Mr. HEPBURN. I decline to be further interrupted. I have only twenty-five minutes, and in twenty-five minutes I could not answer all the questions that gentlemen from Georgia could ask. They need to ask many.

Our silver dollar has two elements of value in it—the 53 cents of bullion value and the 47 cents of the credit of the United States. The two make it equal to the gold dollar, and that is the reason why we are not suffering from conditions that are suffered in the Republics south of us.

Mr. BOATNER. Mr. Chairman——

Mr. HEPBURN. I can not be interrupted by questions which are meaningless as a rule.

Mr. BOATNER. I do not intend to ask the gentleman a meaningless question.

Mr. HEPBURN. If you desire to ask a question for information I will try to answer it.

Mr. BOATNER. Yes, I do. I want the gentleman from Iowa to please explain to us wherein the credit of the United States operates upon the silver dollar.

Mr. HEPBURN. It operates in the pledge of the statute that the Government of the United States will maintain silver at a parity with gold, and the Republican party put that pledge into the statute. [Applause on the Republican side.]

Mr. BOATNER. Will the gentleman now please inform us——

Mr. HEPBURN. I did not yield for two questions.

Mr. BOATNER. This question naturally follows the other. What can be done under the act of 1890, or what is required by law to be done under the act of 1890, to make that pledge good? In other words, how is it that the United States maintains in circulation about 400,000,000 silver dollars at a parity with gold, when there is not so large a circulation maintained at a parity by any other Government in the world?

Mr. HEPBURN. That is a question for the Treasury Department rather than myself. We know the fact that the parity is maintained. Just how it is maintained I am not at all desirous of explaining to the gentleman.

Mr. Chairman, I am not in favor of the free and unlimited coinage of silver until we can have an international agreement whereby there can be a fixed price for silver as measured by gold. When we can secure an agreement from the commercial nations as to ratio and as to free coinage, then there will be a union of value between the gold and silver, or the price of gold and silver, that can not be separated. In every part of the world that ratio will be recognized.

Mr. McMILLIN. If it will not interrupt my friend, I should like to ask him right there——

Mr. HEPBURN. I must decline to be interrupted. I have only twenty-five minutes, and I desire, connectedly, if I can, to make the remarks that I desire to make.

Mr. McMILLIN. I beg the gentleman's pardon.

Mr. HEPBURN. It was asserted here yesterday by a gentleman in whom I have great confidence, and whose opinions with me weigh much, that an international agreement was hopeless, that it was folly to expect it. He said to us in his admirable address that the money power, the banking interests of England, as he expressed it, are opposed to an international agreement; that that power is opposed to the use of silver as a money metal; that that power is interested in making dear the money of ultimate redemption; that that power is the creditor power of the world. He spoke of England as the creditor nation of the world. Ah, gentleman, that is a mistake. It is not England to whom America owes money, or Italy owes money, or the Turk owes money. It is to a limited class of the people of England, who may, it is true, be now supreme in the exercise of power, but the fact that they are so to-day is not an evidence to my mind that they will so continue.

This same gentleman admitted that the party of the landowning interests of England was the dominating one prior to the triumph of Cobden; and yet new interests grew up, the people were educated into new ideas, and the manufacturing interests, as he told us, asserted themselves, overthrowing the once dominant power, changing the policy of England with regard to protection, repealing the corn laws, and starting out upon new lines. For a time the manufacturing class was in power, but in time it was overthrown and the banking interest became and continues to be dominant.

I take it, Mr. Chairman, that there is a reserve power there as here in the hands of the people. The people of the United States know that it is their interest, the interests of the masses, that the money of ultimate redemption should not be limited. They know of the quantity in the world one-half should not be destroyed. They know that their interests demand that gold and silver alike should be the money of ultimate redemption. We

have been agitating this matter. A little more than twenty years ago so little was thought upon the subject of silver that it is said the silver dollar was dropped from the coinage of the United States without knowledge upon the part of the people. They had so little interest in the question then; but since that time its restoration has been agitated.

Since that time the people have been educated. Since that time thought has been directed in this channel of restoration. Now, all over this land, save in banking circles, we find the people of the United States a unit on the proposition that gold and silver shall be standard money in the United States. What is the interest of an American is the interest of an Englishman of the same class. If the agriculturists, if the manufacturers, if the laboring men, if professionals here, all save the banking class, are thus unanimous upon this question, is it not reasonable to presume that when education upon the subject has gone as far in England as here, when agitation has been had, then when the masses are taught on what lines their interests run, will not they exercise the reserve force they possess and overthrow, as has been done twice in the last half century, the controlling class, and compel a reluctant Administration to give to them their rights and to carry out their interests in this matter of silver coinage. Instead of being hopeless, in my judgment, this result is as certain as that time flies, and that the people become interested in the great questions that lie closely to them and to their homes.

I believe, as the Republican party has declared, that in international agreement lies our hope; that it has the elements not of possibility, of probability, but of certainty. I censure, if I may be allowed to use that term, the President of the United States for his inaction in this matter. It is said by some that legislation is necessary in order that he may reconvene the monetary conference. Not so. The conference was convened and with their business uncompleted they adjourned, expecting to be called together in May, 1893—an expectation thus far denied; but there is power in the statute, power in the hands of the President, to reconvene that conference, to renew that argument, and to send someone there, representing the United States, who will not make the blunders in the matter that the gentleman from Kentucky probably did. [Laughter.]

Mr. Chairman, I have said that the Republican party has demonstrated the fact that it was the friend of silver. We have to-day within the limits of the United States nearly $700,000,000 of silver coin. In 1873, when these gentlemen say the Republican party struck down silver, there were not $50,000,000 within the country. We have added nearly $650,000,000. Does that look as though we were unfriendly? But the gentlemen say that the act of 1873 was an act of unfriendliness in that it destroyed, so far as the mints were concerned, the market for the white metal. Do not they know that under that act in less than three years $35,000,000 of silver was used at the mints in coining trade dollars alone, more than five times the amount that ever was coined in any year prior to 1873 into silver dollars? It has done no act save one, perhaps, and that under Democratic inspiration two years ago, that evinced the slightest degree of unfriendliness to silver.

I confess, sir, in the act of 1893, repealing the Sherman Act—unwarranted, unjustified by conditions, unjustified by any fulfilled prophecies, was an act in that direction, but I am assured that no Damocrat can urge that as an objection against the Republican party. Yielding too suddenly, too quickly, to the hysterical fears of the Democratic Administration, that meritorious act was stricken down. I have never believed that it could have been harmfnl to the credit of the United States. Certain gentlemen say that the enlarged use of silver would be destructive of our credit. While I am not in favor of the free coinage of silver, I am in favor of the use of silver to the extent that it is necessary to meet the demand for expansion resulting from our growth in population and our development as a commercial and manufacturing people.

In 1860 we had $407,000,000 of money of all kinds in the United States. To-day of all kinds, counting the silver certificates and the duplicates, we have $2,300,000,000 of money. One billion nine hundred million dollars have been added to our circulation by the Republican party, about $60,000,000 a year. That amount seems to have been necessary to meet our increasing population, growing at the rate of more than a million and a half each year, and to meet the demands of our increased business, whose expansion is even more rapid than the growth of our population. That money was absorbed by the people, and no man claims that there was too much of it.

In my belief, Mr. Chairman, that measure of expansion of the circulation ought to be continued, and it were much better that it should be continued by the use of the mints in coining silver rather than by the use of the printing press in printing promises to pay. But gentlemen say, as they said then, "This will destroy the credit of the United States." Ah, those pessimists have forgotten the glorious history of this country under Republican Administration. I can remember a time when we had just emerged from the gloom of desolating war, and when a burden of two and three-quarter billions of debt rested upon this nation. At that time, too, thirteen States had been harried by war and were not in any degree contributing factors to the wealth of the United States.

[Here the hammer fell.]

Mr. STEELE. I ask unanimous consent that the gentleman from Iowa be allowed ten minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Indiana that the time of the gentleman from Iowa be extended for ten minutes more?

Mr. JOHNSON of California. Mr. Chairman, I interpose no objection, and I am glad the extension is to be made, but I want to call attention to the way in which the Chairman makes fish of one and flesh of another, because when it was undertaken by the gentleman from South Carolina [Mr. MCLAURIN] to give me some time——

The CHAIRMAN. The gentleman will be order. Is there objection? [After a pause.] The Chair hears none, and the gentleman from Iowa will proceed.

Mr. HEPBURN. At that time, Mr. Chairman, there were only 30,000 miles of railway in the United States; none of the Pacific railroads were built; the coast beyond the mountains was unable to contribute to our wealth production to any great extent. We had then only about half our present population. And yet, under Republican control, which for many years prevailed, and with the confidence that came from that Republican control, the credit of the United States went higher and higher and higher until it reached a point never before reached by the credit of any nation in the history of the world.

And now, as was said so admirably by the gentleman from Montana, with the comparatively inconsiderable debt that we have, only about six hundred millions of bonded debt when this Administration came into power, and less than a thousand millions of all kinds of unprotected debts, the idea that the addition of $60,000,000 of silver would burden or disparage the credit of the United States is one so grossly insulting to the intelligence of our people that I marvel that any man, even though driven by the stress of the absence of other arguments, should have the temerity to advance it. Fifty million dollars of silver affect our credit! Remember that when we purchase the silver we have it; so that the case is very different from issuing promises to pay. It is not like issuing a bond or issuing an uncovered note. In coining silver we do not add to our burden, because we have that which we have purchased.

Mr. Chairman, I want to call the attention of my own party friends to our attitude as a party upon this question. I hold that the repeal of the Sherman Act was, in view of the declarations of our party in 1890, an unwarranted attempt to write anew the party law. That declaration in the platform of 1892 was made in view of the then existing conditions. Every statute affecting our monetary condition had been upon the statute book for years, and that plank of our platform was intended as a vote of approval to the public servants who had enacted the then existing laws.

I do not believe it is competent for any gentlemen here from any of the States, whether silver producing or not, to write anew the party law. Let us wait until we meet in the recognized tribunal. Let us trust to that leadership which has carried the party and the country safely through every storm. In all the years of the past that leadership has been equal to the vicissitudes that have surrounded us. Let us not, by any attempted action of our own, thwart the splendid possibilities for continued service in command of the ship of state by, in any unwarranted way, undertaking to write anew the party doctrine or by inventing new party tests.

The Republican party has never declared for the free coinage of silver unless when the old conditions could be restored. When they can be we shall all be a unit for it. You gentlemen have no authority to attempt to hurry us beyond that safe position. When the party assembles in national convention it will indulge in no uncertain utterances. Our party declarations are always distinct and certain, and when we do make an announcement of our principles we put a candidate upon the platform who is in harmony with our declarations. Sometimes I hear bewildered Democrats assailing the integrity of the President of the United States.

I know of no Democrat throughout the length and breadth of all the States who has been more consistent or more closely adhesive to his announcements than has the President of the United States. [Applause.] Gentlemen pretend to say that he wavers. Not so. I remember being in this Hall in 1885, before his first inauguration, when the letter addressed to Mr. Warner was read, in which Mr. Cleveland declaimed against the heresy of free silver and warned his Democratic brethren against it.

In all of his public utterances he has adhered to the same position, and even in the early part of 1892, before your national convention, he told you again how he stood, reiterating for the fifth time his position upon this question. He has not varied an iota

from it; and while, in the State where I lived the Democratic party insisted that their platform was to be interpreted as a free-silver platform; yet you selected this man whose views you knew—who you knew would not carry out that interpretation, except upon the hypothesis that he was to become as a partisan, perjured and dishonored.

You pretend now that you have been deceived; you pretend now that you are surprised at the views he has expressed. [Applause.] He has on this question been consistent. He has always told you that he was of the Wall-street school. You knew he was. But you took him as your candidate, knowing he would receive the support of this class in the East; then you gave a free-silver-coinage interpretation to your platform in the West. This duplicity gave you success. Now you Western Democrats hold up your hands in horror and denounce the President for having betrayed his party. Betrayed his party! He is the one man who has been consistent.

[Here the hammer fell].

Coin Redemption Fund.

SPEECH
OF
HON. URIEL S. HALL,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 8, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. HALL said:

Mr. CHAIRMAN: I have been informed for the first time in the last few minutes by the speech of the gentleman who has just taken his seat that I was expected to follow him and to answer his arguments and that I was selected (he does not say by whom) to reply to him. I can say that I have not the honor of knowing the gentleman, and did not even know him as a member of the House until his most excellent address was delivered. But I wish to add that the few remarks I had intended to make were on a different line and branch of the subject from the one he discussed, but I shall for a few moments ask the attention of this House to a portion of the remarks of the gentleman.

I think it entirely meet and proper that any argument in favor of 16 to 1 free and unlimited coinage of silver should be answered by a Democrat from west of the Mississippi River, and from a rural district.

I ask the attention of the gentleman to his own chart, Chart E. This is a chart giving the price of silver from 1792 to 1894. I presume, of course, that the speech of the gentleman is germane to the motion before the House, upon which he is speaking, that is, the motion of the gentleman from Maine [Mr. DINGLEY], the chairman of the Committee on Ways and Means, "that the House nonconcur in the Senate substitute."

Now, the first section of that Senate substitute is as follows:

That from and after the passage of this act the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of 400½ grains troy, of standard silver, nine-tenths fine, as provided by the act of January, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold; and whenever the said coins herein provided for shall be received into the Treasury, certificates may be issued therefor in the manner now provided by law.

I now ask the attention of the committee and the gentleman from Minnesota who has just concluded his remarks to his own Chart E; also, to the first section of the bill I have just read, to which his remarks have been addressed. This substitute provides for the free and unlimited coinage of silver by the United States, alone, at the ratio of 16 to 1 of gold, or 412½ grains of standard silver or 371¼ grains of pure silver in a dollar.

About the year 1873, according to the lines on his own Chart E, the silver line starts down from 16 to 1 until it reaches the ratio of 34 to 1; i. e., from the point where 16 ounces of silver purchased as much as 1 ounce of gold until it reaches the point where it takes 34 ounces of silver to purchase as much as 1 ounce of gold.

What, according to his own admissions, was the cause of this unprecedented decline in silver? He admits, and history bears him out in the statement, that from 1871 to 1893, both inclusive, eleven of the greatest silver-using countries of the world (not including the United States) closed their mints to the free coinage of silver. I maintain that this action by these eleven countries, coupled with the increased production, was the sole cause of this decline in the price of silver, as shown by his Chart E, and all of this entirely independently of the action of this country.

Why?

First. Because as long as these eleven great countries had their mints open to the free and unlimited coinage of silver a great demand for that metal for mintage purposes existed, consuming, as they did, millions and tens of millions of dollars every year of that metal, and of course we all admit that this great demand tended to keep up its price.

Second. For fifteen years prior to 1873 the average output of silver from all the mines of the world did not average more than $50,000,000 annually, while under even the decreasing demand for silver after 1873 the supply has increased until in the last fiscal year it has reached the enormous sum of over $200,000,000.

We see by these two statements the two great elements of decreasing prices, to wit, decreased demand and increased supply.

It will be noticed that up to this time I have not considered the action of our own country, but have shown that causes entirely outside of any action of ours was the sole cause of the decline in the price of silver.

But someone unacquainted with the facts may think that the United States used so much silver, and thereby made such a great demand for that metal for our own money purposes; that when we stopped its coinage in 1873, silver went down in price solely on account of closing our mints. The average total amount of silver coined by the United States each year for ten years prior to 1873 was less than $1,000,000—less than one-fiftieth of the entire output. But for twenty-two years after 1873 we have used for money purposes in this country over $22,000,000 of silver a year, or a total of over $530,000,000 worth of silver.

In the light of all of the foregoing admitted facts, how can anyone call a vote for this bill a vote for bimetallism? It is trying to have our country, single and alone, restore the price of what eleven other great nations and a quadruple increase in production have brought down. It is asking us to set aside all laws of trade, commerce, and business experience, and to perform the impossible.

It thus appears clearly to anyone seeking the truth that a vote for this bill means a vote for silver monometallism pure and simple, and therefore a vote directly against bimetallism. How any bimetallist can vote for such a bill is to me incomprehensible.

You can not dodge the conclusion. No amount of sophistry can lead you out of it. Will you vote to Mexicanize this country? Will you vote for silver monometallism? If so, vote for this Senate substitute. [Applause.]

Mr. TOWNE. I will say to the gentleman that, as I am excessively weary, if he has completed his question, I will answer it. If not, I must leave the Hall of the House for a moment, and he must allow me to answer after I return.

Mr. HALL. I think my question is complete.

Mr. TOWNE. If it is complete I will answer it. Mr. Chairman, if the gentleman did me the honor to follow the course of my remarks, he can not have missed the point that the total effect of the demonetization of silver by the nations that he has named was not immediately appreciable. It has been only by successive steps that the injury was wrought. The fall of silver began about 1873 or thereabouts, when several of these nations to which he has referred demonetized silver by closing their mints to its unlimited coinage and by denying to it some of the functions of ultimate money, that is, legal tender. Now, at that time the combined power of the distinctively interchanging nations, so far as the maintenance of the parity is concerned, the Latin Union and Germany together, did not bear a proportion to the capacity of the world as a total as great as the corresponding capacity of the United States of America to-day does to the same capacity of the world for the maintenance of any money upon its own terms. [Applause.]

Mr. WILLIAMS. It is not the number of mints, but the character and importance of them which is to be considered.

Mr. TOWNE. Furthermore, I claim it is a begging of the question to say that some of these nations might not have stayed the fall had they not all got stampeded about the same time and fallen into the procession. It is a begging of the question. Furthermore, I would say as a final answer to the gentleman—for I can not talk all afternoon—I am disposed to concede that the action of the United States alone is attended with some possibility of a resulting premium upon gold. A concert of action by France, Germany, and the United States would, in my judgment, make possible the maintenance of an absolute parity, but I say this, reckoned by the only money which the world possesses, namely, the price of commodities, gold to-day in the United States and the world is at a premium of 50 per cent, and I propose for one to end that premium. [Applause.] I would rather have a nominal premium upon gold, that might possibly result from independent action upon our part, than the 50 per cent premium now existing, reckoned in the enterprise and sweat and sinew of the manhood of the United States. [Applause.]

Mr. HALL. When the gentleman uses the expression, "I am disposed to concede that the action of the United States alone is attended with some possibility of a resulting premium upon gold," he gives his whole case away and puts himself down a pure, un-

adulterated silver monometallist, as every business man in this country knows.

Now, Mr. Chairman, I suppose that everyone in this audience, my 16 to 1 friends and the others, will recognize the ingenuity of that answer, and will recognize in the same answer that the gentleman does not pretend to deny that the United States single handed and alone can not bring silver back to where it was in 1873. [Applause.] He admits it, and then acts the wise part and leaves the room. Now, there are but two propositions for us to meet here upon the argument that he makes. You vote for the first section of this Senate substitute, and by so doing you vote for the United States going to a single silver standard, Mexicanizing our Government, or you have to take the position that the United States single handed and alone can undo what 13 nations combined and a quadrupled output succeeded in doing in the past. You have got to take the position that one man can bring a log back from across the stream that it took the combined strength of 13 men to carry there in the first place.

Now, as for the gentleman's adroit admission of the forcing of gold to a premium, I want the members of this committee and the country to understand what it means. It means the United States going to a single silver standard at once. When that follows, what results? With all of the gentleman's kindergarten object lesson, let us strip this question to the one sole proposition and take his last admission, that it will drive gold to a premium in the United States, which means that the United States will at once sink to a single silver standard. It means 16 to 1 as the medium of exchange and the standard of value in the United States and not the present 100 cents of gold. What becomes of it?

I have a report here—volume 1 of the Report of the Comptroller of the Currency for 1895—that shows a wonderful state of facts. It shows that in 87 cities of the United States where clearing houses exist the clearings for one year were over $51,000,000,000. Only 87 cities were included, and in those 87 cities not more than half the banks are in the clearing houses. A carefully compiled estimate puts the amount of credit circulation in the United States at the enormous sum of $150,000,000,000 during that period. What does it mean? We talk about per capita circulation. What do you mean? There is not a political economist—and I am here to defy refutation of this statement upon the floor of this House—I maintain there is not a political economist among all the men who have spent their lives in the study of economic questions who ever has written, nor any business man who has expressed himself, that does not lay down the proposition that credit circulation performs every office and function the same as the dollar in cash.

Mr. WILLIAMS. Cite one authority.

Mr. HALL. John Stuart Mill, one of the best that ever wrote.

Mr. WILLIAMS. Cite the page and the paragraph.

Mr. HALL. I can give you the exact expression of John Stuart Mill. I am aiming to give his exact language. I can at least give it to you in substance:

> For credit, though it is not productive power, is purchasing power, and a person who, having credit, avails himself of it in the purchase of goods creates just as much demand for the goods and tends quite as much to raise their price as if he made an equal amount of purchases with ready money. Volume 1, Book III, chapter 11, section 3.

Mr. WILLIAMS. As a medium of exchange. He nowhere says as a standard of value.

Mr. HALL. I am discussing the all-important question of the effect of credit upon prices, and am trying to show so clearly that no one can deny that the contracting of credit is a thousand times worse than contracting the volume of money.

Mill further says, fourth edition, volume 1, page 70:

> Credit which is used to purchase commodities affects prices in the same manner as money.
> Money and credit are thus exactly on a par in their affects on prices.

Again, on page 327:

> In any state of commerce in which much credit is habitually given general prices at any moment depend much more upon the state of credit than upon the quantity of money.

Mr. HALL. Francis A. Walker and others. There is not a writer who has ever written what the credit function performs but says the same thing—that $1 in credit is equal to $1 in actual cash.

Now they talk about the circulation being $22 per capita.

Mr. OGDEN. Will the gentleman allow me to ask him a question?

Mr. HALL. I will.

Mr. OGDEN. What is the cause of panics, then?

Mr. HALL. I will tell you what it is. Panics are caused in the first place by overspeculation, which soon impairs confidence or credit and this brings about a contraction. Of what? Of the circulation? Yes, sir. And what is the circulation? It is 98 per cent credit, referred to above, and 2 per cent money; and when you contract the credit function you contract 98 per cent of the circulation; and when you contract the money, you contract 2 per cent. [Applause.] Just the same as was done in 1893. Do not you know you could not take a Government 4 per cent bond and go into any bank of the United States and borrow 50 cents on the dollar upon it? Why? Because credit was gone? That was the reason. There was as much money in the United States as ever, but the immense contraction of our credit produced the panic.

Mr. OGDEN. Were not the silver certificates at that time at a premium?

Mr. HALL. Currency of all kinds in New York was at a premium then. That was the evidence shown before the Committee on Banking and Currency of the last House.

Mr. UNDERWOOD. Will the gentleman allow me to ask him a question, for information?

Mr. HALL. Yes.

Mr. UNDERWOOD. Is it not a fact that the credit on which you say a great proportion of the business of the country is done is based on the solvent money of the country, and if that money contracts the credit contracts?

Mr. HALL. I am unable to understand what is meant by solvent money.

Mr. UNDERWOOD. Is not money based on a standard?

Mr. HALL. No, but money is a standard itself.

Mr. UNDERWOOD. Then, if that money is contracted, does not that contract the amount of credit?

Mr. HALL. Yes, it contracts one-thirtieth of 1 per cent. You contract the volume of credit circulation throughout the United States 1 per cent and you contract it 30 times as much as the entire circulation of every dollar of silver in the United States.

Mr. SWANSON. Will the gentleman allow me to ask him a question?

Mr. HALL. I do not like to have the thread of my argument interfered with.

Mr. SWANSON. I just simply want to ask you one question.

The CHAIRMAN. The gentleman from Missouri declines to yield.

Mr. SWANSON. If it interferes with the gentleman I will not persist, but I simply wanted to ask him one question.

The CHAIRMAN. The gentleman declines to yield.

Mr. HALL. I dislike to refuse to answer a question of the gentleman from Virginia [Mr. SWANSON]; but I will say this, not speaking to him, that if I have to yield for the information of every 16-to-1 man on this floor, my time will be extended to Sunday at noon. [Laughter.]

I do not know that I gathered the idea of the gentleman from Minnesota clearly on this proposition; but I take it that he was on the same tack as my friend Mr. Bland, when I had a joint discussion with him in Missouri last summer; and this was his position. He says that we have an instance in history where France kept up the price of silver, from 1806 to 1872, and he cites the instance of the Latin Union, and says the United States is now in the same position that France was in 1806. Let us see the analogy. In 1806 every government on the face of the earth, every civilized government, had its mints open to the free coinage of silver.

Now, there is not a civilized nation of the world of the first commercial standing, or the second, that has its mints open to the free and unlimited coinage of silver. That is the first analogy. In 1806 the amount of silver produced was, if I remember rightly, less than $38,000,000 a year, and now it is $214,000,000 yearly. In 1806 every nation was helping the Government of France to carry forward silver at a ratio of 15½ to 1. To-day there is not a single nation helping us. Where is there any similarity between our condition now and the condition of France then? This will show to what desperate extremities our 16 to 1 friends are driven to find excuse, example, and precedent for this inexcusable, unexampled, and unprecedented agitation in favor of the United States attempting to set aside and defy all the laws of commerce and trade, and we at the same time trying to continue a great commercial nation.

One hundred and fifty billion dollars is the amount of credit circulation in the United States. Shake the confidence of the moneyed class as to what kind of money they will be repaid in, frighten this credit, and what will follow? You will have a contraction in the volume of circulation, which is the credit part, and is a mountain as compared to the molehill of cash money. Every writer, as I have shown, says this credit circulation performs every function of money, and nobody will pretend to attack that proposition who is any way familiar with the authors on that subject.

Now, what have we in the United States to-day? An agitation. An agitation for what? An agitation by which men who had deposited their money in the 13,000 banks—the 9,000,000 of bank depositors in the United States, who have deposited over a billion dollars; these banks are threatened that their deposits will be paid in money worth 50 or 52 cents on the dollar in gold, when they know that at the time they made these deposits they were worth 100 cents in gold. If that agitation should succeed, what would be the effect? What would be the effect on your home bank? The effect would be that the bank would at once say: "Here,

we will draw in every loan that we have out, and we will not only do that, but we will get every dollar that we can lay our hands on and put it into the bank and keep it there."

If you asked why they did that, they would say, "We dread a run by these 9,000,000 depositors; if we do not have the money, the bank goes to the wall and the financial crisis will be intensified and increased." The banks therefore are hoarding their money, while the depositors are demanding their money. If the bank can not pay, it goes down. There you have at once a contraction of the circulation to the extent of every dollar of that money; but, worse than that, a repetition of what we saw in 1893, a contraction of the one hundred and fifty-six billions of credit currency or circulation which performs every office and function of money itself.

Mr. Chairman, we have a pendulum-like condition in the United States, an agitation by the extreme 16-to-1 silver men on one side, causing financial distress in the money market, a threatening of credit, national, State, municipal, corporate, and individual, and then falls on the other side a rush upon the gold reserve, followed by a bond issue. We have $262,000,000 of bonds issued now, and I have been informed by a gentleman in the Treasury Department that it may reach a thousand millions within the next eighteen months if the present processes and conditions are to continue. Here then we have $262,000,000 withdrawn from railroads, withdrawn from stocks and bonds, withdrawn from farm-supply investments, withdrawn from factories, withdrawn from all the enterprises that give labor employment and give food and clothing to the wives and children of laboring men, and put into bonds that pay no tax, national, county, State, or municipal, and the issue of which may reach a thousand million dollars within the next eighteen months.

Now, gentlemen, I will tell you what I set out to say. I did not intend to answer any argument made by the gentleman from Minnesota, because I did not know which side he was on; but I was going to say that Senator STEWART stated in his remarks on this subject that this was a dress-parade business solely; that the vote on this bill was for home consumption. If that is the case, I want to be reckoned on the side of the Jeffersonian, Jacksonian, sound-money Democracy under all existing circumstances. [Applause.]

And that is not all. If I were called on to-day, as I was called on some time ago before the annual meeting of the State Teachers' Institute of my State, to state what I regarded as the greatest crime, threatening and impairing our credit, American institutions, national and individual, and keeping us on the verge of a panic, I should reply in one sentence, "The cowardice of our politicians, of the public men, who have not the courage, the manhood, the grit, to go before the people and tell them when they are wrong upon these great economic questions." I am credibly informed that there are eight Senators at the other end of this Capitol who voted for this bill, yet who say that they believe the free and unlimited coinage of silver at 16 to 1 would mean national bankruptcy and ruin.

Mr. Chairman, in our form of government, where the majority of the people are the controlling power, the perpetuity of our great and free institutions depends upon the great mass of the people understanding the great basic principles of sound economy and finance. How are they to get this understanding? They have not the time amid the busy rush for a living for themselves and their families to take time from the farms, mills, workshops, offices, and counting rooms to delve into the intricate questions of national economy, international trade, and those intricate laws that govern them.

To whom can they turn for information? Not to the politicians. For I am ashamed to admit that the greed for public office makes cowards of otherwise good men. And while we may frequently see a good man resolving to "cease being a demagogue and become a statesman," yet "this native hue of resolution soon becomes sicklied o'er by the pale cast of thought" as to how he can be reelected.

What does it mean? It means that our politicians have concluded to hold themselves in office, national, State, or county, by letting a great number of men who have not the time to delve into these questions turn their backs upon their own welfare, and they are willing to close their hearts to all gratitude for past favors and tell those men that what really leads to their destruction leads but to prosperity and happiness, and these voters are too frequently controlled by the ranting of Populist demagogues when a firm denunciation of these heresies would prevent it.

I know, Mr. Chairman, that this is not going to make me popular with this class of men and that I shall be roundly denounced for these utterances.

I only wish someone else had undertaken this unpleasant duty. But as no one else has, I will.

For instance, I know that it is regarded as political death for a Democrat in a rural district west of the Mississippi not to throw up his hat and applaud these delusions, but if my people want a man of that kind to represent them they can get rid of me and I will willingly and gladly retire to private life.

Mr. TALBERT. Did not the gentleman vote for the free-coinage bill in 1893? I ask the question for information.

Mr. HALL. The gentleman from South Carolina asks if I did not vote for the free-coinage bill in the extra session of Congress in 1893. I answer yes. I will further admit that my vote then and my vote now are not consistent, or that I can be charged with that "hobgoblin of feeble minds" called inconsistency. But I tell the gentleman, also, that I have progressed since that time, while he is standing right where I was three years ago. [Laughter.]

Mr. TALBERT. And I shall stay there on that question.

Mr. HALL. The gentleman's question brings up the subject of that miserable fallacy, so-called "consistency." Let us see what there is in that.

Mr. LAYTON. I wish to ask the gentleman a question. I understood him to make the extraordinary statement a few moments ago that he had been informed that eight Senators who had voted for this bill had said that they believed the free coinage of silver would lead to the bankruptcy and destruction of this country. I ask the gentleman, "Do you believe that any Senator ever said that?"

Mr. HALL. I told you that I was credibly informed that they had said it, and I believed it, or I would not have stated it here.

Mr. LAYTON. Yes, you used the words "credibly informed," but I desire this House to know now whether you really believe that eight Senators, or that one Senator, ever made such a statement.

Mr. HALL. I believe that eight of them did. [Laughter.] If I did not believe that I would not have made the statement here.

Mr. Chairman, I refuse to retract one jot or tittle of what I have just said. I cited that case as an illustration, a great national condition, of the cowardice of our politicians, and I want it understood that what I have said is to stand without revocation. But now, on the question suggested by my friend from South Carolina, the question of consistency, I want to say a word. The gentleman seems to make the point that I voted differently in 1893 from my present position.

Mr. TALBERT. I merely asked the question for information. I had forgotten how the gentleman stood at that time, and I asked the question for information, and not to "rattle" the gentleman at all.

Mr. HALL. It does not "rattle" me at all, and I will tell you why.

Mr. TALBERT. I would like to hear.

Mr. HALL. I will tell you. The reason it does not rattle me one bit is because I find, upon investigation in the Bureau of Education, that the Chinese, the inhabitants of the Indies, and the tribes of Africa are the only human beings that are continually consistent. [Laughter.] The lower grades of animals also are always consistent. [Laughter.] I maintain that reasoning, thoughtful, clear-headed men, who pass through the world with their minds open to the investigations of truth, are ever liable to change.

What is progress but change?

Where is the intelligent man in the United States who has not a high regard for the fame of William E. Gladstone, the great English statesman. His legislative life was one of constant change, and therefore progress.

Observe the course of Bismarck, the greatest of German statesmen. When he was advocating the sale of the silver of Germany for whatever price could be obtained for it and was approached by one of his friends, who said, "I am just where you were ten years ago," the reply was: "That was the political blunder of my life, and I have had intelligence enough to profit by it and move forward."

In the history of the world there is no great movement that has not contained the germs and seeds of progress and development, and therefore of "inconsistency." I might take a case from our own legislative halls.

Mr. MERCER. The gentleman might refer to what Stephen A. Douglas said about a man who never changes his opinion.

Mr. TALBERT. According to this doctrine, we can never tell where a man stands.

Mr. HALL. We can always tell, Mr. Chairman, how certain animals stand, and how the Chinese stand, because they adopt the doctrine of Confucius, that the greatest crime which a Chinaman can commit is attempting to do a thing differently from the way his ancestors did it a thousand years before.

But let us take legislative proceedings; take matters of parliamentary law. My friend from Georgia has had occasion on this floor to cite a case where our present Speaker varied from the position which he now occupies upon the question of counting a quorum. Certainly Mr. REED of Maine held at the time the view attributed to him; but further investigation showed him that he was wrong; and when he found he was wrong what did he do?

[Here the hammer fell.]

Mr. TALBERT. I ask that the gentleman be allowed time to conclude his remarks.

There was no objection.

Mr. HALL. Mr. Chairman, I was about to speak of Mr. REED's lack of "consistency." That gentleman is quoted by our worthy leader on this side of the House, Judge CRISP—I mean our leader on all questions except money. [Laughter.]

Once when the question rose in this House as to the right of the Speaker to count a quorum, Mr. REED, then a member, thought that such power did not exist. But investigation of the matter subsequently opened his eyes upon that question. What is the result? He changed his position upon that great rule of parliamentary law and wrote himself down what history, after partisan prejudice and passion shall have passed away, will justify as one of the greatest pioneers in parliamentary law that ever lived. [Applause.] That was a violation of "consistency." I never in any public utterance condemned Mr. REED for the position he took on that question, and I never intend to do so, for he was, in my judgment, absolutely correct.

I observed a remark of my friend from Georgia this morning to the effect that in voting for this first section of the Senate amendment he was standing upon the Democratic platform adopted at Chicago in 1892. I know that I am talking to a body of men who know that platform by heart; and I defy any one of them to produce one section of that platform that warrants a vote by any Democrat for the first section of this Senate substitute.

You can not find any such provision in the Chicago platform of 1892. You will find in that platform of the Democratic national convention a declaration that one dollar should be made as good as another in the United States and the world over. You will find in the platform of one national convention a doctrine corresponding exactly with the first section of that Senate resolution. I refer to the national platform of the Populist party, announced at Omaha July 4, 1892. That is the only political platform in the United States that has ever laid down such a doctrine as that embodied in this Senate resolution.

Mr. Chairman, I will tell you the class of people to whom, in my judgment, legislators should most look in legislating upon the money question—the people who find it hardest to get money and those who are most affected and distressed by a failure to have an adequate circulation. Those people are the great farming and laboring classes of this country.

Sir, the gentleman from Minnesota [Mr. TOWNE], who spoke just before me, said that the money of the country is like the lifeblood. That is correct; but he should have added that credit or confidence is like the heart that drives that lifeblood to the uttermost extremities of the body. There is the rest of the analogy; but the gentleman stops short. What part of the body begins to get cold first when the lifeblood is withdrawn by the lack of the pumping power of that heart, which answers to confidence in monetary affairs? It is the extremities of the body; the fingers and the toes begin to get cold on the approach of death or from any retardation of the circulation.

How do we sometimes resuscitate a person in this condition? By starting the action of that great engine that drives again the lifeblood to the extremities of the body. That is what is necessary in this case.

What are these men battling for? What is this Senate bill intended to accomplish? Its advocates come forward battling for one-thirtieth of 1 per cent of the circulation of the United States, and proposing to cut down the other 99.99 per cent of circulation which is manifested in confidence and credit.

Mr. Chairman, I did not for many reasons intend to make an address on this subject further than to put myself on record as the one Democrat from a rural district west of the Mississippi in a purely agricultural region that dares stand up and say that sound money is the salvation of the agricultural and laboring classes of this Government. I wanted to put myself on record in that way because Mr. STEWART has said that this is a "dress parade" affair, and that noses will be counted. I understand full well that the action of the National Bimetallic League has put my district on the black list.

I understand, Mr. Chairman, situated as I am, with both of my Senators on the opposite side of the question, my entire State and all my speaking colleagues, on the Democratic side, on the other side of the question, that leaves me standing alone practically, and with a hard row to hoe. But whether I appear in the Fifty-fifth Congress or not, I expect to battle for what I believe to be the best interests of my people; to give them a sound money, and as far as I can, within my district and in my own State, I will aid the sound-money leaders of my State in their efforts in that direction. And if in that effort I shall go down to defeat, I will go with my own self-respect, and I trust with the respect and confidence of my friends, who will be able to appreciate the fact that I was not too cowardly to tell my people what I believed to be right when their judgment was entirely the other way. I thank the House for its courtesy. [Applause.]

Mr. COX. Now, in view of the fact that our associations have always been so pleasant, in view of the fact that we have acted together and worked for free silver, I hope the gentleman from Missouri does not mean to say that any of his friends who happen to differ with him on this question, or who have not advanced as far as he has, are a set of cowards or have no respect for facts?

Mr. HALL. I will say simply this, that I had no reference to my friend from Tennessee. I do not believe the shoe fits him, and I do not want any man to wear it unless it does fit him. I never worked on the Coinage Committee with my friend, but did work with him on the Committee of Banking and Currency, where our relations were always pleasant, and the work on his part was able and conscientious.

Mr. COX. There is one more question. Do you not think it fair when you change your course you should have said some kind words to the associate with whom you had been connected for so long a time?

Mr. HALL. I can only say God bless you, and I hope you are going to open your heart and eyes and get right upon this question. [Prolonged applause.]

Senate Substitute for the House Bond Bill.

REMARKS

OF

HON. THOMAS J. STRAIT,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue.

Mr. STRAIT said:

Mr. SPEAKER: It is said that in the multitude of council there is safety, but it is difficult to realize the truthfulness of this after beholding the scenes that are enacted in the assembly of this great nation year after year. When we see reason dethroned by party feeling, in order to keep up party organization, at the expense of suffering millions, we are amazed.

How often have we heard it stated on the floor of this House that "all is right"; that as soon as confidence is restored everything will be prosperous. This old statement has been used until it is threadbare. For years it has fooled the people, and has been used purposely to fool them. Instead of prosperity, what do we have? There are nothing but murmurings, as of distant thunder, coming from every quarter and from every class except one or two. Instead of the prophesied prosperity there is an increase of failures, with increased liabilities, and a tendency to concentrate all kinds of business into corporations; the smaller merchants swallowed up and closed out; thousands of small farms passing into the hands of land-loan and trust corporations at about one-third of their cost, and their real owners thrown upon the world to fight the bitter battles of life without a penny to help in the struggle; patriotic men and women reduced to penury and practical serfdom, and patriotic principles struck down. The lords realize the fact that men without homes are more easily managed and controlled and subservient to their masters.

Add to this impoverishment of the agricultural classes of this supposedly great country, Mr. Speaker, a picture of thousands of idle factories and millions of tramping men hunting bread for themselves and starving wives and children, and we see to what pass the situation has come by the inaction of these "all is right" statesmen. There are a thousand other things which could be said to show the deplorable condition to which the agricultural and laboring classes have been brought. There are men who sit in the halls of Congress of this country who do not want to know of these things; but the time is coming when circumstances will force them to know it. Still, we hear that nothing is wrong and that our evils are imaginary. There is undoubtedly some cause for the unrest of the people and for the terrible condition of affairs. Some attribute the cause to the lack of a protective tariff; some to too much money of the wrong kind; some to not enough money; the majority to the striking down of one of the final redemption metals, thereby making it simply a commodity and increasing the work of the remaining metal to double its capacity. The latter class is right in believing that the enormous demand for gold by the nations of the world to establish a gold standard has doubled its value compared to other products.

This argument has been made too often to again go over, but when the low price of the products of the country is met with the cry of overproduction it is enough to make one sick. When an enormous increase in population is compared to the alleged in-

crease of products, no man can see anything sensible in all this cry of overproduction. It comes from the same people who are constantly feeding the country on the "all is right" stuff. There might be an underconsumption instead of an overproduction, because there are thousands of people lacking the necessaries of life. I would like to ask the members of this House if they are not aware of thousands of people who are in need of bread? How many humble homes in the cities and towns of this beautiful country and how many farms have gone to rack because of a lack of money? What causes the desolation which pervades particularly the rural districts of the country?

Mr. Speaker, after the civil war, when the South had been crushed, overpowered by numbers, our people, with no resources but the land and with what little greenbacks they could get, *started* life anew. They made marvelous progress with this much-abused money, and not only lived but prospered—prospered as no other people ever did in the history of the world—until this money was curtailed and silver was stricken down by treachery and rascality. The debts of the country have been doubled and the capacity to pay them diminished accordingly, bringing untold misery upon the people.

Now, Mr. Speaker, to revert to the overproduction theory and myth. In 1873, when this rascality commenced and the people were robbed of their constitutional rights and plunged into pauperism, there was as much land as there is now. I hope my gold-bug friends will not charge that there has been an overproduction of land, although it would be compatible with their position on all other matters for them to do so. Well, there was as much land then as now. The population of the country has almost doubled, but have the prices of the lands increased? Instead of doing so, they are hardly half of what they were then. Have the prices of the products of the lands increased? I have no doubt but what some of the able overproduction dodgers can answer these questions to suit themselves and the money power, but will they be able to answer them to suit the farmers, who know better about these facts than all the moneyed men of the country put together? I am a plain man, representing a plain and honest people, and I say here that there may be an overproduction due to an underconsumption, because of thousands of starving people, but to the mind of the plain people of the country the trouble is due to an underproduction of money.

As to the issues of bonds before this, Mr. Speaker, I say that the shadows of suspicion cast upon our rulers for their connection therewith are humiliating to this great nation. There is humiliation enough to cause this representative body to stand with bowed heads. It is a sad spectacle when an already dissatisfied people come to believe their rulers dishonest and incompetent and working against them in behalf of money sharks and syndicates and corporations. The latest newspaper stories that a certain syndicate received a tip just before the opening of the bids for the last bonds, or, in other words, was let into the secrets of the transaction, is enough to cause every patriotic citizen of the United States to shudder at the prospects of the evil consequences which will follow such suspicion. The people of the country are ready and willing to believe whatever they hear and read. The course of certain officials of the country has been such as to strengthen the suspicious natures of an overburdened people.

There is no doubt that the people have been outraged, and the question has become so important and the solution fraught with consequences so far-reaching that it is the duty of every member of this House to speak out boldly upon it and let the nation know where they stand and why they stand where they do. It has been asserted that this question is threadbare, but no unsolved problem of such importance to a nation can possibly be threadbare. Weeks and months might be spent in its discussion, but still there would be many good reasons for the passage of this substitute. It is not necessary for me to enter into the subject in all of its bearings and give reasons why I say it should be passed. Reasons enough have already been given, and I shall content myself with presenting what I conceive to be one of the most important and alarming features of the situation. It is admitted by those who uphold the present policy of this Government that we can not maintain a single gold standard under existing conditions without continuous issues of bonds.

These bonds must, to a large extent, be sold abroad for gold to be brought here in place of the gold lost by export. They contend that the legal-tender currency is redeemable in gold when there is a law for the retiring of such currency, and that this forms an endless chain for the withdrawal of gold from the Treasury for export; that should Congress consent to the retirement of all legal-tender currency the gold exports would stop. That proposition I deny, and believe it can be shown to be a fallacy. International monetary conditions have changed since the adoption of the single gold standard by foreign nations, and it is a part of true statesmanship to recognize the changes and meet them as they present themselves. No man can deny that when the great nations of the world discarded silver and adopted the single gold standard there began an international scramble for gold. Previous to that time some of the nations had aspired to be agricultural, some manufacturing, and some commercial. Since then the first object of each has necessarily been the acquisition of gold. Being a common and international scramble, the gold price of all commodities in these countries must be so nearly the same that they could not be exported without loss, otherwise the country importing them would lose gold.

Now, we practically have a single gold standard in this country, but the general level of prices of labor and commodities is higher here than in other gold-standard countries. While that condition continues to exist the export of gold will not cease. There is absolutely no way to avoid it. This is the true reason for our present loss of gold by export. Our legal-tender currency simply forms a convenient method of collecting gold. If it were retired some other means would be employed for obtaining gold, which, like every other commodity, would seek the highest market. Our effort to maintain the present level of prices in this country, and at the same time perpetuate the single gold standard by issuing bonds, is like pouring water through a seive.

Now, Mr. Speaker, we can not maintain a gold standard and the present level of prices. One or the other must yield to the inflexible law. The only way on earth to maintain a gold standard is to buy the gold and pay for it. Then we can keep it, but so long as we buy it on credit it will leave us faster than it came. To purchase it and pay for it we must reduce the general level of prices for all labor and commodities in this country to a lower point than in the pauper-ridden, effete monarchies of the Old World. Can we afford to do that? Let it be attempted and continued and no man can predict the dire results that will follow. Let no man deceive himself. The perpetuation of the gold standard means the reduction of free and enlightened Americans to a level with the ignorant, half-starved, menial classes of the Old World who have been trained to privation from infancy to the grave. If you elect to bring this condition of affairs upon the people of this country you had best vote to close our public schools, stop all donations to arts and sciences, and establish petty despots in every county, backed by a standing army, to compel proud Americans to work sixteen hours a day on half rations and to wear rags. What for? Simply to enable us to maintain a lower level of prices than those that prevail abroad and please Wall street plutocrats.

If you want to reduce our farmers and laborers to serfdom and add millions more to the hoarded wealth of our present millionaires you can easily do so by the plan I have mentioned. Then our gold will stay with us. We may be able to import some. In this way we can win in this scramble for gold, but God forbid! Let us pause and consider before we plunge this free and beautiful land into revolution and ruin.

Now, gentlemen, the passage of this bill will, in my opinion, end all of these troubles. The Goddess of Prosperity is smiling upon us with bountiful harvests, and is knocking at our door, ready to enter and spread joy in every State. It is our duty to our constituents and posterity to pass this bill and bid her enter this glorious land of ours and make it her permanent abiding place.

Free Silver, Not Bonds.

SPEECH

OF

HON. THOMAS C. McRAE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. McRAE said:

Mr. CHAIRMAN: I am opposed to the bond bill passed by the House. I would not under any circumstances vote for the sale of bonds to purchase gold. I favor and will support the substitute of the Senate, which provides for the free coinage of silver at the present legal ratio of 16 to 1.

The gentleman from North Dakota [Mr. JOHNSON] boasts that the legislation in reference to revenue, coinage, and currency from 1861 to 1893 was the work of the Republican party. I admit it, and, so far as I am authorized to speak for the Democratic party, make haste to disclaim responsibility for any part of it. I chal-

lenge the gentleman or anyone else to show a single law in all this legislation which was not dictated by organized capital and against the interest of the toiling masses. Or, if I may be allowed to express the idea in the language of the eloquent Senator from Indiana, I would say that "every concession ever made by law to the greed and lawless avarice of the money power since 1861 is the work of the Republican party."

When we remember that at the end of that period the Treasury was practically bankrupt; our foreign commerce dwindling; the farms incumbered with $6,000,000,000 of mortgages; that we had $2,000,000,000 in national and State debts, $5,000,000,000 in railroad debts, 4,000 trusts, and a million of idle men, all the legitimate result of the general policy of the Republican party, I wonder that the gentleman would advert to it, even to remind us that wheat was worth more in 1891 than it is now.

In giving some of the reasons why I shall support the Senate amendment I must of necessity repeat to some extent what has often been said by the friends of silver. But until the character of the assaults on the part of gold monometallists is changed, our main points of defense can not vary much except in the form of statement.

THE USES OF MONEY.

It has been said by a great political economist that real money is an order drawn by the government in favor of the owner on all persons who have things for sale. Everybody wants it, because with it they can obtain all of the things that add to their comfort and happiness.

Money has three principal functions: (1) It is a medium of exchange; (2) it is a legal tender for debt; and (3) it is a standard and measure of value. Early in the history of the human race it became necessary to adopt a medium of exchange for commodities and products without which mankind, society, nor government could exist. Some parts of the earth are adapted to the cultivation of cotton, others to the production of wool; some to the raising of corn, others to wheat; some to the growth of hogs, and others to cattle; in some mountains we find precious metals, while in others we find iron and coal. There is no man who can produce one-tenth part in kind of all that he uses, and there is no government with such a diversity of interests as to be able to supply all the numerous demands of its inhabitants. They all have something to sell, and want at the same time to purchase at least a part of what has been produced by someone else.

So it is absolutely necessary to have money as a medium of exchange, and for forty centuries it has existed by consent. A large part of the commerce and business of the people must be done upon a credit, and as debts for a long or a short time must be contracted, there should be a legal basis upon which deferred payments can be adjusted and finally settled, so in all countries there must be a legal tender or money of final payment. This function is imparted by law, and I think should attach to all forms of money issued by the Government. As an honest standard and measure of value the metal from which money is coined should be worth intrinsically or commercially what it purports to be. I believe in honest money, gold and silver, and paper convertible into coin on demand. I have always fought and now repudiate the theory of irredeemable fiat money as dangerous to good government. I do not believe that the law alone by a simple declaration can fix the exchangeable value of money any more than it can fix the value of anything else.

All the acts of Congress that might be passed and all the international agreements that might be made declaring silver bullion to be worth $1.29 an ounce, without providing for its coinage and use as money, would not increase the commodity price of it one cent. If left uncoined its value would still be controlled by the law of supply and demand, and until there is some new use found for it, or until there is some diminution in the supply, laws and international agreement would not affect the value. But, Mr. Chairman, while the law can not add value to silver bullion, it can increase the demand for it and enhance the value of it by providing for its free coinage and use as standard money. This idea will perhaps be made clearer by referring to the act of November 1, 1893, which in terms commits this Government to the use of both gold and silver as standard money, but makes no provision for coining silver. The act of Congress adds therefore nothing to the price of silver bullion, for in fact silver has been cheaper since its passage than ever before. But it will hardly be denied that if this act had carried with it a provision for free coinage, silver bullion would have advanced immediately to a par with gold.

If I did not believe that the disparity which now exists was caused by the limited coinage of silver or rather the failure to coin it freely, I would not favor the free and unlimited coinage of it at a ratio of 16 to 1. I am as much in favor of honest money as any man can be, but I emphatically deny the false assumption of the gold monometallist that gold is the only honest money.

REAL AND CREDIT MONEY.

(1) Real or metallic money is such as has real or commercial value, that which needs no redemption and is itself final payment. It cuts its way through the business world and asks no government or bank to be responsible for it. Primarily it is a natural product and is not the fiat of human government. It is indestructible, and yet the supply has never exceeded the demands of trade and commerce. (2) Credit money is all that character of government notes or bank bills which to be serviceable as money must be redeemable in real money on demand. We have in the United States according to the last monthly statement of the Treasury Department in gold coin $583,488,105; in standard silver dollars, $423,289,629; in subsidiary silver, $78,573,872; in United States greenback notes, $346,681,016; in Sherman Treasury notes, $137,324,280; national-bank currency, $213,496,547, besides some Treasury certificates. The grand total of our circulation on the 1st of this month was $1,589,720,607. Under our present system all of this volume of credit money rests on the narrowing gold basis, and it requires no great financial ability to see that the structure is top-heavy with promises that require frequent redemption. Is it any wonder, then, that the "wheel within a wheel" exists and that gold goes out of the Treasury faster than it comes in.

OBJECTIONS TO THE SINGLE GOLD STANDARD.

1. Gold is insufficient in quantity to answer the demands of our increasing population and growing commerce. The fact that all gold-standard countries are compelled to use silver ought in itself be enough to show that there is not enough gold, but there are other facts to which I will call attention. That this Administration has purchased $262,000,000 of it, partly foreign gold, shows how scarce it is in this country, and yet of the $1,500,000,000 produced in the world since 1879 the United States have absorbed in their monetary system over $600,500,000 and used in the arts nearly $200,000,000. In other words, more than half of the output of all the mines in the world has been used in the United States, and still we are selling bonds to get more. Again, the world's production of gold since 1873 has been about $2,500,000,000, and yet the coinage of the world for that time has been nearly $3,000,000,000. Some of this excess is recoinage, but not near all of it. So we see that gold is so scarce that gold-using countries have been compelled to coin the jewelry and household ornaments in order to meet the urgent demands for money.

2. It is the money of large transactions and does not generally circulate, and is easily cornered and premiums on it extorted in the way of long-time interest-bearing bonds. It ought not to be hard to understand how easy it is for the banking power of the world, aggregating as it does $20,000,000,000, to corner one-fifth that much gold.

3. Gold is appreciating in value, is therefore unjust to debtors, producers, and laborers. It is hardly necessary for me to spend much time to prove that prices have declined since 1873. I am aware that the advocates of the single gold standard claim that for some reason, which they do not and can not explain, gold has a fixed value and that as the gold dollar is not worth more than 100 cents, therefore, it has not increased in value. The fatal error in this assumption is in measuring it by itself. All dollars contain 100 cents, and so they would if doubled or reduced in value. Of course the gold dollar is worth 100 cents, and so is the silver dollar. It takes 100 cents to make a dollar. A fair illustration of the absurdity of this contention is furnished by a story told of a distinguished Indiana volunteer general in the late war between the States.

General Rosecrans instructed him to gauge the Tennessee River at a given place, and ascertain every hour its particular stage and the rapidity at which it was rising or falling. The Hoosier general accordingly constructed a scale of inches upon a board three feet long and nailed it to the side of a flatboat floating on the river, so that the end from which he began to number would just touch the water. The general inspected the gauge as ordered each hour during the entire day, and reported each time that the river was on a dead standstill, although the fact was, as shown by the high water marks on the trees and other natural objects, that it had been rising during the entire day at the average rate of three inches per hour. [Laughter and applause.] There are two clocks in this Hall, and they show a difference in time of two minutes, but you can not tell which is wrong by comparing them with each other. You must test them both by the sun, the only thing by which you can measure time. And so, Mr. Chairman, you can never determine whether gold has risen or silver has fallen in value by measuring gold by gold, or silver by silver, nor the one by the other, but you should measure both by the great commodities of our country. When you do this you will find that both have changed; silver has depreciated because not coined freely, and gold has appreciated because in part it now performs the work heretofore done by both gold and silver, but silver has kept nearer on a parity with cotton and other commodities than gold. Twenty-five and eight-tenths grains of gold will now purchase more than twice as much cotton as it would in 1873; 412½ grains of standard silver will purchase as much now as it would then.

In that year we exported about 1,200,000,000 pounds of cotton, for which we realized $201,635,376. During the fiscal year ended June 30, 1895, we exported 3,517,433,109 pounds of cotton, for which we got only $204,900,990. I do not say that the discrimina-

tion against silver is the sole cause of this decline, but I do believe that it has contributed in a great measure to it. I do not believe the free coinage of silver would double the price of cotton, but I do think it would increase it. It would at least stop the decline in prices. The adoption of the single gold standard has reduced the price of all forms of property except gold mines and debts.

OBJECTIONS TO SILVER ANSWERED.

Now, let us consider some of the objections urged against silver by gold monometallists.

1. They say that because prior to 1873 the United States had only coined about 8,000,000 standard silver dollars this shows that the people of the United States did not want silver money. This statement is part true and part false, but is altogether misleading.

What are the facts? By the acts of February 9, 1793, April 29, 1816, March 3, 1823, and June 25, 1834, the coins of Spain, Portugal, Great Britain, France, Peru, Chile, and Central America were a legal tender in the United States until 1857, and they were coined at a ratio of 15½ to 1, 3 per cent less than the United States would coin silver. So the keen sense of the careful, prudent, American miner, who dug his silver from the earth, suggested to him to take it to the foreign mints and have it coined. He got more dollars for his bullion, and as they were a legal tender here they circulated and performed all the functions of American silver pnaiey. There is not a gentleman here over 60 years of age who mw not bear me witness that Mexican dollars and 5-franc oleces were as common before the war as standard silver dollars lire to-day. The truth is it was then as it is now, that silver was in much more common use than gold. That is why none of the standard silver dollars were coined, and it is not true that the people did not want them. That same selfishness which carried the American silver to foreign mints to be coined will prevent foreign coins from coming to ours if we adopt free coinage, because they still adhere to the old ratio of 15½ to 1.

2. Is the difference in the bullion value caused by overproduction? I think not, for in 1855 the production of gold was so increased as to be four times that of silver—the change in the ratio of production being about twelvefold, and yet this did not change the relative value of the two metals. From 1855 to 1873 the world doubled its silver production, and yet during that eighteen years there was scarcely any variation in the relative value or the ratio of gold and silver. The United States have produced about twice as much gold as silver. The reason why the relative value has not changed with the changes in the ratio of production is in the fact that both gold and silver were redemption money—did not need to be redeemed in something else—and that it was impossible to have too much of either. For such money there is always an unlimited demand. Everybody wants it, and until you find some power that can set a limit upon human wants, avarice, and greed, there can not be too much of gold or silver. It is a striking and significant fact that wherever one of these metals is found you generally find the other near by. There appears to be some law of nature that holds them together, and we find them sleeping side by side in the "rock-ribbed" hills of our great West. I believe that these metals were designed by an all-wise Providence to be used by mankind as money. When the United States and Germany inaugurated the proceeding to abandon the coinage of silver, it was not cheap but was at a premium, and the world's production for the preceding year was $51,575,000, while the production of gold was $106,850,000. The average production of silver for the six years preceding 1871 was only about $51,000,000. The excess in the production of silver over gold since 1871 is only about 10 per cent. Certainly this did not cause the 50 per cent decline in the bullion value of silver.

3. Would free silver Mexicanize the United States? My friend the chairman of the Committee on Coinage, Weights, and Measures, [Mr. CHARLES W. STONE], who preceded me, had read an article from a Government publication showing the condition of the peons and the price of labor in Mexico. I want to suggest to the gentleman, in the language of Mr. Carmack, the eloquent and able editor of the Memphis Commercial, "That the difference between this country and Mexico is that of men and not of money." I want also to say to him that if she had the single gold standard the condition in Mexico would be infinitely worse than it is. She is making more progress in building railroads and factories than at any period in her history. The true test is to compare her condition now with that of 1873.

Mr. CATCHINGS. I understand that Mexico is a silver-using country only. We all agree about that. Now, if we were to concede that Mexico is on a high tide of prosperity, which I do not concede, but if we did so, would that be an argument for bimetallism? Would it not be an argument that we should go to a silver standard? I do not see what it has to do with the bimetallic proposition.

Mr. MCRAE. Mexico is a silver-standard country. She is weak as a government, her people are generally poor, her commerce is small, and she has but little use for gold. Her stock of gold is less than 50 cents per capita, while she has of silver only $4.55 per capita. The transactions in Mexico are so small that gold is not adapted to them. It is different with us. We need gold for our large transactions and silver for the smaller ones, and we have business enough for all we can get of both. Mexico has not.

4. They also tell us that we will be deluged with silver. I want some gentleman to tell me where the silver is to come from.

Mr. BOATNER. Mexico.

Mr. MCRAE. Suppose we get all there is in Mexico. How much additional per capita would it give us?

Mr. BOATNER. The gentleman can make the calculation.

Mr. MCRAE. Mexico has only $55,000,000 of silver, and that would not give us $1 per capita—not enough to buy sewing machines for our wives. [Laughter.]

Mr. BOATNER. If you argue that the unlimited coinage of silver would not cause a deluge in silver in this country and would not give us silver monometallism, will you please explain why that result has followed in every country which has retained the unlimited coinage of silver at any ratio?

Mr. MCRAE. It has never followed in any first-class government like this. If France, Germany, or England should adopt the free coinage of silver, it would not, in my opinion, follow. It follows in Mexico and Japan and all those half-civilized countries, for reasons that I have stated.

Mr. BOATNER. Then why did France change it in 1874? She has commerce and is a very powerful nation?

Mr. MCRAE. I would think because the United States did so first. France, be it said to her honor and glory, stood by us in our fight for liberty; she gave her gallant and noble son, Lafayette, to help us win our independence, and she faithfully kept the agreement to maintain real bimetallism until after the United States, by the act of 1873, abandoned it. It is sometimes said that the United States followed France and Germany to the single gold standard. It is not true. Germany put upon the market some of her silver prior to our law, but the German act of demonetization was not passed until the July following our act of February 28, 1873.

Mr. LACEY. Did not France change her ratio over twenty times in less than one hundred years in order to keep bimetallism?

Mr. MCRAE. I do not know that she ever changed her ratio, and if so, how often, but I give her praise for doing so if it was necessary in order to keep bimetallism. If it is necessary for us to change the ratio in order to keep bimetallism, let us change it, but I want to say that we now have the highest ratio of any first-class country.

Mr. WILLIAMS. France has never changed her ratio from 1873 until now.

Mr. LACEY. She dropped silver altogether in 1874.

Mr. WILLIAMS. But the ratio has never been changed since that time.

Mr. MCRAE. Outside of the bullion owned by the United States there is but little uncoined silver in the world. It is estimated that 90 per cent of the product for the last year was coined. The silver in Europe is coined money, and is the equivalent of her gold and circulates side by side with it, and it is coined at a ratio that would require the loss of 3 per cent and freight charges both ways in order to exchange it for a dollar of no greater value to them than the coin they now have. Besides, we must remember that the European coins are old and that there will be considerable loss in melting. Gold is not a legal-tender in India, and that country will not dump any silver on us as long as silver is in the hands of the common people and is the only money they have. The proposition for free coinage practically involves only the coinage and use on our part of our present stock and the annual increase, which would be about $1 per capita. We must not forget that Europe still coins silver on government account and that our miners furnish them a large part of it. The net exports of silver for 1895 amounted to $27,631,789. I refer to those facts to show how easy it would be for us to absorb the present surplus of silver bullion. This is a world-wide question, and it can not be fairly considered without estimating the demand of the world.

IS IT REPUDIATION?

The gentleman from Maine [Mr. DINGLEY] on yesterday, and the gentleman who preceded me this morning [Mr. JOHNSON of North Dakota] have said that free silver means the repudiation of existing debts. If I believed that I would not give my vote to it. I do not believe there is any way to get rid of an honest debt except to pay it, and I have no respect for the man, the State, or the Government that would repudiate the payment of a just debt. But I am just as much opposed to the robbery of the helpless debtor who is required to pay in a coin made dearer by law.

All private debts are payable in lawful money, unless otherwise stipulated in the contract, and all our public debts are payable in coin—gold or silver. While we make no proposition to change the one, we should resist at every step the scheme of the bondholder to alter the other. For both we insist upon payment according to the terms of the contract. But I beg to remind the

gentlemen who shout themselves hoarse over the false cry of repudiation that they have, unintentionally perhaps, utterly demolished some of our Democratic gold men, who insist that free silver is in the interest of the silver miners. If it would work the repudiation of private and public debts by paying them in 50-cent dollars, then it could not enrich the miner. I will leave our gold-bug friends who present these two conflicting arguments to get up a joint debate and determine which of the two propositions is true. [Laughter.]

I am not here to speak for the silver miners. For them as miners I care nothing. I had the honor when the Sherman Act was pending to speak against its passage, and I said then that the Senators from the silver-producing States by agreeing to it would surrender to the Eastern gold bugs, and I now charge upon them responsibility for all of the injury to bimetallism which has resulted from that miserable makeshift. To get a market for a lot of silver bullion they consented and aided in the passage of a law that stopped all coinage. Both in the House and Senate, the Democrats, the real friends of silver, voted solidly against that act, because it reduced silver to a commodity and surrendered the scientific principle of bimetallism.

Other timid gentlemen, Mr. Chairman, tell us that they believe in bimetallism and want an international agreement, but assert that we can not go it alone. Can not go it alone! May the Lord increase the faith and patriotism of all such! If it was necessary for the United States to go it alone upon this question, as she has upon others, I think she has the commerce, the resources, and the people to enable her to boldly declare that "We will go it alone!" [Applause.] But, sir, we will not be alone. Of the 1,250,000,000 people of the world, about two-thirds are to-day upon the single silver standard, while there is not a single government on earth that does not use silver to some extent.

Mr. LACEY. The gentleman says that two-thirds of the people on the globe are using silver as the basis of their currency. Now, if that is true and they can not raise the price of silver bullion, how is it that the gentleman expects the addition of 70,000,000 more of users to have that effect?

Mr. CATCHINGS. I wish my friend from Iowa would add to his question the fact that since 1873 more than $2,000,000,000 of silver money has been coined and still the price has gone down.

Mr. McCULLOCH. Let him add also the fact that notwithstanding the use of that silver the world has also about $2,460,000,000 of uncovered paper money, which shows that the world lacks that amount of real metallic money and is compelled to substitute paper for it.

Mr. McRAE. All the governments, I think, use silver in some way as money. Measured by population, a large majority of them have adopted silver as the standard, but as none of the great Governments like the United States, Great Britain, France, Germany, and Russia provide for the free coinage of silver, as they all do for gold, there is an annual surplus of about $200,000,000, which is not needed to meet the demands of their limited coinage laws, and the value of that surplus is called the commercial value of silver. It is worth less than coined silver because denied the functions of money. All the silver coined by any of the great commercial powers that I have named is on a parity with gold at the legal ratio which, in every other country except one, is less than ours. On the question of the ability of the United States to take this step without treaty, I desire to quote the opinion of that great lawyer and wise and conservative statesman, ex-Attorney-General Garland. He says:

> I can not help believing that our country is big enough in territory, in soil, and climate, in all the appliances of the arts and sciences, in all its variety of productions, in all its different interests of its people, in energy and honesty, and in name and character, to fix its own standard of value without waiting for or dancing attendance upon foreign powers. Let us fix them and these foreign powers can follow, if they will; but let us fix them.

We occupy first place as to mining, manufactures, agriculture, education, and the industrial arts. The growth of the United States can as well be shown by its railways as anything else. Fifty years ago we had no railways, but now we have 76,000 miles, the value of which can not be expressed in the total coined money of the world.

The banking power of the United States is nearly one-third that of the world and half as much as all Europe. I call attention to the following from the St. Louis Republic:

> The wealth of the United States is more than a fourth as great as that of all the rest of the world put together. So reports Professor François, a student of political economy, in a recent number of Monde Moderne, a French publication.
>
> He places the wealth of this country at 313,000,000,000 francs, which is equivalent to about $62,600,000,000, and that of the other eighteen countries covered by his statistics at 1,144,700,000,000 francs.
>
> According to this statistician, the value of all property owned in England, including money in circulation, is 265,000,000,000 francs—48,000,000,000 less than this country's wealth. Third place is given to France, with 225,000,000,000, and fourth to Germany, with 161,000,000,000 francs. Then come Russia with one hundred and twenty-seven, Austria-Hungary with eighty-two, Spain with sixty-two, and Italy with fifty-four billions, or milliards—as the French say—of francs.
>
> These are the richest countries of the world. There are four in the list—Italy, Spain, Russia, and Austria-Hungary—whose combined wealth is only a little larger than that of the United States.

Senator GEORGE, that great lawyer and courageous champion of the common people, has stated the facts bearing upon our power, wealth, and productive capacity more forcibly than I can hope to do. I will ask the Clerk to read what I have marked.

The Clerk read as follows:

> The United States in territory, leaving out Alaska, is larger than all Europe, leaving out Russia. Their soil and climate are unequaled. The range of their productions covers nearly all that is valuable to man and all that is essential to human happiness. Taking the silver-using countries, there is produced in them and in the United States together every necessity and every comfort of human life. We are 70,000,000 people, and are increasing at the rate of 2 per cent per annum. Our country is comparatively new and undeveloped. More and better houses, roads and bridges, railroads and canals are needed. Money is needed to make them. We ought not to borrow that money from abroad, and would not if we had a sufficiency. Our mines are more cheaply worked and turn out more than those of other countries. The immense and valuable forests which now obstruct the farmer's plow need to be cleared away to make homes for our increasing population, 52 per cent of whom are landless. More and better schoolhouses and church edifices are needed, more museums, more galleries of art, more public libraries.
>
> Our population is the most industrious and the most productive of all peoples, and consumes more commodities, and therefore needs more money, than any other.
>
> A great statistician and a gold monometallist, Mr. Walker, of Massachusetts, has stated in a public speech that we consume more than do 200,000,000 of the people of Europe—about three times as much per capita. By the extreme subdivision of labor now existing and still progressing, no man produces one hundredth part of the commodities he needs. He produces to sell for money with which to supply his wants. As production increases so does consumption, and so does the need for more and more money.
>
> Let us compare our country a little further with Europe. I take my figures from an English statistician of world-wide renown, Mr. Mulhall.
>
> The merchandise transported on our railroads is double that carried on all the railways in all the other countries in the world. I add that the merchandise carried on our waterways is one-quarter of that carried on the railways. All this merchandise is bought with money and sold for money on an average at least three times. With twice as much merchandise carried and sold and consumed by our people as in all the world together, does it not look a little as if we needed twice as much money as all the world? Yet we have only about one-sixth as much gold (the only good money, according to our monometallic friends) as is possessed in Europe.
>
> Mr. Mulhall gives us some further figures of immense importance in this connection. By superior energy and skill, by the use of more steam and electricity, greater labor-saving devices, the United States possess more productive power than Great Britain, France, and Germany all combined. When we consider the more than 4,000,000 men in the standing armies of Europe who produce nothing and the 1,000,000 necessary to feed and clothe them, we may safely say that the productive power of the United States is quite as great as that of all Europe. And yet our friends of the gold standard say that we can not do what France alone did for nearly one hundred years—maintain the parity between gold and silver at our old ratio, which was 3 per cent less favorable to silver than the French ratio.
>
> I have dealt in figures only as to our country's power. I have not indulged in Fourth of July glorifications. These cold figures prove beyond cavil our ability to establish, as England did, and as Germany did, our own monetary system without the consent of other nations. I quote from a distinguished enemy of independent action by the United States. He says:
>
> "In fact, at this moment our country is the richest in the world. It has in it every element of prosperity. * * * Nothing has ever been seen like the progress of this nation since the world began."
>
> And now paraphrasing his further language to some extent, I say yet here we are, standing on the shores of the Atlantic, turning our backs on our own country and its greatness, and on the millions of our people suffering from the insufficiency of the volume of money, with our faces to Europe, we are begging, imploring, even on bended knees, monarchs and bankers across the ocean to allow us to use our grand powers and opportunities for still further progress in the advancement of our people.
>
> I concur with Mr. Jefferson, who, in discussing foreign influence on our banks, foreign control of our finances, foreign dictation of the policies of our Government, the foreign possession and control of our newspapers, expressed the hope that we might find—
>
> "Some means of shielding ourselves in the future from foreign influence, political, commercial, or in whatever form it may be attempted."
>
> And considering the ruin coming to us from this foreign influence, he used these words:
>
> "I can scarcely withhold myself from joining in the wish of Silas Deane, that there were an ocean of fire between us and the Old World."
>
> And I reverently add that I can scarce refrain from joining in the same wish.

WHY THE UNITED STATES SHOULD ACT.

Mr. McRAE. Now, Mr. Chairman, having shown to my own satisfaction, and I trust to the satisfaction of others, that we are strong enough to fix our own standard of value, I want to give some facts to show why we should act at once.

We produce more silver than any other country. It is one of the items of our national wealth, and it is our duty to legislate so as not to injure it. To adopt the bimetallic standard would beyond question enlarge our foreign commerce. Being the leading nation of the world, our geographical position would soon give us control of the markets of the world if we would enact wise trade and finance laws. We have courageously and patriotically determined to enforce the Monroe doctrine, and passed the Wilson bill to extend our trade, but still have the single gold standard. Here we are with silver-using Asia and Mexico on one side and gold-using Europe on the other, all reaching out for our trade; some want the products of our mines, some of our farms, some of our forests, and others of our factories, but all want trade of some kind. The patriotic, statesmanlike thing to do is to extend to all of them the right hand of fellowship and at once change our monetary standard so as to revive business, prevent further decline in prices in farm products, and make it easy to settle international balances.

I have here the advanced sheets of the statistics of our foreign commerce for the year ending June 30, 1895, kindly furnished me by the Bureau of Statistics, and from them I get the exports and imports by the grand divisions of the world:

Countries.	Standard.	Imports.	Exports.
Europe	Gold	$383,645,813	$627,927,692
West Indies	Gold	68,860,152	31,563,830
Mexico	Silver	11,580,760	6,629,369
South America	Gold	112,167,120	33,525,935
Asia	Silver	77,626,364	17,325,057
Africa	Gold	5,709,169	6,377,842
Total		659,589,378	723,349,725

From this table, Mr. Chairman, you will see that in the principal silver-using countries the balance of trade is against us, while it is in our favor in those using gold as the standard. To silver-using Mexico, West Indies, and Asia we owed a balance of $102,559,120, and to gold-using South America $78,641,185. But, sir, when we come to gold-standard Europe and Africa we find that the balance in our favor is $244,950,552. If these balances were settled by the payment of the metal which is the standard of value in the respective countries, then we received $166,308,367 more of gold than we paid out, and $63,760,357 more gold than we paid of both gold and silver. I know, Mr. Chairman, that international trade balances are not settled in the coins of the debtor Governments, but with bullion or coin at its bullion value; but it is easy to see what an advantage it is to us to use our silver when we can, and for the cotton, wheat, corn, and meat products that our farmers send to Europe to receive gold bullion. This shows that we are in no danger of losing gold by adopting bimetallism, but, on the contrary, it is the surest way to keep it. So far as I am concerned, I would be willing to rest the cause of bimetallism upon this single point so far as the United States is concerned.

I am not one of those who believe that the Anglo-Saxon race will ever become slaves and serfs whatever may be our financial policy. No, Mr. Chairman, if we are driven into the market to buy gold when we have silver in the Treasury, which ought never to be done, we know that our country will get it, as the bids just opened show, but every man who is proud of our history and hopeful of the future should insist upon a broader monetary basis and a larger field for our commerce. Shall we, when our Christian civilization is ripe, when the countless resources of our country are being discovered and developed, when the products of mine, farm, forest, and factory to be exchanged and utilized by both the gold and silver using people are increasing, narrow the basis of our business? To admit it is to ask the American people to be satisfied with the conditions of the Old World. To follow the financial policy of Europe is to yield to a conspiracy te check the progress, social development, and Christian sentiment of a Government now the vanguard of civilization—a Government whose mission it is to lead, not to follow.

It is common for those who take the opposite side of this question to tell us that gold and civilization, and silver and barbarism, go together. I ask, Mr. Chairman, when did France and Germany reach their highest state of civilization? Was it not before they went to gold monometallism? When did our own beloved country show the greatest growth in population and prosperity among the farmers and other producers?

It was under the free-coinage act of 1837. In 1860 the farmers of our country owned more than one-half the wealth of the United States; now they own less than 20 per cent of it. It was not until France, Germany, England, and the United States adopted the gold standard that they were afflicted with social discord and labor strikes.

Take the gold-using countries as a whole, and they have national debts aggregating $40 per capita, while that of the silver-using countries is only $4 per capita. England has been referred to as a great creditor nation. In the sense that the corporations of this and other countries owe her people, she is a creditor nation, but let us not forget that the Government of Great Britain owes $3,500,000,000, which is about $90 per capita for each subject. Other European countries are not in as good condition.

Edward Atkinson is reported to have said that the public debt of Europe had increased from $2,000,000,000 to $22,000,000,000 within the present century. England has paid only about $500,000,000 of her national debt during the last fifty years. Yet that is the progress and civilization held up as an example for the United States. At the rate we are selling bonds we may come to it; but at this time, with more people and more wealth, we owe only about one-fourth of what Great Britain does, to say nothing about her dependencies, for the most important of which she enforces the silver standard. If you want a great national debt, continue the single gold standard, but if you want a freer commerce, an independent and happy people freed from debt, a Government resting upon manhood with equal rights to all and special privileges to none, give us the bimetallism established by the fathers of the Republic. For one, I do not believe that a national debt is a blessing, and I deny that our Government or people can advance civilization by getting in debt. I trust the time will soon come when our public and private debts will be paid. Debts are the greatest troubles to our people, and with the rising value of gold they cling to them as did the "old man of the sea" to the neck of Sinbad the Sailor.

Mr. WASHINGTON. Allow me to ask the gentleman how much has the national debt been decreased since 1879, when we resumed specie payment, and was that reduction had on a gold basis or on a silver basis?

Mr. McRAE. It has been reduced about one-half.

Mr. LITTLE. How much cotton would pay it then and how much cotton would pay it now?

Mr. McRAE. It would take about as much cotton to pay it now as it would then. But thanks to a patriotic people and the Bland Act, a large part of it has been paid. For the twelve years that followed the passage of that act our commerce increased and our people prospered as much as was possible with a gold standard and high protection tariff.

Mr. CATCHINGS. Does my friend attribute that to the use of silver?

Mr. McRAE. I do in a large measure.

Mr. CATCHINGS. Why not to the fact that the resumption of specie payments had given us a sound and stable currency?

Mr. McRAE. I say that the resumption of specie payment at that time without the use of silver was impossible.

Mr. BOATNER. Then the gentleman admits that the Bland dollar does not rest on the same basis as paper money, but is money of final redemption?

Mr. McRAE. There is a vast difference between the silver dollar and paper money. Notwithstanding the standard silver dollar has been denounced and boycotted by the Treasury officials and the most of the bankers since the passage of the Bland Act it is to-day as good as gold here or elsewhere, less transportation charges. No man can be found who has ever lost a cent on the standard American silver dollar. Not a dollar in silver or silver certificates has ever been or can be legally redeemed in gold. They are receivable for all debts due to the United States—this and nothing more has the Government done or promised to do for them.

Mr. LACEY. Then why repeal the law that makes that dollar good?

Mr. McRAE. I want to make more dollars like them.

Mr. BOATNER. I think my friend from Arkansas did not understand my suggestion. I agree with the position he now takes as to the silver dollar being money of final redemption. That is the position I have always taken. Many of the advocates of free and unlimited coinage contend that the money issued under the provisions of the Bland-Allison Act is not money of final redemption, because they say it is subordinate to gold and that the whole volume of our money of final redemption is restricted to the gold circulation. I say that all the silver money issued under the Bland-Allison Act reenforces the gold and that all of it is money of final redemption.

Mr. McRAE. I think I understand the position of the gentleman from Louisiana. The silver dollars are redemption money to the extent that they do not require redemption themselves. What I complain of is that they are not used to redeem the paper obligations of the Government. I think it is the duty of the Secretary of the Treasury to coin and use silver in redeeming the notes and bonds of the Government. They are all payable in silver, and I believe that if the policy of paying in gold alone was changed, and silver or silver and gold in equal parts used, that the strain upon the Treasury caused by exports of gold would stop at once. If you and I can agree on nothing else, let us resolve to prevent the retiring of the present stock of standard silver dollars.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. McRAE. Mr. Chairman, I hope I can have consent to continue for ten minutes.

Mr. CATCHINGS. I think the gentleman should certainly have that privilege, as he has been very much interrupted.

Mr. McMILLIN. I suggest that the gentleman be permitted to go on, and then whoever is to be recognized can come after. The gentleman has yielded very patiently to a great many interruptions.

Mr. BOATNER. I ask that the gentleman have ten minutes.

Mr. WALKER of Massachusetts. If it does not interfere with the time of those who are to follow.

Mr. McMILLIN. I would say, give the gentleman ten minutes at least.

The CHAIRMAN. Is there objection to the gentleman from Arkansas proceeding for ten minutes?

There was no objection.

Mr. McRAE. I thank the committee for the extension. I understand that my friend from Mississippi wishes to ask a question.

Mr. CATCHINGS. Well, my friend is so frank that I will be obliged now if he will let us know exactly what he understands by the term "bimetallism." There seems to be some controversy and confusion with reference to the matter.

Mr. McRAE. I understand it to be the legal right to have coined at a fixed ratio both metals and the right to use either as money of final payment. In other words, the "dollar," the unit of value, should be coined of either metal and thus secure to debtors and business men the double or alternate standard. I do not insist that bimetallism necessarily carries concurrent circulation.

Mr. CATCHINGS. That is the very point that I wanted the gentleman to explain.

Mr. McRAE. But the gentleman must not confuse circulation with the standard or measure of value. To illustrate, if the demand for gold in some other country for some special purpose increases its value or makes it scarce here, there will at once be a demand for silver to meet the scarcity occasioned by the withdrawal of gold, and for the same reason the value of silver will be increased, so that one may circulate to-day and the other to-morrow. At any given moment the standard actually used in any particular country may be one or the other and not both; but if the right to use either is secured by law this is bimetallism, and it will tend to make each metal change less than it would otherwise.

Mr. CATCHINGS. Then my friend, under that definition, would consider Mexico a bimetallic country, and she has the same privilege.

Mr. BRUMM. Does Mexico coin any gold at all?

Mr. McRAE. The Director of the Mint puts Mexico down as being upon the single silver standard. She has silver monometallism, not bimetallism. I am as much opposed to the single silver standard as I am to the single gold standard.

BIMETALLISM—HISTORIC, CONSTITUTIONAL, AND DEMOCRATIC.

Silver is historic, constitutional, Democratic money. Since the organization of human government gold and silver have both been used as money. When the United States secured their independence silver was in use as standard money in the mother country as well as in the colonies. It was distinctly recognized by the Constitution, and from the foundation of the Government, following a policy indorsed by Jefferson and defended by Jackson, the Democratic party has been the party of bimetallism, favoring the coinage of both gold and silver as standard money. For the last fifteen or twenty years we have had three distinct financial policies presented to the country by the leaders of as many different political parties:

1. The single gold standard with the national-bank notes for currency, which has been and is yet supported by a majority of the Republicans. As a general thing, Republicans are opposed to silver, but I do not say all Republicans, for there are some in the South and West who favor it.

2. The irredeemable fiat paper money advocates, who make no distinction between metallic and paper money, and demand that it all shall be issued by the Government to the people upon a per capita basis. This scheme of finance is advocated by the Populists, who, as a general thing, do not believe in redemption money, care nothing for either gold or silver, and favor silver because it is popular in certain States. I warn Democrats against such pretended friends.

3. The old safe and sound bimetallic doctrine of gold and silver as the basis, and such an amount of paper money as can be kept at par with coin, has been maintained by a large majority of the Democratic leaders and voters, and in my opinion this is what a majority of the people desire.

The present Executive has been twice elected as a Democrat, the first time in 1884, on a platform declaring for "honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss;" the last time, in 1892, when the party was committed to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, etc.; and the only time that he was ever defeated before the people was in 1888, when his party made no distinct declaration upon the coinage question, and the same year the Republican party declared for the use of both gold and silver as money and condemned the policy of his Administration in its efforts to demonetize silver.

In every Democratic Congress except one since the passage of the act of 1873 a majority of the Democratic Representatives and Senators have endeavored to right the great wrong perpetrated by that law. Our party is not responsible for bringing this country to the single gold standard. All that can be truthfully said against the record of our party on this question is that the Fifty-third Congress, which was Democratic, failed to restore silver coinage. This political sin of omission on the part of the Democratic Administration must be confessed, and the people administered a severe punishment in 1894. We must now turn our attention to correcting the mistakes of two years ago and elect none who have deceived us. I believe the only chance for the success of the free coinage of silver at the next election is to have the Democratic national convention declare for it and nominate a candidate who believes in it.

I do not believe that any President of the United States will ever preside during the life of any of us who is elected upon a platform declaring distinctly against silver. The Republicans of this House may do like the last Congress, and defeat this amendment, but the people, mark my prediction, will rebuke them for it as they rebuked the Democratic party.

Mr. CATCHINGS. Does my friend think that any man could be elected President on any platform that declares for the free coinage of silver at a ratio of 16 to 1 without the cooperation of other countries?

Mr. McRAE. Yes; I believe with all my heart and soul that if the Democratic party, when it meets in convention at Chicago in July, declares for the free, unlimited, independent coinage of silver at a ratio of 16 to 1 it will carry two-thirds of the States of the Union, and give the Republican party, if it adopts a single gold-standard platform, such a defeat as it never gave it before. [Applause.]

No Democrat who loves the principles of his party ought to refuse a hearty support to its nominees whatever may be our differences on the coinage question, for we can accomplish nothing without organization. It may be necessary to reform the party before it can reform the coinage and currency laws. But let us swear by the sacred memories of the founders of Democracy and that faith which is due the people that we will tread no backward step upon these questions. Come what may, we will not lower our flag to our common enemy, the advocate of centralization, extravagance, monopoly, and high taxes. "Our party must become a compact organization, for we will be confronted in November by an unscrupulous foe. There will be no speck on our record they will not magnify; no circumstance they will not torture and misrepresent; no disappointment they will not exaggerate into a revolt; no class or creed they will not seek to inflame; no passion they will not attempt to arouse; no fraud they will not willingly perpetrate; no combination with the isms of politics they will not make; no crime they will not condone. United let us stand guard, full armed at every point to meet them. Our appeal is not to passion nor to prejudice, to class or faction, to race or creed, but to the sound common sense, the interest, the intelligence, and patriotism of the American people."

I am aware that there are some who think that the party of Jefferson, Madison, Monroe, Jackson, Tilden, Seymour, Hancock, Hendricks, Beck, and Thurman can not recover from the overwhelming defeat of 1894, but, Mr. Chairman, the Democracy has seen darker days than these. This is no time for gloomy forebodings, but rather a time for us to reason together; to take a survey of the conditions that threaten our institutions. Let us renew our fealty and close up our lines for the coming contest; and let Democrats everywhere beware of the seductive overtures being made by those who would link the destiny of silver to protection, railroad ownership, subtreasury land-loan or other paternal schemes of government. If you want the free coinage of silver you must stand by that organization that has fought its battles in the past; that party which has given you 423,000,000 silver dollars, and the only one that is likely to give you more of them. [Applause.]

Coin Redemption Fund.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. McMILLIN rose and was recognized:

Mr. CHAIRMAN: After a man of the distinction of the gentleman who has just taken his seat [Mr. DOLLIVER], a member of the Ways and Means Committee, which has charge of this question, has occupied the time of the House for about one hour and has failed to state what his views are on the silver question, it is not strange that in the last emergency and in despair he should

hold up his hands and say, as he did: "We trust the Lord in this business." [Laughter.] Gentlemen who have questions so important as these for consideration on behalf of 70,000,000 people ought to be at least candid with their fellow-representatives in the enunciation of their own principles.

When the gentleman was asked directly: "Do you favor the coinage of silver at any ratio and in any degree or not?" he was dumfounded and opened not his mouth, except to say that he was with the Republican party on this question.

The gentleman has heard from his party, and we behold a member of the Committee on Ways and Means saying what you ought not to do, but wholly unable or unwilling to point out what you ought to do.

Mr. Chairman, we have resting upon us one of the most fearful responsibilities that ever devolved upon a body of representatives of a great people. These are grave and solemn questions that are presented for our consideration. The questions, how much currency we should have, what should be its nature, how it should be distributed, how it should originate, are questions to which the gentleman would do well to give his attention instead of applying epithets to those who happen to differ from him.

Lest I should forget it in a different connection, let me say that the gentleman [Mr. DOLLIVER], in the course of his remarks, asked whether they had not tried in 1890 the experiment of the issuance of more silver, and whether it had not broken down. I want to say in reply that the distinguished gentleman whose name was attached to the measure known as the Sherman law is credited with saying that the object of that legislation was to prevent silver coinage. Again, that measure provided for the purchase of silver, but not for its coinage and its standing as money side by side with gold and on an equality with it. It provided for the purchase of silver bullion and the deposit of it in the Treasury, and for issuing upon it gold and silver certificates or warrants. It was not bimetallism in any sense. Of course such a measure as that would receive the condemnation of the people, as it did; of course such a measure as that could not result in any good to silver or to the people. It was intended as a stab at silver, and did do much to destroy it.

When asked how he stood upon the silver question, the gentleman from Iowa said:

> I stand with that party which has coined $600,000,000 of silver, and has kept it all at par with gold.

He concealed the fact that that party's representative, who by the grace of the Electoral Commission was occupying the White House—Mr. Hayes—vetoed the very bill under which that was done, and it was by Democratic votes passed over his veto. So that it was a Democratic, not a Republican measure, that gave that silver to the country, and his party repealed it in 1890. [Applause.] Let us have a little plain dealing with each other in this discussion.

The gentleman says that in the long run when we have free coinage the value of the coin produced will correspond to the value of the metal that is in it. I do not propose to be otherwise than candid in this discussion. That is a correct statement of what would occur ultimately; and I take the gentleman's own confession later on to go with that. But the value will be measured by the value of bullion that is in the dollar after the legislation unfriendly to it has been repealed. He admits that to rehabilitate silver by statute, to authorize free coinage, would have a tendency to raise the price. He tells us that the office of money is to buy things. I think I shall be able to show him before I get through that a main office it has had to perform in this country for a great many years has been the payment of taxes.

NOT ENOUGH CURRENCY TO PAY TAXES AND CARRY ON BUSINESS.

Mr. Speaker, there is no denying the fact that our finances are out of joint. Gentlemen who have not traveled over the country, who have not gone to the homes of the people, to the retail stores and workshops, have little conception of the great scarcity of money with the masses.

Business men, and those having control of public affairs, continually admonish the farmers and laborers to cease doing credit business and pay as they go for what they buy. Wholesale merchants would rejoice if able to sell for cash instead of selling on credit. The retailers would be gladdened by a change from a credit to a cash system. But there is not a sufficiency of currency to carry on the business of the people in that way.

Who has not seen the beautiful essays, from time to time published, setting forth the advantages of these changes? Who has not heard the eloquent declamations favoring cash against credit? We have all heard and seen these things time out of mind, and felt their force and admitted their truth, yet we have known, and do know, that, however beautiful the theory, it is impossible of application with the small volume of currency we now have.

TAXES OF THE AMERICAN PEOPLE.

Mr. Speaker, the people of the United States paid in taxes in 1890, according to our census, $1,040,473,013, as follows:

To the Federal Government	$461,154,680
To the States	116,157,640
To the counties	133,525,493
To the municipalities	329,635,200

The money of the United States outside the Treasury is estimated by Secretary Carlisle to be $1,598,000,000. Of this amount it is safe to say that not so much as $1,500,000,000 is in actual circulation. Speaking in round numbers, it is safe to calculate that about one-third of all the money in actual circulation has to go annually for Federal taxes, over a third of it for State, county, and municipal taxes, leaving only about $500,000,000 to carry on commerce unobstructed by the taxgatherers.

Sir, in vain will you clamor against credits; in vain laud the cash system; in vain declaim against mortgages while this is the situation. In vain will you look for the permanent return of prosperity while there is insufficiency of currency. Our population and commerce are increasing rapidly; and even if we had all the currency which was needed now it would be wholly inadequate five years hence. There must be a constant increase of currency to keep pace with this increase in population and business. We had this partially provided for by what was known as the Bland Act of 1878, which required the coinage of not less than $2,000,000 and not more than $4,000,000 worth of silver per annum, but in 1890 the Republican party repealed this act and substituted in its stead what is known as the Sherman Act, which stopped the compulsory coinage of silver and provided instead for the issuance of gold and silver obligations upon bullion purchased and deposited in the vaults of the Treasury in bullion form.

At this point, Mr. Chairman, I desire to comment very briefly upon the Sherman law. It was recognized at the time as a deadly blow aimed at silver, but the Republican party put it through against the protest and over the opposing votes of every Democrat in Congress. Mr. Bland, the author of the act of 1878, under which $400,000,000 of silver was coined, predicted at the time the calamity that would come from it. Mr. SHERMAN, the author of the bill, has since admitted, as I stated in another connection, that its object was to prevent free coinage of silver. When the Democratic convention met it denounced the Sherman law as "a fraud and a sham" and demanded its repeal. It was foreseen then, it is known now, that to buy silver and issue gold obligations upon it, instead of coining and letting it stand upon its own basis, meant the use of silver only as a commodity and its ultimate destruction. It was repealed in pursuance of promise by those who denounced it.

DISASTERS OF REPEALING THE BLAND LAW AND PASSING IN ITS STEAD THE SHERMAN LAW.

Mr. Chairman, let us look at some of the disastrous consequences which have flowed from the Sherman Act. While we coined silver under the Bland Act we had no difficulty in maintaining specie payments. About $100,000,000 of gold was bought many years ago by the issuance of bonds to enable the Government to resume specie payments. This was held for the redemption of the $346,000,000 of greenbacks issued by the Government, and proved ample for the purpose. But when the Sherman law was passed and $150,000,000 of obligations which might be redeemed in gold were issued upon the silver bullion purchased, that became an additional strain on the $100,000,000 of gold reserve. In addition to this there was in circulation $200,000,000 of national-bank money redeemable in greenbacks. Being so redeemable and the greenbacks in turn being redeemable in gold, these also became virtually an additional burden on the gold reserve, and we had the anomaly of $700,000,000 of paper resting on $100,000,000 of gold.

The addition of the Sherman notes to the paper demands on the gold reserve made the strain so great that it was found insufficient to meet it, and the Government has since from time to time gone into the market and bought more gold with which to maintain specie payments. I regard this and high taxation as the most fruitful sources of the panic which almost bankrupted the country. I think the repeal of the Bland Act and the enactment of the Sherman law instead one of the greatest calamities that has characterized Federal legislation in two decades. If we had continued to coin silver and let it stand on its own basis instead of issuing gold obligations upon the bullion, as was done by that act, silver would have taken care of itself.

DISASTERS ACCUMULATED UNDER THEIR AUTHORS.

Sir, the Administration of President Harrison stayed in power long enough to feel the folly of this unwise legislation. The large surplus which they had obtained from the Democratic Administration was swept away and became nothing. Deficiency was staring them in the face. The gold reserve was run down until they prepared to issue bonds for the purchase of gold before the close of his Administration. But finally it was ascertained that by changing the system of bookkeeping, by raiding the trust funds of the Treasury and counting them as reserves, they could bridge over until the present Administration, which had then been elected, should take charge. In this way they dumped their disasters onto the present Administration. We inherited from them a bankrupt Treasury, a system of taxation that yielded less rev-

enue than was expended, and a panic in full blast. Our people have worked and struggled ever since like slaves. Their corncribs and wheat bins are overflowing with abundance, but so disjointed had they made our finances that the prosperity worked for and hoped for was slow to return.

DIFFERENCE BETWEEN THE BILLS.

Mr. Chairman, two bills are presented for our consideration. One is the House bill, which provides for the issuance of a new quality of bonds to keep up the gold reserve, and for the issuance of certificates of indebtedness of the Government to meet any deficiency in the current revenues; the other is a bill sent us by the Senate as a substitute therefor, which meets the demand for money in a different way and a better way. We now have silver bullion in the Treasury which cost $127,000,000, the seigniorage on this, or profits from its coinage, would be about $40,000,000, and the Senate bill utilizes this seigniorage by putting it in circulation.

The House bill provides for a temporary currency to be withdrawn at the end of a few years, thereby producing stringency when withdrawn. The Senate bill borrows nothing, goes in debt for nothing, but utilizes what we already have. It adds permanently to the currency of the country instead of laying the foundation for future stringency. The Senate bill by section 3 provides that no national-bank notes of less than $10 shall be issued, thus leaving the field of small denominations to silver and silver certificates alone. Section 4 provides for the redemption of the notes of the Sherman Act and the greenbacks in gold or silver, at the option of the Government.

The gentleman from Maine tells us that the Government will have no difficulty within five years in taking in all the Sherman notes and issuing silver in their stead. Yet he refuses to pass this law which provides that it shall be done. As I have indicated, the Government has already a large amount of silver bullion on hand. The Senate concluded it had better coin this at a profit of $40,000,000 or $50,000,000, and thus obtain money to meet current expenses, than by issuing any kind of bonds, high or low, short or long. There is no ill for which the House bill is a remedy.

Sir, the Secretary of the Treasury has told us that we do not need additional revenues, that the revenues of this year will be within twenty millions of the expenditures, and that next year there will be a surplus. So we shall see over one hundred millions of money in the Treasury in excess of the gold reserve after paying all deficiencies. And yet we are solemnly asked to go on and provide for a contingency that can never happen. Such expensive child's play, Mr. Chairman, I do not intend to take any part in.

Mr. LACEY. Will my friend permit a question?

Mr. McMILLIN. With pleasure.

Mr. LACEY. My friend from Tennessee, being upon the Ways and Means Committee, is familiar with this question of revenue, and I will ask him whether he has observed that for some time past the shortage runs from $500,000 to $800,000 a day, and whether he thinks, judging by our present experience, that the deficit will be less than twenty millions for the current year?

Mr. McMILLIN. I think the amount of deficiency is overestimated by my friend. Just what it will be I can not say, but I will state to the gentleman that I have been astonished at the accuracy with which the Treasury experts figure out what will be the revenues for any given period of one or two or three years. I do not know just what the deficit will be, but this I do know, and it is the material question for consideration, that there is no possible state of affairs which can call upon one-half the money that will be in the Treasury in excess of the gold reserve within the next three years.

CONDITION OF THE TREASURY.

Mr. Chairman, in further response to the gentleman from Iowa I will say that the pretenses under which the majority of the House passed the House bill authorizing the sale of bonds and the issuance of certificates is the maintenance of the gold reserve and to meet a deficiency of revenues.

Let us examine the condition of the Treasury and see what it needs. The Treasury contains an available cash balance, including the gold reserve, of $181,000,000. Inside of sixty days it will be over a quarter of a billion dollars, about one-seventh of all the currency in existence. Sir, will the gentleman tell us what need he has for certificates of indebtedness? If, instead of his bill, the Senate bill should pass, we would get the benefit of the seigniorage now locked up in the Treasury, and thereby add forty millions more to our available cash and to the circulating medium. The Secretary of the Treasury informs us that very soon our revenues will equal our expenditures. So it now looks like that very soon the problem with us will be how to get this vast sum in circulation, instead of adding to it and hoarding.

REDEMPTION IN GOLD OR SILVER AT THE OPTION OF THE GOVERNMENT.

Mr. Chairman, there is another particular wherein I must prefer the Senate bill to that of the House. It provides for the redemption of the United States Treasury notes in gold or silver at the option of the Government. Unfortunately, as is admitted by all, when we resumed specie payments we allowed by practice the note holder to demand gold or silver at his option instead of the Government paying in gold or silver at its option. Under Mr. Hayes this was started. It was continued under Presidents Garfield and Arthur, and was the custom when the present Secretary, Mr. Carlisle, took charge. He found the Treasury bankrupt, the gold reserve running down, and hard times prevailing. He feared to change the custom in the midst of the panic lest he should increase the general distrust and intensify the panic. But the gold reserve will soon be more than one hundred and twenty-five millions. Every consideration admonishes us to change this practice. What private creditor owing a debt and having the option to pay in either of two commodities, say wheat or corn, tobacco or barley, iron or lead, gold or silver, would not exercise that right and pay in that commodity which suited his convenience? What court of equity would not declare and enforce this right?

Our failure to exercise this option has cost millions, and will cost more if continued. How does it operate? Whenever a strong organization wants gold for speculation or shipment it has only to get greenbacks or Sherman notes issued on silver bullion, go to the Treasury, and drag it out. This forces a sale of bonds to get more gold. Whenever investors want more nontaxable United States bonds, whether to bank on or as a permanent investment, all they have to do is to gather up these notes, with them draw out the gold reserve, and they force the sale at which they propose to be the bidders. So this may go on as long as this greed for gold continues, or till the hunger for bonds is glutted. Meantime each sale of bonds puts more money not needed into the Treasury and thereby draws it from commerce, where it is badly needed.

DO NOT DESTROY GREENBACKS.

As a remedy for this admitted evil we are told to issue five hundred millions of bonds and retire all the Treasury notes; to supplant a noninterest-bearing, taxable, circulating note with an interest-bearing, nontaxable, noncirculating bond. In other words, we are assured that if we will burn our barn we will rid ourselves of rats.

Sir, I am opposed to this. It would be ruinous to contract the currency by destroying between one-fourth and one-third of all in existence. Such a panic has not been seen as would ensue from a sudden contraction of this magnitude. There is a surer, speedier remedy. It is the one provided by the last section of the Senate bill, redeeming in either gold or silver, at the option of the Government. The French have this system, and it works perfectly. Their payment is made in gold or silver, or both, as the Government prefers. And so wisely have they managed their affairs that notwithstanding the heavy drain caused by the Franco-Prussian war, notwithstanding every man, woman, and child in France had to pay $30 indemnity—$1,000,000,000—to Germany, France came to the rescue of boastful England and saved her when Barings failed. The demand for specie and for sale of bonds would both cease if we exercised this option.

The bill was so drawn by the Committee on Ways and Means as to issue bonds, with them buy gold and redeem the greenbacks, and then withhold the greenbacks from circulation by refusing to pay them out on the current demands of the Government. If this had been consummated a noninterest-bearing circulation would have been destroyed and interest-bearing, noncirculating bonds substituted instead. But this House took the same course on this subject taken by the last House and refused to do it. The committee was compelled to amend the bill regarding this.

FREE AND UNLIMITED COINAGE OF SILVER.

Mr. Chairman, the most important question presented by the Senate substitute is the free and unlimited coinage of silver at the ratio of 16 to 1. The gentleman from Maine [Mr. DINGLEY] tells us that an excessive production of silver has been a potent factor in the demonetization of silver, and excuses it on this ground, but, unfortunately for his argument, he makes the confession that silver was at a premium over gold at the time it was demonetized by this country in 1873 and at the time it was demonetized by Germany. Hence, away with the argument that the abundance of silver caused this demonetization; away with the argument that there existed a necessity for it at the time it was done. Much has been said in this connection to prove that the demonetization by this country was not brought about by concealment, fraud, or deceit. I know, Mr. Chairman, that these things were charged all over the country at the time the demonetization was found out. From public platforms, from the hustings, from the halls of legislation, went out the charge that the crime had been surreptitiously committed. No man for years confessed here or elsewhere, so far as I know, that he had part or lot in that crucifixion. Never until within the last four years have I heard any man in Congress admit his part in it.

Sir, in this connection I wish to say that I am not for gold monometallism or for silver monometallism. I am for bimetallism, in the broadest and truest sense of the word, for the concurrent use of the two metals, which would put each on a par with the

other. I do not propose in what I shall say to question the motives of those who differ from me. I look at the question from a different standpoint, and come to a different conclusion from other gentlemen, and give the reasons why I can not join in the raid made on silver—the war of extermination begun in England in 1816, which was taken up by the United States in 1873, and about the same time in Germany, and later on by other countries of the world.

Mr. Chairman, the gentleman from Missouri [Mr. HALL] has called attention to the magnitude of the world's fiscal transactions, estimating them at $150,000,000,000 annually. If this proves anything it proves that in the affairs of mankind a large amount of metallic money can be used. I have shown that the world's gold and silver is but little more than $8,000,000,000. Does he not think that more than this could be used where the annual transactions are twenty times this? This only goes to show the extent to which we might use money.

Sir, he and other gentlemen have dwelt at length upon the power of "confidence" in commerce. Nor do I underrate it. It is a strong element. But confidence goes when the panic comes. I beg him to remember that the more of our business there is done in cash the less room there is for ruin when the panic does come. Confidence may postpone a debt, but can not pay it. Confidence does not pay taxes.

COST OF MONOMETALLISM.

When the Latin Union met to guard against a deluge of silver poured into their mints after we demonetized silver, Belgium, Italy, and Switzerland wished to declare for a single gold standard; France resisted. France is one of those countries now resisting any agreement which discredits silver. Her action is explained by the fact that, with more silver than any other nation circulating at par among her people, a reduction in the ratio would result in a direct loss of just such proportion of their present circulation. Four billion dollars of silver in the world would, if a new ratio of 32 to 1 were agreed upon, destroy $2,000,000,000 of value.

France has come to the rescue of almost every other country financially during these breaking times.

It is variously estimated that the arts consume from 10 to 65 per cent of the annual output of the precious metals.

But the world's production of gold and silver from the fatal year 1873 to 1895 was gold, $2,526,834,000, and silver, $2,754,542,900, both in coinage values. The commercial value of the silver was but $2,151,474,700, but the coinage of the mints of the world was gold, $3,404,703,469, and silver, $2,756,423,015, or more than one-third more gold than was mined and more ounces of silver than were actually mined, and the recoinages of old coin is far from offsetting the demands for the arts.

Now, if silver of the commercial value of $2,151,000,000 has been coined into $2,756,000,000, why has not this been an addition to the world's wealth of $600,000,000? Why will not the reduction of its value to its commercial basis destroy that wealth of six hundred millions? Why has not this legislation thus destroyed half the value of the present and future output of the silver mines of the world, and if legislation has destroyed this value that is more than a loss of one hundred millions per year, why should not legislation try to restore that value? If legislation is inoperative to affect these values, why hesitate to grant the relief asked? Why contest with such ferocity the indulgence of a harmless sentiment to a clamorous people? Why guard with so anxious restraint the appetite of the hungry? It is useless to cry; the viands in sight are but the illusions of the Barmecide. The agony is as real as that of Tantalus.

Sir, the gentleman from Minnesota [Mr. TOWNE], to whom I am indebted, the gentleman from Mississippi [Mr. WILLIAMS], and other distinguished gentlemen have so ably presented the other phases of this question that I may be relieved in a great measure from what I would otherwise be very glad to undertake in connection with it. They have shown how it has affected prices, and they have accounted thereby for the reduction of prices; and I leave that field that has been sufficiently cultivated by them and others.

Mr. Chairman, originally, in the use of gold and silver in exchange of commodities, or, as we usually term it, in the purchase of commodities, they weighed the metal. But subsequently it was found more convenient to have it put into forms, where the weight and fineness could be stamped on it by law, than for each trader to carry around with him his scales to ascertain its weight and his acids to fix its fineness. Hence, coinage laws became a convenience, and in the rapid transactions of a busy world the English pound and the American dollar became a necessity.

When two things are exchanged, the one for the other, it may be truly said the one buys the other. If A exchanges a horse with B for one hundred silver dollars, it is true that B has bought the horse with $100 and A has bought the 100 silver dollars with the horse. If the world demands horses and there is a scarcity, the more dollars they will bring. If the world needs money and there is a scarcity, the more horses it takes to procure it, other things being equal. Therefore the greater the scarcity of money the more horses it takes to buy or get the money needed, and the scarcity of money will be manifested in a fall of prices.

But there are other matters to which I wish to call attention, and I must hasten on. At this point, allow me to ask, Mr. Chairman, how much of my time remains?

The CHAIRMAN. Three minutes.

Mr. MCMILLIN. I shall be very much obliged if I can obtain at this point a little extension of my time—ten or fifteen minutes—until I can present one or two other phases of this question.

Mr. COX. I ask unanimous consent that the time of my colleague [Mr. MCMILLIN] be extended.

The CHAIRMAN. Is there objection?

Mr. JOHNSON of North Dakota. I wish to inquire whether the granting of this request will prevent the gentleman from Minnesota [Mr. MCCLEARY] from occupying the hour from 4 o'clock till 5 o'clock.

The CHAIRMAN. Under this arrangement the gentleman from Minnesota would be recognized at about a quarter after 4 o'clock.

Mr. MCMILLIN. I shall try, and I think there will be no objection, to get an extension of the time for the recess, so that the gentleman from Minnesota may have his full hour.

The CHAIRMAN. Is there objection?

There was no objection.

CAN AMERICA MAINTAIN BIMETALLISM?

Mr. MCMILLIN. Now, Mr. Chairman, I come to the question which I think is of the very essence of this discussion—the most important involved in it. That is, Can the United States establish and maintain free coinage at the ratio of 16 to 1? Sixteen times as much silver in a silver dollar as gold in a gold dollar.

Mr. Chairman, I realize that the greatest difficulty we have to encounter in advocating free and unlimited coinage of silver at 16 to 1 is the fact that many people have been brought to believe that it is impossible for the United States to do this alone. If we could only convince the American people that there was no danger in this undertaking to our finances and industries I think we would have comparatively little difficulty in getting the restoration of silver. And in the presentation of this important question I hope to be able to show that the stock of gold and the stock of silver in the world are about equal in value, and that silver is already doing substantially one-half of the fiscal work that is done by coin in the world. I will show next that nearly two-fifths of all the coined money in the United States, United Kingdom, France, Germany, Austria-Hungary, and Russia is silver.

I shall make an effort to show, in answer to those who charge to the over production of silver the decline in its value, that from 1792 to 1840, when we had bimetallism, and even after that time, during the bimetallic period, there was a greater amount of silver produced by the world in proportion to gold than there was from 1874 to 1894, the period of demonetization of silver. I hope to be able to establish that the ratio of the production of silver to gold remained substantially uniform, varying from 15 to 1 and 16 to 1 for nearly two hundred years, and that this ratio of production and value did not materially change until after hostile legislation against silver.

Sir, I will try in the next place to show that the power of the United States is such in commerce, in manufactures, in production, in transportation, in banking, and in everything that makes the people great that we can, if we will, restore silver to its original use.

STOCK OF GOLD AND SILVER IN THE WORLD.

Sir, according to the Report of the Director of the Mint for 1895 the stock of gold in the world is $4,086,800,000; the stock of silver in the world, legal tender and limited legar tender, is $4,070,500,000. The difference in value is therefore on the two metals only four-tenths of 1 per cent. Hence I may claim on this authority my first proposition that the two metals extant in the world are about equal in value and that silver is now doing one-half of the metallic work of commerce.

Sir, in the next place, let us see what part silver takes in commercial business in what are usually regarded as the principal commercial countries of the world.

The following table exhibits it, and shows that nearly two-fifths of the metallic circulation of these countries is silver.

	Gold.	Silver.
The United States	$618,100,000	$416,700,000
The United Kingdom	580,000,000	113,400,000
France	850,000,000	487,900,000
Germany	625,000,000	215,000,000
Austria-Hungary	140,000,000	204,000,000
Russia	480,000,000	530,000,000
Total	3,293,100,000	1,967,000,000

THE RATIO OF SILVER AND GOLD.

Sir, the distinguished gentleman from Ohio, Senator SHERMAN, in a speech outside the Senate, when discussing the ratio between gold and silver, is credited with saying:

The enormous increase of the production of silver in the United States, Mexico, and Australia has disturbed this ratio and has lowered the market value of silver.

Sir, this is a most astounding proposition, and as it is the favorite basis for argument of those who hold to gold monometallism, let me compare it with the facts of the case as shown by Senate Report No. 256, page 163, Coinage Laws of the United States for 1792 to 1894. It will there be found that the production of the precious metals, gold and silver, in the world, coinage value, from 1792 to 1840 was, gold $529,942,000, silver $1,364,697,000.

Now, sir, let us take another period when hostile legislation had been enacted for the destruction of silver; from 1874 to 1894 the production by the world was, gold $2,419,043,000, silver $2,687,833,000. It will thus be seen that, while there was nearly three times as much silver coined from 1792 to 1840 as there was gold, the ratio of the two metals remained almost stationary, and at the time of the demonetization of silver by the United States it was 3 per cent higher than gold. But when the scheme of demonetization hostile to silver had been worked in 1874 the value of silver declined, notwithstanding there was nearly as much gold produced as there was silver. So, instead of the increase of production disturbing the ratio, as was claimed by Mr. SHERMAN, hostile legislation has disturbed it.

Mr. Chairman, I regard this as a very important branch of this discussion. I have therefore collated the statistics showing the ratio of silver to gold for over two hundred years. The first hundred years, from 1687 to 1787, the ratio was generally a little below 15 to 1. In each of those periods it was exactly 14.92. The following table shows the exact figures:

In 1687, ratio in value of silver to gold	14.92 to 1
In 1787, ratio in value of silver to gold	14.92 to 1

It fluctuated about that figure one hundred years.

Ratio in—		Ratio in—	
1800	15.68 to 1	1881	18.16 to 1
1820	15.62 to 1	1882	18.19 to 1
1840	15.62 to 1	1883	18.64 to 1
1860	15.29 to 1	1884	18.57 to 1
1870	15.57 to 1	1885	19.41 to 1
1872	15.63 to 1	1886	20.78 to 1
1873	15.92 to 1	1887	21.13 to 1
1874	16.17 to 1	1888	21.99 to 1
1875	16.59 to 1	1889	22.10 to 1
1876	17.88 to 1	1890	19.76 to 1
1877	17.23 to 1	1891	20.92 to 1
1878	17.94 to 1	1892	23.72 to 1
1879	18.40 to 1	1893	26.49 to 1
1880	18.05 to 1	1894	32.56 to 1

Now, sir, in all the researches that I have been able to make I fail to find any corresponding increase in the production of silver that would warrant this rapid decline in its price.

Mr. WILLIAMS. Will my friend pardon me in connection with that?

Mr. McMILLIN. With pleasure.

Mr. WILLIAMS. I should like to call my friend's attention to the fact that in the four years' interval of the greatest increase of silver production in the history of the world, from 1887 to 1891, there was an increase of $49,000,000 only and that for the four years of the greatest increase in the production of gold in the history of the world, from 1849 to 1853, there was an increase by the enormous amount of $128,000,000 in gold, and that at the time when the two metals were conjoined by legislative authority they did not part from the market ratio at 15½ to 1.

Mr. McMILLIN. The gentleman is entirely correct in that, and I thank him for his figures, for they certainly shed light upon the question. Yet, with that increase of forty-nine millions of silver, we are solemnly told that the United States can not take charge of the additional increase of silver that would be brought about by legislation favorable to silver.

POWER OF THE UNITED STATES.

Mulhall says that, measured by the capacity to produce, measured by the capacity to accomplish, the power of the United States is about as great to-day as that of Great Britain, France, and Germany combined, and that, too, when, weakening them, they have 4,000,000 men in the field who are out of industrial pursuits—when it takes 1,000,000 of their able-bodied men to support those under arms. Now, what are the facts upon which this opinion is based? I will compare what France has done, and I hold that we bear a more potent relation to the world to-day than either France or the Latin Union, when France alone, or with that union, made coinage successful for so long a period at a less ratio than that at which the world produced silver and a less ratio than we propose to adopt now.

Sir, it is claimed by some that it will be impossible for us to maintain bimetallism, even if we undertake it. In reply to this, I wish to say that France maintained bimetallism at the ratio of 15½ to 1 from 1803 to 1873. During all that time, during all her wars and strifes that characterized the period, whoever wanted gold carried silver to the French mints and obtained it; whoever wanted silver carried gold to the mints and obtained it. Her ratio was lower than our 16 to 1 ratio, lower than the Mexican ratio, lower than that of some of the coinage countries. Still there was not that flooding of the mints, there was not that driving away of gold that is feared by many now.

Mr. Chairman, I insist, and believe that I can show, that we are in far better condition for such an undertaking than France then was. We have a greater proportion of commerce than she had. We have a greater proportion of the manufactures of the world than she had; a greater proportion of steam power than she had. Our agriculture bears a greater proportion to that of the whole world than hers did. Let us examine.

MANUFACTURES.

In 1860 the world's product of manufactures amounted to $12,000,000,000. Of this France's manufactures were $1,900,000,000, or about 16 per cent. But in 1888 she produced about $2,425,000,000 worth out of the world's production of $23,000,000,000 worth; only about 10 per cent. We may therefore take the period of 1870 as an average between these two.

Now, let us see how it is with the United States. In 1888 the total manufactures of the United States was $7,215,000,000 worth, or 31 per cent of the world's entire product.

RAILWAYS.

In 1870 the railway mileage of France was 9,770, out of the world's mileage of railways amounting to 128,235. It will thus be seen that France's proportion of the world's mileage was less than 8 per cent. In 1888 the world had in it 354,310 miles of railroad. The United States had 156,080 miles, which was 43 per cent of the entire mileage, and after equaling the mileage of all Europe our excess above Europe would more than circle the globe.

BANKING CAPACITY.

But, Mr. Chairman, there is probably no better means of comparing our capacity now to maintain free coinage with the capacity which France demonstrated for maintaining it for seventy years than by comparing the banking capacity of the two countries in the two periods. In 1870 the world's banking power was in the neighborhood of $8,000,000,000; that of France was only 4 per cent of this amount, or $320,000,000. In 1890 the banking capacity of the world had doubled, and amounted to $16,000,000,000, of which the United States contributed over $5,000,000,000, or 32 per cent. If France could and did maintain coinage at 15½ to 1 when her banking capacity was only 4 per cent of that of the world and there were $30 worth of silver produced for every dollar of gold production, who will dare say that the United States, with one-third of all the banking power of the world in her borders, may not maintain free coinage, especially when the ratio of the production of silver to gold is as 16½ to 1 instead of 32 to 1?

RAILWAY FREIGHTS.

But let us take another one of the elements of power or means of gauging it and see how we compare with France.

In 1870 the railway freight of Europe was 400,000,000 tons; that of France was 52,000,000 tons, or 13 per cent. In 1888 the tonnage of Europe was 765,000,000 tons; that of France 78,000,000 tons, or little more than 10 per cent. At the same time the railway tonnage of the United States was 590,000,000 tons, or more than seven times that of France and three-fourths as much as all Europe combined. But, Mr. Chairman, if it is insisted that we would more properly gauge our capacity by our water tonnage—that is, that portion of it which is carried on canals and rivers—we are equally safe in comparison with France. In 1870 the tonnage of France was 14,500,000 tons, and 24,500,000 tons in 1885. The tonnage of the United States in 1885 was 51,000,000, or double that of France. The canal and river mileage of France is 7,730 miles; of that of the United States is more than 51,000 miles, or three-tenths of all the mileage of that character on the globe. I have left out of this computation what is probably the greatest element of our water-carrying trade, to wit, the carrying on the Great Lakes.

COMMERCE.

Mr. Chairman, I think it is safe in making a computation of this kind to look to the commerce of the two countries in that broader sense which implies the foreign carrying trade. Let us see how we stand there by comparing exports and imports. In 1870 the exports and imports of the world were $11,000,000,000. Those of France were $1,100,000,000. In 1889 the world's total was about $17,000,000,000. The total of the United States was $1,600,000,000, or one-tenth. I think it not at all unsafe to say that the comparison would be still more in our favor if we could get all the data showing the internal commerce of the United States, transactions between the States, and citizens.

That great statistician, Mr. Mulhall, on beholding this wonderful advancement, wrote to the North American Review in 1825:

If we take a survey of mankind in ancient or modern times as regards the physical, mechanical, and intellectual force of nations, we find nothing to compare with the United States in this present year of 1895. The physical

and mechanical power which has enabled the community of woodcutters and farmers to become in less than one hundred years the greatest nation in the world, is the aggregate of the strong arms of men and women aided by horse power, machinery, and steam power applied to the useful arts and sciences of everyday life.

STEAM POWER.

In 1870, according to this wonderful man, the steam power of the world was 18,460,000 horsepower. That of France was 1,850,000 horsepower, only about 10 per cent of the entire amount. But in 1888 the total of the world had risen to 50,150,000 horsepower, of which the United States held 14,400,000 horsepower, or more than 28 per cent. It would be safe to say that to-day we have this capacity in almost a greater degree than was held by the entire world in 1870, upon which Mulhall is moved to say:

Here was seen that the United States possesses almost as much energy as Great Britain, Germany, and France collectively.

In 1895 this had risen to 16,940,000 horsepower.

We have so much more railroad mileage than the balance of the world that we could parallel with our lines every other road in the world and have enough left to put a railroad around the earth, having 3,000 miles to spare.

We carry more railroad freight than all the world besides.

LET US BANISH TIMIDITY.

To those timid statesmen who fear to move unless England will give them permission, I desire to say that England never has been essential to the success of bimetallism, and she is not to-day. She demonetized silver in 1816, and for more than half a century the balance of the world utterly ignored her and kept up bimetallism. Despite her by this judicious use of both metals they had silver at a premium when it was demonetized in 1873. Hence my assertion that she is not essential to the success of bimetallism. Of course the more nations adopt it the easier it is to accomplish it. International bimetallism is much to be desired if it is obtainable, but I do not believe that with the power I have described we should adhere to gold monometallism as our permanent policy. I am told by some that gold monometallism is bound to succeed; but this is no argument with me so long as I believe as I do now that it ought not to succeed. The right is on the side of the use of both metals, and on that side I take my stand whatever be the final result.

Sir, my distinguished friend from Maine protests that he is a bimetallist. If he is really and genuinely one, why does he not propose some measure looking in that direction? His party has control of this House; it has the organization of the Senate. He and his compatriots were wont to stand up here and urge upon us during the last Congress affirmative legislation. Now that he is weighted with the responsibility of legislation, why does he sit supinely by and proclaim to the country that, while he is for bimetallism, he is for nonaction? Why not do something? Why not propose something? Why not find a thread that shall lead out of this labyrinth of woes into which his party during the last Administration plunged us? If he means by international bimetallism to wait until England proposes something, he will be gray and decrepit with age before the rainbow that he is chasing is ever nearer to him.

As well might our colonial fathers have sat down around Boston Bay and waited for England to cease her oppression, to remit her taxes, to release our citizens, and to give us justice, as for us to sit now in these Halls folding our arms, shutting up our eyes, and implore that great country to desist from the half a century of grinding and oppression that has characterized her fiscal policy. I beg him in this connection to remember that there is no circumstance that can induce England to take this course. Her premiers uniformly proclaim that the balance of the world owes England many billions of dollars which annually bear many millions of interest, and the value of which would be reduced if the world returned to the bimetallism in which most of its debts were contracted. The English people have ever manifested an indisposition to give home rule to Ireland, but the gentleman from Maine will remember that she was willing to take Gladstone and Irish home rule, coupled with monometallism, rather than to risk the present status and bimetallism under Balfour and his followers.

We are asked to take no stand on this important question. It is demanded of us that we shall wait. As we led out among the first outside of England in the work of demonetization, is it not fitting that, as we all confess the error of that way, even the gentleman from Maine himself, that we should be the first to make known our sentiments, to proclaim bimetallism and practically inaugurate it? The gentleman from Maine has told us, which we knew before, that the prime minister of France has announced his willingness to join in the movement for the restoration of bimetallism in the great powers of the world.

Why not trust France now as we had to trust her in 1776? Why not help her now as she helped us then? Is it possible that the American people have degenerated and have less spirit than they had in days gone by, when we were only three millions and a half strong? Weak, apparently helpless and defenseless, at the arrest of our fathers and goaded by unjust taxation, our representatives assembled in Independence Hall on the 4th of July, 1776. There that great Virginian stood, with the most immortal declaration that was ever made in his hand, and proclaimed his readiness to die in defense of those principles. We defied England and her power then, and although it took eight years to do it, we established our independence and set the pace of the world in the march of progress and in the science of free government.

Later on, in 1812, although England did not dare to invade our homes, relying on her superb and incomparable navy and its great prowess, she asserted the right to search our ships and seize our seamen on the high seas.

Although we were still weak and feeble, again the spirit of '76 was in our fathers, and they inaugurated the war which was to emancipate the seas as Washington had emancipated the land. This Capitol went up in smoke; the White House, at the other end of the Avenue, was reduced to ashes. Ruin stalked abroad throughout the East, but the great Jackson, at New Orleans, gave the mother country the worst whipping she has had in modern times, and we threw off from our shoulders the "old man of the sea."

Nor was this all. In 1823, when monarchy and despotism were anxious to stop the inroads made upon their power and extend their conquests to this new continent, President Monroe called in counsel the great author of the Declaration of Independence as to whether, when only ten and a half millions strong, we should defy the whole world and establish what is now known as the Monroe doctrine. Jefferson began his reply to what he regarded the most important question which had been contemplated since the Declaration of Independence, and said that we should make haste to proclaim, first, that we would take no part in the broils of Europe, and second, that no European power should, either by accession, purchase, or conquest, extend its territory on this continent.

Again American manhood was asserted and American principles prevailed. Now that we are seventy millions strong, Mr. Chairman, and have seventy billions of wealth, is it possible that we are going to falter? Can it be that we are going to cringe and cower in the performance of what is right? For one, I am for the same boldness in declaration and action that characterized our sires, and I am in favor of proclaiming to the world, as they did, the correct principles, whether to be successful or unsuccessful, and try the experiment of the free and unlimited coinage of silver, with the concurrent use of both gold and silver, in which lies our only road to permanent prosperity.

Mr. Chairman, Mulhall says that the power of the United States to-day is three times what it was in 1860; and yet one hundred and fifty days after the war commenced, and during the whole war between the States, there was not an outside power on this earth that could have whipped either the Federal or the Confederate army, except the Federal force itself, and that took three years. If we are three times greater to-day, what may we not do? If we will wake up, if the slumbering giant will break the threads by which it has been bound and will go forth and declare the American doctrine, that as silver is produced at 16 to 1, as it has been maintained at 16 to 1, as the debts existing have been contracted at 16 to 1, we will have the courage to do justice to ourselves by adopting free coinage at 16 to 1, and give true, genuine bimetallism to the world, and thus set the pace in finance as we set the pace in freedom. [Applause.]

Free Coinage of Silver—No Further Issue of Bonds.

SPEECH

OF

HON. HENRY W. OGDEN,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. OGDEN said:

Mr. CHAIRMAN: I favor the free and unlimited coinage of silver at the ratio of 16 to 1 by the United States, independent of the action of any foreign country whatever. I am utterly opposed to the issue of bonds in the time of peace, by which the indebtedness of this country is increased. Sir, in the short space of time allotted to me, an exhaustive discussion of the question is mani-

festly impossible. I shall, however, endeavor to suggest some points that may be of interest to all.

I will allude first to the oft-reiterated statement which seems to be the main bulwark and support of some of those who are opposed to free silver; the statement with regard to the amount of the free coinage of silver in the United States prior to 1873.

It is a favorite statement of many who oppose the opening of the mints to the free coinage of silver that prior to 1873 there were only eight millions of silver dollars coined in the United States.

Mr. Chairman, anyone acquainted with the true facts should hide his head in shame for attempting before an intelligent audience, and much more so before the whole American people, to use such a statement as an argument for his opposition to the free coinage of silver. As a matter of fact, sir, there were only 8,000,000 of silver dollars coined in this country prior to 1873; but when a witness goes upon the stand in any court he is required to tell the truth, the whole truth, and nothing but the truth, and is not at liberty to withhold any facts concerning the matter in question. Now, why do not these gentlemen, who volunteer as witnesses on this question, tell the whole truth? They tell us that only 8,000,000 silver dollars were coined prior to 1873. This statement is true; but they do not tell us, Mr. Chairman, that prior to 1853 all of our silver coinage, whether it was a dollar, or 50 cents, or 25 cents, or even as small as 10 cents, was legal-tender money in the United States.

The coinage of silver from the time of the opening of the mints in 1792 to 1846 was $69,074,427.

What was the coinage of gold during the same period? It was only $52,560,852.

The coinage of silver from 1792 to 1846 exceeded the coinage of gold by over $16,000,000, and the total amount of silver coined from 1792 to 1873 was, in round numbers, $147,491,000.

Now, Mr. Chairman, if one were disposed to indulge in misleading statements similar to those used by gentlemen on the opposing side of the question, and should state that there were only 19,000,000 of gold dollars coined prior to 1873, which is literally true, and to rest the statement there, what would any person acquainted with the true facts think of such an argument? The real truth is, Mr. Chairman, that in the same period there was a total gold coinage of $852,114,000. Unlike these gentlemen, I wish the whole truth to be presented, in order that each and every fair-minded, thinking person may judge for himself the true situation.

I present here some figures showing the relative amounts of the coinage of gold and silver:

Amount of gold coined from 1792 to 1846	$52,560,000
Amount of silver coined from 1792 to 1846	69,074,000
Amount of gold coined from 1834 to 1846	40,534,000
Amount of silver coined from 1834 to 1846	32,797,000
Amount of gold coined from 1873 to 1893	800,891,000
Amount of silver coined from 1873 to 1893	527,217,000
Coinage of gold from 1792 to 1893	1,653,000,000
Coinage of silver from 1792 to 1893	674,709,000

The gentleman from Tennessee [Mr. PATTERSON] tells us that silver was driven out of the country by the act of 1834. As will be seen from the table submitted, the coinage of silver from 1792 to 1846 was $69,074,000, this amount being full legal tender for all debts, public and private. In addition to this, the silver dollar of Mexico and the pillar dollar of Brazil were also legal tender at their face value. The 5-franc piece of France was legal tender at 93 cents. Large quantities of this coinage were in circulation, but the exact amount is not known. In order to prove that silver was not driven out of the country by the passage of the law of 1834 I will insert here tables showing the silver coin and bullion and gold coin and bullion imported into and exported from the United States from the year 1838 to 1847.

Value of silver coin and bullion imported into and exported from the United States, fiscal years 1838–1847.

Year ended—	Imports.	Exports.
September 30, 1838	$6,072,233	$2,767,783
September 30, 1839	4,430,596	5,884,433
September 30, 1840	5,797,656	6,948,714
September 30, 1841	3,719,184	9,190,949
September 30, 1842	3,329,722	3,679,537
June 30, 1843	5,253,898	1,220,533
June 30, 1844	4,217,125	4,271,098
June 30, 1845	3,251,392	6,395,516
June 30, 1846	2,867,319	2,275,920
June 30, 1847	2,546,358	931,723
Total	41,485,483	43,566,206

Value of gold coin and bullion imported into and exported from the United States, fiscal years 1838–1847.

Year ended—	Imports.	Exports.
September 30, 1838	$11,674,883	$740,263
September 30, 1839	1,164,580	2,892,310
September 30, 1840	3,085,157	1,468,300
September 30, 1841	1,269,449	843,383
September 30, 1842	757,294	1,134,002
June 30, 1843	17,066,437	300,258
June 30, 1844	1,613,304	1,183,116
June 30, 1845	818,850	2,210,979
June 30, 1846	910,413	1,629,348
June 30, 1847	21,574,931	975,301
Total	59,935,298	13,377,260

From 1792 to 1834 the coinage of gold was $12,000,000, and of silver $32,000,000. Under the operations of the United States banking system nearly all metallic money went into hiding, but was brought into sight again after the repeal of the charter of the United States Bank. As shown by the table submitted above, there was a difference only of about $2,000,000 in the imports and exports of silver by the United States from 1838 to 1846. The excess of imports of gold over exports from 1838 to 1846 was about $46,000,000, of which $40,000,000 was coined and went into circulation—went into circulation concurrently with silver, and both were legal tender in unlimited quantities.

From these statements it will be seen that gold and silver were coined and circulated concurrently.

Mr. REED, in discussing the theory of the metallic standard, on August 26, 1893, said:

> Bimetallism by a single nation does not seem possible; bimetallism by all the nations of the world seems to me not only possible, but feasible.
>
> You do not have to indulge in any farfetched theories to understand this. You do not have to discuss the theory of the Gresham law at all. All you have to do is to apply yourself to the history of the United States; and the speech of the gentleman from Tennessee [Mr. PATTERSON], a brave and admirable speech, shows conclusively that this country while it was pretending to be bimetallic in its standard was never really so; that one metal drove the other out of the country; that the standard was not possible of maintenance as long as there was an overvaluation.

Thus we see that Mr. REED gives his unqualified indorsement to these erroneous statements made by the gentleman from Tennessee [Mr. PATTERSON]. It can be said that each of the gentlemen is proud of the indorsement of the other.

Mr. PATTERSON also speaks of the increase of wealth from 1850 to 1860. His figures are correct and will not be disputed by anyone familiar with the statistics given by him. He gives the increase of wealth at about $9,223,000,000 in round numbers. The coinage of gold and silver during the period was $393,000,000. It was principally a gold coinage, because the mines of California had been discovered and many millions annually were added to our supply of circulating medium and to the world's stock of primary money. But our fathers did not demonetize silver during that time. They continued the coinage of both gold and silver, and then began the exportation, not of the silver coined by our Government, but of the bullion, which bore a greater value. The discovery of the gold mines during that period made us a rich people. We opened up trade with all the world. Our ships sailed the seas laden with American products, and the Stars and Stripes were known and respected all over the world.

Our commerce was second to Great Britain only. From 1851 to 1860 we exported the enormous sum of $423,580,000 of silver bullion, as shown by the Report of the Director of the Mint for 1895, page 295. It was not exported at 50 cents on the dollar. It was not discredited in the eyes of the nations of the earth. We did not say it was only worth 50 cents on the dollar. Its value had not been destroyed by adverse legislation—it had not been outlawed by our own lawmakers. No, Mr. Chairman, nothing of the kind. The good policy of the fathers of the Constitution was continued. The mints were open to all who had gold or silver bullion to coin. We exported this $423,000,000 in ten years and, during this unexampled period of prosperity, were indebted to the exportation of silver to pay our balances abroad.

I suppose that, under the latter-day statesmanship we are now treated to, our mints would have been closed in 1850—after the discovery of gold. Instead of having $423,000,000 to our credit, they would have discredited the white metal and would have taken from the people of this country the power to develop our commerce with other countries and to buy and sell, using both gold and silver at its coinage value. They would have discredited this silver—would have proclaimed to the world that we were coining silver worth only 50 cents on the dollar.

The gentleman from Tennessee seems to have an idea that the gold standard caused our prosperity during the period from 1850 to 1860. Mr. Chairman, this $423,000,000 of silver was shipped

abroad during that period, and we got dollar for dollar for it. He may, if it pleases him, call it being on the gold standard, but we did not discredit our silver at that time. What was the cause of this prosperity and of this tremendous increase in values from 1850 to 1860? It was because of the united value of our gold and silver, which stimulated all other productions and furnished home capital to embark in great enterprises. We had not become a nation of borrowers, and the country was free from debt.

Now, Mr. Chairman, the people of this country have been unfairly dealt with on the silver question by every Secretary of the Treasury and by every President since 1868. I will quote from reports of the various Secretaries of the Treasury to prove this statement. From 1792 to 1873 any holder of gold or silver, or silver bullion, could have had the same coined at the mints of the country in unlimited quantities, the ratio from 1834 to 1873 being 16 to 1. By the act of 1873 the coinage of silver, except for subsidiary coinage, ceased. This did not become immediately known to the people of the country, as the country had not been on a specie basis since 1860. The bonds of the Government issued for general purposes, amounting to hundreds of millions of dollars, were payable in legal tender and afterwards were made payable in coin. In speaking of this subject, the Hon. Lot M. Morrill, Secretary of the Treasury, in his report dated December 4, 1876, says as follows:

The report of the Director of the Mint shows that, notwithstanding the silver dollar occupied in law prior to April 1, 1873, the position of an unlimited legal tender, gold has, for many years past, been the money of payment in this country.

It appears that but a comparatively small sum in silver dollar pieces was ever coined, and that it at no time constituted an appreciable part of the circulation. This was due to the fact that silver was more valuable as bullion than its stamped or legal-tender value in the form of dollars. Since the fall of silver propositions for the revival of the silver dollar have been made, and the position which it would occupy with reference to unexpired coin obligations, should its coinage with unlimited tender be again authorized, has been the subject of considerable discussion.

The question whether the pledged faith of the United States to pay its obligations in coin would justify their payment in the silver dollar is of no small importance as affecting public securities of the United States. In any discussion of the question it must be conceded in the outset that the silver dollar was the unit of value, having the quality of legal tender for all sums and in all cases, and that the terms of the United States obligations do not exclude payment therein, and that the act of 1869, in which is the pledge of payment in coin, does not, in terms, discriminate against silver. These provisions are broad enough, in terms, to include payment in either gold or silver, and compels an inquiry into the history, production, issue, and subsequent treatment of these obligations, and the relative condition of gold and silver coin as money of payment in order to a correct interpretation of the meaning of the language "payment to be made in coin."

President Hayes, in his message to Congress dated December 3, 1877, used the following language:

I respectfully recommend to Congress that in any legislation providing for a silver coinage, and imparting to it the equality of legal tender, there be impressed upon the measure a firm provision exempting the public debt heretofore issued and now outstanding from payment, either of principal or interest, in any coinage of less commercial value than the present gold coinage of the country.

It is a fair inference, as shown by the above extract, that he favored the payment in one kind of money to the bondholder, which money he evidently deemed better than that used by the common people. The answer to this recommendation was the passage of the Bland-Allison Act by a Democratic Congress in 1878 over President Hayes's veto. This act restored the unlimited legal-tender power of the silver dollar for payment of all debts, both public and private.

The report of the Secretary of the Treasury of December 4, 1882, gives the amount of standard silver dollars coined up to November 1, 1882, coupled with the recommendation for the repeal of the law and the retirement of all silver certificates at an early date.

From report of the Secretary of the Treasury December 4, 1882:

Standard silver dollars and silver certificates.

There had been coined, on November 1, 1882, under the act of February 28, 1878, of standard silver dollars	$128,329,880
There were in the Treasury at that date	92,946,094
And in circulation	35,383,786
There were in circulation November 1, 1881, about	34,000,000
Increase	1,383,786

* * * * * * *

I refer for a more full discussion of this subject to my report of last year, and repeat my recommendation that the provision for the coinage of a fixed amount of standard silver dollars each month be repealed and the Department be authorized to coin only so much as will be necessary to supply the demand.

The recommendation is renewed for the repeal of the act requiring the issue of silver certificates and for a law authorizing measures for their early retirement from circulation.

The international monetary conference met in April last, on the day to which it had adjourned, and adjourned again sine die. It is not understood that it effected any important practical result.

President Arthur, in his message of December 6, 1881, said:

I approve the recommendation of the Secretary of the Treasury that provision be made for the early retirement of silver certificates, and that the act requiring their issue be repealed. They were issued in pursuance of the policy of the Government to maintain silver at or near the gold standard and were accordingly made receivable for all customs, taxes, and public dues. About sixty-six millions of them are now outstanding. They form an unnecessary addition to the paper currency, a sufficient amount of which may be readily supplied by the national banks.

In his message of December 4, 1882, President Arthur also said:

In respect to the coinage of silver dollars and the retirement of silver certificates, I have seen nothing to alter, but much to confirm, the sentiments to which I gave expression last year.

The Secretary of the Treasury, in his report of December 1, 1884, said:

While, however, the public debt is in this satisfactory condition, there are some financial dangers which can only be avoided by changes in our financial legislation. The most imminent of these dangers, and the only one to which I now ask the attention of Congress, arises from the continued coinage of silver and the increasing representation of it by silver certificates.

President Cleveland, in his message of December 8, 1885, said:

I recommend the suspension of the compulsory coinage of silver dollars, directed by the law passed in February, 1878.

President Cleveland also said, in his message of December 3, 1888:

* * * * * * *

At the close of the fiscal year ended June 30, 1887, there had been coined under the compulsory silver coinage act $266,988,280 in silver dollars, $55,504,310 of which were in the hands of the people.

On the 30th day of June, 1888, there had been coined $299,708,790, and of this $55,289,303 was in circulation in coin and $200,387,376 in silver certificates, for the redemption of which silver dollars to that amount were held by the Government.

On the 30th day of November, 1888, $312,570,990 had been coined; $60,790,990 of the silver dollars were in actual circulation, and $234,438,346 in certificates.

The Secretary recommends the suspension of the further coinage of silver, and in such recommendation I earnestly concur.

The Secretary of the Treasury, in his report of December 7, 1885, said:

Currency reform is first in the order of importance and of time, and fitly precedes other reforms, even taxation reform, because it will facilitate all other reforms, and because it can not safely be deferred. The coinage act of 1878 is overloading the mints with unissued, the subtreasuries with returned silver dollars, and will unavoidably convert the funds of the Treasury into those depreciated and depreciating coins.

The Secretary of the Treasury, in his report of December, 1889, said:

The continued coinage of the silver dollar at a constantly increasing monthly quota is a disturbing element in the otherwise excellent financial condition of the country, and a positive hindrance to any international agreement looking to the free coinage of both metals at a fixed ratio.

He also said:

It is freely admitted that the predictions of many of our wisest financiers as to when the safe limit of silver coinage would be reached have not been fulfilled, but it is believed that the principles on which their apprehensions were based are justified by the laws of trade and finance and by the universal experience of mankind. While many favorable causes have cooperated to postpone the evil effects which are sure to follow the excessive use of an overvalued coin, the danger none the less exists.

The silver dollar has been maintained at par with gold, the monetary unit, mainly by the provisions of law, which make it a full legal tender and its representative, the silver certificate, receivable for customs and other dues; but the vacuum created by the retirement of national-bank circulation, and the policy of the Government in not forcibly paying out silver, but leaving its acceptance largely to the creditor, has materially aided its circulation.

I have thus fully shown that no President or Secretary of the Treasury has favored the free and unlimited coinage of silver and gold at the ratio of 16 to 1.

We have been told, Mr. Chairman, by those who oppose free and unlimited coinage that the remedy is through the medium of an international agreement. Since 1878 there have been three international conferences, at which the Governments of France, Germany, Great Britain, the United States, and other nations were represented. The result of those held in 1878 and 1885 can best be told in the language of the Secretary of the Treasury in his report of December 7, 1885:

The choice before Congress is not between silver monometallism and gold monometallism. Both are inadmissible. The choice before Congress is not between bimetallism and either gold or silver monometallism. The latter are not admissible, and bimetallism is only possible with the cooperation of other nations, which is not now to be had, for, although France holds the same friendly attitude, and would be followed by some of her associates of the Latin Union, England now, as in 1878 and 1881, is unwilling to depart from her mintage of gold alone into coins of unlimited legal tender, and Germany now, as in 1881, regards the concurrence of England in an international bimetallic union as a sine qua non.

The report of the Secretary of the Treasury, dated December 6, 1886, is more expressive:

Since the date of my last annual report the attitude of an important Government toward the silver question has been changed. The matter is of consequence, and requires detail.

Last December the results of our special mission to the Governments of France, Germany, and Great Britain had just been obtained, and were as follows:

The French Government remained of the same mind as when it had united with the Government of the United States in calling the International Monetary Conference of 1881. The German Government deemed the cooperation

of Great Britain in any change a sine qua non. The Government of Great Britain, administered by the same party and principal persons then as now, saw no reason to depart from the position held by that Government at the international monetary conferences of 1878 and 1881.

The position which the delegates of the British Government were instructed to take at each of those conferences had been adverse to the object sought by the United States. The object was the opening of the mints of the Government of the United States of America and of the leading European States to the free coinage of both gold and silver into unlimited legal-tender money at a ratio fixed by international agreement.

Thus, at the International Monetary Conference of 1878 the British delegates had led M. Leon Say, the first French delegate, and a majority of the conferees to declare that silver, like gold, of course, must be kept a monetary metal, but each State or group of States must act for itself in the choice and the minting. An international ratio being pronounced undebatable, since the bimetallic States did not undertake an unlimited coinage of silver, the British delegates further declared their hope that every State would not prefer gold, while insisting upon Great Britain keeping to her own preferences, and that a fixed ratio was "utterly impracticable."

These declarations, of course, frustrated the object of the United States in calling the International Monetary Conference of 1878.

During the next three years the powerful polemic of M. Henri Cernuschi revolutionized the opinion of leading men in Europe and terminated the dependence of France upon Great Britain. The Government of France joined the Government of the United States in calling the next international monetary conference, held at Paris in 1881. The object of the United States, now supported by the invaluable concurrence of "the greatest among the great metallic powers," was again the same—the opening of the mints of a group of such powers to the free coinage of gold and silver at a ratio fixed by international agreement into unlimited legal-tender money. The delegates for Great Britain declared that their monetary system since 1816 had rested on gold as a single standard; that this system had satisfied all the needs of the country without giving rise to the difficulties manifest elsewhere under other systems, and for these reasons it had been accepted by the Governments of all parties and by the nation. The Government of Great Britain, therefore, could not take part in a conference as supporting the principles proposed, and her delegate was not permitted to vote. This declaration, of course, frustrated the object in assembling the International Monetary Conference of 1881, for the Government of Germany, following the lead of Great Britain, was resolved to retain a monetary system like hers.

* * * * * * *

SHALL THE UNITED STATES PROPOSE MORE CONFERENCES?

More conferences, further diplomatic correspondence, are proposed. I venture to think, with all due deference to those who are responsible for a decision, that the time for another conference has not arrived and that the moment for diplomatic interference is not perfectly felicitous. Our information is recent and authentic, and is contained in the letters of our ministers accredited to Great Britain, France, and Germany, there published, and in the correspondence and action of the English Government, which are summarized above.

The continental powers await the action of Great Britain, whose reluctance defeated the object of both conferences called at the instance of the United States, and to whom again, almost within a twelvemonth, she has turned a deaf ear. If it suited the dignity of the United States again to besiege the attention of European States, or again to make advances where they have been so lately repulsed, it would not suit our interests to so do when it is certain that the inquiry upon which Great Britain has suddenly entered at the instance and insistence of her great dependency, India, and of her own accord, is entered upon with anexclusive regard to her own interests. And of Great Britain's interests the United States have no call to become advisers or guardians.

Thus, from the language of the able Secretary of the Treasury, we see that we were rebuffed by Great Britain. The Secretary, however, advises patience, insisting that time would bring about the much-desired end. His words were, "Stop, wait, negotiate." His advice was followed—we stopped, we waited, we negotiated. No international conference was called until 1892—a lapse of nearly ten years. The results obtained were as barren as those that marked its predecessors, Great Britain, as usual, blocking the way to any agreement whatever.

As showing the utter futility of any attempt to have Great Britain depart from the position she has taken with regard to the gold standard, attention is called to the correspondence herewith submitted:

EMBASSY OF THE UNITED STATES, *London, May 29, 1895.*

SIR: For transmission to your colleague, the Secretary of the Treasury, I have the honor to send, inclosed herewith, certain important correspondence, published to-day, between the chancellor of the exchequer and sundry leading bankers and financiers of London, in relation to a proposal for the reassembling of international delegates with a view to the establishment of a bimetallic standard of money and value.

I have the honor, etc.,

T. F. BAYARD.

Hon. EDWIN F. UHL,
Acting Secretary of State.

[Inclosure from the Morning Post, Wednesday, May 29, 1895.]

THE CURRENCY QUESTION—AN ADDRESS FROM THE CITY.

The Press Association states that a meeting of leading bankers and merchants of the city of London was held yesterday at Glyn's Bank, Lombard street, Mr. Bertram Currie presiding, when it was decided to form a gold-standard defense association, the chairman of the meeting being elected president, and a council, which included Lord Farrer and Lord Welby, was also elected. Lord Hillingdon was appointed treasurer and the Hon. George Peel secretary.

An address, as follows, had been forwarded to the chancellor of the exchequer:

"MAY 20, 1895.

"*To the Right Honorable the Chancellor of the Exchequer:*

"SIR: We, the undersigned merchants and bankers in the city of London, desire to address you in reference to the discussion which has taken place in Parliament on the question of the currency. We have observed with regret the growing agitation in favor of what is called bimetallism, the more so since this theory has obtained the support of persons of eminence and authority. As long as it was proposed to apply the bimetallic principle to foreign countries only we did not feel concerned to offer an opinion thereon, but we are constrained to state that we should view with grave apprehension any change in the system of currency which has prevailed without intermission in this country since 1816. The experience of nearly eighty years has convinced us that this system is in every respect suited to our wants, and that under it the commercial supremacy of Great Britain and the financial ascendency of London have been established and maintained.

"We believe that any serious attempt to modify it by the adoption of silver as a standard of value, either alone or concurrently with gold, would be followed by consequences dangerous to the trade and commerce of the country, and, further, that if it were possible that such a measure could not only become law but be made effective in practice, or should become law without becoming effective in practice, it would disturb contracts, injure credit, check enterprise, and thus prove disastrous both to capitalists and to wage earners.

"We venture, therefore, to express our earnest hope that Her Majesty's Government will not only refuse their countenance to any change in our monetary system, but that they will avoid entangling proposals which might lead persons either abroad or at home to believe that England is prepared to depart from the single gold standard, which is established by law and sanctioned by custom.

"Brown, Shipley & Co.; Dennistoun, Cross & Co.; Fruhling & Goschen; C. J. Hambro & Sons; Hardy, Nathan & Co.; Heilbut, Symons & Co.; Henckel du Boisson & Co.; Hoare, Miller & Co.; Fred. Huth & Co.; Kleinwort, Sons & Co.; Morris, Prevost & Co.; Morton, Rose & Co.; Henry S. King & Co.; Ralli Bros.; Robert Benson & Co.; R. Raphael & Sons; J. H. Schroder & Co.; Barclay & Co.; Glyn, Mills, Currie & Co.; Robarts, Lubbock & Co.; Smith, Payne & Smiths; directors of the National Provincial Bank of England (5); Henry Paull; directors of the London and County Banking Company, Limited (3); Bonamy Dobree, director of London and Westminster Bank, Limited; A. W. Gadesden, director of London and Westminster Bank, Limited; J. Sanderson, director of London and Westminster Bank, Limited; directors of the Union Bank of London, Limited (6); J. Spencer Phillips, deputy chairman Lloyds Bank, Limited; E. Brodie Hoare, director of Lloyds Bank, Limited; W. Farquhar, director of Lloyds Bank, Limited; directors of Parr's Banking Company and the Alliance Bank, Limited (3); the directors of Prescott, Dimsdale, Cave, Tugwell & Co., Limited (3); John B. Martin, for Martin's Bank, Limited; D. Larnach (Bank of New South Wales); Alexanders & Co., Limited; Brightwen & Co.; Hohler & Co.; Reeves, Whitburn & Co.; the directors of the Union Discount Company, Limited (3)."

The following reply was read from the chancellor of the exchequer:

"TREASURY CHAMBERS, *Whitehall, May 27, 1895.*

"MY DEAR BERTRAM CURRIE: I have received with much satisfaction the address you have forwarded to me, which I recognize as bearing names among the most weighty which could be found to represent the judgment of the merchants and bankers of the city of London.

"I can have no hesitation in giving to that address on the part of Her Majesty's Government the reply which you have a right to expect.

"I may briefly recall to your recollection the history of the last International Monetary Conference, which was assembled in the year 1892.

"The Government of the United States had taken measures to promote a conference of the European powers in order to take into consideration the condition of silver, and expressed a wish to Her Majesty's Government that a ratio might be established by the leading nations for the coinage of silver at their several mints.

"My predecessor in office, Mr. Goschen, while assenting to an inquiry as to the possibility of an enlarged use of silver in the currency of nations, distinctly declined to accept the invitation couched in terms which involved the adoption of a bimetallic system.

"When the conference met at Brussels the bimetallic proposals brought forward by the delegates of the United States, owing to their generally unfavorable reception, were not pressed to a division.

"At the last session of the conference an adjournment was agreed to with a view of its reassembling after an interval of six months, in order to consider some agreement (if any such could be produced) which should not infringe in any way the fundamental principles of the monetary policies of the different countries. (Report of Brussels Conference, page 195.)

"It was recognized that there would be no advantage in calling the conference together again except for the purpose of the examination of practical and explicit proposals brought forward on the responsibility of one or more of the Governments there represented, and which should conform to the condition that those proposals should not interfere with the fundamental principles governing the monetary systems of the various States.

"When the prescribed time arrived it appeared that these conditions were not fulfilled, and none of the Governments concerned expressed a desire for the reassembling of the conference, which accordingly came to an end.

"I concur entirely in the opinion expressed in your address that the experience of well-nigh a century has proved that our present system of currency is suited to the wants of this great commercial country, and that to depart from it would be disastrous to the trade and credit of the United Kingdom.

"Continuity of national policy is more necessary in this than perhaps any other question. You may rely upon it that Her Majesty's Government will not depart from the course pursued by all the governments that have preceded them, and will give no countenance to any changes in the fundamental principles of our monetary system, nor in any discussion in which they may be called upon to take part will they admit any doubt as to their intention firmly to adhere to the single gold standard, which you justly regard as essential to our well-being as a commercial nation.

"I remain, yours, faithfully,

W. V. HARCOURT."

Germany follows closely in the footsteps of Great Britain, and it is evident that her ministry will not take any further step looking to another monetary conference. Prince Hohenlohe as late as February 8 gave utterance to the following expression of opinion on the subject:

A monetary conference could not bring the question nearer to a practical solution, and therefore it appears undesirable that Germany should take the lead in summoning a conference. The federal governments, acting upon this conviction, have decided not to take further steps in pursuance of the resolution of the Reichstag of February 16, 1895. If, however, definite and acceptable proposals promising success were made on behalf of another State, I should duly consider the question of German representation at the conference.

So that it is utterly hopeless to expect any relief through the medium of international conference.

To illustrate this point more fully, I will relate some of the conversation I had about one year ago with an Englishman who was on a business trip to this country for the purpose of loaning about $10,000,000, and which, he said, he had accomplished. Learning that I favored the free coinage of silver, independent of any action of any foreign government, he asked my reasons therefor. I briefly stated the great agricultural depression then existing in the country—the decline in the prices of products—and told him that this depression had now extended to all other interests and values in this country; that I believed that our country was powerful enough to maintain at home and abroad the value of any dollar—gold or silver—that might be coined by the Government of the United States.

I also told him that we possessed the most valuable gold and silver mines in the world; I alluded to the value of our internal commerce, and in a general way to the wealth and power of our country, and that it was to the interests of our people to change our present methods from the payment of gold alone. His answer was perfectly frank and candid. He said that he recognized the strength and power of the United States; that we were a wonderful people; that any metallic dollar, or its representative, to which the stamp or seal of the United States was affixed would be received as a good dollar not alone in this country, but by all the countries of the universe; and that if he was an American, like myself, he would also favor the free coinage of silver in the interests of America, and his only wonder was how any American could do otherwise.

"But," he said, "the interests of my country are not the interests of the United States." Continuing, he said: "Beginning nearly a century ago, we have adopted a policy of trade and finance that has gotten all the rest of the world in debt to us, and now," he exclaimed, "we collect $1,000,000,000 annually in gold as the interest on that debt." Turning to me, he said: "Do you know what $1,000,000,000 means? Have you any conception of such an amount of money?" I replied that it was a vast amount; that the average value of the entire cotton crop of the United States, as now measured in gold, amounted to $250,000,000 annually, and that it would require the value of four cotton crops to equal it; that, counting the wheat crop of the United States at 400,000,000 bushels, sold at 62½ cents per bushel, it would require the value of four crops of wheat to pay it; that, counting the net savings of each of the agriculturists of the country at $100 annually, it would require the combined net earnings of 10,000,000 farmers to pay it; that, counting the net earnings of skilled wage earners at $200 each, it would require the combined earnings of 5,000,000 skilled workers annually to pay it; and that counting the average of the combined output of the world's annual production of gold and silver at an average of $250,000,000, it would require all the gold and silver produced in the world for four years to pay one year's interest.

Mr. Chairman, the condition of our country is a peculiar one. From a weak colony of 3,000,000 people, a little over a century ago, with not a settlement west of the Alleghany Mountains, we have taken possession of the fairest and most fruitful land under the sun, and have developed into the highest civilized, as well as the most powerful, nation of the earth. It is not my purpose to trace this wonderful development. It would seem that nature's storehouse has provided us with almost every product that would conduce to our comfort, and American brain and brawn have supplied the power that has transformed them into the necessaries and luxuries of life. Our natural resources are greater than those of any three nations of the world. Our mines of gold and silver, of iron and coal, of lead and copper, are inexhaustible. Our forests exceed in value and extent those of any other country. We grow four-fifths of the cotton to clothe and one-fourth of the wheat to feed the people of the world.

I read recently that one-third of the world's manufacturing is done and nearly half of the newspapers are published in the United States. We produce one-third of the world's supply of the precious metals, one-half its copper, over one-fourth its iron and steel. We have built nearly one-half the railroads, and by lakes and rivers have more miles of navigable water than all Europe combined. The value of our agricultural products is over $3,500,000,000 annually, and that of our manufactures over $9,000,000,000, with over $2,000,000,000 paid in wages to employees. Our internal trade is over $20,000,000,000, and our estimated wealth is $70,000,000,000, and increasing, according to Mulhall, at the rate of $7,000,000 daily. We produce more grain than Great Britain, France, Germany, Austria, and Italy combined, and nearly as much meat as those countries. We transport double the amount of merchandise by rail than all the other nations of the earth collectively.

Our annual school expenditure exceeds that of Great Britain, France, Germany, Austria, and Italy combined. The telegraph lines that encircle the globe, climbing mountains, crossing deserts, and buried beneath the bosom of old ocean itself, is a tribute to American ingenuity and skill. The steel rails that encompass the earth and bring all the nations together in friendly and commercial intercourse mark the path of American pluck and American enterprise. We fought the greatest war the world has ever known, whether measured by heroism displayed, by battles fought, by numbers engaged, by losses sustained, or by treasure spent. Our ingenuity devised new methods of warfare by land and by sea, and as a consequence the navies of the world had to be built anew. A reunited people, devoted to one flag and one country, with a population doubled and resources quadrupled since 1860, we could well nigh defy half the world in arms.

Yet, Mr. Chairman, notwithstanding all this greatness and all this glory and all this wealth, a little seagirt isle across the sea dictates her financial policy to this great Republic and to all the world.

Mr. Chairman, shall we longer pursue a policy which strengthens and builds up the already enormous money power of Great Britain, which appreciates the value of gold and decreases the value of all other products, or shall we declare for an American system of finance in the interest of the American people by opening up our mints to the free and unlimited coinage of both gold and silver and restoring prosperity to our distressed and long-suffering people?

But, even from the English point of view, there is another side to the question, as shown by the following extract from a paper read before the Society of Arts on January 19, 1893, by J. Barr Robinson:

> In a period like the present of widespread depression in trade and industry, and among the people generally, the question as to whether this can be traced to any special cause or causes is one of the highest importance. Numerous controversies have been and are being carried on as to these causes, and out of the conflicting masses of argument and fact, of error and confusion, there is gradually emerging the cardinal idea that the predominant cause is the appreciation that gold has undergone in the last twenty years.
>
> * * * * * * * *
>
> While it would take too much space to enter into details regarding the practical effects of this appreciation of gold, it will suffice to give some indication of the enormous injury it has inflicted if it is stated that the transfer of wealth from the landed and propertied classes and from the mercantile, manufacturing, and producing classes generally in the United Kingdom to the holders of securities, mortgages, annuities, etc., can not be less than £2,000,000,000, due solely to the appreciation of gold. It is already a question how much further the holders of securities are to receive the assistance of a continually contracting currency to enable them to go on absorbing further and further the wealth of the producing classes. If no other relief can be obtained it may be necessary to fix a commodity standard instead of a money standard for long-dated payments, as has been recommended by the principal economists of the last hundred years. Such a colossal unearned increment as has accrued to the holders of securities valued in gold during the last twenty years in Europe and the United States, amounting to not less than from £7,000,000,000 to £9,000,000,000, is entirely unparalleled in the history of the world, and all other public questions sink into utter insignificance compared with it.

Thus it will be seen that the change in the system from the coinage of both metals on terms of equality since 1873 has caused a transfer of wealth from the agricultural and other classes in Great Britain to the bondholders and money lenders of £2,000,000,000, or $10,000,000,000.

They have copartners in the United States, according to Mr. Robinson's statement, and with Great Britain they are joint owners of this colossal unearned increment of from £7,000,000,000 to £9,000,000,000 annually, which he truthfully says is unparalleled in the history of the world, and all other questions sink into insignificance compared with it.

Eduard Suess, the eminent professor of geology at the University of Vienna, Austria, said:

> Indebtedness in gold, especially when it rests on a silver land, manifestly rises from year to year with the divergence of values. While any economic gain due to the premium in the silver land is distributed among thousand of hands, in the figure of the interest, which is due in gold, the burden finds concentrated expression, and it increases with every fraction by which the ratio rises. Many a statesman of an honestly toiling, upward striving land watches with anxiety this figure which withdraws from his country undeservedly and inexorably a part of the fruits of its industry and conveys to the bondholder unearned and unexpected gain. The crises of recent times have furnished abundant examples in which the paying capacity of a debtor country was exceeded and a good part of the capital was lost along with the interest.

In speaking of the possible, and perhaps probable, division of the world governed by two different money standards, he argues that the final results would be disastrous to the gold lands, and that America holds the balance of power. I quote Professor Suess's words:

> The more remote consequences, however, would be disastrous to the gold lands. In the great silver area, which comprises many States in need of money, there would occur, perhaps, at first inflation and irregularity. True, it must be confessed that even nowadays there are States with free-silver coinage and yet without too great inflation. In order to bind the metal more and more, fully covered certificates would perhaps be issued instead of the partly covered notes. In any case the production of goods would make a great, perhaps too great, advance. In the gold area, too, there would at first be improvement, but soon there must ensue more and more contraction, fall of prices, injury to labor.
>
> All obstacles now thrown in the way of commerce by tariffs would dwindle into insignificance compared to the barrier that would be erected by the partition of the earth into two solid areas of money standards.
>
> As the silver area comprises all zones, all natural products, and, in the United States, also all industries, a great independent economic unit would

be constituted by the silver area. Exportation from the gold area would be rendered, and yet the gold would be dependent on the other for many products, as is proved by the balance of goods, already passive in a high degree even to-day, of Great Britain, Germany, and France. Silver capital would grow up in the silver area, and silver lands would borrow only silver capital. At the same time, however, in the whole silver area industry would continue, as hitherto, consuming gold. That is the "walling in of Europe."

Whether the United States will make this or some other choice is now not known, but in any case some deductions arise from the present situation.

First of all, it is certain that Europe, in case of refusal to enter into an international agreement, leaves America's hands free to enact measures which must exert the most profound influence upon all commerce and upon the money affairs of Europe herself.

Furthermore, it is certain that gold alone can never become the standard of the whole earth, but that, on the contrary, a time will come when it will be entirely absorbed by industry. Let us not forget Soetbeer's results, according to which the entire monetary stock of the earth is smaller by almost one-third than the production of the last forty years.

The great fall in prices in the past few years has been heaviest upon the farmers of the country. Over one-third of the people of the country are engaged in agriculture. They have been the first to feel the loss in the value of their products. The farmer has to contend with the cheap labor of India and Argentina in the production of cotton and wheat. Under the gold standard the price of cotton has fallen to about 6 cents a pound. An overproduction of the cotton crop of 1894–95 of about 1,000,000 bales caused the price to fall to about 5 cents per pound, the lowest price at which it was ever sold in the United States. It is estimated that the crop of 1895–96 will be 2,000,000 bales short of a normal supply for the uses of the world. It is estimated that 8,700,000 bales is the amount of American cotton needed for the world's consumption. Yet, with the crop of 1895–96 2,000,000 bales short, the price to the farmer is about 7¼ cents a pound.

Even the price received for a short crop of cotton is one-third less than that received for an average crop ten years ago. Wages of labor in the cotton States brought about by the constantly decreasing price of cotton has fallen to 50 and 60 cents per day, and the laborer out of this sum has to board himself. Wheat has fallen in price at about the same ratio as cotton, and this decline in price has not been brought about by overproduction. No one can truthfully say that the farmers of this country are in a prosperous condition. By hard work they live, and by hard work only are they enabled to obtain the absolute necessaries of life. They are deprived of many of life's comforts and almost all of its luxuries. Their products are used by the nation at large in settling the gold balances due other countries.

Mr. Chairman, patriotic appeals go up from gentlemen on the other side of this question to save what they are pleased to call the honor and credit of the country, but what it really means is to save and make sure the increased and ever increasing unearned increment of the bondholder of this country and of Europe.

Mr. Chairman, the system is wrong and it is sapping the life-blood of the people, and year by year plunging them deeper and deeper into debt. How long can it last? The masses of the people of this country are utterly opposed to the sale of bonds now carried on by this so-called Democratic Administration, backed up by the immense Republican majority in this House. You have the power to stop this issue of bonds, even over the President's veto; if necessary, to compel the Secretary of the Treasury to use silver dollars, as well as gold dollars, in the redemption of greenbacks and Treasury notes. But you will not do it; you have taken your stand like the President and Secretary of the Treasury and their followers—the money power of the land against the masses of the people.

Mr. Chairman, the reason of the frequent changes in the political complexion of this House in the last few years can be written in two words, "hard times." Dissatisfaction prevailed all over the country with the results of the Republican Administration under Mr. Harrison, and a tidal wave swept it from power. Promises of relief were given by the Democratic party, but these promises failed to come up to public expectation. True, a tariff bill was passed that partially relieved the people of the unjust burdens placed upon them by long years of high-tariff legislation. But the main cause of the cankering disease of the body politic still remains. Previous to the advent of the present Executive into national political life, the voice of the gold bug was rarely ever heard in Democratic ranks. The declarations of our party were practically unanimous for righting the great wrong perpetrated by the act of 1873, and for restoring silver to its rightful place as a money metal in the coinage laws of the country. Legislation had reduced, almost destroyed, its value. Legislation had outlawed it as a money metal. That which was in the power of legislation to do was in the power of legislation to undo.

Legislation could withdraw the ban of outlawry; legislation could restore the value of silver by opening the mints to its free and unlimited coinage. That was the position of the Democratic party as proven by the action of a majority of its Senators and Representatives in every Congress, save one, since 1873. But in 1894 a Democratic Congress failed to do its duty—to pass a free-coinage bill—and give the people full measure of relief which had been promised for years. The voice of the cuckoo was heard in Democratic councils—the vote of the cuckoo was mingled with that of our old Republican enemy. The great Democratic leader of tariff reform and the great Republican leader and defender of high protection smiled sweetly, one upon the other, and cooed together like turtle doves, and their votes were alike cast to issue more bonds—gold bonds.

What joy filled the heart of your great Republican leader in the divided councils of what should have been a united party is best shown by a few remarks made by him in the closing hours of the Fifty-third Congress.

He said:

Mr. Speaker, I am somewhat reluctant to address the House because my feelings are divided between two emotions. One is a feeling of regret for the Democratic party and its position; and the other is a feeling of equal regret for the country and its position.

* * * * * * *

I tell you when the people of this country get an opportunity to express their opinion of you, you will listen to it more intently than you are listening to me, and with sadder hearts than you have to-day even.

Not content with what you have done, you have threatened the people of this country with yourselves again. We shall not write your epitaph. That has been done by a nearer and dearer. That has been done by the man whose name must be affixed to this bill before it can disgrace the statute book. I wish I could congratulate the country upon something, with the departure of incompetency.

Those were brave words, Mr. Chairman, and proved to be prophetic ones. We all know the fate of old dog Tray when caught in bad company. Relief had not come through Democratic agencies. Thousands of disgusted Democrats refrained from going to the polls. The charge of incompetency rang through the land. Vainglorious and boasting Republicans proclaimed their ability, if once more granted power, to afford the long-promised relief.

Another tidal wave was the result. The country believed your party, and 150 Republican majority in this House attests that belief, and now the eyes of the country are upon you. The people demand the fulfillment of your boastful promises.

Your leader, Mr. REED, said in that same speech, on August 28, 1894:

We stand in a very peculiar position to-day. The representative of the Democratic party, just chosen President of the United States, finds himself powerless in his first great recommendation to his own party. Were he left to their tender mercies the country would witness the spectacle of the President of its choice overthrown by the party charged with the country's government. What wonder, then, that he appeals to the patriotism of another party whose patriotism has never been appealed to in vain.

* * * * * * *

What we were in our days of victory the same are we in our days of defeat—champions of true and solid finance. And when the time comes, as it surely will, for us to lead this land back to those paths of prosperity which were trodden under Republican rule for so many years, we shall take back our ancient glory, undimmed by adversity; our ancient honor, unsullied by defeat.

Mr. Chairman, the Republican party did stand in a peculiar position that day, and the peculiarity of the situation is that it stands in a very "peculiar position" to-day. According to Mr. REED'S statement, a Democratic President is no longer left to the "tender mercies" of his own party, but is sheltered under the protecting wing of the 150 Republican majority of this House. On the financial question he is a Republican President, not ours. He is the champion of so-called sound money—so are you—which, read between the lines, signifies that you are alike the champions of the bondholders and money power of Great Britain and America.

Mr. Chairman, the time has come for the Republican party to redeem its promises to lead this land back to those "paths of prosperity which were trodden under Republican rule for so many years." The country is waiting—how fondly, how trustfully, how impatiently! "Yes; waiting, my darling, for thee." Waiting for you to clasp it gently by the hand and "lead" it back to paths of prosperity. If you can not find all the "paths," at least find one. Alas, poor country, it will hope and watch and wait in vain!

The "do-nothing" policy prevails, and Republican incompetence and madness rule the hour. The country asks for relief, and your answer is, "Bonds; millions more of bonds." However, Mr. Chairman, it is some relief to know that this miserable bond bill—this little puling infant—which came from the loins of its Republican parent "into this breathing world scarce half made up," is passing—passing away. Its days are numbered, and it will soon be laid away to rest forever.

Handle it tenderly, touch it with care,
Fashioned so slenderly, young and so fair.

A little stone should be erected to its memory and on it inscribed:

SACRED TO THE MEMORY
OF OUR ANGELIC CHERUB, LITTLE DINGLEY BILL.

Born on the 25th day of December, A. D. 1895, at Washington, D. C., its life was short but eventful. Weak and lacking in vigor, scarce 10 days old, it was carried with a message of bonds to the eastern end of the Capitol, where it was cruelly assaulted by brutal Senators with silver clubs, and its young life taken away.

This stone is erected to its memory by its unfortunate parent, NELSON DINGLEY, and its loving foster parents, Grover Cleveland and THOMAS BRACKETT REED.

REQUIESCAT IN PACE.

Coin Redemption Fund.

SPEECH

OF

HON. WILLIAM ELLIOTT,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. ELLIOTT of South Carolina said:

Mr. CHAIRMAN: I will vote against the Senate amendment, as I have voted against all propositions for the free coinage of silver in past years whenever the question came up on its merits. While it is, of course, true that the people of the district I have the honor to represent are much divided upon this question, yet a great majority of them are altogether opposed to any depreciation of any part of our currency. They have very bitter recollections of the evils of a depreciated currency, and they insist that every dollar of our currency shall be kept of the same value as every other dollar of it. And I take occasion here to say, Mr. Chairman, in view of what has been said elsewhere, that they thoroughly indorse and approve the course of the President in the action which he has deemed it necessary to take for the preservation of the financial honor of the country. They indorse and approve all his steps thoroughly; and they do not believe that any President has ever surpassed him in his determination to uphold the honor of the country, and to protect in all respects the interests of the people. And I say this not only in behalf of the great majority of the people of my district, but as voicing the sentiment of thousands of people throughout the State who thoroughly uphold him in his course.

WHAT IS FREE COINAGE OF SILVER?

Let us inquire, then, Mr. Chairman, what substantially is the free and unlimited coinage of silver at the ratio of 16 to 1 as provided by the amendment of the Senate. It is a very different thing from the process by which the Government has for many years past been coining silver dollars, about 400,000,000 of which have entered into our currency and are in daily use by our people. This silver has been purchased by the Government at its regular market price and has been coined by the Government for itself and not for any private owner. These purchases by the Government have always been made within the limits prescribed by the acts of Congress, the first the act of 1878, which provided for the purchase by the Government and coinage during each month of not less than $2,000,000 nor more than $4,000,000 of silver, and the second the Sherman law of 1890, which required the purchase during each month of 4,500,000 ounces of silver bullion upon which Treasury notes should be issued by the Treasury.

The currency provided by these acts of Congress is full legal tender for the payment of all debts, public and private, and circulates upon an equality with the rest of our currency, whether paper or metallic. It is a well-known fact that to-day, while the actual value of the silver in one of our silver dollars is less than 50 cents, these dollars pass everywhere precisely the same as if their intrinsic value was 100 cents. This is due to two causes: First, that these silver dollars are received by the Government in payment of all dues and are maintained by the Government as of equal value with gold; and, second, that the coinage being limited by law to a certain amount, the Government is able to maintain silver upon a parity with gold. These purchases of silver were put an end to by the act of 1893, and to-day the Government makes no purchases of silver. The free and unlimited coinage of silver at the rate of 16 to 1 is altogether a different thing from the process we have been considering.

FIFTY-CENT DOLLARS.

If the Senate amendment becomes a law any person, from any country, can take to the mints of the United States silver in unlimited quantities, and have what is to-day but 50 cents' worth of silver coined into a dollar. This right is not limited to citizens of this country, nor is it limited to the silver product of this country, but it can be exercised by every person in the world, and the silver may be brought from all parts of the earth. There are to-day in the world over $4,000,000,000 in silver, which is nowhere worth more than 50 cents on the dollar, and it will be readily seen that, if this bill becomes a law, and the owners of silver thereby become entitled to receive a dollar for every 50 cents of silver that they own, there will be a rush of all the above enormous amount of silver upon our mints for coinage. Can any sane person doubt that this will be the result? Where else can a man in one day and by one act double his possessions?

No one denies that the intrinsic value of a silver dollar is to-day only 50 cents, nor does anyone deny that the owners of silver will be swift to avail themselves of such a splendid chance; in fact, the whole purpose of this bill is to enable the owners of silver to do this very thing—bring all their silver to the Government mint to be coined. We would no longer have a limited amount of silver dollars for which the Government would be responsible, as it is now, but there would be an unlimited amount of them coined, not for the benefit of the Government, but for the sole benefit of the owners of silver. Now, while I can readily see why the silver-mine owners of the West should be exceedingly anxious to procure the passage of such a law, I fail to see of what advantage it would be to the other people of the country who are not silver-mine owners.

How will it benefit, for instance, the cotton growers of South Carolina to have the owner of silver get two prices for his product? If such a law were proposed to be passed for the benefit of the cotton growers of the South, undoubtedly they would be as eager to procure its passage as the producers of silver are to have this bill become a law. No doubt when the agitation for the free coinage of silver began years ago it was advocated solely by the silver-mine owners, but they soon were joined in the movement by a large number of people who had no such selfish interest, but who were then, and are now, acting under an honest conviction that free coinage of silver is absolutely necessary to the prosperity of the country, and the strength of the movement is indicated by the fact that the bill we are now considering has lately passed the Senate.

FALL IN THE PRICE OF PRODUCTS.

The chief argument in behalf of the free coinage of silver is that, ever since silver was limited as to coinage by the United States in 1873, there has been a steady fall in the price of all products and that this fall was due to the alleged demonetization of silver. Of course this argument appeals very strongly to the agricultural producers of the South and West, and it is in those sections of the country that the measure finds its chief support.

PRICE OF COTTON.

Taking up the question of the fall of price in cotton, let us see what the facts are: The proposition is that as silver has fallen so cotton has fallen, and that cotton has fallen because silver has. If this were so, no one would be more swift to advocate this bill than I, if I thought it would bring relief to our farmers, remembering as I do that the cotton farmers of South Carolina last year produced 800,000 bales of cotton. But is it true that cotton has fallen just as silver has? Statistics show that in 1886, for example, silver was worth 99.4 cents per ounce and cotton was worth 9.44 cents a pound; while in January just passed silver was worth only 67 cents an ounce while cotton was worth 8.1 cents a pound. If the fall in the price of cotton was due to the fall in the price of silver, how is it that during the above period we see that cotton has fallen very little, while silver has lost about one-third its value?

Furthermore, we find from the tables which I will publish that during the four years following 1886 the average prices of cotton in New York were 10.25, 10.27, 10.71, and 11.53, while it is a notorious fact that during all those years silver continued to fall. If silver has carried cotton down with it, how is it possible that the price of cotton should have continued to rise while at the very same time the price of silver kept going down? Again, in 1895, cotton fell as low as 6.26 (average) in New York, but it has since risen to over 8, while there has been no rise whatever in silver. Cotton is now higher than it was for seven out of ten years commencing in 1841, during two of which years, 1842 and 1845, it sold as low as 5 cents in New York, and the average price in New York for 1845 was only 5.63. In New Orleans in the same year it sold as low as 4⅞, and in 1843, in the same place, for 4¼.

Now, all this was, of course, long before the alleged demonetization of silver, and yet we see that cotton was then selling for very much less than it has brought since 1873. How is it possible to reconcile these facts with the theory that as silver has fallen in price, so has cotton fallen, and that the fall in the price of cotton is due to the fall in the price of silver? Again, taking the fifteen years from 1840 to 1855, we find that cotton sold in New York at an average of 8.7, while for the five years from 1885 to 1890 the average price in New York was 10.4. Now, here we have taken a period of fifteen years before the war, quite long enough to make a perfectly fair average, and have compared it with a period of five recent years, and yet we find that during the last period, since 1873, the average price was almost 2 cents higher than during the first-named period.

How is it possible, then, to say that the limitation on the coinage of silver has reduced the price of cotton? But it seems to me, Mr. Chairman, that it is not necessary to go back so many years in order to settle this point, because we have facts all occurring within less than two years past which utterly disprove the claim made by the advocates of this measure. Everyone remembers that, when cotton sold at such fearfully low prices during the latter

part of 1894 and the early part of 1895, the advocates of free coinage of silver everywhere claimed that this terrible depression was due solely to the demonetization of silver, and there is no doubt that a great many people were seriously impressed by this deplorable fact, and began to think that the advocates of free coinage were at last, perhaps, right. It was then loudly proclaimed by those who are now urging this bill that the demonetization of silver had ruined the cotton growers of the South, and that they would have to make up their minds to become accustomed to 5-cent cotton until the free coinage of silver should bring about better times.

But within the past year we have seen this idea thoroughly exploded by the fact that cotton has again been selling for 9 cents a pound. While silver remains at its lowest price the cotton growers of the South have had new life put into them by this wonderful rise in the price of cotton. Can any unprejudiced person now have a lingering doubt in his mind as to the fact that the legislation of 1873 has had nothing whatever to do with the fall in the price of cotton or any other product? If I were to take the time to examine into the statistics as to wheat it would be found that substantially the same condition of things exists as to the wheat market, but I will leave that matter to gentlemen more thoroughly familiar with that product. I will here insert some tables as to the price of cotton, furnished by the Agricultural Department:

Supply and consumption of cotton in the United States and Europe—surplus stocks and prices.

[In bales.]

Year.	Supply and consumption.								Prices (middling upland) per pound.					
	United States.					Europe.			In New York.			In Liverpool.		
	Crops.	Consumption.	Exports.	Stocks (close of year).	Net weight of bales.	Imports, etc.	Consumption.	Stocks (close of year).	Lowest.[1]	Highest.	Average.	Lowest.	Highest.	Average.

[1] Estimate of Department of Agriculture; all other figures for 1895 are to July 1.
[2] The figures for 1895 are estimates by Thomas Ellison.

CAUSE OF THE FALL IN PRICES.

There is no doubt whatever that, as a general thing, farm products have fallen in price of late years, but it has been due to other causes than the demonetization of silver, such as improved methods of cultivation, increased production per acre, the general use of commercial fertilizers, and their enormously diminished price; to lower freights, quicker transportation, and various other causes. Farm products are not the only things that have fallen, but there has been a general fall in prices all along the line, and, as a matter of course, a farmer can afford to sell his products cheaper when he has to pay less for everything that he buys; and the fact is, as the statistics show, farm products have fallen in price, up to a few years ago, less than most other articles. A few years ago an elaborate investigation was made for the Senate on this whole subject under the direction of Mr. Carroll D. Wright, the eminent statistician, and the result showed that from 1873, when it is said silver was demonetized, up to the time of the investigation, some three years ago, food products had fallen less than 10 per cent, while clothing had fallen 32 per cent, lumber and building materials about 20 per cent, house furnishings 27 per cent, and implements 35 per cent. Furthermore, it appeared that, as between 1860 and the time of the above investigation, food products had advanced 3 per cent, while, as a rule, other articles had fallen.

LABOR STATISTICS.

But it is universally conceded that the very best test to apply to this subject is that of wages, and from the table prepared under the same investigation, which I will print, but will not have time to discuss, it will be seen that since 1840, taking every tenth year except 1870, when prices were still inflated in consequence of the war, there has been a general increase in wages.

Occupation (per diem).	1840.	1850.	1860.	1880.	1890.
Plasterers	$1.50	$1.75	$1.75	$2.00	$3.50
Blacksmiths	1.50	1.50	1.50	3.00	3.00
Blacksmiths' helpers	.83⅓	.83⅓	.83⅓	1.75	1.75
Painters	1.25	1.25	1.25	1.75	2.50
Wheelwrights	1.25	1.25	1.25	2.50	2.50
Carpenters	1.29	1.41	1.52	1.84	1.94
Engineers	2.00	2.25	3.00	3.50	4.25
Firemen	1.25	1.37	1.44	1.40	1.65
Laborers	.81	1.04	.99	1.16	1.25
Machinists	1.45	1.55	1.76	2.08	2.19
Watchmen	1.10	1.06	1.00	1.50	1.55

Railroads (per diem).	1840.	1850.	1860.	1880.	1890.
Baggagemen	$1.53	$1.53	$1.91	$2.10	$2.11
Brakemen, freight	1.00	1.00	1.16	1.75	1.85
Brakemen, passenger	1.15	1.15	1.25	2.00	2.00
Carpenters	1.22	1.33	1.30	1.77	2.00
Conductors, freight	1.66	1.68	1.61	2.58	2.57
Conductors, passenger	2.11	2.30	3.19	3.45	3.84
Engineers, locomotive	2.14	2.15	2.30	3.78	3.79
Firemen, locomotive	1.06	1.15	2.00	2.00	2.00
Foremen, masons	2.50	2.50	2.50	4.00	4.10
Painters	1.50	1.43	1.32	1.87	2.17
Average, according to importance, for all occupations, 1860 being reckoned as 100	87.7	92.7	100	143	168.6

THE EXAMPLE OF MEXICO.

I will also print the following table showing the increase in wages in grains of gold:

Wages in 1860 and in 1885 in dollars and in grains of gold, and percentage of increase in grains of gold.

Workmen.	Wages (in dollars).		Wages (in grains of gold).		Percentage of increase (in grains of gold).
	1860.	1885.	1860.	1885.	
Factory hands:					
Dyers	$0.62	$1.00	16	25.7	61
Giggers	.62	.82	16	21.1	32
Shearers	.69	1.00	17.8	25.8	45
Plain weavers	.65	.85	16.7	21.8	31
Spinners	1.10	1.26	28.3	32.5	15
Miscellaneous:					
Leather factory beam and yard hands	1.10	1.67	31	43	39
Leather factory whiteners and skivers	1.83	2.75	47.2	70.8	50
Common laborers	1.00	1.50	25.8	38.7	50
Blacksmiths	1.50	2.00	38.7	51.6	33
Blacksmiths' strikers	1.00	1.50	25.8	27	50
Carpenters	1.67	2.00	43	51.6	20
Machinists	1.75	2.25	45.1	57.7	28
Locomotive engineers	2.40	3.20	62	82.4	33
Locomotive firemen	1.20	1.75	31	45.2	46
Average percentage of increase in weight of gold					38

The gentleman from Texas [Mr. BAILEY] in his speech yesterday read from an article in the North American Review by the Mexican minister, Mr. Romero, for the purpose of showing how prosperous Mexico was because of the free coinage of silver, the object of the article being to show that products brought a higher price in Mexico than in this country. After stating the alleged advantages that Mexico enjoys from being on a silver basis, what does Mr. Romero say on this question of wages?

Although our wages are low—

he says—

there has been in recent years a marked tendency to their increase.

Wages are "low," even in silver currency, he has to admit, and the best that can be said for any improvement is that there has been in recent years "a marked tendency to their increase"—not an actual increase, it seems, but only a "tendency" in that direction. And this is true, Mr. Chairman, of every country which is on a silver basis. Is that the condition of things that gentlemen desire to establish in this country when they cite to us the examples of these silver countries? Do they want all products, the food that a man eats, the clothing that he wears, everything that he consumes to be high, leaving labor alone to be low—labor that produces them all?

JAPAN.

How is it in Japan, the most advanced of all the silver countries? I have here some statistics, taken from the January bulletin of the Department of Labor, showing the condition of things as to labor in that country, the prices being in American gold; and, without stopping to discuss them, will again ask whether gentlemen desire to reduce our labor to such a condition?

Daily rates of wages, Japan.

Occupation.	Highest.	Lowest.	Average.
Blacksmiths	$0.60	$0.18	$0.30
Bricklayers	.88	.20	.33
Cabinetmakers (furniture)	.53	.17	.30
Carpenters	.50	.20	.30
Carpenters and joiners (screen making)	.55	.17	.30
Compositors	.83	.10	.29
Coolies or general laborers	.33	.14	.22
Cotton beaters	.45	.13	.23
Dyers	.60	.05	.25
Farm hands (men)	.30	.16	.19
Farm hands (women)	.28	.06	.19
Lacquer makers	.58	.15	.29
Matting makers	.50	.20	.30
Oil pressers	.34	.16	.25
Paper hangers	.60	.20	.31
Paper screen, lantern, etc., makers	.55	.20	.31
Porcelain makers	.50	.13	.29
Pressmen, printing	.70	.11	.26
Roofers	.60	.20	.29
Sauce and preserve makers	.40	.10	.24
Silkworm breeders (men)	.50	.10	.22
Silkworm breeders (women)	.25	.05	.17
Stonecutters	.69	.22	.36
Tailors, foreign clothing	1.00	.25	.49
Tailors, Japanese clothing	.56	.15	.28
Tea makers (men)	.80	.15	.31
Tobacco makers	.50	.11	.26
Weavers	.40	.07	.15
Wine and sake makers	.50	.15	.29
Wood sawyers	.50	.13	.30

The following are the rates of wages paid by the month:

Farm hands (men)	$1.44
Farm hands (women)	1.20
Silkworm breeders (men)	1.92
Silkworm breeders (women)	.96
Weavers (women)	.96

Factory labor is paid even less than these prices. Middleton & Co., one of the most prominent tea-shipping houses in Japan, employ in their establishment a large number of persons, men and women, who work from 5 o'clock in the morning until 6 o'clock at night, with three intervals at 8, 12, and 3 o'clock, respectively, when they eat their rice and what other refreshments they bring with them and rest for twenty minutes or a half hour. The highest wages paid by the Messrs. Middleton are 42 sen a day, which is equivalent to 21 cents in United States currency. This is received by men who are experts in handling tea and have acquired their proficiency by natural ability and long years of experience.

The lowest wages are paid to young boys and girls who pick over the tea leaves to remove the stems and other foreign substances. They receive 13 sen (6½ cents) a day for about twelve hours' work, not including their resting spells.

Of the entire force in the establishment, 20 are paid 21 cents (United States currency) a day, 90 are paid 18 cents, 50 are paid 15 cents, 335 are paid 12 cents, 278 are paid 10 cents, 5 are paid 9 cents, and 30 are paid 6½ cents—and they board themselves.

THE CRIME OF 1873.

Mr. Chairman, there has been throughout the discussion of this subject a great deal of denunciation of the manner in which the act of 1873 was passed. It is alleged that the act was secretly passed by Congress; that while its sole purpose was to demonetize silver, this purpose was carefully concealed; that demonetization was brought about through a conspiracy on the part of interested persons, and that the prime movers in the matter were substantially criminals, and all this is urged as an additional reason why the alleged wrong then done should be now righted. If we are satisfied that at this time and under existing conditions the free coinage of silver would be a bad thing for our people we ought not to enact it into law simply because, as is alleged, silver was improperly demonetized twenty-odd years ago.

In 1873 the silver dollar was intrinsically worth about 3 per cent more than the gold dollar, and it may have been an unwise step to have then limited the coinage of silver, but is the fact that the legislation was then improperly procured any argument to reestablish at this day the old law when the silver dollar, instead of being more valuable intrinsically than the gold dollar, is now worth only one-half as much? If we are satisfied that free coinage at this day would be disastrous to the country, should we go to work to ruin the people of to-day in order to right a wrong alleged to have been done nearly a quarter of a century ago? This would seem to dispose of this charge from a practical standpoint, but so much has been said about this matter, with a view of arousing the indignation of our people and enlisting them in behalf of the free-coinage movement, that it seems necessary to give facts bearing upon the charge, and to let the people judge for themselves whether the charge is sustained. In the speech made by Mr. Carlisle at Covington in May last there is an utter

refutation of this charge, and I can not do better than to here copy what he says on the subject:

THE BILL WAS PENDING IN CONGRESS FIVE SESSIONS.

That bill was pending in Congress for nearly three years and was under consideration during five sessions of that body; it was distinctly recommended in two reports of the Secretary of the Treasury and the Director of the Mint, and it was officially printed and laid on the desks of members of the House and of the Senate thirteen different times before the final vote was taken on it. It was read at length in the open Senate several times, and in the House at least once, as shown by the record; it was reported from committees seven times, and the discussion upon it in the House fills 66 columns of the Congressional Globe, and in the Senate 78 columns. As first reported to the Senate and passed by that body in January, 1871, the bill did not provide for the coinage of any silver dollar whatever, but expressly limited the coinage of that metal to subsidiary pieces—half dollars, quarters, and dimes.

In this form, without any provision for the coinage of any kind of silver dollar, the bill was passed in the Senate on the 10th day of January, 1871, upon the call of the yeas and nays, and the record shows that the two Senators from Kentucky, Hon. Garrett Davis and Hon. Thomas C. McCreery, the distinguished Democratic Senator from Ohio, Hon. Allen G. Thurman, the present Senator from Nevada, Hon. WILLIAM M. STEWART, together with all the other Senators from the Pacific Slope, voted in the affirmative, while Senator SHERMAN, Senator MORRILL, and 12 others voted in the negative. The reason given by Mr. SHERMAN for voting against the bill was that the Senate had, in obedience to the demands of the Senators from the Pacific Coast, so amended the bill, after it was reported from the committee, as to abolish the charge of one-fifth of 1 per cent for coining gold, thus making the coinage of that metal entirely free.

The bill went to the House of Representatives, but it was not disposed of during that Congress, and at the first session of the next Congress Mr. Kelley, of Pennsylvania, introduced it in the House and it was referred to a committee. So far as the coinage of the silver dollar was affected, the bill introduced by him was precisely the same as the one that had passed the Senate—that is, it made no provision for such a coin. However, when the bill was finally reported back from the committee to the House it was so amended as to provide for the coinage of a subsidiary piece, to be called a dollar, and to contain 384 grains of standard silver, the same as the French 5-franc piece, and it was to be a legal tender to the extent of $5, and no more. In this form it passed the House by a very large majority—in fact, the opposition to it was so weak that the yeas and nays were not even called.

The Senate struck out the 5-franc subsidiary dollar and substituted for it another subsidiary coin, called the trade dollar, containing 420 grains of standard silver, and provided that it should be a legal tender to the amount of $5 and no more. A committee of conference was appointed, the Senate amendment was agreed to, and the bill became a law by the approval of President Grant on the 12th day of February, 1873. This brief historical statement of the proceedings, which is fully sustained by the official record, shows that it was well understood in Congress that the old standard silver dollar of 412½ grains was not to be thereafter coined at our mints, and that the only difference of opinion that ever existed, even temporarily, between the Senate and House was whether they would substitute in its place a subsidiary coin containg 384 grains or a subsidiary coin containing 420 grains of silver. No proposition was made in either body to continue the coinage of the old dollar or to make any silver coin the unit of value or a full legal tender in the payment of debts.

Is it conceivable that, after all this has been done in both Houses of Congress, anyone can believe that the silver dollar was left out of our mintage laws secretly and without the knowledge of men who took part in these proceedings? It may be true, as alleged, that some distinguished men then in Congress were not aware that the silver dollar was omitted from the law; but if such be the case it must have been due to the fact that they felt no concern in that particular subject, precisely as others felt no concern about it, for the very good reason that silver was not then in circulation, and probably not one man then in Congress had ever seen a silver dollar of the United States. And it seems impossible to imagine any sinister motive that could have influenced the promoters of this legislation when it is remembered that the silver dollar was then actually worth 3 cents more than the gold dollar.

In addition to what Mr. Carlisle has said I beg to quote the following from the report on the subject made by Deputy Comptroller John J. Knox to the Secretary of the Treasury and by him transmitted to Congress with a draft of the proposed act:

COMPTROLLER KNOX'S RECOMMENDATION.

The coinage of the silver dollar piece, the history of which is here given, is discontinued in the proposed bill. It is by existing law the dollar unit, and, assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being 103.12) and intrinsically more than 7 per cent premium in our other silver coin, its value thus being 107.42. The present laws consequently authorize both a gold dollar unit and a silver dollar unit, differing from each other in intrinsic value. The present gold dollar piece is made the dollar unit in the proposed bill, and the silver dollar piece is discontinued. If, however, such a coin is authorized it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar which is the favorite for circulation in China and Japan and other Oriental countries.

ACTION OF SECRETARY OF TREASURY.

In transmitting to Congress the proposed bill the Secretary of the Treasury called special attention to Mr. Knox's report, stating that it gave "a concise statement of the various amendments proposed to existing laws and the necessity for the change recommended." Here we have not only the report of Mr. Knox, stating distinctly that the coinage of the silver dollar piece was discontinued by the proposed bill, but the Secretary of the Treasury, in addition, called attention to the report as giving a statement of the proposed changes and the necessity for the same. How is it possible under these circumstances to charge that the law was passed by stealth? The conclusion is irresistible that either gentlemen then in Congress did know of the proposed change or that it was a matter of so little consequence that it failed to attract attention. And to show what different opinions gentlemen who are now conspicuous advocates of the free coinage of silver then held from what they now express on this subject, I will quote the following from what Mr. STEWART, Senator from Nevada, said on February 11, 1874, as appears by the CONGRESSIONAL RECORD:

SENATOR STEWART'S VIEWS ON GOLD.

I want the standard gold and no paper money not redeemable in gold; no paper money the value of which is not ascertained, no paper money that will organize a gold board to speculate in it.

And on the 20th of February of the same year he said:

By this process we shall come to a specie basis, and when the laboring man receives the dollar it will have the purchasing power of the dollar, and he will not be called upon to do what is impossible for him or the producing classes to do—figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

These remarks were, of course, not made upon the act that we have been considering, but they, nevertheless, show what an extraordinary revolution has since taken place on this subject in the minds of gentlemen from the West.

SENATOR JONE'S VIEWS.

In the first session of the Forty-third Congress Senator JOHN P. JONES used the following language, as appears from the Appendix of the CONGRESSIONAL RECORD, volume 1, part 2:

Does this Congress mean now to leave entirely out of view and discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such a standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities? Gold is the articulation of commerce. It is the most potent agent of civilization. It is gold that has lifted the nations from barbarism. So exact a measure is it of human effort that when it is exclusively used as a money it teaches the very habit of honesty. It neither deals in nor tolerates false pretenses. It can not lie. It keeps its promises to rich and poor alike.

TRUE INWARDNESS OF DEMAND FOR FREE COINAGE.

Now, Mr. Chairman, who can doubt that, if silver had retained the value it then had, we would never have heard a word from these gentlemen about its free coinage; that they would still be proclaiming that "gold is the universal standard of the world." "It can not lie; it keeps its promises to rich and poor alike." It is as certain as anything can be in this world that the attitude of the silver-mine owners with reference to free coinage was taken simply and solely because of its fall in value; because, instead of being more valuable than gold, it soon fell below gold and has ever since continued to fall. If silver had retained its then value of 3 per cent higher than gold, or if it had fallen to the price of gold and had there remained, there would have been no special advantage to the owner of silver to take it to the mints to be coined, because the owner would have received from the mint in the dollar that was given him only the market value of his silver; but as soon as silver commenced to fall immediately the silver-mine owner saw that at no other place in the world except the Government mint could he put in silver less than a dollar in value and take out a full dollar.

Hence we find that at about 1876, when silver had commenced to fall materially in its market value, we heard for the first time the demand made for its free coinage, and from that day to this, the greater the price has fallen, the louder has been the cry for its free coinage. And to-day, when the silver in a dollar is worth only about 50 cents, we see progressing the most active fight on this line that has ever been waged. Can anyone doubt that if the coinage of gold had been limited in 1873 and gold had depreciated in value, and silver had been retained as the standard of value, we would have heard, and would still hear, just as vigorous a demand made by the miners of gold for its free coinage as has been made by the owners of silver for its free coinage? It is interesting to fancy how our friends on the other side of this question would have coined for their opponents, if gold were the cheaper metal, a new vocabulary of abuse and derision. Instead of being "gold bugs" we would have been "silver bugs," and we can well imagine with what unction they would have told us that we were oppressing the farmers and laboring men of the country by discriminating against this "articulation of commerce," this "most potent agent of civilization," this "precious thing that has lifted the nations from barbarism"—the one thing that "can not lie," that "keeps its promises to rich and poor alike."

The only difference would have been that the fight for free coinage of gold would have been made by the owners of gold, whereas the present fight is urged on by the owners of silver. Now, Mr. Chairman, while I do not doubt for a moment that the fight for free coinage of silver was begun, and has since been constantly carried on, by the owners of silver for their personal benefit, I do not wish to be understood as imputing any such motive to the great mass of the supporters of the movement who have no such

selfish interest. The respect and friendship which I entertain for the advocates of this measure on this floor make it almost unnecessary that I should disclaim any such imputation. I know that they honestly believe in this doctrine and that they are convinced in their own minds that, if adopted, it would be greatly to the benefit of our people. Their mistake lies, in my judgment, in having been induced by the vociferous cries of the silver owners that relief could be found in a depreciated currency.

SILVER CIRCULATION IN 1893.

As the advocates of free coinage of silver have imputed all manner of disastrous results to the limitation of its coinage in 1873 on the ground that our people have not been allowed the free use of silver money, let us see what was the condition of silver circulation at that day and what it is now. In 1873 there was not a dollar of silver in circulation of any sort, nor had there been any for at least ten years. To-day we have nearly four hundred millions of silver in full legal tender and seventy-seven millions in subsidiary coin. How, then, can it be charged that, by the act of 1873, the great mass of the people were injured by being deprived of the use of silver, when, at that day, there was not a dollar of it in use, while, since 1878, we have been constantly adding to our stock of silver until it now amounts to the above enormous sum? From the loud complaints that have been made anyone would have supposed that, for every year of our national existence, the United States had been hard at work coining silver dollars, whereas the truth is that, in the whole previous history of the Government, we had coined only the pitiful sum of $8,030,000 in silver dollars.

$400,000,000 AGAINST $8,030,000.

Now, since 1878, there have been coined the enormous sum of $397,652,873 in full legal-tender standard silver dollars. Thus we find a coinage of nearly four hundred millions in about fifteen years, against a coinage of $8,030,000 in eighty-nine years—nearly fifty times as much in the one case as in the other. Now, under this condition of things, it is impossible to conceive what objection the advocates of silver free coinage, except the silver-mine owners, can have to our silver currency, except that the Government does not allow it to be depreciated in value, but maintains it at full parity with gold. Of course, the owners of silver would be very glad to be allowed to go to the mint and, by giving a half dollar, take out a full dollar, but this motive, as I have said, does not affect the great mass of the supporters of free coinage, and I am utterly at a loss to see what can be the object of this latter class to get into circulation a cheap dollar, which in my judgment would be the most deplorable affliction that could befall our people.

$1,260,937,506 AGAINST $135,000,000.

Leaving for the present the question of the condition of the country as to silver alone in 1873 and at the present time, and taking up the question of the difference in our condition as to both gold and silver then and now, we find from the statistics that there was in the United States in 1873, in and out of the Treasury, only $135,000,000 in coin, whereas in 1895 there was the enormous sum of $1,260,937,506 in coin. If our alleged prosperity before 1873 was due to the fact that we then had free coinage of both gold and silver, whereas we are now suffering all manner of disasters because there is no longer free coinage of silver, how does it happen that we then had only $135,000,000 in both coins, whereas we now have over a billion of the same?

PER CAPITA CIRCULATION.

And if we take all of our circulation, in both coin and paper money, instead of confining it to coin alone, we will find from the tables which I will print that in 1873 our entire circulation was $18.04 per capita, whereas in 1894, during the worst period of our late depression, our circulation was as high as $24.28—greater than the circulation of any country except France.

Specie and bank-note circulation of the United States in the years specified from 1800 to 1859.

[Prepared by Loans and Currency Division, Treasury Department.]

Year.	Number of banks and branches.	Estimated bank notes outstanding.	Estimated specie in United States.	Total money in United States.	Specie in Treasury.	Money in circulation.	Population.	Per capita.

NOTE 1.—Specie payments were suspended from January 1, 1862, to January 1, 1879. During the greater part of that period gold and silver coins were not in circulation except on the Pacific Coast, where, it is estimated, the specie circulation was generally about $25,000,000. This estimated amount is the only coin included in the above statement from 1862 to 1875, inclusive.

NOTE 2.—In 1876 subsidiary silver again came into use, and is included in this statement, beginning with that year.

NOTE 3.—The coinage of standard silver dollars began in 1878 under the act of February 28, 1878.

NOTE 4.—Specie payments were resumed January 1, 1879, and all gold and silver coins, as well as gold and silver bullion in the Treasury, are included in this statement from and after that date.

ARGUMENT AGAINST FREE COINAGE.

Looking, therefore, at the question from any standpoint, I can not for the life of me see how we were any better off in 1873 in the matter of currency than we now are.

Having, up to this time, considered only the arguments urged in behalf of this measure, I will now discuss, as fully as the time at my command will permit, the reasons which, to my mind, would make it most disastrous to enact this measure into law.

SILVER MONOMETALISM.

My first objection is that the free coinage of silver as proposed would drive out of the country the $625,000,000 of gold which we have. Gentlemen on the other side of this question strenuously assert that this result would not follow; but if we will have any regard for what has universally occurred under similar circumstances in other countries, and also in our own, it seems impossible that there could be any result except that gold would at once disappear.

The universal experience of mankind has been that where one of two coins is overvalued relatively to the other, and both made a legal tender with free coinage to both on the same terms, the coin which is so undervalued will disappear from circulation. Taking up the history of our own country alone, we will find that this result has invariably happened whenever such conditions existed, and in cases even where the difference in value was insignificant. In 1792 we first fixed the ratio between gold and silver at 15 to 1, when in fact the market value was about 15¼ to 1, and the effect of this insignificant overvaluation of silver sent our gold out of circulation, and it continued out of circulation until 1837, when a law was passed changing the ratio to 16 to 1 for the express purpose, as declared by the statesmen of that day, of bringing gold back into circulation.

But in their anxiety to secure this result they undervalued gold to a slight extent, whereupon silver immediately disappeared from circulation and, substantially, we had a circulation only of gold for the next forty years. There is nowhere any dispute about these facts, and we are driven to the conclusion that the same thing will happen again under similar circumstances as has happened in every instance recorded in history. Now, what do our friends on the other side ask us to do in this matter of the ratio between gold and silver? They are insisting that the ratio shall still be kept at 16 to 1, although the market price of silver everywhere in the world to-day shows that the proper ratio should be about 32 of silver to 1 of gold, which would make the enormous overvaluation of silver of 100 per cent.

Can anyone doubt that gold would instantly disappear? Can we, as reasonable persons, believe that what has always happened in the case of a very slight overvaluation will not instantly come about when there is this unheard-of overvaluation? There is no mystery about this law, nothing whatever about it that is not easily understood; there is the very best of reasons at the bottom of it, and hence it is that we find the same thing always occurring under the same circumstances. That reason is that if a man has two kinds of money with which to pay for what he buys, one of them worth much less than the other, he will inevitably pay out that which is of the least value and retain the other. And when everyone in the community does this the necessary effect is that the better money ceases to circulate and is either hoarded by the people or kept locked up in the banks. And this is especially apt to happen when there is agitation about the currency and danger of a crisis in financial matters.

THE CURSE OF FREE COINAGE AGITATION.

It is the belief of many people whose opinions are entitled to the highest respect that the trouble we are now having with our financial affairs—the continual rush on the Treasury to get gold—is due to the agitation of the free-silver question and to the enormous additions we have made to our silver currency, and there is no doubt whatever in my mind that such is the case. Not many years ago there was, as everyone knows, a great deal of gold in circulation—who sees any of it now? It has gone out of circulation; it is hoarded and treasured up and is so eagerly sought after that it is now costing the Government millions of dollars every year to keep enough gold in the Treasury to redeem its notes.

Now, if such a condition exists from the additions already made to our silver currency, all of it maintained by the Government at an equal value with gold, and from the mere apprehension that the country will be flooded with silver through free coinage, what may we not expect if the silver agitators had their way and free and unlimited coinage of silver was an accomplished fact? Undoubtedly we would immediately fall into silver monometallism and be a silver country like Mexico, China, and Japan. Nor do the advocates of this bill deny that such would be the case. On the contrary, so far from denying it they are anxious to bring about just that result.

EFFECT ON THE COTTON PLANTER.

I can not understand, Mr. Chairman, why the representatives of the cotton-producing States of the South should think that this measure will be of advantage to their constituents. With whom do we deal? Where do we send our products—the enormous crop which we yearly make, far exceeding in quantity what this country can consume? Do we deal with silver countries? Do we deal with China, Japan, and Mexico? Why, no.

GOLD COUNTRIES OUR BEST CUSTOMERS.

All of our surplus cotton is substantially sent to the gold countries of Europe, to Great Britain, Germany, and France. When we consider the vast quantity of cotton shipped to those countries I can not understand how gentlemen can maintain that it is to our interest to have a currency system entirely opposed

to that which they are using. During last year we shipped to those countries the following enormous quantities of cotton:

	Bales.	Value.
United Kingdom	3,468,255	$101,696,650
Germany	1,500,309	43,075,399
France	773,734	21,583,890
Total	5,742,228	166,355,939

In addition to this, we sold to France 5,044 bales of sea island cotton, worth $354,323, and to the United Kingdom 33,912 bales, worth $2,404,595; sustantially all the sea island cotton that we sold to foreign countries. This is what we sold to only three of the gold countries, without taking into consideration the sales to the various other gold countries of less importance. Now, what cotton did we sell silver countries during the same period?

SILVER COUNTRIES OUR WORST CUSTOMERS.

It does not appear that we sold a bale to China, and to Mexico and Japan together we sold only 93,261 bales. Now, what would be the result to the cotton farmers of the South if this country is placed upon a silver basis while the countries with which they chiefly deal are on a gold basis? Everybody knows that the price of our cotton is fixed in Liverpool, and that every purchase of cotton made in this country is made on the basis of Liverpool prices, and that not a single cotton buyer in this country bids on cotton until he knows what the price is in Liverpool that day.

But the Liverpool price would be in gold, and the American price would be in silver, and the cotton buyer would not only have to figure on a possible fall in the price of cotton, but on a change also in the price of silver, and there would thus be two chances to be taken in the transaction instead of only one, as there is now. Would the cotton buyer himself assume either of these risks? Certainly not. He would take neither risk, and would make such a difference in the price paid the farmer as would make himself safe in the transaction.

FIGURE ON THE EXCHANGE, FIGURE ON THE FLUCTUATIONS, FIGURE ON THE GAMBLING.

What chance would the farmer stand in business conducted in that way? As Senator STEWART, the great silver leader, said in the speech from which we have above quoted, he would have "to figure upon the exchanges, figure upon the fluctuations, figure upon the gambling"; and in all of this he would be no match for the cotton buyer, whose business it would be to be thoroughly informed on all such matters. How many farmers would have time to spare from their legitimate business to be making all these calculations? And if he had, what information could he get as to the price of cotton and the price of silver in London?

There would be constant worry, friction, and uncertainty, all of which would react against the farmer. In ordinary life nothing is considered more important with a business man than for him to retain his best customers and to make his dealings with them as easy and pleasant as possible; but, if our silver friends are allowed to have their way, this plain and sensible rule would have to be violated by every farmer in the South. Great Britain and the other countries I have mentioned are the farmers' best customers; they generally buy about two-thirds of our whole cotton crop, and it would certainly seem to be to the interest of the farmer to keep these good customers, and to have the business transactions between them made as easy and simple as possible. But if this country were placed upon a silver basis not a bale of cotton could be sold without the farmer being involved in all these difficulties I have mentioned. Has he not already enough to do to raise his crop and prepare it for market without assuming these additional burdens? And by no possibility could he derive any benefit from such a condition of things, for if he got a high price in silver for his cotton he would of course have to pay a correspondingly high price for everything that he bought.

Can the farmer possibly believe that what he has to sell will alone increase in price, while the prices of nothing else will rise? If he gets more for his cotton in silver, will he not have to pay more for everything he buys? And he must bear in mind what is a very sad but nevertheless an undeniable fact, that what he has to buy is always fixed by the seller, while the price of his cotton is not fixed by himself, but by the buyer—a result arising out of the fact that its price is fixed in Liverpool, thousands of miles beyond his reach. And here again he will find the rule operating against him that, whether buying or selling, he will have to pay for all the risks and chances arising out of a depreciating and fluctuating currency.

I have dwelt, Mr. Chairman, at length on the effect this legislation would have on the cotton planter, because he has my deepest sympathies, my interests are all the same as his, and I believe I know enough about his business and his needs to enable me to judge intelligibly what will hurt or help him. No doubt I would please him better for the time being if I were to tell him that the passage of this bill would give him two prices for his cotton, and that I would, therefore, vote for it; but, believing as I do that the free coinage of silver would almost prove his destruction, I feel it to be my duty, as his earnest friend and faithful representative, as my record will show I have always been, to warn him of the danger that is ahead of him and to do all in my power to protect him.

EFFECT ON SALARIED MEN.

If this bill becomes a law, Mr. Chairman, it will at once reduce by one-half the value of the income received by every clerk and every other employee working at stated salaries; of every schoolteacher, of every professor in colleges, and of every minister of the gospel.

WIDOWS AND ORPHANS.

Possibly, after years of privation suffered under this condition of things, and after much contention, their condition may be somewhat ameliorated by an increase of salary, but there would be no such hope for another class, who are entitled to our deepest sympathy and protecting care. I mean the aged, women and children, widows and orphans who are dependent on investments for their income, never very large in our part of the country. What hope would there be for them, with ability to work all gone and with their entire investments and yearly income reduced one-half in value?

LABORING MEN.

I have already referred to the effect that this bill would have on the laboring classes, and have produced tables showing their condition in those countries, to the level of which the advocates of this bill wish to reduce us. Does anyone believe that under free coinage of silver the wages of labor would be increased in proportion to the price of articles that the laborer must have? The statistics of silver countries show that this is never done. In his first message to Congress, in 1885, President Cleveland quoted the following from a speech made by Daniel Webster in the Senate in 1834:

> The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil.

THE DEBTOR CLASS.

There are a great many people in the country who favor the free coinage of silver solely upon the ground that they are in debt, and that it would be much easier for them to pay off their indebtedness in dollars worth only 50 cents than in dollars worth 100 cents. Conceding, for the sake of argument, that the debtors of the country would be thereby benefited, are we justified in legislating solely in the interest of one class of our people in disregard of the rights of all others? And, especially, ought we to do this when such legislation would deprive many others of our people of just one-half of the money they have invested? For, of course, if the debtors gained by such a law, their creditors must undoubtedly lose exactly in the same proportion. But is it true that the debtors as a class will be benefited? There is, of course, no possibility of this bill passing this House and becoming a law, but let us suppose that, during the coming election, the advocates of free coinage, having now a majority in the Senate, were to carry the House and win the Presidency.

What would be the result on the debtors of the country of this declaration that just as soon as the new Congress could meet and the President take his seat all debts were to be paid in 50-cent dollars? There would be a financial crash such as the world has never seen, and the debtor class would be the very first to be ruined. It would be months before the law could be passed, and instantly every creditor in the country would do his utmost to collect his money before it got to be the fashion to pay debts in 50-cent dollars. As a matter of course no debt would be extended; the instant it became due, if it were secured by collaterals, the collaterals would be rushed upon the market and sold for whatever they would bring, and not only would the uncertainty as to the future keep purchasers from bidding, but enormous amounts of such securities being all at once placed on the market would produce ruinous prices. If the debt were secured by mortgage, suit to foreclose would be at once commenced and pressed to judgment and sale.

Not only would no extension of time be granted, but money to pay the debt could not be procured from other sources. With their property sacrificed under the hammer and their credit all gone, where could the unfortunate debtors look for help? Have we not had an object lesson and warning in what lately occurred? Did we not see that, upon the mere danger of war between this country and Great Britain, there came a crash in New York that in one day is said to have cost debtors over $100,000,000?

WHO ARE DEBTORS?

But, Mr. Chairman, when we speak of the debtors of the country, whom do we mean? Who really are they? Not simply those who owe borrowed money; they constitute a very small part.

RAILROADS, BANKS, INSURANCE COMPANIES.

The great debtors of the country are the railroads, banks, insurance companies, and other corporations. It is estimated that the railroads of the country owe not far from $6,000,000,000; savings banks owe their depositors about $1,700,000,000, the depositors therein numbering over 4,700,000. There were over 1,900,000 depositors in national and other banks whose deposits amounted to $3,000,000,000; building and loan associations owed their members about $450,000,000; cities, counties, and towns owe about $1,100,000,000, and over 7,500,000 persons hold policies in life insurance companies. These enormous sums have either been invested or deposited with these corporations, and every dollar of it has been paid in sound, hard-earned money, and the great mass of it represents the savings of people of moderate means.

If we come down to a silver basis what will be the result as to this vast sum? Silver will be the sole standard of value and these institutions would all have the right to pay every cent of it in 50-cent dollars. Take the savings banks depositors and the holders of life-insurance policies alone and see what a fearful amount of wrong and injustice would be done that most worthy class of people. For years they have been stinting themselves and denying themselves perhaps even the comforts of life in order to make provision against old age or to secure a support for their loved ones after they themselves have passed away, and they would see one-half of it destroyed at one blow. It would seem, Mr. Chairman, as if our friends on the other side, if they have their way in this matter, would be benefiting only the banks and other corporations which they usually denounce in such round terms.

Coin Redemption Fund.

SPEECH
OF
HON. R. W. BLUE,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. BLUE said:

Mr. CHAIRMAN: As the Representative-at-large from the State of Kansas I do not at this time desire to be wholly silent. Absence from this House, enforced by sickness, prevented me from getting the necessary time in general debate. I shall therefore be compelled to content myself with the limited time accorded under the present rule and ask leave to extend my remarks in the RECORD.

The Republicans of the State of Kansas, in their platform adopted in 1894, indorsed the national Republican platform made and promulgated at Minneapolis. By its terms it favored the use of gold, silver, and paper as money, but under such restrictions and regulations as would preserve the parity of the dollars in debt-paying and purchasing power. To that enunciation they added that they favored the coinage of the output of our own silver mines and a tariff upon foreign silver. Taking the whole enunciation upon the question of finance together, it clearly meant that the Republicans of Kansas are in favor of sound money [applause on the Republican side], and as their Representative I propose by my vote and to the extent of my power to carry out their direction. [Renewed applause.]

Florid rhetoric revamped from "Coin's Financial School" proves nothing. [Laughter.] Nor do turgid phrases offer argument. There are a few general principles that underlie this whole money question, and after all the debate, after all the known theories that are presented here on the side of those who favor the free and unlimited coinage of silver, these general principles remain. One is that when there is a difference between money, between the coins, in value, that the cheaper coin invariably drives the dearer out of circulation. In other words, that it has the effect of demonetizing it, and the cheaper coin becomes the measure of value that is invariably used. The other is that whatever may be the value of a coin as fixed by statute it eventually takes its true value as gauged by the laws of commerce and trade in purchasing power.

Soon after the commencement of the present session of Congress this House expeditiously passed and presented to the Senate of the United States two measures intended to meet in a patriotic way the necessities of the country. The first was a revenue measure designed to increase the revenues of the nation by at least $40,000,000 per annum. The other was an amendment to the law of 1875, which authorizes the issuance and sale of bonds for the relief of the Treasury and the protection of the national credit. It is as follows:

That in addition to the authority given to the Secretary of the Treasury by the act approved January 14, 1875, entitled "An act to provide for the resumption of specie payments," he is authorized from time to time, at his discretion, to issue, sell, and dispose of, at not less than par in coin, coupon or registered bonds of the United States, to an amount sufficient for the object stated in this section, bearing not to exceed 3 per cent interest per annum, payable semiannually, and redeemable at the pleasure of the United States, in coin, after five years from their date, and payable in fifteen years after their date, with like qualities, privileges, and exemptions provided in said act for the bonds therein authorized. And the Secretary of the Treasury shall use the proceeds thereof for the redemption of United States legal-tender notes, and for no other purpose: *Provided*, That nothing in this act shall be construed to repeal or modify an act approved May 31, 1878, entitled "An act to forbid the further retirement of United States legal-tender notes." Whenever the Secretary of the Treasury shall offer any of the bonds authorized for sale by this act or by the resumption act of 1875, he shall advertise the same and authorize subscriptions therefor to be made at the Treasury Department and at the subtreasuries and designated depositories of the United States.

SEC. 2. That to provide for any temporary deficiency now existing, or which may hereafter occur, the Secretary of the Treasury is hereby authorized, at his discretion, to issue certificates of indebtedness of the United States, to an amount not exceeding $50,000,000, payable in three years after their date to the bearer in lawful money of the United States, of the denomination of $20, or multiples thereof, with annual coupons for interest at the rate of 3 per cent per annum, and to sell and dispose of the same for not less than an equal amount of lawful money of the United States at the Treasury Department and at the subtreasuries and designated depositories of the United States and at such post-offices as he may select. And such certificates shall have the like qualities, prvileges, and exemptions provided in said resumption act for the bonds therein authorized. And the proceeds thereof shall be used for the purpose prescribed in this section and for no other.

This amendment provides for the issuance of shorter-time bonds at a lower rate of interest, and requires that the disposition of the bonds shall be open to the public and an opportunity afforded our people to become owners of our national loans. In addition it provides for the issuance of bills of exchequer running not to exceed three years in time at low rate of interest, these exchequer bills to be used only for the purpose of meeting any temporary deficit which may exist in the Treasury.

The amendment further provides that the proceeds of bonds hereafter to be issued and sold should be applied only to the redemption of the greenbacks.

A careful examination of this proposed amendment to the law of 1875 will clearly exhibit its merits.

The present Administration, when confronted with an insufficient revenue brought about by its defective economic policy and its growing and continued deficit in the Treasury, invoked the aid of the act of 1875 and issued and sold bonds to redeem United States Treasury notes which the impaired national credit drove to the National Treasury for redemption. With the gold derived from the sale of bonds it has redeemed greenbacks, which were immediately reissued by the Treasury to pay the deficit produced by an insufficient revenue. In that way has been established the endless chain about which the President and his Secretary of the Treasury have so much to say.

Some of the adherents of the President's policy in this House stoutly maintain that there is no lack of money in the Treasury, and no necessity for the issuance of any more bonds. With skillful and adroit sophistry they would argue the deficit away: Should this amendment offered by the House become a law the deficit would be emphasized and pointed out by the requirement which compels the Treasurer to meet the emergency by the issuance of short-time exchequer bills. Thus the endless chain would be impaired and eventually broken, and the use of greenbacks in the payment of the Treasury deficit prevented. It will be observed that this amendment does not in any sense compel the issuance of more bonds, but only provides for an additional class of bonds, shorter in time, cheaper in rate of interest, popularizing our national loans by first offering them to the masses of our own country, and prevents the use of the redeemed greenback in discharging the deficit.

It is apparent to everyone who has given the subject careful consideration that the law of 1875, which provides for the issuance and sale of bonds, has been for some months the only barrier between the National Treasury and the destruction of national credit.

We have seen the gold reserve in the Treasury sink to about $50,000,000, and yet all our money has remained as good as the best and our national credit has been preserved. Why is this? It is due to the fact that the country and the civilized world realize that under the law of the land the Government could issue and sell these bonds for the protection of the national credit whenever necessity compelled it.

It is now apparent that the chief cause for present financial conditions is lack of national revenue. The experience of the past, reaching from specie resumption down to the national election of 1892, abundantly proves that with a sufficient revenue and a gold reserve of $100,000,000 all of our money can be maintained at a parity in value, the national credit preserved, and the confidence of the people so sustained that comparatively few of our greenbacks will be presented for redemption.

When this House measure reached the Senate and was taken up for consideration that body struck out the entire bill and substituted for it the following measure:

That from and after the passage of this act the mints of the United States shall be open to the coinage of silver, and there shall be coined dollars of the weight of 412½ grains troy, of standard silver, nine-tenths fine, as provided by

the act of January 18, 1837, and upon the same terms and subject to the limitations and provisions of law regulating the coinage and legal-tender quality of gold; and whenever the said coins herein provided for shall be received into the Treasury certificates may be issued therefor in the manner now provided by law.

SEC. 2. That the Secretary of the Treasury shall coin into standard silver dollars, as soon as practicable, according to the provisions of section 1 of this act, from the silver bullion purchased under authority of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," that portion of said silver bullion which represents the seigniorage or profit to the Government, to wit, the difference between the cost of the silver purchased under said act and its coinage value, and said silver dollars so coined shall be used in the payment of the current expenses of the Government; and for the purpose of making the said seigniorage immediately available for use as money the Secretary of the Treasury is hereby authorized and directed to issue silver certificates against it, as if it was already coined and in the Treasury.

SEC. 3. That no national bank note shall be hereafter issued of a denomination less than $10, and all notes of such banks now outstanding of denominations less than that sum shall be, as rapidly as practicable, taken up, redeemed, and canceled, and notes of $10 and larger denominations shall be issued in their stead under the direction of the Comptroller of the Currency.

SEC. 4. That the Secretary of the Treasury shall redeem the United States notes, commonly called "greenbacks," and also the Treasury notes issued under the provisions of the act of July 14, 1890, when presented for redemption, in standard silver dollars or in gold coin, using for redemption of said notes either gold or silver coins, or both, not at the option of the holder, but exclusively at the option of the Treasury Department, and said notes, commonly called "greenbacks," when so redeemed, shall be reissued as provided by the act of May 31, 1878.

Amend the title so as to read: An act to restore the coinage of silver dollars, and for other purposes.

IN THE SENATE OF THE UNITED STATES,
January 30, 1896. (Calendar day February 1, 1896.)

Resolved, That this bill pass with amendments.

Attest: WM. R. COX, *Secretary.*

That is the proposition now before us for consideration. It is to be observed that this is the best average judgment of the silver advocates in the Senate of a measure for the relief of the Treasury along the lines for proper treatment of silver. They are the champions of the silver cause. In their hands is the destiny of the white metal. By their conduct in presenting this substitute is their good intent and honesty of purpose to be gauged. The first criticism of this measure is that it is not germane to the subject of the original bill and is wholly at variance with what seems to be good faith and parliamentary practice.

With equal logic a substitute might have been offered by the Senate providing for a system of irrigation of arid America or for the distribution of seed by the Secretary of Agriculture.

It would have been much more in consonance with the dignity and honor of the Senate to have met the question frankly by a germane amendment and an independent bill of its own for a solution of the question. If the friends of the free and unlimited coinage of silver mean to treat the subject fairly, why do they not prepare and introduce in this body or enact and send to us from the other body of this Congress a measure embodying their views?

This substitute as presented to us by the Senate provides for the free and unlimited coinage of the silver of the world on a ratio of 16 to 1. It directs the coinage of the seigniorage of the silver bullion now in the Treasury, purchased under the provisions of the Sherman silver-purchasing act of 1890, and requires it to be used in the payment of the current expenses. For the purpose of making said seigniorage immediately available it authorizes and directs the Secretary of the Treasury to issue certificates against it as if it was already coined. It retires all national-bank notes of a denomination less than $10 and then requires the Secretary of the Treasury to redeem the greenbacks in standard silver dollars or in gold coin, or both, not at the option of the holder, but exclusively at the option of the Treasury Department. I will consider these several sections in inverse order.

It will be observed that the provision for the preservation of the parity of the dollars which was placed in the act of 1890 is omitted. What was that provision?

It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law.

The provisions of the act of 1893 upon the parity of the dollars is also left out. That provision is as follows:

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintainance of the parity in value of the coins of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

Now, these omissions were doubtless purposely made in order that the descent to a silver basis might be the more certain and speedy.

The expressions of those parity provisions in the laws of 1890 and 1893 were only legislative affirmations of what had been the policy of the Treasury for many years. To omit them now would be an abandonment of the principle.

If the third section of this substitute stood alone, freed from the obnoxious provisions of the other parts of the substitute, I would cheerfully yield it my support, believing it would aid, in a degree at least, in reaching actual bimetallism to the extent of using the silver output of our own silver mines.

There are several serious objections to the second section of this Senate substitute. In the first place, it requires the coinage of the seigniorage of the silver bullion in the Treasury. There can be no seigniorage until the silver is coined under the provisions of the act of 1890. It can not be determined in advance of the coinage. And yet this substitute requires not only the coinage of this supposed seigniorage, but directs the Secretary of the Treasury to issue certificates against it as if "it were already coined." In other words, the Secretary is required to certify that there are so many dollars in the Treasury which have never been coined and have no existence as dollars. Couched in this vicious provision is a doctrine enunciated by a distinguished Populist:

That the Government should estimate the gold and silver in the mountains in the nation and issue certificates against it.

Gentlemen do not seem to recognize the difference between the promise to pay based on the faith of the nation and a gold or silver certificate. A certificate states a fact, that is, that so many dollars have been deposited in the Treasury. The gold and silver coins in the Treasury, against which there are certificates outstanding, are not the property of the Government. They are the property of the holders of the certificates. The Government is simply the trustee of the owners, and has no more right to use such coin than any other trustee has to use trust funds for his own private purposes. When this coin which now rests in the Treasury with certificates outstanding against it is excluded, it leaves about $7,000,000 of free silver remaining in the Treasury which can rightfully be applied to the discharge of the current obligations of the Government.

The first section of the substitute is for the free and unlimited coinage of the silver of the world, pure and simple. How is the free and unlimited coinage of the silver of the world to relieve the Treasury from its present embarrassment? The owner of silver bullion who takes it to the mint to have it coined will carry his silver dollars coined at Government expense away with him. He will leave no dollars behind to aid in the discharge of the deficit in the Treasury.

The advocates of this measure with practical unanimity oppose the issuance of any more bonds to protect the national credit. There has been no gold paid into the Treasury on tariff dues for several months. With the power to sell bonds taken from the Secretary of the Treasury and no gold coming to the Treasury from taxation, what will the word coin in our statute mean? Some gentlemen may say pass an act requiring the payment of dues in gold. Do they realize that such a discrimination in favor of gold would still further widen the space between the metals and aid in demonetizing gold? Has not the distrust bred by the threat of free and unlimited coinage of silver already put Gresham's law into operation? Do not gentlemen find the money in use now very generally silver certificates and silver? Are not gold and greenbacks already retiring from view as the more valuable money?

The momentous question which is before the nation is the free and unlimited coinage of the silver of the world by this nation alone. The friends of this free and unlimited coinage in this House and in the Senate Chamber with practical unanimity discard all belief in the possibility of an international agreement for bimetallism. They insist that this Government alone can maintain the free and unlimited coinage of the silver of the world at a ratio of 16 to 1 and preserve the parity of the dollars. What is there in past experience to justify it? The lawmaking power of this Republic established our first monetary ratio in 1792 at 15 to 1. It was believed at that time that that ratio was the average commercial ratio between the two metals in the commercial world and that the parity of values could be maintained thereon and that the concurrent circulation of silver and gold could be maintained thereby. France at that time maintained a ratio of 15½ to 1. When this Republic began its coinage upon the established ratio it was speedily discovered that gold would not circulate concurrently with silver upon that ratio, because it was more valuable. It was melted down and used in the arts or sought the markets of France or other nations where it was more highly valued.

The force of our statute was overcome by the higher law of commerce and trade, and so long as we maintained that ratio gold refused to circulate as money, and we had silver monometallism. This condition of affairs continued until 1837. Congress then changed the ratio to 16 to 1, believing that it would more nearly approach the commercial parity between the two metals and compel the concurrent circulation of both gold and silver in the country. When the mints entered upon coinage under this ratio and the coins began to be used among the people, it was speedily ascertained that silver had been undervalued by this ratio and that gold was the cheaper money. The inexorable law of commerce and trade, as established by the universal experience of mankind, compelled hoarding and exporting of silver and made

gold the metallic money of account. In 1853 the lawmaking power of the nation, in order to prevent the shipping of our subsidiary silver coin and to keep it at home as change, lightened its weight and fixed the amount of its legal tender at $5.

In 1857, by an act of Congress, the foreign silver dollars in use in this country were demonetized, and by these various statutory provisions silver was demonetized in its use as standard money, and from 1857 to 1861 gold was the standard of value and the money of account.

From 1861 to 1873 metallic money was out of circulation in the nation, the cheaper unit of value, the depreciated Treasury note, having under Gresham's law driven the better money out of circulation.

The so-called crime of 1873, about which we have heard so much and concerning which there has been so many persistent misrepresentations, occurred in 1853 and 1857, rather than in 1873.

The law of 1873, which it is claimed demonetized silver, was simply a confirmation of what the ordinances of commerce and trade had made the business practices of this nation since 1857. Gresham's law of finance, like the law of gravitation in physics, existed for centuries before it was discovered by man, and like the great law of gravitation, its silent and inexorable force controlled everywhere in the commerce and trade of the world. No statute has ever repealed or ever can for any appreciable length of time modify or impair it. If all the statutes in the civilized world should by common consent demonetize gold it would still, under the operation of the laws of commerce, business, and trade, measure values and settle balances between nations until something more acceptable in the judgment of mankind should take its place.

Much has been said in this House and elsewhere about the depreciation of silver by reason of its demonetization by the legislation of the great nations of the earth. Is that assumption wholly sustained by the facts? Is it not in general true that legislation follows rather than precedes conditions? Is it not a fact that laws are enacted to meet the requirements of the changed conditions of society? Are they not generally made to correct inequalities, redress wrongs, or preserve rights under the existing conditions of society? Why was it that silver, by the common consent of mankind, became discredited as a measure of value and a standard money? Was not this condition of things in existence before the legislation effecting the demonetization of silver began? An enumeration and consideration of the causes which brought about these conditions in the commercial world would be an interesting study.

As the debate has progressed the question has occurred to me, why go back in the eternal past and seek to adopt the practices and methods and measures of value established centuries ago? The conditions which confront us deal with the present rather than the past.

We have not been wholly without experience upon this subject in the last twenty years of our national existence. Up to 1878 we had coined 8,000,000 silver dollars. Under the operation of the Bland-Allison Act we organized a system of silver coinage which added to our standard silver dollars something over $2,000,000 per month for many years, averaging something near $30,000,000 per annum until we had added to the $8,000,000 already coined about four hundred millions more.

What is the remedy now? Advocates of free coinage insist that the cure for all our financial ills is to at once enter upon the free and unlimited coinage of the silver of the world upon a ratio of 16 to 1 by this nation alone. They assume that such a course will at once give us a concurrent circulation of both gold and silver at a parity in value, greatly enlarge the volume of money, enhance the prices of all commodities, and produce such prosperity in the land as the world never knew before. What is there in the past history of this nation to justify the assumption? If a difference of two or three cents on the dollar was sufficient to demonetize gold from 1792 until 1857 and demonetize silver from 1857 until 1861, when practically the whole civilized world was sustaining the parity in the metals by ratios very similar to our own, what would be said of our ability alone to sustain the parity of the dollars on a ratio of 16 to 1, when the difference between the dollars on that ratio now is 50 cents and the commercial ratio of the world is 32 to 1? Such a proposition carries with it its own refutation. It is contrary to the experience and common sense of mankind and is unworthy of the support of any sane person.

In 1890 we enacted the Sherman silver-purchasing law, and provided for the purchase by the Government of the estimated annual product of our own silver mines, amounting to about 54,000,000 ounces of silver per annum. Now, this enactment called for an effort on the part of this Government alone to sustain the value of silver. What was the effect of this immense consumption of silver by our Government? During all that time silver continued to fall in price in the markets of the world. At no time during this experiment did the price of silver exhibit a healthy condition. The decline in the price of silver in the markets of the world was not arrested.

If the Government can, by the use of silver in large quantities, impart a value to it above that fixed by the commerce of the world, why did it continue to fall during the entire period from 1878 to 1893? It is claimed by the advocates of free silver that one of the money commodities of the world has been destroyed in its use and the volume of money severed in twain. Is this claim sustained by the facts?

The report of the Director of the Mint shows that all the countries of the world since 1873 have actually coined two billions seven hundred millions of silver. All the coined silver in the world is estimated at $4,000,000,000. Of that sum, something like one-half has been coined since 1873. According to the same authority more silver has been coined during that period than any like period of free and unlimited coinage.

France has been cited as an example of a bimetallic country, and statements have been frequently made that she reserves and exercises the right to pay at least a part of her obligations in standard silver. As an explanation of the financial conditions in France and a refutation of the misstatements frequently made by the advocates of free silver, I beg leave to make use of the statement of the gentleman from Georgia [Mr. TURNER], which is as follows:

France tried the experiment of an international agreement and joined in what was called the Latin Union, a union with Italy, Switzerland, Greece, and Belgium, by which they fixed a ratio between the two metals, and international coins of the same weight and fineness circulated freely in all the countries named. That union has been dissolved; and since France has refused the free coinage of silver the coins of like value in these other parts of the Latin Union that happened to be in France have been rejected by the shopmen everywhere, and in addition to that, the Bank of France has recently returned to Italy, under a sort of Government auspices, two or three millions of dollars in Italian silver coin because in French people would no longer take them, although they were a party to their coinage.

In France the Government has no demand notes outstanding, while we have $500,000,000. France has no such thing as agitation for free coinage at 15½ to 1 by France alone, as a menace to its system of finance. In this country our stock of gold, with a population of over 70,000,000 of people, is $618,000,000. In France the stock of gold, in a country of about 35,000,000 inhabitants, is $850,000,000.

The per capita allowance of gold would be in this country $8.78. In France it would be $22.10.

How is it with silver? In the United States we have a total, including the coinage of limited tender, of $825,000,000 of silver—more of it than gold. In France the silver is $487,000,000. With uncovered paper estimated—for all this enters into the calculation—we have on the basis assumed in the Treasury, which excludes the paper in the Treasury and the Sherman notes, but taking the basis of uncovered paper there after the gold reserve is deducted, we have a per capita of uncovered paper amounting to $5.92, while in France it is only 84 cents.

Now, let us run that out. I here use the figures of the gentleman from Mississippi [Mr. CATCHINGS]. France holds $231,000,000 more gold than we do, and she has only about one-half of the population. France holds $384,000,000 less of uncovered paper than we do. If we had the same per capita of gold as France, we would have $1,567,279,700 of gold. Taking the per capita of silver in France, we would have of that metal $913,952,200. Our excess of gold over silver would at that per capita be $653,227,500. Now, we have more silver than gold. If we had only the same per capita of uncovered paper as France we would have $59,329,200 instead of $416,700,000. With such resources at his command, our Secretary of the Treasury, with such a limited strain for redemptions, would be happier than he has been for many a day.

The Bank of France has a monopoly of note issues, and keeps its paper almost entirely covered with gold and silver. It largely conducts the fiscal operations of the Government, which appoints its president and two of its vice-presidents. But the bank's assets are not those of France. It does not pay out as much silver as does our Treasury Department. All our collections from all sources of taxation are now in silver and uncovered paper; we get no gold, so that we do a great deal more with silver than the French Government and the Bank of France combined. We pay out many hundred millions of silver over the counter at the Treasury, and we receive nearly all our revenues in that currency. We honor silver a great deal more than France. As I have said, France has no demand notes to redeem. If we had none and had her resources in money, there would be no fear of silver such as is now apparent in this country.

It is sometimes said that the Government of France exercises the option to pay in silver or gold as it pleases. It has no demand obligations to meet, and as to Government disbursement we use daily a great deal more silver currency. The Bank of France will frequently pay silver to those who present bills at its counter; but whenever the person who presents the paper will state that he needs the gold for export or for any purpose for which silver is not as good as gold, they will give him the gold; and, as my friend indicates, that is largely a matter of accommodation.

What would be the effect of the free and unlimited coinage of silver at a ratio of 16 to 1 on the business of the country, if it be true that silver monometallism would follow (and about that there can be no reasonable difference of opinion)? The demonetization of gold would inevitably follow. The circulating medium of the nation would be contracted by the amount of the gold which would be driven out of circulation. The use of a cheaper standard of value would enhance the price of all the necessaries of life. The individuals and corporations who have money would reserve the better money for themselves and use the cheaper money in the marts of trade. The laboring man, who has nothing but his day's work to put upon the market, would find that, while all else was appreciating in price, his wages would be the last to rise and the first to fall. With the purchasing power of his day's work constantly sinking and every necessary of life constantly appreciating in price, he would speedily discover that his condition was rapidly becoming worse.

Gentlemen here insist that with the remonetization of silver the price of wheat will be doubled. Will the remonetization of silver double the pensions of the soldiers? Will the remonetization of

silver double the wages of the school-teacher and the fixed salaries of all the other common people throughout the nation? Are we to be forever harassed with expressions of these fallacies in the interest of the country? Is the cheapening of the necessaries of life an unmixed evil? Is not the inventor of the labor-saving machine and the discoverer of unseen forces of nature who reduces them to subjection and makes them subservient to the uses of man a benefactor of his race?

We have been frequently referred to the prosperous condition of the silver monometallic countries of the world. It has been well said by a member on this floor, Mr. GROW of Pennsylvania, that succeeding generations will read in amazement the discussions of these questions on the floor of this House at this time, in which well-informed gentlemen cite the prosperity of the pagan nations of the earth and compare it with conditions in this country to our disadvantage.

Mr. Chairman, the truth is that the most abject condition the people of this Republic have ever experienced would be unexampled prosperity in Mexico or China.

The remedy for existing conditions is a revenue sufficient to discharge the current expenses of the Government and leave an annual balance for the liquidation of a portion of the national debt—a sufficient gold reserve in the Treasury to preserve the parity of all our dollars, using the output of our own silver mines.

The revenues should be derived mainly from tariff dues so gauged as to protect the wage earners of the nation and preserve business prosperity throughout the country.

Mr. Chairman, the people of Kansas are in favor of bimetallism, not theoretical but actual bimetallism. How is that accomplished? There is not a civilized nation upon the face of the globe to-day that has actual bimetallism but is preserving that bimetallism by limiting the amount of standard silver coin, and keeping a gold reserve sufficient to make the cheaper money interchangeable with the dearer. There is no other practical bimetallism under the sun, and every country upon the face of the earth that has free and unlimited coinage of silver to-day, at any ratio, is a silver monometallic country. Their money sinks in purchasing power to its actual value. The stamp of the Government, with the statute behind it, may give it debt-paying power within the Government, but it does not confer purchasing power.

I represent, I undertake to say, a larger proportion of pensioners than any other member on this floor. The gentleman from Pennsylvania, Mr. GROW, with his colleague, Mr. HUFF, perhaps represent a larger number; but divide the number between them, and I still represent a greater number of pensioners than any member in this House.

Adopt this silver substitute that comes to us from the Senate, and we descend immediately to a silver basis with a dollar as the measure of value which is really a 50-cent piece. I represent thousands of pensioners in the State of Kansas. If I were to support this Senate substitute I would help to sever in twain the purchasing power of every pension, so that these pensioners instead of getting on the average $100 per annum of purchasing power would receive each of them only about $50 per annum of purchasing power.

[Here the hammer fell.]

Mr. PITNEY. Mr. Chairman, I ask unanimous consent that the time of the gentleman from Kansas be extended five minutes.

There was no objection, and it was so ordered.

Mr. BLUE. I undertake to say, Mr. Chairman, that no true friend of the pensioner on this floor can vote for the free and unlimited coinage of silver.

Mr. PICKLER (sotto voce). That is a fallacy.

Mr. BLUE. As the gentleman from South Dakota has made that suggestion in an undertone, I ask him to point me to a single country on the face of the globe to-day that has free and unlimited coinage of silver and has not, as its standard of value, a 50 per cent coin, so far as its purchasing power is concerned. If he can point out any such country I will thank him for the information. There is none; and the united experience of mankind is worth more than all the argument that is based upon theory without experience. The truth is that the gold-standard countries and the bimetallic countries have 85 per cent of the commerce of the world, and the pagan nations and others having free coinage of silver control the other 15 per cent. In every gold-standard and bimetallic country on the face of the globe weekly collections are taken up in the churches to send missionaries to the free-silver countries to convert the heathen. [Laughter and applause.]

Now, Mr. Chairman, permit me to say that I voted for both the measures, the revenue bill and the bond bill, as presented by the Ways and Means Committee of this House. In deference to the instruction of the convention which nominated me I shall vote for the amendment offered by my colleague, Mr. LONG, confining the coinage of silver to the American output, but I shall vote for it with the distinct understanding that the platform upon which I was nominated says that the Republicans of Kansas favor the coinage of the American output under such conditions and restrictions as shall preserve the parity of all our dollars in debt-paying and purchasing power.

I shall vote to nonconcur in the Senate substitute as it is presented, and I shall vote to insist on the House bill. In doing so I shall have an approving conscience, and an abiding confidence that I shall have the support of the patriotic and honest people of Kansas. [Applause.]

Coin Redemption Fund.

SPEECH

OF

HON. WILLIAM H. DOOLITTLE,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. DOOLITTLE said:

Mr. SPEAKER: Being an American, and a Republican, and a protectionist, I shall vote for concurrence in the Senate amendment now pending.

I shall vote for it because I desire to see progress made in the development of manufacturing, agriculture, mining, domestic and foreign commerce, and in all ways by which the people of the Union can be employed, and because I desire, above all things, to comply with the conditions which alone can bring to this country the great prosperity our people are entitled to enjoy.

I shall vote to sustain this amendment because I am possessed of convictions as firmly embedded as truth itself upon this subject, and do not believe it to be in the interests of the American people, whom we are on this floor to represent, that the single gold standard shall be permanently established in the United States, and so long as I shall cast a vote, simply representing the views of my party, and my own views, at the polls or on the floor of this House as a representative of an intelligent and most worthy constituency, such vote shall at all times be cast on the side where I believe the interests of the people of my State and the masses of the people of the American Union are.

At this time and in this body, and with the dominancy of the present Administration, no man of ordinary information can believe for a moment that success will attend the efforts of those who either speak, vote, or otherwise labor in behalf of the emancipation of the American people from the blighting curse to all our industries, and all American interests, proceeding from the single gold standard of values now prevailing.

That the single gold standard should exist in the United States is unnatural, un-American, unpatriotic, and a thing that should have been resisted by the American people as the American people would to-day resist the invasion of a foreign foe.

In so far as present conditions and those of the future are concerned, it makes no difference, in my judgment, what the history of the past may disclose relative to the demonetization of silver in this country, who engaged in that work, or whose selfishness or greed was the motive culminating in that act.

I wish to see the people of this country inform themselves and well understand the evil results that have come upon us from that demonetization, and that the single gold standard of values has been for the past three years, now is, and ever will be so long as it shall continue, one of the fiercest, most implacable enemies to the development, commerce, and business of this country that the people of the country have ever been called upon to contend with.

The single gold standard and free trade would be the most effective means that could be made use of by the worst enemies of this country and its prosperity, if destruction of everything American which we of this generation have always been proud of were premeditated and designed.

I care not whether a crime was intentionally committed in 1873 or whether it was a criminal blunder on the part of legislators. As to that it makes no difference to the American people, for no one can be brought to justice or made to suffer a penalty. It is a thing of the past. Existing conditions, with a just regard for the future, are the only subjects with which the people of this country and this Congress are called upon to deal.

We do know, however, as we know of our own existence, that the establishment of gold in the United States as a standard of all values is the thing above all things that the holders and owners of money in Europe, and especially in Great Britain, together with

their worshipers and satellites and agents in this country, most desire.

We also know that the banking interests here, dependent in a greater or less degree upon their credit with the great wealth holders of Great Britain, are entirely in harmony with the wishes of those across the water, and are blindly disregardful of the true interests of the masses of our own country.

We also know that the borrowings of this country, both public and private, have been, during the past twenty years of our national development, so enormous that the sum is well nigh incomprehensible to the human mind, reaching many billions of dollars in its total.

We also know that Great Britain is a manufacturing country and a commercial nation, whose hands and footprints are in every part of the world where there is production at the expense of human effort. Her ships are on every sea, her merchants are in every commercial capital, her traders are in nearly every city and hamlet.

The products of the skill, labor, or traffic of her people are, in some form, upon the backs or in the habitations of almost every human being the world over.

She has made herself the banking and commercial nation of the world, and thus stands to-day. She has the means at her disposal through the channels of business she has established and the means of communication and transportation she has builded by various paths and lines, radiating in all ways, to fasten her grip wherever a demand may exist for anything she can handle in trade, or which the skill of her people can produce, and thereafter exact full payment in money of the standard she has exalted or its equivalent.

Whenever that country and its traders and bankers can not use, as profitable in agriculture or manufacturing, the energy and intelligence of her own people on that island, which is more than anything else the seat of the British Government, she ruthlessly brushes aside the demands for labor and employment of her own humbler children, and without hesitation or remorse employs the coolie classes of India and China, or those who are well prepared to compete with the coolie, in the production of the articles she requires for consumption or to be used as the means of profit getting in her trade and traffic about the earth; and her colonies are simply her stepping stones across the seas in her progressive wealth gathering around the world.

The United States is fitted, by reason of its geographical location, the intelligence and skill of its people and their inventive genius, the great extent of territory, its hundreds of excellent ocean harbors, the natural wealth of its fields, forests, and mines, and in all ways, to make itself the more than successful competitor of the present mistress of the seas. Those intelligently engaged in the active supervision of the world's progress, as are those managing the destinies of Great Britian, well realize the truth of this statement, and the continued dominancy of that country can only prevail so long as the influences of that country are sufficient to substantially control the affairs of the United States.

Whenever the people of the American Union can see and understand that they occupy of right the place of vantage of all the earth and can easily be made the greatest of all factors and the greatest of all sharers in all the profits of commerce and business existent, then it will be easy to apprehend and throw off the withering influences which make forever the borrower the servant of the lender and this country, in common with nearly all other countries of the world, subservient to the will and uses of the British money powers.

It has been frequently stated in debate in this House, and is generally accepted as true by the Republican party of this country, that English influences and British gold have at all times been active in behalf of the election to national positions of free traders when elections have come about in the United States.

I have no question as to the truth of this charge.

Free trade and the single gold standard are twins, and hand in hand work in all seasons in behalf of British interests.

The one would open the markets of this country to the products across the water; the other, by its constant appreciation and increasing power to purchase, cheapens the price of the product they must buy.

This statement is in itself an unanswerable argument, and the American man who disregards its truth is, in my judgment, either unintelligent, willfully blind, or determinedly opposed to the welfare of the people of his own nation.

It seems altogether unnecessary that I should here state that which has been stated so often, and with absolute truth, that by cutting out the coinage of silver in the United States the purchasing power of the yellow metal has been enormously increased.

This fact, I think, has been admitted now by nearly every intelligent man in the Union.

Nor is it necessary to say that the values of property have shrunken in the United States during the past three years correspondingly.

You have seen during this time one-half of the values at which real estate was bought and sold ooze out and evaporate, and so it is with nearly all other property, and the people all over the country are rapidly getting to understand and know that this has been and is the direct effect of the same action in all other countries, and thus they reason that neither tariffs, taxation, nor anything of that kind can be solely at the bottom of their difficulties, and that something more universal in this country and all other single gold-standard countries has occurred to bring about such a palpable change in the value of the property of men.

"Loss of confidence," "hard money," "honest, honest" money have been the cries of the claqueurs of the money holders of Great Britain and their servants, the borrowers and dealers in money in the United States, while all these people have been engaged in erecting in this country on a broad, firm foundation and base their single gold standard.

England in the meantime, the keystone of the gold arch of the world, while enjoining upon the United States the sacred duty of supporting that arch to the uttermost morally, and to them in more substantial ways, has availed herself of the abundant opportunity to purchase the silver bullion, crucified and disfigured as it has been through her influence most largely in the United States, coining it with the stamp of her Queen on one side and the Asiatic characters on the other, declarative of the quantity of silver in the coin, then using this in the Oriental countries, unlocking the commerce of the East with it, as unblushingly as though silver were the money of her choice, and thus cutting a cudgel from our own soil with which to break American heads; and to-day British subjects in the city of Hongkong have completed, or have nearing completion, a great mint for the purpose of the coining of this kind of silver money, and the American people blindly shut their eyes and allow themselves to be outwitted, coopered, and controlled, and their opportunities taken from them for profitable trade and business by the bankers and commercial men of the tight little island across the Atlantic, and utter no word of protest, but use their voices to praise in ceaseless hosannas the golden standard of our country's greatest commercial enemy.

What cares England for the fact that fields are rich in production, population enormous, and wages next to nothing in the Orient?

These are factors she turns readily to her own account and profit, as she turns the interest and credulity of the gold bugs infesting this country at the present time.

The chimneys of her factories in Manchester and other cities may be smokeless, the hum of their machinery stopped, and want and destitution everywhere prevail among those who were formerly operatives in English factories in consequence of upbuilding of manufacturing in the Orient.

Her trading can go on in her own ships, whoever is the producer.

Cargoes are as easily purchased and sold whether the black-haired races of Asia or the fair faces of England are over the toil, as the process of production goes on.

Can Americans suppose that had England been the possessor of the silver the Almighty placed in the rugged hills and rock-strewn mountains of this country, or had she continued dominion over this country, expanding as it has, that wise Government would have ever consented to or permitted the demonetization of the sister metal of gold?

Farsighted business sense displayed by English statesmen makes the negative answer as emphatic as was ever the thunderings of her guns on any field of strife.

Great Britain would have said no to such a proposition with indignation and resentment, for silver has always been, during all the generations of men, accepted, appreciated, and eagerly sought for as a money metal in common with gold, wherever trading and business have been known among the children of man, down almost to the present day, save where, as in the case of England and the other now gold-standard countries, some especial and unfair advantage was either sought for or enforced; and I undertake to say here, and in this presence, that no living man or men can furnish the evidence that overproduction of silver has ever been the cause of its demonetization.

Overproduction, as well as the physical weakness of American manhood to carry about some portion of this species of wealth, has been urged by the ignorant and unscrupulous against the use of silver, but that the production of silver has ever been increased over the corresponding production of gold has never been and can never be proven.

Of course, the production of silver has been greater within the past decade at times than it has been at prior periods, but the production of gold has been found to closely parallel that of silver in proportion to its natural ratio.

Both of these productions no more than keep pace with the increase of the world's population.

Now, the use of silver as a money metal has been relegated to Oriental countries and the Latin-American States.

I have heard it asked on this floor repeatedly, during the debates

of the last Congress, whether the people of the United States wished to align themselves with the intelligence of the earth, or did they wish to make their beds with the semibarbarians of the Orient and with the Mexicans and South Americans.

I tell you here to-day, standing in this House of Representatives, that as an American I will cheerfully align myself, and so will my constituents, and intelligent and loyal they are as the citizens of any American State in the Union—we will all align ourselves with the people with whom we can transact business and build up commercial relations to our own profit and the advancement of our interests, rather than will we make our beds, if bed we must make with anyone, with the people across the Atlantic, with whom we can not deal or trade with profit, save as to those lines we produce which they must purchase of us.

They buy our breadstuffs and our meats only as a cold-blooded business proposition and because they obtain them from us at a cheaper rate, the quality of these products considered, than they can buy them elsewhere.

The only fields remaining to-day for profitable investment in the way of commercial venture lie across the Pacific from our western coast and in the Latin States of this and the southern continent.

In those countries the white metal is the money and the yellow metal the commodity, and here I wish to speak somewhat of the development of manufacturing in Japan and among the Japanese people.

That race has always shown itself quickly intelligent.

With all the wisdom of the East, these people possess the shrewdness of the West.

Wages are low, as they are everywhere in the far East, and manufacturing is being developed in that country under the use of silver money with greater rapidity than such industries have ever been developed elsewhere, and to such an extent and perfection is it carried on along many, many lines, and so greatly is the use of silver its protection, that the American people have reason to be apprehensive of a fierce competition speedily between the production of the skill of that people and the output of manufacturing in this country.

In those countries the production is on a silver basis.

As we all know, wages are low, but labor is satisfactorily recompensed.

These people have during the ages past solved many of the questions of life that we are just beginning to discern, and live cheaply and happily on the wages their industry brings.

They are even now invading American markets with many lines of goods.

Last spring I was informed that one and one-quarter millions of cotton spindles were in operation in that little Empire of less than 50,000,000 of people, and that the number would be increased within a year to more than 2,000,000.

The recent fair at Kioto, commemorating the twelve hundredth anniversary of the establishment of that city, the ancient capital of the Japan of the Shogan, the Samuri, and the Ronin, must have convinced the thousands of Western people who visited it of the fact that skillful manufacturing along nearly all lines was well on its way in Japan.

China, with the determination now evident among the leaders of that people to build railways and develop the territory of that most ancient Empire of the world, will soon take her place in the van of progress.

The energies of her people along those lines will be either invoked or compelled by the forces at work.

With China's four hundred and sixty-odd millions of human beings, who can doubt the result, when large portions of her people, adaptive and skillful as they readily are, when once engaged in factories, machine shops, and all the industries of which they are capable, acting as they will in company with Japan and the other silver-using countries, with their production upon a silver basis, if we adhere to the single gold standard, disparaging as it does the value of everything we possess until even now the veins and arteries of commerce everywhere outside of our great cities and Eastern money centers are shriveling and blackening and drying up for lack of money, the lifeblood of trade and business.

Still the cry among you men who believe in the single gold standard is that you heartily, sincerely, and earnestly desire bimetallism in the language of the platforms of the parties, namely, the use of both gold and silver as standard money; and the able gentleman from Maine the other day, at the opening of this debate, adjured us to push forward earnestly, buoyed by hope, toward the goal of an international agreement, of course England to be considered as one of the powers and parties to such an agreement.

You might as well sit yourself on the eternal ice fields forming the grandeur and crown of Mount Tacoma's lofty dome and pray the sun of heaven to melt away the accumulations frost has imprisoned there at that awful height during the ages past, and that verdant fields and orange groves should cluster about the brow of that grandest of all nature's pyramids, as to talk of inducing cold-blooded, regal England to cast aside the gold standard, the source of so much wealth to her and injury to us, and enter into an agreement for the use of American silver at the ratio of 16 to 1.

The American people look to the Republican Congress and to the Republican party for the relief they demand and a restoration—at least, to a fair degree—to the prosperity they have heretofore enjoyed.

That prosperity never can come to them under the single gold standard they either know or will know where this fact is not already known.

The enactment of tariff legislation is assuredly of vast importance, but as I have indicated before, protection must be consistent with itself.

To add to the use of any article, however slightly, either increases the value of such article or stiffens the demand for it, and in that way the tendency is the same.

The coinage of silver does not, as some have here asserted, cheapen the price paid for labor.

That is simply another slander, malicious and intentional. It should never have been uttered at all against the white metal.

The coinage of silver simply means independent, patriotic American action in behalf of one of the great and exceedingly valuable resources of our common country and an increase in the volume of basic money in the United States, indispensable to the essential development and carrying on of the business of the country.

It means the employment of labor in field, mine, forest, and factory, where labor can not now find employment, and the recompensing of such labor satisfactorily and to the extent of fully enabling it to purchase of the necessities and luxuries of life as much as it ever has purchased in the history of mankind.

It means the throwing of a wall of protection about the industries of this country, both direct and effective.

It means, when coupled with wise tariff legislation, the utter reenfranchisement of the American people.

Therefore, as I said at the outset, I shall with satisfaction vote for the Senate amendment.

Unlimited Silver Coinage.

SPEECH

OF

HON. JONATHAN P. DOLLIVER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. DOLLIVER said:

Mr. CHAIRMAN: If the House will hear me, I will speak for a time on some of the practical phases of the question before us. It is to be regretted that the matter comes here in the form of an amendment to the House bill relating to the coin redemption fund, and that the measure originally sent to the Senate comes back entirely stripped of its subject-matter. Without pausing to consider the invasion of the dignity of this House involved in the action of the Senate, I will only say that we can not submit to it without a loss of the influence which belongs to the House of Representatives under our system of Government. We sent to the Senate a measure the adoption of which would have enabled the Government in borrowing money to have the advantage of a lower rate of interest, a shorter term, and of that publicity which ought always to attend the use of the national credit.

The Senate, without making any effort to amend or to repeal the law of 1875, under which the Secretary of the Treasury had already three times negotiated the sale of bonds at an exorbitant rate of interest and running for an unreasonable length of time, chose to ignore entirely the bill of the House, except for the purpose of attaching to its enacting clause an elaborate scheme for the gratuitous coinage into American silver dollars of every 50 cents' worth of silver which the world might be disposed to present at our mints. The proposition of the Senate raises a question in which the people of the United States have been interested for many years, and to that I propose to direct the attention of the House. I will say, to begin with, that I do not enter the debate for the purpose of scattering dogmatic opinions, foreclosing the opinions of others. It appears to me that the matter is one of such complexity as to make sharp differences of judgment unavoidable. I have never heard the silver question debated, either in this House or among the people, without feeling encouraged by the reflection that this is the only country in the world where difficult questions of economy and finance can be safely submitted to the decision of the whole people.

In other nations these problems are for the exchequer and the cabinet. In our country, from the beginning, they have been left in perfect safety to the conservative judgment of our fellow-citizens. Give the American people a reasonable time for discussion and for reflection and there is no problem in the management of human affairs that may not be submitted with confidence to their wisdom. I think I may say, without offense, that this is especially true of the people of the State which I have in part the honor to represent in this Chamber. Therefore, if I were without convictions of my own resulting from a study of this question, which, whatever its defects, has at least been diligent and faithful, I would feel secure in relying upon the average judgment of the people of Iowa, expressed without a dissenting voice, in the convention of the Republican party of 1895, in these words:

We reaffirm the declaration of the Republican national platform of 1892, adopted at Minneapolis, that the American people from tradition and interest favor bimetallism and the party demands the use of both gold and silver as standard money with such restrictions and under such provisions as will secure the maintenance of the parity of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

I do not ignore the fact that there are differences of opinion in the Republican party with reference to this matter. When I heard my friend from Minnesota [Mr. TOWNE] the other day, giving the House the result of his patient and conscientious investigation of the subject, I could but feel gratification and pride that the Republican party in the United States is large enough and generous enough for every honest man's opinion upon any of the complicated questions of Government and finance. [Applause.] I rejoice that the opinions of every Republican, based upon sincere conviction, are received respectfully and hospitably in any part of the United States within the ranks of the Republican party. On a question like this, when every man ought to keep his mind open to the new light of larger knowledge, it appears to me that there is no place for taunts and epithets, but a call rather for the exercise of thought, of labor, of research, and above all of neighborly kindness and good will. [Applause.]

There are only a few things in the controversy which any man can be sure of. That is true of this world in which we live. I once bought the book of an eminent Boston divine on Certitudes in Religion in order to find out what the certainties are in that field of inquiry, and after reading it and rereading it I made out that, according to my Boston guide, there are only two things that we can be entirely sure of, one is that we are here and the other is that we are going hence [laughter], and that everything else is a matter for speculation and for faith. It is so in all the practical fields of life where the world's great debates are carried on; there are only a few things that a man can be absolutely certain of.

In reflecting on the money question I have found one or two things in respect of which my mind has been entirely delivered of any doubt. One of them is that whatever kind of money we have in this country it ought to bear the image and superscription of the nation itself, and not the mere authority of some State legislature. It is a matter for congratulation that whatever its views about the money question in general, Congress shows no disposition by any act of national legislation to bring back the half-forgotten promissory-note factories of the last generation. [Applause.]

There is another thing that I think we may rely upon with a reasonable degree of assurance, and that is that whatever kinds of money we have in the United States every dollar shall always be kept exactly equivalent in value to every other dollar, so that if a man happens to have a dollar he may know exactly what he has, and if a man happens to owe a dollar he may know exactly what he owes.

The most of our troubles, in connection with what may be called, without offense, popular heresies on the money question, arise out of a failure to exactly apprehend the nature and office of money. A school of opinion has grown up in the United States which appears to think that the only office of money is to pay debts, and I confess that I have had such a monotonous experience all my life with debts that I have sometimes given a rather ready ear to that view of the philosophy of money. But the truth is that the chief function of money is not to pay debts, but to buy goods. The best definition of money I ever heard I found in the writings of the German jurist, Savigny. I have treasured it in my memory because you can always rely on a German student to come to a sound conclusion upon any matter to which he may apply himself.

It is a tribute to the clearness of German thinking that the German press of the United States is practically a unit in its defense of sound and coherent ideas on the money question. It has furnished neither aid nor comfort to the Populist agitation of these times. For that reason I have always fallen back in seasons of doubt and perplexity on the old German definition of money: "Money is—eine allgemeine vermögen-macht—a universal purchasing power."

If money were only a debt-paying power, then it would be literally true that Congress could declare anything to be money, by providing that it should be a legal tender in the discharge of debts. But the American people are entitled to a money that is not only good to pay with, but good to buy with. Therefore the Republican party refuses to put afloat a dollar differing in value from the coins now outstanding, and depending for its acceptance in the business world upon laws compelling people to take it in discharge of debts.

The silver question is the oldest money question in the world.

Thy silver is become dross, thy wine mixed with water—

thundered the old prophet in that inspired indictment of the crimes of Judah and Jerusalem, contained in the first chapter of Isaiah—words of scripture that were to become the text centuries later for brave Hugh Latimer to threaten the vengeance of God against the debasement and degradation of the coins of the realm of Edward VI.

Thy silver is dross, it is not fine, it is counterfeit. Thy silver is turned. Thou hadst good silver.

The silver question is the oldest monetary problem we have had to deal with as a nation, and we took it up after the Governments of modern Europe had been dealing with it, with varying experiences, for centuries. It has become the fashion to set aside the judgment and authority of writers and students of our own day who teach sound monetary science, as under the influence of what is vaguely called the money power of Europe and America. For that reason it is not without interest to go back far enough in the history of the question to get the authority and judgment of thinkers and teachers who can be accepted without the suspicion that they were influenced by evil surroundings.

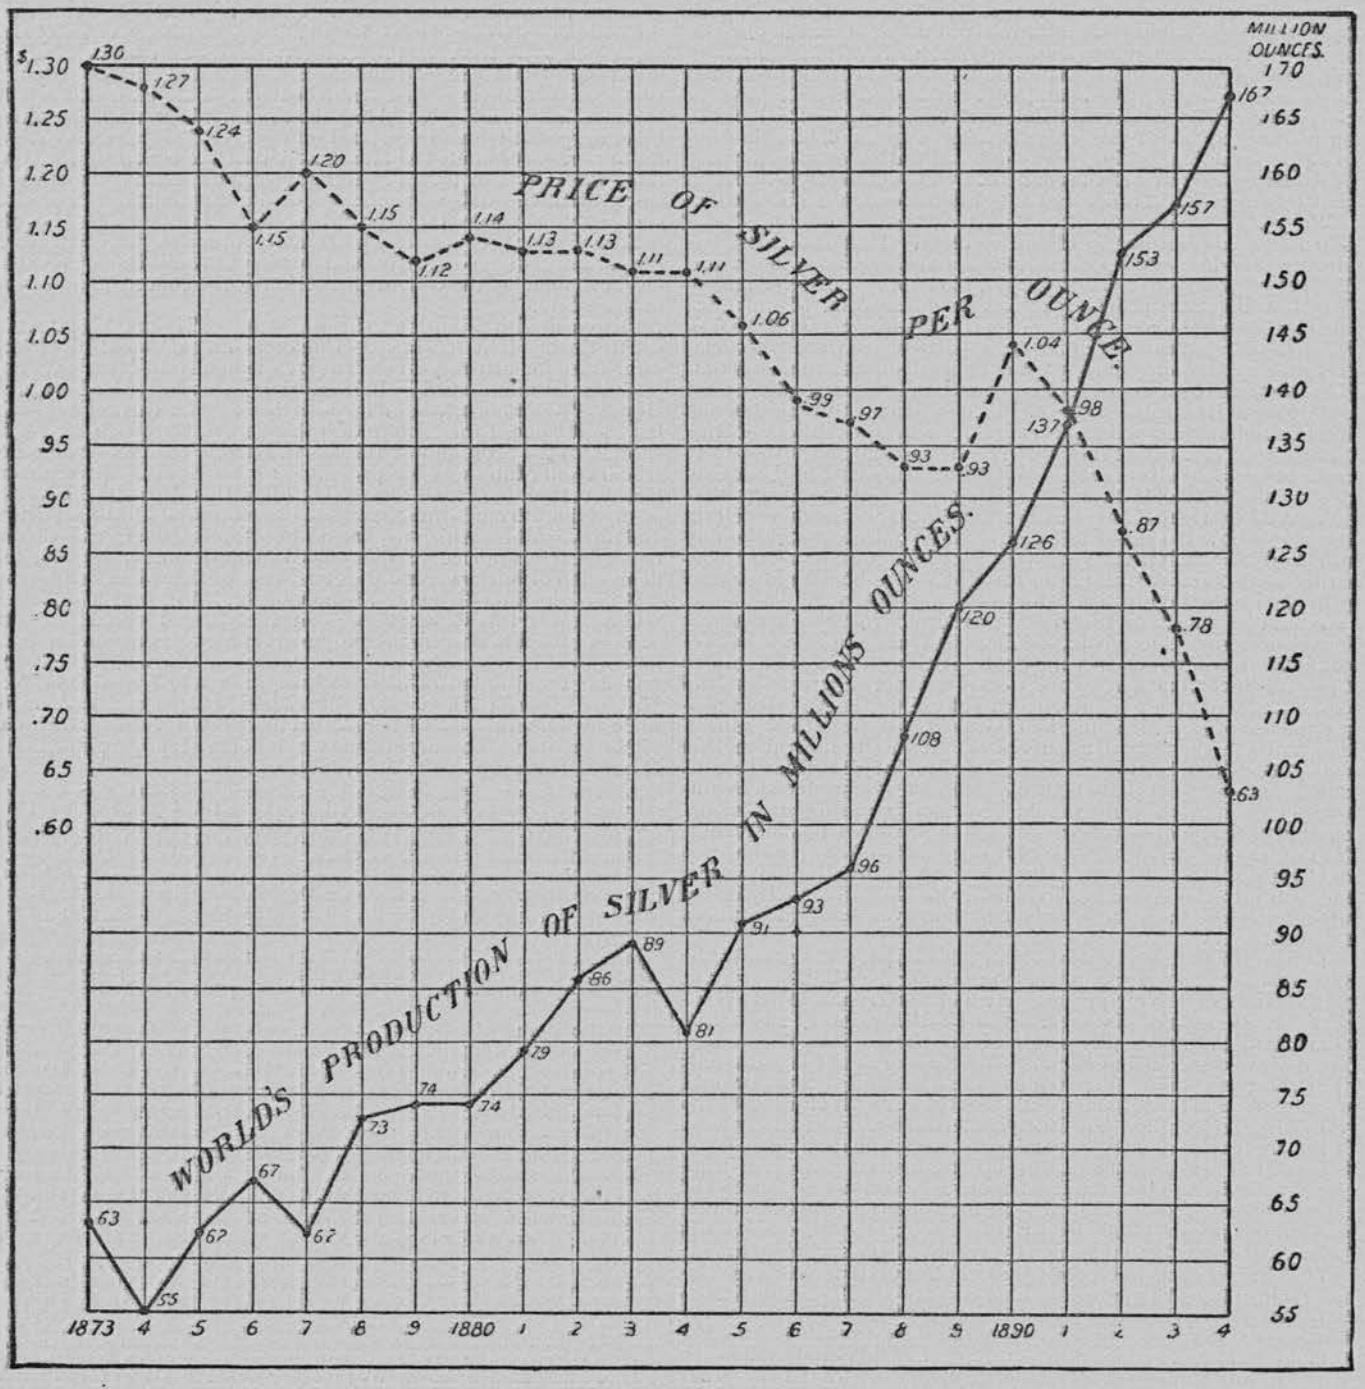
I intend to take the writings of three great men, in three separate languages, dealing with the same problem, and see if I can get from them a platform of first principles for our guidance in disposing of the present aspect of the silver question. First, I will take the treatise of Nicholas Oresme, the most distinguished man of France of the fourteenth century, who was a counsellor of Charles the Wise when he had the silver question on his hands, very much as we have to-day. At the request of the King, when he had determined on a reformation of the coinage, Oresme produced his treatise on money, a work of surpassing interest, for the rescue of which from neglect the world is indebted to Professor Roscher, of Leipsic.

So I open the work of Oresme without any fear that Wall street has bought him up. By its side I lay down a volume called The Ratio of Coined Money, of the date 1526, one hundred and sixty years after the date of the work of Oresme. It is the reply of Nicholas Copernicus to Sigismund, King of Poland, who desired him to advise his Government in respect to the management of his mint. The little book has an interest for us because it contains the conclusions of one of the profoundest human intellects, who not only gave his name to the system of modern astronomy, but was one of the founders of an important school of economics. This book, in the handwriting of its author, is preserved in the archives of Königsberg and has been included in the Warsaw edition of the works of Copernicus. So I lay the little book by the side of Oresme with absolute confidence that its author has not been corrupted by the Jews of Lombard street. [Laughter.]

By the side of these two books I will lay a letter addressed to Elizabeth of England, explaining the effect upon the monetary system of the attempt made by Henry VIII and his predecessors upon the English throne to float coins of different weight and fineness at the same time. This letter was written by Sir Thomas Gresham without knowledge of the conclusions of Copernicus and Oresme, so that the three witnesses, speaking three separate languages, if they agree together, make a strong case in favor of that in which they are agreed. We may pin our faith to what they say, and with your permission I will condense their philosophy into two sentences. I put it into two sentences, although it is practically one philosophy, and I am willing to stake this controversy upon the truth and wisdom of these three great students of finance.

The first proposition is that every coin manufactured under free coinage will, in the long run, have the exact value of the material out of which it is made. The second proposition is like unto it, that when a nation creates two coins of the same denomination, differing in value, it stands to lose instantly the circulation of the one which is undervalued. [Applause.] These two propositions express the uninterrupted experience of mankind and are confirmed by the testimony and authority of every great writer upon economical questions in every language of the earth. Our fathers gave diligent attention to the silver question. The first thing they had to do with was a practical inquiry about silver. Some desired to establish a monetary unit of gold and others a unit of silver.

Mr. Hamilton, who was the founder of the American mint, and in my judgment the most productive thinker of Revolutionary times, the greatest intellect that gave the light of its genius to the rising Republic, thought that the double standard, based on gold



and silver, was reasonable and practicable, and so in establishing the mint he said distinctly that he desired the unit to rest on both the metals, and then set about to determine the ratio at which the coinage should be made. He made diligent inquiry to find out what the commercial ratio between gold and silver was. He never dreamed that the mere act of coinage would operate to produce a correspondence between the mint ratio and the market ratio.

Our fathers opened the mints to the free coinage of both gold and silver at the ratio of 15 to 1, fixing the ratio so as to correspond exactly with the existing market values of the two metals. If there had been a modern free-coinage enthusiast present he would have said: "Now, gentlemen, stand back and watch this mint supply the American people with gold and silver for the transaction of their business." But the experiment did not operate in that way. Before many months the commercial ratio departed slightly from the ratio fixed by the act of 1792, and the business community speedily found itself confronted with the fact that gold had totally disappeared from circulation in the United States.

Then came the old Democratic statesman, Thomas H. Benton, representing the frontier State of Missouri in the Senate, and began the agitation to bring back the use of gold in the coinage and business of the American people. I can recollect reading his speeches in his thirty years in the Senate, and one sentence out of them I have never forgotten. He said that he wanted the humblest workingman in the United States to be paid for his labor with a coin as good as the money of the crowned heads of the Old World. [Applause.] If a man were to get up in Congress to-day and say that he wanted the working people of the United States to have as good a dollar as was used by the crowned heads of Europe, our free-silver brethren would jump up and say that he had certainly sold out to the money power. [Laughter.] And yet what Mr. Benton said was sound doctrine then, and it is sound doctrine now.

APPENDIX 1.

CHART NO. 1.—Report of the Director of the Mint for 1895 (pages 238-249).

So the act of 1834 was passed changing the ratio for the purpose of approaching more nearly the exact commercial ratio between gold and silver. That act cut down the weight of the gold dollar, not, as some have claimed, because silver was the exclusive unit, but because silver being in use and gold being out of use, the American people could change the ratio, by changing gold alone, without disturbing existing business relations and outstanding contracts among the people; and so the ratio was changed, not under a revelation from heaven that 16 to 1 is the correct ratio, but on a careful determination that 16 to 1 corresponded more nearly than 15 to 1 to the commercial ratio existing at that time. Again the mints were open to the free coinage of both gold and silver, and an ordinary free-coinage philosopher would have said, "Now you can all see the blessings of an unlimited coinage of gold and silver in the business of the American people."

But it did not work that way. An insignificant departure of the commercial ratio from the mint ratio caused silver to disappear from use in the United States. From 1834 to 1873 the coinage of silver dollars was only nominal, and the use of silver dollars was practically unknown in the United States. The reason for this is very simple. The coin partook of the exact value of the material out of which it was made. The material being worth $1.03, of course nobody would bring it to the mint for the purpose of having it converted into a dollar, and the few coins that were minted being worth more than a dollar, were hoarded or melted down and exported. We could not even keep a 10-cent piece in circulation. The fractional coins were bought up and reduced to bullion for export, so that in 1853, after a great debate in Congress, the fractional coinage was debased for the express purpose of reducing the value of the coins below the value of the material that was in them, in order that they might remain in circulation.

We hear a good many people say that the act of 1873 struck down one-half the money of the country. That statement has always sounded well as declamation, but it ignores the truth. The act of 1873, whatever it did do, took away no silver money from the American people, for, from the foundation of our mint, the total output of coined dollars was hardly in excess of 8,000,000. I heard one man say the other night that there were fractional coins in circulation. That is true. I heard another man say that there were in use a lot of foreign coins made legal tender by act of Congress from time to time. That is true. But neither the fractional coins nor the legal-tender foreign coins belong in this controversy, since the act of 1873 in no wise affected either their coinage or their circulation. Whatever happened to them happened long before 1873, and is therefore not chargeable to that act. And so when I find a man in this House or elsewhere telling the people how the act of 1873 deprived the business world of any use of silver which it then enjoyed, I set him down as a man who either needs further training in the ethics of public discussion or primary instruction in the history of this question.

What did the act of 1873 do? It dropped from the list of our legal coins an obsolete coin, a dollar that was out of use on account of its difference in value, compared with the gold coin of the same denomination. Thus we see that for seventy years the free coinage of silver dollars, instead of giving the American people the use of silver literally took away its use from the commercial community of the United States. It has been said in this debate that the effect of the demonetization of silver has been to cut in two the prices at which the commodities produced by human labor in this world are sold. Without entering upon a discussion of the tendency of prices since 1873, and without entering, for the present, on a discussion of the connection between the price of silver bullion and the price of other things, I will inquire for a moment into the reasoning by which the United States is called upon to restore the value of silver bullion by opening its mints to free coinage.

I intend to be absolutely candid in this matter. When we know the causes that have cast down the price of silver bullion, we can judge rationally of the process by which the friends of free coinage propose to bring it back. If the fallen value of silver had come from the unfriendly action of the United States, abandoning its free coinage, and from no other cause, then I might admit that the restoration of free coinage in the United States would operate to undo the mischief. All careful students admit that the value of silver bullion has fallen on account of two main causes. First, the extraordinary increment in its production since 1873. Second, the action of the nations of Continental Europe in dropping silver from their standard coinage. So much of the fall of silver as comes from the increase in the annual product of bullion can not, it appears to me, be corrected by an act of Congress. It belongs to a jurisdiction beyond the reach of legislative enactment.

The closing of the mints of the world has undoubtedly contributed somewhat—how much no man can say—to the decline in the value of silver. It seems to me reasonable that the falling away of the consumption of silver involved in the suspension of its free coinage can not be ignored in a discussion of this kind, but I wish to say to this House—and I challenge dispute of what I say—that there is not a serious student of this question in the Old World, writing in any language, who affirms that the action of the United States in 1873 contributed to that result in any respect whatever.

If there is any man in this House who knows the name of a great writer in any language of Europe who attributes to the action of the United States in 1873 any share in the decline in the price of silver bullion, I will pause now to have the name of the writer mentioned. And, Mr. Chairman, I pause in vain, because every student knows that the attitude of the United States toward silver in 1873 was such that they did not, and in the nature of the case could not, abridge its use, in view of the fact that for more than a generation the standard silver dollar had been out of use among the people of the United States, so that the act of 1873, instead of creating a new condition, only recognized the condition which had prevailed in this country for forty years. So it is that the sober students of the question in the Old World agree that it was the unfriendly legislation of the commercial countries of central Europe which depreciated silver in so far as legislation has contributed to its decline.

Mr. Chairman, I listened with great pleasure the other day to my friend from Minnesota [Mr. TOWNE], and I find it possible to agree with much that he said. I find it possible to agree that the action of the commercial world adverse to the use of silver has had much to do with the fall in the value of silver bullion, and if my friend would come to me and say, "Now, then, the value of silver bullion having been disturbed by the action of the whole commercial world, let us bring the commercial nations together in an agreement for the restoration of silver," I would say that his appeal was founded in reason and that his conclusion was at least coherent and logical. But my friend, parting company, I think, with the judgment of most of our Republican fellow-citizens, having shown that the fall of silver is due to the hostile action of many countries, deliberately proposes that our own mints, acting independently, shall attempt to undo the injury that has been done by the concurrent action of the commercial powers of the world.

I listened with attention to his argument. There is no bimetallist in Europe that has not been making an argument along the same lines for fifteen years. The gentleman from Minnesota has paid a great tribute to Mr. Balfour, the Conservative leader of the House of Commons, whom he describes as "an earnest bimetallist" and "one of the profoundest thinkers in Europe." I wish to submit to the profoundest thinker in Europe the facts which my friend from Minnesota has presented to this House. Mr. Balfour has more than once used those facts, all of them, except the charts of my friend from Minnesota. He has employed all the statistics and all the tables which my friend has illuminated in this Chamber by his eloquence in reference to the decline of prices, the depression of business, and the evil aspect of the world's situation.

It is interesting to mark his conclusion. I have it here, and I will read it to this House, because even my friend from Minnesota can not afford to despise the judgment of a conscientious bimetallist, who is also the profoundest thinker of Europe. I ask the friends of unlimited coinage to hear me while I read what Mr. Balfour says as to the wisdom of a single nation undertaking to undo by a hurried bit of legislation an evil which has grown out of the combined hostility of the whole commercial world. In his Mansion House speech of May, 1894, he says:

> Now, the question with which we are concerned is whether it be or be not inexpedient to adopt by international agreement this double standard; and I am far from denying—and I think a bimetallist is a very poor friend of his cause who would deny it—that there are difficulties, difficulties of detail it may be, but still difficulties, inevitably attaching to the solution of this question.

You would not believe that, gentlemen, to hear one of our free-silver brethren make a speech on this floor. [Laughter.] Now, what do you suppose is the first difficulty that strikes Mr. Balfour? He says:

> I have only to mention one of these difficulties, the difficulty, namely, of what shall be the ratio on which the nations of the world are to agree as that which is to govern the future relations between gold and silver in the double standard.

In the name of common sense, is the profoundest thinker in Europe in doubt about the ratio? Why, sir, to hear the debate in this House a man would think the ratio was a part of the original divine revelation to man, and that if anyone denied it or disputed it he ought to be pursued for blasphemy. [Laughter.] Yet here is an "earnest bimetallist," and the profoundest thinker in Europe, declaring that that is the first difficulty confronting the nations of the world in agreeing upon the double standard. What more does he say? I wish to show you his photograph of these brethren in this House whose zeal in the cause of silver has disturbed the even balance of their faculties.

> I believe there are individuals who cherish the dream that currency is a matter for the State to regulate independently and for itself alone, that with its currency no foreign nation has a right to interfere; that it is a matter simply for the citizens of every community in relation to each other, and that the outside world need not be taken account of at all in coming to a decision upon a question which is one of purely domestic policy. Ladies and gentlemen, this is a dream. I will go further and say it is a dream worthy only of a mediæval dreamer. We have long passed that stage in civilization

when each country was a self-contained, or approximately self-contained, national unit, and when it could afford to disregard the internal commercial relations of other countries. Those days have gone by. They have gone by never to return, and I do not think there is a man in this room who regrets it.

This profoundest thinker in Europe seems to hold that the commercial world is a unit. No man liveth to himself alone, the Scriptures have taught us to believe; and no nation in these days lives to itself alone, and that statesman who would undertake to isolate a great commercial community like ours is literally dreaming a dream of days long since gone by in the history of the world's commerce and business. I have up to this point made no dispute in respect to the huge collection of statistical data upon which the argument for the free coinage of silver has long comfortably reposed. My friend from Minnesota presents a lot of tables here purporting to show that the average price of goods, wares, and merchandise has gone down throughout the world in the last twenty years, the argument being that these prices have been dragged down in the fall of silver.

These tables have been before the country ever since the silver question has been up for discussion. I have always had more or less suspicion of figures unless I made them myself, so I always look in a somewhat incredulous frame at statistics which somebody else is handling for my instruction. In the present case my suspicions are unusually active. We all know that there are in this world no large effects which come from a single cause, so that on the face of it, when a man comes to me and tells me that in twenty years the average price of 200 things that enter into the necessities of modern life has gone down 40 per cent, and that it is all due to one transaction which took place in 1873, I look upon him as misusing faculties which Providence intended to be applied to the rational consideration of human affairs.

Is it possible that a result like that can be reasonably attributed to one cause? Why should a man leave out of his calculations the industrial growth of the United States and the progress of Germany and of France since 1870? I have made a somewhat practical study of the growth of the industrial arts within my own memory. I believe that few changes have occurred in the selling price of staple manufactures, such as the products of iron and steel, of textile fabrics, of things made from leather, and of that whole range of products made from the natural resources of the forest, the soil, and the mine, which may not be referred to improved methods of production, of transportation, and of business management.

I look with amazement at the mental process of these apostles of free coinage who leave out of their calculation the infinite variety of causes, which, operating in unseen and complex ways, have gradually reduced the cost of the things which enter into the daily life of the world, and in the same period have gradually increased the earning power of human labor. I have stood in a modern steel mill and watched the manufacture of a steel rail and learned more about the philosophy of the price lists of iron and steel by a half hour's conversation with an intelligent American workingman than my friend from Minnesota will find out by poring over Soetbeer's tables till doomsday.

A thousand causes have operated to affect the cost of modern production. Some things have gone up, more have gone down. Some have gone down much, others little, others not at all. The value of a day's work, a thing which nearly everybody has for sale, has gone steadily up. Could human folly go further than to average pork with pig iron, candles with petroleum, wheat with woolen cloth, and finding the mean decline explain it by reference to an act of Congress that occurred over twenty years ago? We have been taught to believe that if you could make a reasonable reduction in the cost of living and secure a reasonable increase in the wages of labor you would create a condition in this world not altogether open to criticism. We are now beginning to learn for the first time that the interest of American labor requires us to give a fictitious legislative value to the things which a man has to buy in order to live, leaving labor itself to take its chances of securing that increased rate of wages which ought to go with increased expenses of living.

If the people of the United States deliberately give their influence to the creation of a new standard of value in this country the effect of which is, and is intended to be, to increase the expense of living—if they do that before they have made arrangements for the corresponding increase of their wages, they will manifest a lack of common sense that has never characterized the working people of any country in any age of the world. [Applause.] As I have said, some articles have gone up in price and some have gone down. I have endeavored in the years past to talk over with my own people the situation in which we are placed.

The farmers of the Western country are just now at a serious disadvantage. They find the market place in which the great bulk of their products must be sold depressed and broken, not by the crime of 1873, but by the blunder of 1892, which turned the Government of the United States over to the management of the Democratic party. They find their market place opened in Europe and Spanish America by the reciprocity law of 1890 suddenly taken away by the tariff act of 1894. They find that the idleness and poverty incident to the Democratic reform of the tariff in the workshops of America have so lessened the domestic consumption of breadstuffs and meat as to seriously cripple the prosperity of the American farm. But when a cheerful brother from the far West with silver to sell undertakes to tell them that the act of 1873 is at the bottom of their misfortunes and that the true remedy consists in manufacturing every 50 cents' worth of silver presented at our mint into a dollar gratuitously and handing it back to the owner, the great mass of our people is not ready to accept such a scheme of relief. They know that the year 1892 witnessed the largest measure of prosperity on the farm, in the factory, throughout the country, seen in this generation. They know that the great staples of agriculture in the Mississippi Valley have brought better prices in the local markets for the last five years than they did for the year 1873 or for the five years immediately preceding that year.

I wish to present a picture of agriculture in one of the most productive counties in Iowa in 1873, a picture preserved in the annual report of the Iowa State Agricultural Society for that year in a speech by Charles H. Rogers at the Harrison County fair:

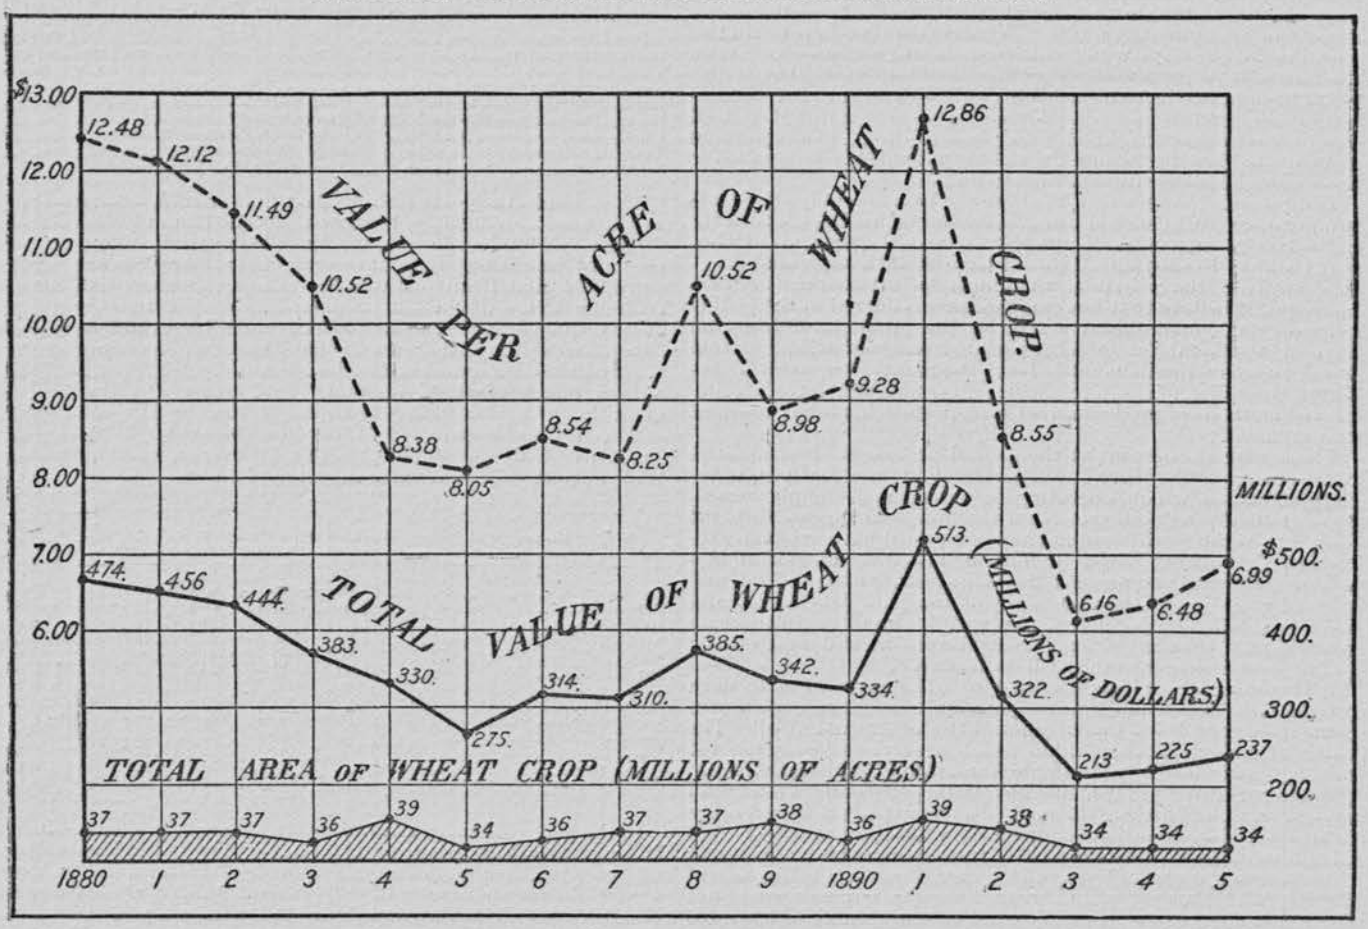
> Proud of these aspects and of her progress in practical agriculture, still the condition of the laboring man and farmer is far from what is desirable. They have worked, watched, and waited for an adequate reward until weariness has well nigh turned to hopelessness. Farming has been a financial failure for the past three years. Hard toil has opened up fine farms and brought to the bins the products of unexampled harvests, but the sales have hardly paid expenses and bought cheap clothing until the coming harvest. There is no surplus to improve buildings, purchase thoroughbred stock, and furnish the home with any of the luxuries of art and literature.

That was in the years prior to the crime of 1873, when the whole world was enjoying such benefits as accrue from the free coinage of silver. I undertake to say, Mr. Chairman, knowing as I do the hard conditions that have surrounded the Western farmer since 1892, that if anyone were to make a statement like that in reference to the life of our people in any part of that great State at any time during the last fifteen years he would have been denounced as the author of a libel and an injurious fiction against the credit and surroundings of the community. [Applause.] The annual report of the Iowa State Agricultural Society for 1873 gives the price of corn at the capital of Iowa in December, 1870, at 25 cents; in December, 1871, 21 cents; December, 1872, 16 cents. The price of all our staple products for every month in the year 1873 is preserved in the same report, as follows:

Month.	Wheat.	Rye.	Barley.	Corn.	Oats.	Hay.
January	$0.95	$0.35	$0.40	$0.16	$0.20	$6.00
February	1.10	.35	.45	.17	.20	6.00
March	1.00	.35	.45	.17	.20	6.00
April	1.00	.35	.45	.18	.20	6.00
May	1.10	.45	.45	.22	.22	6.00
June	1.10	.35	.40	.23	.28	6.00
July	.85	.35	.....	.20	.20	6.00
August	.85	.35	.50	.22	.20	5.00
September	.75	.45	.60	.22	.27	5.00
October	.75	.45	.70	.22	.27	5.00
November	.75	.40	.70	.22	.20	5.00
December	.85	.40	.70	.22	.23	5.00

In the year 1873 there were 26 local pork-packing establishments buying hogs in the State of Iowa. The same report shows that the price paid per hundredweight in these 26 Iowa towns averaged $3.74 for the season of 1871–72, and $3.52 for the season of 1872–73. A man has only to take up the market reports of the last five years and make an average of the prices realized by the farmer upon the staples of agriculture to learn that while prices have gone up and down they have averaged above the price levels of 1873. I intend, by the courtesy of my colleague on the committee [Mr. JOHNSON], who represents with courage and ability a constituency that produces one-seventh of the wheat crop of the United States, to append to my remarks a chart showing the movement of prices with respect to the staples of agriculture, and especially with reference to wheat. This chart is correctly drawn from figures made by the statistician of the Department of Agriculture, and is based not on the prices in any one State, but upon the average farm prices throughout the United States. It is worthy of careful study and reflection.

And so our people do not listen with a very perfect patience to the promises and predictions of happiness and prosperity which are to flow from the restoration of silver coinage in the United States. They look rather for the prosperity of the farm, to the recovery of the American market place from the prostration which followed the industrial revolution of 1892. They believe that they have more to gain by a return to the national policy which gave every willing hand work and wages than they can possibly gain



by an experiment which threatens to unsettle all values, disturb all contracts, and put new elements of risk into every department of business. For myself I have made up my opinion in this matter slowly and deliberately, not only contrary to my sympathies, but also to my prejudices, guided at every step by the experience of the nations of the world.

What will be the effect of the free and unlimited coinage of silver? I undertake to say that the immediate effect will be a change in the standard of values. I am not one of those who say positively that it will produce a 50-cent dollar. I do know that 412½ grains of standard silver are now worth in the neighborhood of 50 cents, and that the coin produced would partake of that exact value, unless the opening of the mints changed the existing value of the total silver stock and total silver product of the world. I do not know whether it will produce a 50-cent dollar or a 75-cent dollar. I will admit that the unlimited coinage of silver into standard money will operate to somewhat stimulate the value of silver bullion throughout the whole world. Mexico, under a system of free coinage, succeeds in producing a silver coin which circulates at the precise value of the metal of which it is composed.

In the last Congressional campaign I had the opportunity of talking on a railway train in Iowa with our old friend from Missouri—no longer a member of this House—Mr. Bland. He was up in our country at that time trying to help General Weaver in his campaign against our good Republican friend—HAGER—of the Ninth district. I called his attention to the fact that the free coinage of silver in Mexico appeared to produce a coin corresponding in value to the substance of which it was made. He replied that Mexico was a small country, but that the United States had a great deal of wealth and abundant resources, and that if we permitted the free and unlimited coinage of silver the whole bullion of the world would rise in value, and the future commercial ratio between gold and silver would respond to the ratio fixed at our mint. He did not pretend that anybody could know this with certainty.

APPENDIX 2.

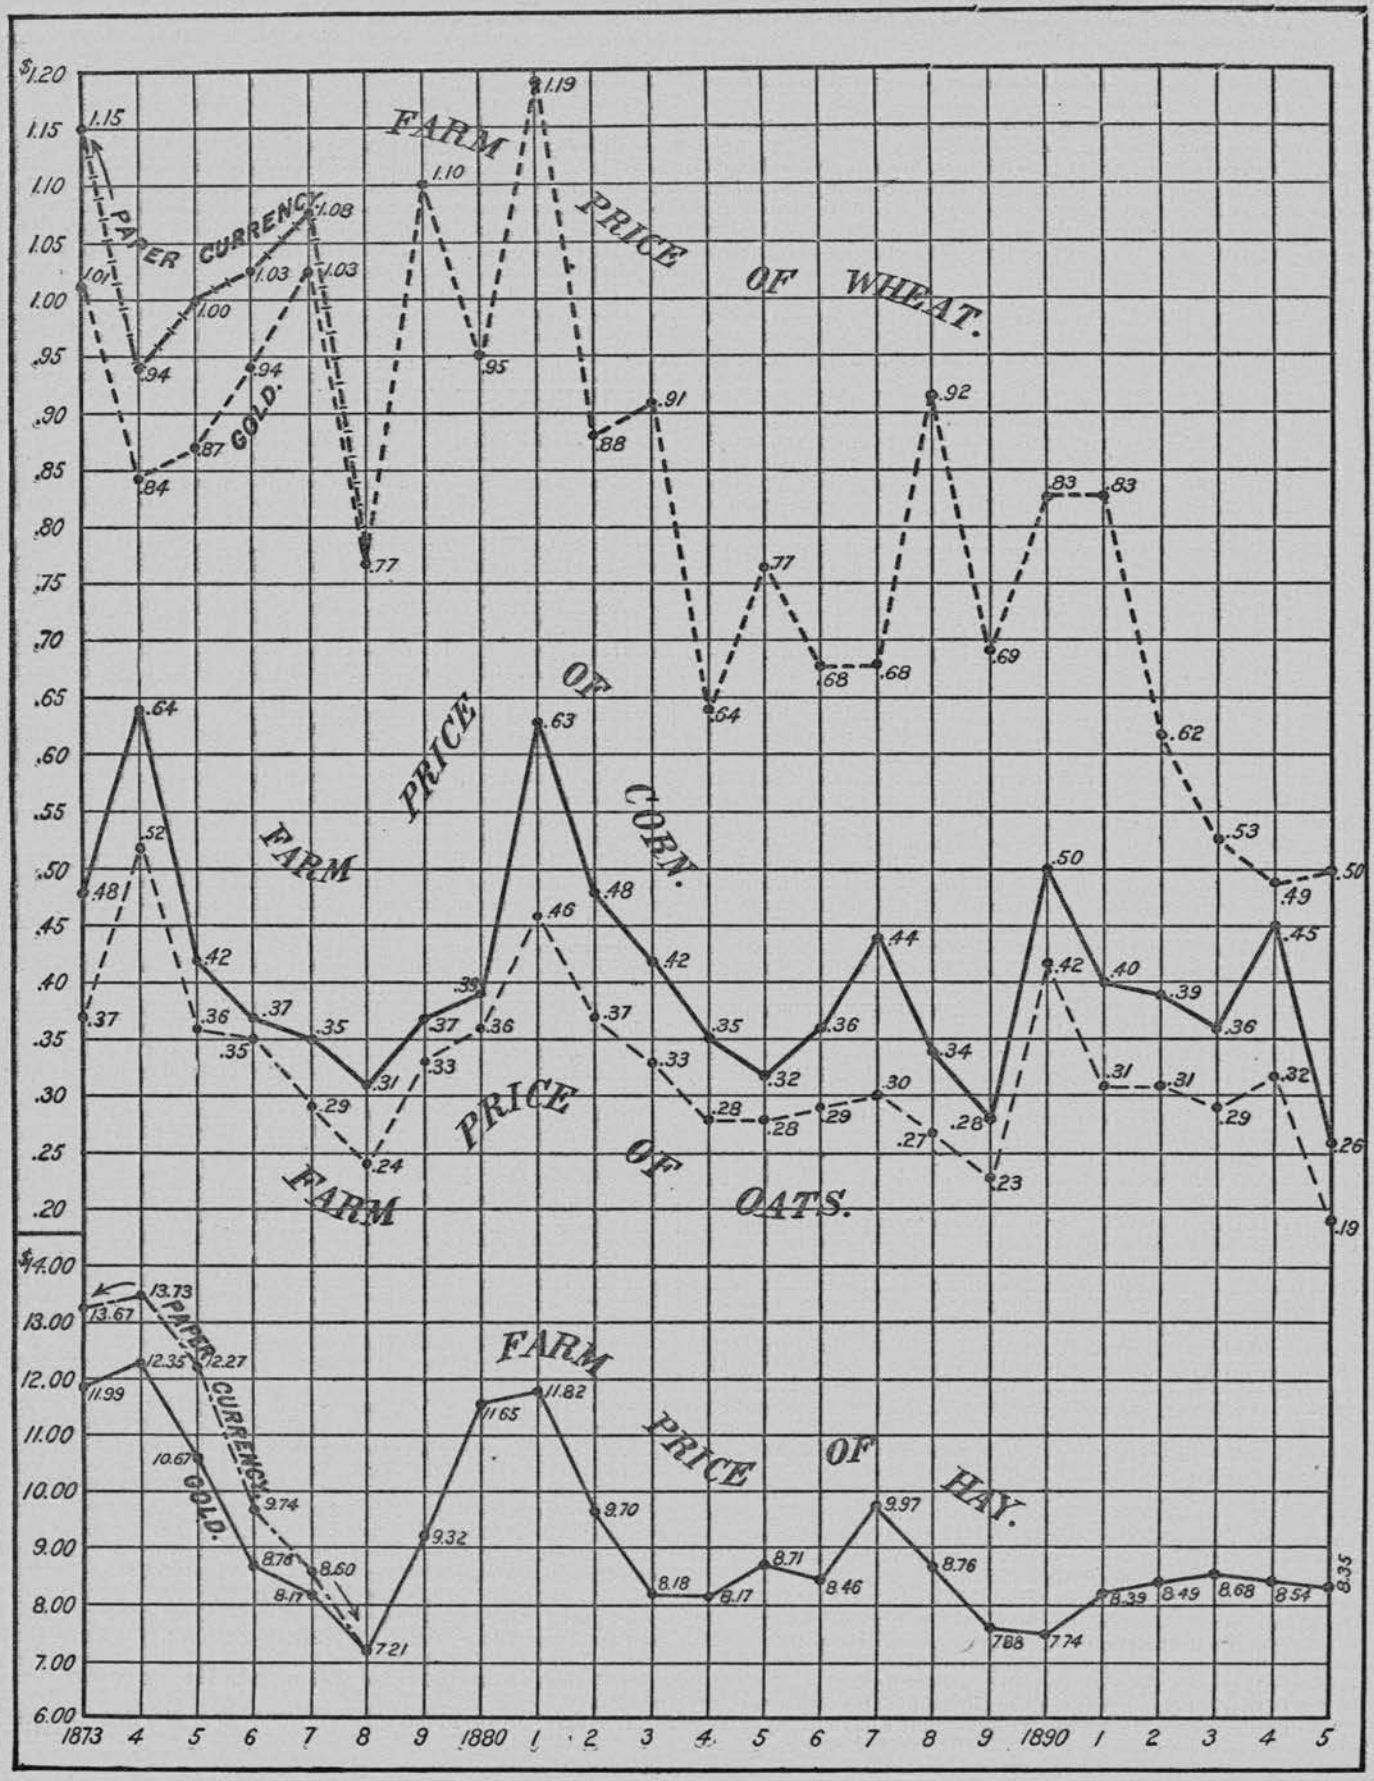
CHART NO. 3.—Crop Report, Agricultural Department, for December, 1895 (page 6).

He only claimed that it was his opinion; that he might be right or might be wrong.

I have never met an advocate of free silver who could do any better than merely offer an opinion on this matter. Hardly one of them to-day recognizes the importance, or even the advantage, of bringing silver to an actual equality with gold at the ratio of 16 to 1. In the minds of most of them the blessing of free coinage consists in the creation of a cheap coin to be used by the people in discharging debts. Their whole object is to subvert the existing standard of values. So far as I am concerned, representing nearly 200,000 people, all their property, all their investments, all their prospects being at stake, I must know with some degree of certainty what the result is going to be.

It is vain to talk of the hardships that now surround us. I know something of them; but hard as the place is in which we stand, nevertheless we are able to stand. And if you ask me what we propose to do, I will assure you that we intend to stay where we are, unless some one can tell with some degree of certainty whether the leap proposed is toward the solid ground or into the bottomless pit. [Applause.] I am looking for somebody who knows what the result of these transactions will be. My friend from Mississippi [Mr. WILLIAMS] thinks he knows. He says that he can stand in the city of Yazoo, with unlimited capital, and make the price of cotton 15 cents a pound in all that country by giving that amount for all the cotton that comes to him. Therefore, he says, open the mints and $1.29 will be the price of an ounce of silver the world over. He thinks that the manufacture of a silver dollar out of material worth 50 cents is equivalent to paying a dollar for that amount of silver.

He is measurably right about the cotton, but he is wanting, it seems to me, in that coherence of faculties which would otherwise enable him to see that his attitude in the market place of Yazoo buying cotton is not the attitude of the mints of the United States gratuitously converting into dollar pieces minute ingots of silver worth 50 cents, and handing them back to the owner to be turned loose on the business community for better or for worse.



Mr. WILLIAMS. Will the gentleman allow me?

Mr. DOLLIVER. Certainly.

Mr. WILLIAMS. That there is an apparent difference upon the face of the proposition is evident to everybody. But is not the effect just exactly the same as if you were standing here and giving $1.29 an ounce for silver, when by law you make an ounce

APPENDIX 3.

CHART NO. 4.—Department of Agriculture, February 4, 1896.

of silver pay $1.29 worth of debts and do $1.29 worth of tax paying and do $1.29 worth of business, provided you have the business and the tax paying and the debts to overtop the possible supply of silver?

Mr. DOLLIVER. I think I understand my friend, and I regret that he does not perceive a difference between buying a thing and paying for it on the one hand, and simply stamping O. K. upon it and handing it back to the gentleman who brought it to the front on the other.

Mr. WILLIAMS. Suppose I had the power to furnish use for all the cotton after I had stamped it?

Mr. DOLLIVER. If the United States, by simply making a thing available for paying debts and taxes, can juggle 50-cent pieces into dollars, we ought to go back to the old greenback theory and take a piece of worthless paper, make it available for these two purposes, and rely upon Providence to give it value and stability.

Mr. WILLIAMS. Not at all. Because in the one case you are merely stamping it and relying upon the stamp for the value, and the other case you are furnishing a demand for the actual existing valuable material, which increased demand makes the increased price.

Mr. DOLLIVER. That is another theory. Your theory is that we are buying silver at $1.29 an ounce, and that therefore that must necessarily be the market price of it throughout the world. That I will denominate the Yazoo theory. Now, there is another theory just hinted at by my friend from Mississippi, though more elaborately stated by my friend from Minnesota on last Saturday, and that is that if you create this body of coin and have it in the country, there is such an enormous business in the United States, such vast resources, such stupendous horsepower, and such immense uses for money and for credit that they will absorb and give employment to this money and thereby give it a par value. One thing we are absolutely certain of, and that is that it would give it no value in which the material out of which it was made did not participate.

Now, I am just charitable enough to admit that if you create such coins under free coinage, making them available for debts and taxes, it would have a tendency to stimulate the value of silver bullion. I do not know exactly what additional value it would give it. I undertake to say that short of the counsels of supreme wisdom is no intelligence in the world that can predict in advance the value that such a situation would give to the coin. I think the gentlemen in this debate have overestimated it, because it is not true that the vastness of the volume of business calls for a corresponding manipulation of actual coins. On the contrary, it is commonly agreed that the more business is done in this world, the less absorption of actual money there really is. The commercial capitals which do the world's business are not inhabited by the people who carry the world's money in their pockets. [Applause.]

Mr. DINGLEY. Will my friend pardon me for a moment?

Mr. DOLLIVER. Certainly.

Mr. DINGLEY. Have we not had a trial of the effect of an increased demand for 54,000,000 of ounces annually, all the American product and one-third of the product of the world, and of the effect of that demand from 1890 to 1893, and did it not result in lower prices than ever?

Mr. DOLLIVER. I think the experience we have had in the last five years throws a valuable light on this phase of the question.

Mr. WILLIAMS. Will my friend excuse me just a moment? I hate to interrupt him again. In fact, I should not have interrupted him before if I had not jumped to my feet impulsively, but that remark causes me to want to interrupt the gentleman far enough, at any rate, to say that the entire contention of ours is not based upon a limited demand which shall leave a surplus over to be hawked about for a market and thereby to fix the price of the entire bulk of the product, but that my analogy and all of our contention is—and there we may be mistaken, possibly——

Mr. DOLLIVER. If you are mistaken, the country is ruined.

Mr. WILLIAMS. Not at all.

Mr. DOLLIVER. It is, if we go into your enterprise and come out with two kinds of dollars in the United States.

Mr. WILLIAMS. Not at all. When we had the greenbacks in circulation we had one price in gold and another price in greenbacks, and the country was not ruined at all; but to go on, the point I was talking about is that the entire contention is based upon the conviction that the demand for the actual stuff in actual use will overtop the possible supply. We admit that if it does not equal and overtop the possible supply the parity will not be maintained, and no limited coinage can equal and overtop the possible supply. It must be the coinage, and back of the mint the use, which will absorb the possible yearly production.

Mr. DOLLIVER. I will ask the House for an extension of my time in order to enable me to conclude what I have to say.

By unanimous consent, Mr. DOLLIVER's time was extended.

Mr. DOLLIVER. I am greatly obliged to the committee. Going back to the last remarks of my friend from Mississippi, I will say that there seems to be a difference among the defenders of free coinage as to what it is that will double the value of silver bullion, whether it is the act of coining it or the exercise of using it.

If the use of it alone is relied on, then it is pertinent to say that the first real use of silver as legal-tender money in the United States has occurred since its free coinage was abandoned. And the mint reports of the various countries of the Old World show that a larger coinage of silver and a larger use of it for the ultimate purposes of money exists there to-day than ever before. The abandonment of free coinage has not, except in Germany, disturbed the monetary quality of existing coins nor reduced the monetary use of silver, but there is one thing that every man ought to bear in mind, and that is that there is not a country in the world which has the free coinage of gold and silver which enjoys the use of gold and silver—not one. If there is anybody in this House who knows the name of a country which has the free coinage of both gold and silver at any ratio and enjoys the use of both I will stop long enough to have the country mentioned.

Mr. HENDERSON. Go right on.

Mr. DOLLIVER. I will go on.

Mr. UNDERWOOD. I would like to ask the gentleman if it is not a fact that Mexico has the free coinage of both gold and silver and, according to Mr. M. H. Muhleman, a late authority, on page 115 of the Monetary Systems of the World, they have $5,000,000 in gold in circulation in Mexico?

Mr. DOLLIVER. In answer to that I have to say that a secretary of the Mexican legation told me yesterday that Mexican gold coins were not used in Mexico in common circulation, being at a premium of 80 per cent above the corresponding silver coin.

Mr. BRUMM. Permit me to say that when the United States had free coinage of gold and silver for many years, for the greater portion of that time she was more prosperous than she ever was before.

Mr. DOLLIVER. That opens a field for a long discussion. I will dispose of it in a short way. Whatever prosperity the United States had for the eighty years prior to 1873, be the same more or less, was evidently not owing either to the coinage or the use of the standard silver dollar, for in that period its mints produced only 8,000,000 silver dollars, not a million of which remained in the channels of the business of the country.

Mr. LACEY. I wish the gentleman would permit me to state that last summer on my journey through Mexico, a young Mexican about 35 years of age, a very intelligent gentleman, showed me a gold coin and assured me that it was the only gold Mexican coin he had ever seen.

Mr. DOLLIVER. That is perfectly reasonable, with gold at a chronic premium of nearly 100 per cent.

Mr. WILSON of Idaho. When France demonetized silver she had nine hundred millions in gold and seven hundred millions in silver. That was the result of free coinage, even at a ratio of 15½ to 1, and France is one of the greatest commercial countries in the world.

Mr. DOLLIVER. My friend's suggestion leads me to dwell for a moment upon the history of French bimetallism, a history which is always brought into the silver debate, sometimes by word of mouth, and the other day by my friend from Minnesota by a chart, showing in a picturesque way how the French law of 1803, opening the mints to free coinage at 15½ to 1, had preserved for seventy years a substantial correspondence of the market value of silver with that ratio. No man who believes in the unwritten law commonly known as Gresham's law could look at my friend's chart without suspecting that the slight deviations of the market from the mint ratio, indicated upon the chart, would operate to alternately exclude one or the other metal from use.

Mr. WILSON of Idaho. France maintained the parity by opening her mints.

Mr. DOLLIVER. The fact is that the parity existed when France opened her mints, and had existed for more than a century. That is to say, the market relation of gold and silver had long been 15½ to 1, with only slight deviations; so that the action of France in 1803, instead of creating a new condition, only conformed to a condition long existing. Now, I will undertake to show whether France actually enjoyed during that seventy years the use of both gold and silver, which, in my judgment, constitutes the only true bimetallism. Men stand here and tell us that for seventy years the mint ratio at Paris controlled the market ratio, produced an exact parity, and gave the people of France the continuous use of both gold and silver; and they bring in a chart to illustrate these facts. I propose now to throw a cathode ray right through my friend's chart to see what lies behind it in the actual experience of France.

Mr. WILSON of Idaho. Do you deny that she had nine hun-

dred millions of gold and seven hundred millions of silver before she demonetized silver?

Mr. DOLLIVER. I believe the gentleman's figures are approximately correct of the year when the French Republic, after bearing the burden of unlimited silver coinage till it could no longer be borne, retired finally from the experiment. A recent work (1895) on the History of Currency, by W. A. Shaw, a profound and scholarly book, shows clearly that this serene seventy years of French bimetallism was disturbed from year to year, from decade to decade, by movements of gold and silver into and out of France, which gave to the money brokers of London, Paris, Berlin, and Vienna an uninterrupted profit from the fluctuations of the currency of France. On page 178 he condenses the monetary experience of France from Napoleon to Thiers. With your permission, I will read what he says:

The second idea which is commonly entertained with regard to the action of France during this later period [1803-1876], viz, that her action secured for the world at large a fixed and steady ratio, is equally—indeed, still more—fallacious. At no point of time during the present century has the actual market ratio, dependent on the commercial value of silver, corresponded with the French ratio of 15½, and at no point of time has France been free from the disastrous influence of that want of correspondence between the legal and the commercial ratio. The opposite notion, which prevails and finds expression in the ephemeral bimetallic literature of to-day, is simply due to ignorance. From 1815 England has been withdrawn from this action of a bimetallic law, and the modern insular pamphleteer has before his eyes no sign of its working in his own country. He therefore assumes a universality of such experience, and attributes it to the French legislative ratio. It is in no polemic spirit, but simply in the interest of science, that this particular or misapplication of history to the squaring of a theory is to be branded. The plainest facts of history are thereby absolutely misrepresented, and the assumption of cause and effect is so far from being true that the repose of the English currency history in the nineteenth century is to be attributed to the absence of a bimetallic system, or to its despite rather than its presence and influence. (Pages 178, 179.)

If that authority is not regarded as satisfactory, I have here a little volume called Bimetallism, a monograph out of the great work of Henry Dunning MacLeod, of Trinity College, Cambridge, on The Theory of Credit, recently published, which gives a valuable insight into the real experience of France. He says:

The period between 1803 and 1873 is cited by bimetallists as the golden age of bimetallism. But if they imagine that there was during that period a general circulation of gold and silver coin in unlimited quantities, they are under a woeful delusion. The French Government pillaged all the sanctuaries in France of their vast masses of silver plate, and the French liberating armies pillaged all the treasuries and sanctuaries of the countries they came to liberate.

Immense quantities of silver plate were sent to the mint to be coined. The consequence was that, while the legal ratio of silver to gold was 15½ to 1, the market ratio became 17 to 1. No gold coin, therefore, got into general circulation. During the period from 1803 to 1820 there was for eleven years a premium on gold, sometimes as much as 3 per cent, which, of course, prevented gold coming into general circulation. But after 1820 the premium on gold rose very considerably, and between 1820 and 1847 it was usually on an average of 10 francs per mille, but in many years 18, 19, 20, and 21 francs, which, of course, utterly precluded any gold getting into circulation.

I myself can testify that in 1839 there was not to be seen a gold coin in France in common use. But in 1851 a great change took place. The gold discoveries in California and Australia caused floods of gold to be imported into Europe, and in 1851 silver rose to a premium. Then the money in common use changed from silver to gold. I was residing in a seaport town in 1857, and every steamer which came in was loaded with casks of Scotch whisky going to be transmuted into French brandy, and every steamer that went out had its decks piled with silver 5-franc pieces. The same was true at every other seaport. Silver departed from France in floods: every steamer and every diligence that left France carried away loads of these 5-franc pieces.

At last the scarcity of silver became so great that it became necessary to coin those pestilent 5-franc pieces in gold. (Pages 14 and 15.)

The Latin Union was formed in 1865, and within two years a commission sat in France to take into consideration the burdens and embarrassments incident to the alternate disappearance of the coins of the country. The next year a similar commission reported that the prosperity of the French people required that an end be made to the long and unsuccessful effort of France to maintain the concurrent circulation of both metals. Her final action was delayed till 1874. She acted out of no hostility to silver. She acted for the protection of her business community. Her action was not influenced by what happened in the United States in 1873, nor controlled by what happened in Germany in 1871.

It was only the execution of a well-matured advice given in 1868 by a commission of her most famous statesmen and economists in the interest of the orderly and safe management of the industries and business of France. And yet men stand on this floor and say that, without difficulty and without trouble, France maintained the use of both gold and silver at the ratio of 15½ to 1 for seventy years. I wish to ask these gentlemen this very plain question, Why did France stop that transaction? She stopped it, not out of malice against silver, but because the burden of maintaining the situation had grown too heavy for the Latin Union to bear.

Mr. WILSON of Idaho. And yet silver was at a premium.

Mr. DOLLIVER. That was the very hardship of the situation; the alternate premium, first on silver, then on gold, resulting in the alternate loss first of one metal, then of the other, was more than French business could bear, even in those years when the departure of the value of silver from gold at the mint ratio was insignificant and fractional. How is it possible, with silver bearing a market ratio to gold of 32 to 1, that any nation in the world shall undertake to carry the burden unaided and alone, which the Latin Union, under conditions vastly more favorable, laid down in despair more than twenty years ago? [Applause.]

Mr. TERRY. Will the gentleman allow me to ask him a question?

Mr. DOLLIVER. With pleasure.

Mr. TERRY. Are you in favor of the coinage of silver dollars at all?

Mr. DOLLIVER. I stand with a political party that in eighteen years has minted 600,000,000 silver dollars, seventy-five times as many as the mint produced from its foundation up to 1873, and has kept every one of them in circulation, by itself or by its paper representative, and has maintained every one of them equivalent in value to the dollar of gold. [Loud applause on the Republican side.]

Mr. TERRY. That is all very fine, but answer the question. Are you in favor of the coinage of silver dollars; and if so, at what ratio?

Mr. DOLLIVER. I am in favor of the coinage of the silver dollar under such provisions and with such limitations and conditions as will produce a coin agreeing in value with existing standards, and I would have the United States join with the commercial nations in such an adjustment of the ratio, under international agreements, as will enable the entire commercial world without loss to any nation to return to the unlimited coinage of silver.

Mr. TERRY. Oh, that is mere jack-o'-lantern statement. Are you one of those parties who say that I am in favor of the coinage of the silver dollar if you will only put enough silver in it to make it equal in value to the gold dollar? Do you belong to the class that favors that kind of silver coinage?

Mr. DOLLIVER. I do not like to be described by my friend from Arkansas as a jack-o'-lantern philosopher, but I do not mind telling him that I have a very strong prejudice, for reasons which I have tried to explain at length, in favor of having all the dollars in use in the United States equivalent to each other in value. So far as the gentleman is concerned, the controversy is not between gold and silver. It is between the existing standards of value and a standard contrived out of compressed air. [Laughter and applause.] I need not say to this House that I am with the Republican party in favor of the largest possible use of silver that can be had without degrading the existing standards of value and turning loose a depreciated and fluctuating coin upon the American people. [Applause.] That is the position I take.

Whatever standard we have in the United States has existed here for sixty years. We have tried to preserve the existing standard reenforced by the largest use of silver that has occurred in the history of modern commerce. I am for the existing standards of value, not to be disturbed, except under conditions that will produce a real bimetallism. [Applause.] I have listened in every session since I have belonged to this House to the claim that this proposed departure from the basis upon which American business has been done in the past is in the interest of the poor, in the interest of the workingman, in the interest of the farmer, in the interest of those who are burdened with debt.

If I know my own heart, there is nothing in it but sympathy for the burdens and anxieties that have fallen upon the homes of so many of our fellow-citizens. It is because I am solemnly convinced that this proposed measure would be a curse and not a blessing, a calamity and not an omen of prosperity, that I have been moved to say what I have said. By no possible means could a bill for the free coinage of silver become a law without long and ample notice of its enactment. Long before the name of a President of the United States could be signed to such a law its enactment would be anticipated and discounted by the business world. In what position do these volunteer defenders of the poor propose to put those of us who are carrying the burdens of debt? This is an intensely practical question, with very little room in it for campaign oratory. Nor is it a new question in this money-lending and money-borrowing world.

On the 8th of June, 1830, Mr. Attwood brought forward a motion in the House of Commons to restore the coinage of silver, which had been abandoned by the law of 1816, after silver had diminished in value about 5 per cent from the mint ratio of the latter year. In the debate he stated that it was the purpose of his motion to enable persons who had contracted debts to pay them in silver, and he moved that coinage should be restored to its old position of 1797. Mr. Herries, the master of the mint, pointed out to the House that the ratio between the two metals had changed since that year. Nevertheless, Mr. Attwood, who brought the motion forward, said:

Let the two metals be a common tender and let the debtor pay in which he pleases.

The master of the mint replied in words which are not without significance in the present attitude of this matter:

Suppose the resolution of the honorable gentleman to be agreed to, what would be the inevitable result? Why, it would be proclaimed to-morrow from one end of the country to the other that this house had come to a resolution, the effect of which might be shortly stated thus, namely, that every man who had claims payable on demand; every man who held notes of small or great value; every man who had debts outstanding, would, if he secured the amount of what was due to him before the resolution passed into law, get the whole of his money, whereas if he delayed beyond that period he would get only £95 for every £100.

It is terrible to reflect upon the consequences which must follow. What would become of the Bank of England? What would become of every banking house in the Kingdom? What would become of all debtors who were liable to pay upon demand all that they owe? Would not all transactions of commerce be suspended and the whole country present one continued scene of confusion, consternation, and ruin, when the House of Commons proclaimed to all who had debts due to them that if they did not collect them on the instant they would assuredly be losers to the amount of 5 per cent?

Mr. Herries concluded by saying that if the motion succeeded it would result—

before the setting of the sun in creating a panic and confusion such as could not be described, and which it would then be too late to remedy.—*Hansard's Parliamentary Debates, second series*, volume 25, pages 102-162.

He was followed by Mr. Huskisson, who entirely agreed with the opinion expressed by the master of the mint, and added that—

If the House agrees to this resolution to-night there will be a general panic among the people to-morrow, and before the lapse of a week it is probable there will not be a sovereign remaining in the country.—*Hansard*, volume 25, page 168.

Sir Robert Peel followed with the expression of a weighty opinion, in which he warned the House that the adoption of the motion would result in a panic, in the midst of which—

All would turn to confusion, and public ruin must be the consequence.—*Hansard*, volume 25, page 170.

These three men were the ablest statesmen of their day, incorruptible in character and wise in counsel. It is not a vain thing for us to apply their admonition in the House of Commons in 1830 to the situation in which the advocates of free coinage ask Congress to place the business world of the United States. I say here, measuring the full significance of my words, that there is no hardship in the life of the American people at this hour, and never has been any, that could be compared to the misfortunes which would instantly ensue upon the assured prospect that the law was about to be changed in such a way as to authorize the legal payment of debts in a coin inferior to that in which they were contracted. The sacrifice of property and of business would be temporary, and might be repaired, but the loss of individual credit and of national character would be beyond the remedy of time.

You say that you wish to have more money in circulation in the United States. Yet you bring in a proposition here to create a coin without regard to the divergence of its value from the value of existing coins of the same denomination. It will take you fifteen years, working the mints of the United States at their full capacity, to make as many new coins of silver as the enactment of a law for the free coinage of silver will drive out of use in gold in the United States within three months. It is still true, under a law which Congress did not make and can not repeal, that no nation under free coinage can create two coins of the same denomination, differing in value, and keep both of them in circulation. But your proposal will not only drive out of use the existing coins of gold and diminish the purchasing power of all remaining coins and currency, but will destroy an element in the monetary volume of the modern business community more precious than either gold or silver—the character and commercial integrity, without which no business prosperity is possible.

"Credit," said Daniel Webster in the American Senate, warning his countrymen against the "evils of a debased coin," "has done more a thousand times to enrich nations than all the mines of the world." The currency or circulating medium of every country consists, not alone of gold and silver and copper and nickel and paper, but chiefly of the numerous forms of credit, written and unwritten. Credit commands all commodities exactly as the coin itself commands them, and, therefore, must be reckoned as a part of the volume of money in any intelligent estimate of the relation of money to prices. The great economists, from Adam Smith and John Stuart Mill until to-day, admit that credit has substantially the same effect on prices as money itself. Therefore, when I meet a man who thinks that the monetary efficiency of our existing coinage is inadequate for the needs of American business, I seek to impress upon his mind the danger of trying to increase the number of coins by means that tend to impair the exercise of commercial credit. That statesman renders a very poor service to the commonwealth who, in trying to provide more coined money for circulation, breaks down and wastes the character and credit which, finding a thousand expressions in the business of the world, has become at last, in a large sense, the true coin of the realm.

I stand here, therefore, in the discharge of my duties to the people for whom I speak to protect them against the wanton disturbance of the basis on which their contracts have been made and to which their business has become adjusted. I speak for them with confidence in their prudence and in their integrity, and I speak all the more confidently because for years, in their schoolhouses, in their villages, in their great political assemblies, I have submitted these questions to their judgment and to their conscience. They are are not driven from their convictions of what is right and wise on this question by considerations drawn from the unfortunate situation of all business in the United States during the present Administration, for, going back to the years when the Republican party controlled the affairs of the nation, they find hope and courage in the prospect of a speedy return to the prosperity of 1892. [Applause.]

There are people who say that the whole history of the Republican party has been one uninterrupted conspiracy against the American people. I heard my friend from Nebraska [Mr. KEM] who, a few minutes ago, disclaimed a very sensible discourse upon the money question as having been delivered, not by him, but by somebody else—— [Laughter,] I heard him say, in starting out the other day, that this conspiracy against the people began in 1862 when the greenback was manipulated in the interest of Wall street. He then passed on to the time when the national banks were created, then to the time when the payment of the public debt was guaranteed in coin, then to the time when the obsolete silver dollar was dropped from the list of our coins.

Mr. KEM. Will the gentleman permit a question?

Mr. DOLLIVER. Yes, sir.

Mr. KEM. Do you undertake to say that the greenback was not manipulated in the interest of the bankers?

Mr. DOLLIVER. I will answer your question, and I will so display the matter that you can understand it, and that your children can understand it. There is not an act of Congress of which you have complained as a part of the conspiracy, from the law creating the greenback in 1862 to the law providing for the resumption of specie payments in 1875, which does not have upon it the signature of one of two men, either of Abraham Lincoln or of Ulysses S. Grant. [Applause.] If that is not an accurate historical statement I desire somebody to correct it.

Mr. KEM. But is it not also true that President Grant made the statement that when he signed the bill demonetizing silver he did not know the effect of it?

Mr. DOLLIVER. I do not believe there is any truth in it, for if he did make that statement after his Secretary of the Treasury had twice recommended the measure to Congress, and after Congress had debated it through 127 columns of the CONGRESSIONAL RECORD, if after all that he made such a statement, then he must have been wanting in that wisdom which the world, by common consent, has attributed to General Grant. [Applause.]

Mr. KEM. He is not the only man who has made the statement that he did not know the effect of the bill when he voted for it.

Mr. DOLLIVER. In view of the public record it is not important what anybody said about that. I say again that the acts of which you speak, all the acts of which you complain, as parts of a conspiracy against the people of the United States, bear upon them the indorsement and approval of one or the other of these men, and I raise a question here, which the American people are going to press home on every agitator who comes forward as a professor of finance and reformer of monetary systems in the United States. If Abraham Lincoln and Ulysses S. Grant were wanting in intelligence, so that they did not know and could not see the welfare of their country; if these men, called in the order of Providence to defend the life of the Republic in the hour of peril, were wanting either in wisdom or patriotism, so that they wrote their signatures of approval upon a long series of statutes by which the struggling millions of their countrymen have been enslaved, what, in God's name, is likely to happen to us when the Augean statesmanship of South Carolina gets hold of us. [Laughter and applause.]

My fellow-countrymen, let us rise above that level of thought and speech which thrives by false witness against the motives of public men, which teaches the young men and young women of the land that public life is without conscience and rectitude of purpose, and that the Government for a generation has been turned from its beneficent office to become the despicable servant of the rich. There never was an hour in the history of the world when a man taken by himself stood for as much, and when a dollar taken by itself stood for as little as it does to-day. [Applause.] People spend a good deal of time worrying over the plutocracy. I have made up my mind that the Lord in His own good time has methods of scattering the wealth of the world; that no unscrupulous money power can long dominate the human race; that this world will in the end be governed by the manhood and womanhood there is in it, and that no syndicate of avarice can drive the integrity out of American politics and American business. [Prolonged applause.]

Coin Redemption Fund.

SPEECH
OF
HON. W. A. CALDERHEAD,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 10, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. CALDERHEAD said:

Mr. SPEAKER: I do not know that in the few moments I have I shall be able to add very much to the information of the House upon the question that has come before it in this curious manner. I think I can agree about some things with my friend who has just taken his seat [Mr. MCDEARMON]. He says that the Treasury of the United States is in trouble, and that it has appealed to the Republican House of Representatives to relieve it, and that the responsibility of providing such relief is upon the Republican House. I think that is true enough; and at least so much of this responsibility as rested upon the Republican House of Representatives it has been willing to undertake and bear.

In answer to the call of the Secretary of the Treasury announcing to us that there was a deficit in the revenues—a deficit in the Treasury, as he claims—we immediately provided the means by which we might relieve that deficit, and we followed that with a bill which would increase the revenues, so that no deficit should occur in the future until time could be obtained for the consideration of a more permanent policy. Was that meeting the responsibilities that were imposed upon it? Why not? When these measures of ours were sent to the Senate for its consideration and when our friends in that Chamber concurred with us in the effort to furnish relief to the Treasury in the manner that we attempted here, there arises a new set of teachers with a new demand.

Not sufficient in themselves to furnish a policy that will relieve the Treasury or prevent a future recurrence of this deficiency, they are sufficient to say to this country, "We want the free and unlimited coinage of silver at the ratio of 16 to 1, and until we can have that there shall be no relief for the Treasury nor for the country upon any other method." And a gentleman now comes and says substantially in his place here that unless we can have that, unless the Republican majority in this House shall surrender its own convictions, its own judgment upon what is for the interest of the country, to the convictions and judgment of this small fraction, there shall be no relief to the country. We could bear this with some patience if there was any sincerity or hope of success in the policy proposed. But when it was proposed in the other Chamber it was distinctly said and understood that the vote upon this question would not provide the remedy demanded, that it would merely put men upon record on the subject. The debate here proceeds in the same manner.

What for? In order that the CONGRESSIONAL RECORD may be filled with campaign literature to be used during the summer months agitating the minds of the people upon a subject which members know can not be settled now by debate in the House or the Senate. Mr. Speaker, for what other purpose has this discussion proceeded thus far in this Chamber? Can any other purpose be named? I have been unwilling to bring myself to consent to the method of stuffing the RECORD with printed speeches never delivered in this Chamber. I can hardly refrain from saying that I can not conceive how any member of this body can find it proper under the privilege of printing his remarks to add to them whole columns of newspaper literature that have no purpose except the effect they may have as campaign documents during the coming summer. Neither can I understand how any member can admit it to be proper with the privilege that is thus extended to him to impose on the country as his speech delivered on this floor sections of public documents that are for free distribution by the different Departments of the Government.

These things are not designed for the purpose of ascertaining a correct solution of the problem that is given to us, but simply, as I have stated before, for the purpose of furnishing campaign literature to be spread over the country during the next six months. That is evidently the purpose. No member expected that kind of discussion to settle the question here. If the members of the House who believe in the substitute now offered to them had sincerely believed in it and wanted an honest and candid discussion of the question before the House, face to face with the men who think differently, so that there might have been a candid and fair debate, and a vote after the deliberate judgment of the members had been rendered upon it—a final verdict pronounced which would have satisfied themselves and their constituents—they should have presented the bill as an original one to the Committee on Coinage, Weights, and Measures. If they could not have obtained a favorable report from that committee they would at least have obtained an adverse report, and could have brought that before the House for consideration, and so instead of remitting the discussion to evening and morning sessions and then absenting themselves from the floor of the House and having little concern in the actual discussion, they would have been in their seats face to face with those occupying a different position on the question, presenting their arguments on the subject, and at least we would have had a vote after a fair weighing of the different arguments on the basis of their material worth and the strength of the claims presented by either side. But that is not the purpose of the discussion. The purpose of now thrusting this measure before us is to obscure the evil results of evil tariff legislation. It is to turn the minds of the people away from the real cause of the prostration of business by which the revenues are made deficient and the Treasury made empty. It is indeed "a condition that now confronts us, and not a theory."

I am opposed to the substitute presented by the Senate, first, because of the indirect manner in which it is presented to the House for its consideration and because of the evident sinister purpose that is underlying the manner of its presentation. I am opposed to it, next, because it is vicious in itself and does not provide any sort of relief to the Treasury, and ignores the real cause of our trouble.

The gentleman who last addressed the House [Mr. MCDEARMON] said "the Treasury would be instantly relieved by voting for the free and unlimited coinage of silver in this House," and in order to satisfy you of the sincerity of his belief in what he stated, he promised that he would take every dollar of the coinage at 99.9 cents on the dollar. Why, he knows, Mr. Speaker, and the nation knows, that the great Republican party throughout this country stands under the credit of the United States, upholding it; that it has pledged itself to the nation to maintain not merely bimetallism, but the parity of every dollar, the equality of the debt-paying and the purchasing power of every dollar that is issued by the Government. He knows that it is because of the intention of this party to maintain the power of the Treasury to redeem all the dollars which are issued in the money in which they have been promised to be paid, and to maintain every dollar that this Government issues, so that it shall have equal debt-paying and purchasing power with any other dollar, no matter how good it may be, that he makes his offer.

I do not know exactly how I will return to the subject he presented first, but I think I will present it by saying that the act of 1875 authorized the Secretary of the Treasury to sell bonds for the purpose of procuring gold to maintain the reserve, such reserve as was deemed necessary for the redemption of the greenbacks when they should be presented at the Treasury. That act has lain there all of that time, from the time it was enacted up to this time, as the basis of the credit of that money, for the gold redemption of the greenback. I know the act uses the word "coin," but no man then or since expected the payments to be anything less than gold. It was necessary that all the other moneys that came from the Treasury of the United States should also be redeemed in the same manner, so that all the dollars issued might have the same power as money.

Now, so long as the revenues of the country were sufficient for the preservation of the redemption fund there was no question about the value of our dollars or about the power of every dollar as money. So long as the revenues were sufficient to meet the expenditures there was no question about the integrity of our money. It was only when the revenue had begun to fall off that a question arose, and this suggestion took its origin about the parity of the dollars.

Which one of you during this discussion has answered the remarks of our friend from Tennessee [Mr. PATTERSON] about the fact that our revenues are not now and have not for nearly two years been paid in gold? Which one of you has explained how it was that when the fear about the equality of the dollars began to arise in the minds of business men not one dollar of gold was paid into the revenues of the Treasury? Which one of you has explained why it was that immediately when there was a fear the dollar recognized as the cheaper was used for business and the dollar which was recognized as the more valuable—the gold dollar—was at once withdrawn? Why is it that gold and greenbacks are at a little premium to-day? But the value of the greenbacks, the value of the national-bank note, the value of the silver certificate or the silver dollar itself, did not rest upon the silver bullion of the Treasury, nor upon the possibility that Congress might authorize the Treasury to coin that bullion; nor did it rest upon the hundred million of gold redemption fund held in the Treasury.

Their value for business was not affected in any way by the loss of the reserve, but day by day, as the reserve diminished from its full amount, the business of the country went on with this

money at par, and when the reserve fund in the Treasury had fallen as low as $45,000,000, although there was still $900,000,000 of money outstanding in the country said to be dependent for redemption upon the reserve fund of the Treasury, the credit of the Government was not affected in the slightest degree and each dollar issued by the Government was at par with every other dollar. So it was evidently not the amount of the reserve fund in the Treasury that kept this outstanding circulation at par. The country knew better than to believe that the value of the dollar depended on the reserve. They knew that it was the power residing in the Treasury by the act of 1875, to provide the redemption of all that money in gold. It was that knowledge which maintained the value of all of these dollars at a par. What maintains it now?

Do you gentlemen think that it was the withdrawal of silver, or the demonetization of silver, as you call it, that produced the panic of 1893 and the appalling disasters of that year? All the standard silver dollars that have ever been coined in this country were still full legal-tender dollars and at par. Have you forgotten the panics of 1824, of 1837, of 1857? Have you forgotten the fact that prior to each one of them the revenues in the Treasury of the United States were provided upon tariff laws framed precisely upon the principle of the law which you presented to the country two years ago, and that each one of those panics followed the enactment and operation of each one of those laws? Even the panic of 1873 came close after four successive reductions of the tariff. Have you the least conception in the world that it was the enactment of your tariff law of two years ago that produced the condition which has existed from that time to this? Have you explained to the country how it was that while for thirty years the revenue of the country was entirely sufficient, and during all that time, except the internal-revenue tax which was paid directly upon whisky and tobacco and articles of that kind, no man was able to put his finger upon one thing that he bought and used that cost him more by reason of the tax which supported the great National Government than it would have cost if there had been no tariff law in existence at all? Not one man could point to a place where he was taxed to support the great National Government except the man who was paying an internal-revenue tax. Not one man could point to a place where he was paying more for anything that he bought and used for his own use under that system of taxation than he would have paid if there had been no such taxation in existence.

You changed the system. You reduced the tariff upon the articles which we manufactured. You provided for free raw material enough to set all the mills of England at work, to shorten the hours of labor in all our factories, to reduce wages, and discharge the hands. You reduced the freight upon all the railways carrying our great internal commerce, reduced the number of employees and the salaries that they received. Within twelve months from the time when you had the power to make that law—and the nation knew that you would make it—two and a half millions of the laboring men of America were out of work.

Has that law nothing to do with the deficiency of the revenue and the deficiency in the Treasury? Has that nothing to do with the distress among our laboring men? Do you propose to furnish men work by coining the dollars that are now in the Treasury? How will these dollars get out? From whom will workingmen get the money? Who does the work that supplies America with her goods to-day? Why is it that you have provided that every English artisan and manufacturer and mechanic shall be at work at increased wages, while nearly every American artisan and mechanic and laborer shall work at diminished wages or go without work? Has that nothing to do with the revenue or the Treasury? And when we now propose that the tariff shall be so levied as to increase the revenue and set our men at work again, you turn from it with contempt and say, "Give us free coinage of silver or you shall have nothing."

But I have not time to give all the discussion to that side of the question that I ought to. There are some of our friends upon our side of the House who also think that we ought to have the free coinage of silver. Now, I admit that it is a question that is still open for discussion and upon which each man has a right to have his own honest judgment, and all I ask of him is that he shall be sincere. He does not make an answer to me when I say that I am not in favor of it, but he stands up and says, "Oh, then you are a gold bug." That is not argument. That settles nothing.

Among those who made the most eloquent and pathetic plea for the free coinage of silver was our friend from California [Mr. JOHNSON]. I was a little surprised at him. I admit the eloquence with which he made that plea, but I ransacked the RECORD in vain for one statement in it that constitutes a reason why we should have the free coinage of silver except the danger that we might lose the next election if we do not.

That is a remarkable statement to come from California. I can not help remembering that from 1862 to 1878, while all the rest of us were compelled to take greenbacks at whatever the market value was and buy gold at whatever the market value was, the great State of California insisted that the National Government should carry $25,000,000 of bonds in order to enable her to maintain gold payments at every counter and upon every contract. From that day to this California has been upon a gold basis. You will not take a promissory note or check or draft there that is not payable in gold. Will the gentleman now make a contract for California that if we establish free coinage of silver she will accept silver for gold? What nation or people has ever sold gold to get silver? Will California sell her gold and take silver in pay? Does California propose again that the whole nation shall go to a silver basis while she retains her gold basis?

But my friend, the gentleman from Minnesota [Mr. TOWNE], has also some admonitions to give us. He must interpret a section of the great Minneapolis platform for us because we have not hitherto understood it. It is not enough for him that that great declaration proclaims the necessity of maintaining the equal power of all the dollars. It is not enough for him that the people of his State have since then repeated that declaration and added to it in 1894 their remonstrance against any attempt to depreciate our money. He has still more knowledge and light. I admire the accuracy with which he has recited to us Coin's Financial School. I admire the adroitness with which he will, under his "leave to print," insert it, with all its maps and charts and tables, into the RECORD, and so secure some permanence to the history of its fallacies.

Admit it all as true, what then? What proposition does he make? Is it not substantially that we shall pay all existing public debts in gold and at the same time begin doing business with silver alone? What is this but a silver basis? Is this bimetallism? But the gentleman from Wisconsin also, like the gentleman from California, proposes that if this is not done the Republican party shall be defeated next. Is this an argument, or is this a threat?

But waiving political fears and guesses, waiving all controversy about the history of this subject, waiving all contention about the practice of our Treasury, what is it you propose to do with the existing condition? What will the result be if you do what you propose in this Senate substitute?

Remember it proposes to take the existing standard of values away, and it proposes to substitute another standard of value. This is to deal with the interests of every home and of every industry—with the interests of every industry which employs labor as well as with the interests of every poor laborer. You say it will increase the price of every product. Can American agricultural products be sold in any foreign market for more than other countries will sell theirs for? If Egypt will sell her cotton for 6 cents a pound and Argentina sell her wheat for 50 cents a bushel, can America sell her wheat or cotton for more? If not, how then would you raise the prices of agricultural products?

But if you should raise prices, is not that to increase the price of everything the poor shall buy? How will you compensate them? With a dollar made of 50 cents' worth of metal? Oh, you will raise the value of the metal to par, will you? Then how have you helped the poor?

But remember in doing this you are to take a metal that is now admitted to be worth only the daily universal market price, and by your new law make money of it, and, as money, rate it at double that market price. What will the result be? You will take a metal which the judgment of the civilized world has now rated at 67 cents an ounce and give it a value of 129 cents an ounce as money. Will the world raise its market price of that metal to the rate you set on it by law? Which nation will do it? You complain now of the power of England. But you in the same breath propose to double the power of England's money. For while the market value of the world's silver remains as it is, if you adopt this Senate substitute, every $1,000 of England's money will buy as much property here as $2,000 of the money you propose for us. How will that relieve us of the power of England over our finances or our business? What is the experience of Mexico? It is an admitted fact that $1,000 of our money or $1,000 of England's money will buy as many cattle or as much property there as $2,000 of her own money. Who will own her property in the end? If you make this law who will own the great industries of our country in a few years more?

Is is not enough that you have turned over to England the work of our manufactories, or must you also turn over to her the purchasing power? In every country in the world now on a silver basis her dollars will buy twice as much of anything that nation sells as that nation's dollars. Must we put ourselves also under her power in the same way by going to a silver basis?

When did any nation get any advantage by depreciating its money? When did any nation get any advantage by depreciating its coin? What nation ever gained anything by coining either silver or gold for more than its commercial value as rated in the business of the world? In the great speech of Senator JONES in the first session of the Fifty-third Congress, he asserts that, "Of

course with unrestricted coinage the mint value and the bullion value will be the same." But when? Adopt this Senate substitute and you will have unrestricted coinage. Can you expect them to take 16 pounds of pure silver and buy 1 pound of pure gold? What man will take his pound of gold to the mint and take 16 pounds in silver dollars for it when he can take his pound of gold outside of the United States and buy twice as much silver or twice as much of anything else that men sell as he could with the 16 pounds of silver.

I know he lays great stress on the fact that it is the law which makes money. But it is only the debt-paying power among citizens within our jurisdiction which the law gives to money. No law can give purchasing power to money. We tried that with our greenbacks. We could pay debts with them at their face value; but when we went to purchase with them the price of everything went up and the purchasing power of the greenbacks which the law made money went down. We worked from 1865 to 1879 to bring the purchasing power of the greenback to par with the debt-paying power, so that the money paid to laborers and producers on what was due them should have as much purchasing power to buy goods as it had debt-paying power to pay them what was due them.

So well was this understood that the legislature of California, on the 25th of March, 1872, presented the following resolution to the United States Senate committee while it was considering the famous act of 1873:

March 25, 1872.—Referred to the Committee on Coinage, Weights, and Measures, and ordered to be printed.

Whereas it is of the utmost importance to the workingmen, farmers, and traders of the Pacific States and Territories that the silver coin of the United States should be raised to the value expressed upon its face: Therefore

Be it resolved by the senate (the assembly concurring), That our Senators in Congress be instructed and our Representatives requested to urge upon Congress the early passage of a law raising the weight of silver coin to the standard of the year 1850.—*Senate Journal*, March 25, 1872, second session Forty-second Congress, page 42.

When they sent this we had free and unlimited coinage of silver at 16 to 1. Why did not the distinguished Senator's theorem prevent the fall in silver which brought that resolution forth? If the law could give purchasing power to silver, why did they ask that the weight of silver coins be increased to correspond with their face value? My friend from Wisconsin [Mr. TOWNE] says very plausibly that "value is a relation." He then argues that the law can fix the relation between silver and gold, and then he says both silver and gold will bear the same relation to all other commodities.

But is that true? Then why did the relation of silver and gold change notwithstanding the law of free coinage, so that the legislature of California asked to have the weight of the silver coins raised? They were on a specie basis then and had free coinage. They discovered that it was essential that the coin should have the same real value as the value expressed on the face, so that it should speak the truth to the laborer, farmer, and trader.

Philosophers like my friend may say, and do say, that "value is a relation," but plain business men know that value is a fact. I have not time now and here to enter into an analysis of his aphorism, but if value is a relation, then I assert that as a commercial term applied to money it means the worth of its possession and use as property compared with the worth of the possession and use of other property. That relation is a fact established by commercial usages of men.

The value of money is not a mere legal function. The greenback had the legal function in its poorest days. It had the legal power to pay debts at its face, but the law could not give it purchasing power, and so it took more and more of them to buy things. The primary element of money is not its legal function of paying debts. The primary element of money is that it is property. It is this element which gives it the purchasing power. It is therefore essential that it should have the same real as nominal value. A dollar should be not only a name, but also a dollar in fact. Otherwise it perpetually speaks an untruth. The office of the Government is to "regulate the value thereof," so that its nominal value signifies its real value. The Government now signs a ten-dollar gold piece with its coin stamp, and thus says to the world, "There are 258 grains of standard gold which the Government will redeem with $232\frac{3}{10}$ grains of pure gold." All men know the value of it. The Government also stamps a silver piece of $412\frac{1}{2}$ grains of standard silver, which contains $371\frac{1}{4}$ grains pure silver. We sign it with our coin stamp for $1.

Will the world give back one of our ten-dollar gold pieces for every ten of these silver dollars? Why not? Because the universal commercial usages of mankind have ascertained the value of gold and the value of silver, and no law of man has ever been able to give value to coin. Men do business with coin according to their estimate of its value, no difference what the law may be.

You may write in a book that gold and silver shall be coined and used in unlimited quantities on terms of absolute equality, but that will not make them equal, neither will it make them circulate together. The nations of the earth have all attempted to use the two metals that way and have all failed.

The gentleman from Minnesota [Mr. TOWNE] lays great stress upon the definition of bimetallism given by Mr. M. L. Muhleman in his recent work, Monetary Systems of the World, page 12—

By bimetallism, strictly defined, is meant the free and unlimited coinage of both gold and silver into coins of full debt-paying power.

Then, notwithstanding his anxiety to be free from the dictation of England, he cites the report of the royal commission appointed in 1886 by Queen Victoria:

A bimetallic system of currency to be completely effective must, in the view of those who advocate it, include two essential features: (*a*) An open mint ready to coin any quantity of either gold or silver which may be brought to it; (*b*) the right on the part of the debtor to discharge his liabilities at his option in either of the two metals at a ratio fixed by law.

Again I say this is not bimetallism. This is bi-legal-tenderism. This refers only to the debt-paying function of money. This ignores the purchasing power of a laborer's dollar. The day laborers and the wage earners of America are not the men who are asking a general bankruptcy act of this kind by which men may now pay off at 50 cents on the dollar. This is not the bimetallism which the people are in favor of by tradition and interest. The bimetallism of tradition and interest in America is the concurrent use of both gold and silver at one value for purchasing the necessaries or luxuries of life as well as for paying debts. Therefore it is that—

"We are in favor of the largest possible coinage and use of both gold and silver as standard money, with such restrictions and under such provisions to be determined by legislation as will secure and maintain the parity of values of the two metals, so that the purchasing and the debt-paying power of a dollar, whether of silver, gold, or paper, shall at all times be equal. The interests of the producers of the country, its farmers, its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other."

This is the bimetallism which the American people by tradition and interest are in favor of. Have these gentlemen been leading their people astray from it? By this large definition, national and all-protecting in its character, American bimetallism is not the "free and unlimited coinage of both gold and silver into coins of full debt-paying power only." The question under it is not whether we shall have gold or silver, but whether we shall have justice. Shall we have money that will maintain justice between man and man? Upon this principle the nation must act in coining money and regulating the value thereof, and when it does not the honor of the nation is questioned.

I know gentlemen answer and say that silver has been forcibly depreciated by demonetization. But that is not true. The demonetization laws of the world were all passed because silver was falling in value before the laws were passed. And it was to prevent the injustice of two dollars of different values that they were passed. All the silver that was in use when they were passed is still in use and we have added to it $500,000,000 in eighteen years.

I know they will answer that gold has appreciated and become more valuable. But is that true? The very tables of Soetbeer, which are quoted to prove this, show that from 1866 to 1892 the world's product of gold exceeded $3,276,000,000. That is $116,000,000 more than the world's product for the three hundred and fifty-eight years from the discovery of America to 1851. The world's product of silver from 1866 to 1893 was $3,063,000,000, making a joint output of $6,339,000,000.

The period of greatest prices was in 1865. The joint product of gold and silver from 1851 to 1865 was greater than ever known in the history of metals to that time. Yet the joint product of gold and silver from 1866 to 1893 was $3,781,000,000 more than the output from 1851 to 1865. All the gold and silver that was then in use remained in use, while this vast sum was added to it. All this increase of the metals is largely in excess of the increase of the population or of commerce in the world during the same time.

If there is anything in the theory that prices are dependent on the volume of money in circulation as compared with the volume of commodities offered in the market there should have been the greatest inflation of prices witnessed in modern times.

I will not now go into the vast productions of other wealth, for the tables of statistics will show the varying prices up and down as supply and demand, good seasons and bad seasons, have surged to and fro for the last twenty years. But I ask your attention to the fact that the metal which you now propose to fix as our money has been steadily falling as we have been increasing all our business and increasing all our instruments and agencies of business. We did the best we could to keep it up.

The United States, since 1878, has bought 459,946,701 ounces of silver, for which $464,210,262.96 has been paid, but its present value is only $309,536,118.17, which shows a loss of $154,674,143.79. And you propose to make up this deficiency by this silver Senate substitute.

My colleague [Mr. LONG] has given notice of his amendment, providing that this free coinage shall apply to the American product only.

I know that many men in our great State earnestly hope that this may be done. The spirit of an American which makes him in favor of a home product and of a home market makes me wish

that I could see how this would be done with safety to all our people. The product of our silver mines from 1834 to 1844 averaged $25,000 a year. From 1845 to 1857 the product averaged $50,000 a year. In 1858 it was $500,000. In 1859 it was $100,000; in 1860, $150,000. In 1861 it was $2,000,000. The next year it was $4,000,000, and the next year $8,000,000, and ever since it has gone on increasing until in 1873 it was $37,300,000 and in 1893 it was $77,575,757. The aggregate production of our own silver mines from 1873 to 1893 was $1,142,700,000, counting it at $1.29 an ounce. It is only worth to-day 67 cents an ounce for payment to anybody outside the United States except for the promise of our statute to maintain the parity of the dollars and the practice of our Treasury in exchanging gold for them or for the silver certificates issued on the deposit of silver dollars in the Treasury. If it is only worth 67 cents an ounce without that action of the Treasury, how would this substitute or amendment make it worth any more? We ought to have a reasonable answer to this question.

The proposition to protect it by a tariff equal to the difference between the 67 cents an ounce and $1.29 an ounce is not a true application of the American tariff. The true application of the American tariff protects American producers from unfair competition from other countries, but it leaves competition free among American producers, and we get the benefit of that free competition. But a free coinage of the American product of silver with a protective tariff that will prohibit foreign silver does not leave free competition among American silver mines. It creates them all into a monopoly of their product at a fixed price and the American people are compelled to take, at $1.29 an ounce, a product which they could exchange wheat or beef for elsewhere at 67 cents an ounce. Would this be right?

It is not opposition to the use of silver as money, nor opposition on my part to the silver producers of my country, that makes me feel it my duty to say these things. I own no gold mines nor gold. I own no wealth of property to be affected by your decision. I highly value the friendship and approval of many men who think this substitute, or at least this amendment, for the free coinage of the American product should be accepted.

But we are here to ascertain the truth about a matter in which every home in the nation is interested. "Let no coward thought of praise or of blame turn by so much as a hair's breadth the fine scales of honor while we weigh this truth and declare the result." When I ask what the result will be, no man makes a definite answer. No proposal is stated here to maintain the parity—the purchasing power equal with the debt-paying power—of all the dollars. No proposal is stated here to fill up the deficiency in the Treasury with a reserve that will maintain the present paper money—the greenbacks and coin notes and silver certificates at par with anything but silver. No proposal is here to provide a revenue that will be sufficient for the expenses of the Government. To these serious questions the whole answer is "free coinage or nothing."

"Nothing" does not mean standing still. It means going on increasing the public debt. It means to go on importing goods while our manufactories rust in idle silence and our workingmen go without work.

I know we must settle this question for ourselves. I do not hope for an international agreement, because no people can afford to alienate its freedom by a monetary treaty. No nation can consent that other nations shall decide how much money it shall have. No nation can do so without subjecting itself to the power of the others.

France chained herself to the other nations in the Latin Union and they obligated themselves to redeem their silver coinage in gold within one year from the notice to terminate that union. None of them dare to serve that notice for fear they will have to settle up. Meantime the national debt of France has increased more than $1,500,000,000 in the last five years. The monetary union has not helped her. We must settle the question ourselves.

From 1878 to 1893 we were paying our national debt. From the day the last tariff law went into effect we have been increasing our national debt. During the last seventeen months the total receipts of the Government have been $429,323,353. The total expenditures have been $502,487,296. The deficit in revenues has been $74,164,296. But the increase of the national debt has been $262,000,000 in bonds.

Where has the other $187,836,804 gone? It has gone to pay the balance of trade account that you have set against us. Our gold has been withdrawn and shipped out of the country to pay for goods which we used to make here and pay for here, and to pay for raw material which we used to produce here and pay for here.

It is the private indebtedness of the country which is turned into a national debt by withdrawing our gold to pay for these things. Will you change the balance of trade account and set it in our favor by this substitute? Turn your eyes from this substitute bill to the record of our exports and imports for the last seventeen months and then tell us, if shame will permit you to speak, what relief for the country or for the Treasury there is in this substitute.

The Silver Question.

SPEECH
OF
HON. JOHN F. SHAFROTH.
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 5, 1896.

The House having under consideration the bill (H. R. 2004) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. SHAFROTH said:

Mr. SPEAKER: This bill, as it passed the House, was for the purpose of creating a coin redemption fund. The Senate has amended the bill by providing a substitute therefor authorizing the free coinage of silver. It is this free-coinage measure that is now before the house for discussion.

The difficulty that has arisen so far in the discussion of this question is, that there has been no data or premises laid down upon which we have agreed as a foundation for our arguments; and yet there are some truths that are generally conceded.

There are two kinds of money in the world.

First. Primary money, by which I mean money of ultimate payment or redemption; and

Second. Credit money, by which I mean promises to pay, based upon the general credit of the Government, redeemable in primary money.

Primary money has two functions: First, as a *measure* of value, and second, as a circulating medium.

Credit money does not act as a measure of value as long as it is redeemable in primary money, because its exact value is fixed by the money in which it is redeemable, but it does act as a circulating medium.

There is one fact that we can all agree upon, no matter what our views may be upon the financial question, and that is, that there is not now and never has been a sufficient quantity of primary money in the world. This truth is demonstrated by the fact that all nations, in order to relieve their necessities for a circulating medium, have been compelled to resort, either directly or through their banking institutions, to the issuance of credit money. No government would undertake the hazards of maintaining credit money unless there was an imperative necessity for the same, and no nation would ever authorize banking institutions to control the currency if there was sufficient primary money in circulation.

There is in existence at the present time in the world $2,469,000,000 of such credit money, and if silver be treated as token or credit money by those nations that have adopted the single gold standard, there is in existence in the world nearly $6,000,000,000 of credit money. This credit money represents the amount of shortage in the world of primary money.

There are two propositions that I first desire to discuss:

First. That in theory by the demonetization of silver there should have been an enormous increase in the value of gold; and

Second. That in actual experience there has been an enormous increase in the value of gold.

APPRECIATION OF GOLD.

Previous to 1873 two metals formed the base upon which was built all the credit and commerce of the world. These metals are designed by nature as money metals on account of their quality of indestructibility, their compactness as compared to value, and the difficulty with which they are extracted from the earth. So evenly has nature stored these metals in the earth that, notwithstanding free coinage of both metals existed in many of the nations for centuries, yet the amount of gold and silver coined in the world previous to 1873 was practically the same. By the demonetization of silver in the various nations of the earth one of these two metal moneys was stricken down as a money of ultimate payment. All the burdens which both metals had borne were thereby shifted on to one. As those metal moneys were, and now are, practically equal in amount, the burden upon that one was thereby doubled. Doubling the burden upon a metal doubles the demand for the same, and doubling the demand for it doubles the value thereof.

If there is any truth in the principle of supply and demand, this conclusion must inevitably follow. It is therefore mathematically certain that if the demonetization of silver had taken place throughout the world simultaneously, the doubling of the value of gold would have surely followed. It is true that demonetization of silver has taken place gradually. One nation after another at intervals of time has adopted the single gold standard. The result has been the gradual shifting of the burdens borne by both gold and silver onto the gold alone, thus making a gradual increase of demand for gold and a consequent gradual increase in the value thereof. It is also true that demonetization of silver has not yet taken place throughout the world, as there are still some nations that relieve

the strain on gold by holding their mints open to the free coinage of silver. It is for that reason gold has not yet doubled in value.

The coinage of silver on government account by standard nations does not relieve the strain on gold, because such nations do not make silver a money of ultimate redemption. Such governments treat silver as token or credit money, and either directly or indirectly offer to redeem it in gold. The silver coin then becomes simply a promise to pay gold. The coinage of silver in that manner makes that many more obligations of the government redeemable in gold, and hence makes that much more burden that gold as the money of ultimate payment must bear. Thus the coinage of silver on government account instead of relieving the strain on gold actually increases the demand for it and consequently the value thereof. As the gold dollar is the unit of measurement in this country, its increase in value can not be estimated in dollars and cents, but only in its increased purchasing power, and its increased purchasing power can only be estimated in the decline in price of everything that gold will buy.

If gold were simply a commodity, and not a standard or measure of value, its appreciation would be of comparatively little consequence; but it is because of its being a *measure for everything else in the world* that it is so important to mankind that it should not increase in value. As the debts of the world are increased by the increase of the measure, doubling the value of the measure doubles the size of the debt calculated by that measure.

Now, Mr. Speaker, what does the doubling of the value of the standard gold dollar mean? It means the doubling of every other dollar redeemable in that coin. It means that the man who has his wealth invested in bonds or notes awakes to the realization that his fortune in purchasing power has been doubled; that the man who has his wealth invested in anything that gold will buy finds that by the doubling of the value of gold what he has to sell will only bring one-half as much as it formerly did.

That legislation is indeed pernicious that in its effect doubles one man's wealth and divides in half the wealth of another. But what is the effect upon the wealth of those men who in order to develop the resources of the country have borrowed money with which to aid in the establishment of their enterprises, or who have been so unfortunate as to mortgage their lands to the extent of one-half their value? Doubling the value of the dollar to such men means the total annihilation of their wealth. As the debts in the United States alone are estimated to be more than $20,000,000,000, it is apparent that the consequences of doubling the value of gold in this country must be most appalling. It is contended that as demonetization of silver by the nations of the earth has taken place gradually, the addition to the stock of gold has relieved this increased demand upon it. That would be true to a certain extent if commerce and debts had not increased during that period. We know that by the increased and ever-increasing facilities of transportation commerce has been increasing at the rate of more than 6 per cent per annum, while the increase in the gold coin of the world has very little exceeded 1 per cent per annum. The production of gold in 1894 was $180,626,100, the highest amount ever reached in any year up to that time.

It has been estimated by Mr. Giffen, the statistician of the London Board of Trade and a gold monometallist, that the arts consumed as much gold as the annual product, and that in the arts there was melted as much gold coin each year as there was new gold coined.

Sir Lyon Playfair, a member of the British Parliament and a gold monometallist, has estimated that at least 75 per cent of the annual product of gold goes into the arts.

Prof. C. L. Fawcett, another gold monometallist, estimated that of the annual product of 1892, viz, $130,650,000, there was consumed in the arts $110,000,000.

We know as a matter of fact that the consumption of gold in the arts has multiplied in recent years. Twenty-five years ago, in a town of a thousand or fifteen hundred population, you could count almost on the fingers of your two hands the number of gold watches, chains, and charms worn by its citizens. To-day at least ten times that number are in use among the people of the same community, and the same rate of increase has been made as to medals and other gold ornaments. The enormous amount of gold used in gilding and in dentistry has increased even in a still higher proportion.

Taking the most liberal of the estimates above referred to, we have no greater sum than $45,377,500 in gold per annum to be added to the stock of primary money of all the gold-using nations on earth. The world's stock of gold coin is about $4,000,000,000. The annual increase in that stock is therefore a very small fraction over 1 per cent. The condition therefore is, that our stock of primary money is increasing at the rate of a little over 1 per cent per year, while it is upholding and bearing the burdens of commerce and credit, which in the past twenty-five years have been increasing at the rate of more than 6 per cent per annum. The inevitable result of such a condition must be the continual increase in the value of gold, occasioned by the continual increased demand on it by commerce and credit. By adhering to the single gold standard, therefore, we are tying ourselves to a metal the production of which does not keep pace with the increase of commerce.

To divide the $45,377,500 in gold among all the gold-using countries in the world would be to add only a few million dollars each year to the primary money of the United States. We know that the demand which the United States alone has made upon gold in order to maintain its reserve during the past two years has been $262,000,000, including the bond issue bid for to-day. This amount is several times greater than that part of the annual gold product that goes into coin for the entire world. Is there any wonder that there is a terrible strain on the gold in the world and that the enormous demand which is being made upon it is continually increasing its value? It is this increased demand for gold that has increased its purchasing power. That is the reason why prices are continually falling. When the measure of value is increasing gradually each year, the result is bound to manifest itself in the diminished price of all the commodities and property that it measures.

Previous to 1873 any person had the right to take silver bullion to the mints of the Latin Union to have it coined, free of charge, into money, just the same as he now has the right to have gold coined. The principal use of silver is for money. Suppose the governments of the world were to conclude that wheat bread was not as healthy as bread made from corn, and should enact laws prohibiting the mills from grinding wheat. Can there be any doubt, if those laws were enforced, that wheat would be worth almost nothing, that it would sink in price to what it would be worth as feed for animals? And can there be any doubt that the price of corn would increase enormously? The mere statement of the proposition is conclusive of its truth. Why should not that same principle of supply and demand apply to gold and silver? Can the nations of the world annul the right to have silver coined into money and leave their mints open to the free and unlimited coinage of gold, unless it increases enormously the value of the latter metal and correspondingly decreases the price of the former?

In 1873, when silver was demonetized by the United States and Germany, there were only three nations in Europe that had the single gold standard. They were Great Britain, Turkey, and Portugal. Turkey at that time was upon an inconvertible paper currency and hence was making little or no demand upon gold. Great Britain at that time had a population of 32,000,000 and Portugal a population of 6,000,000. Thus only 38,000,000 of people were making demands upon gold alone for monetary purposes.

At that time there were six nations in Europe that had a bimetallic standard. They were France, Belgium, Switzerland, Italy, and Greece, constituting the Latin Union, and Spain. There were only two of them, namely, Belgium and Switzerland, that were then on a specie basis.

There were seven nations in Europe at that time that had the single silver standard. They were Germany, Austria, Russia, Sweden and Norway, Denmark, and Holland. All of these were on a coin basis except Russia and Austria. The United States at that time had the bimetallic standard, but was upon an inconvertible paper currency. None of these nations now have a bimetallic standard, but the gold valuation prevails in every one except Russia, Italy, and Greece, which are still upon inconvertible paper currencies. France maintains a very large silver currency, but upon a gold valuation. At the present time the demand upon gold is enormous. Great Britain, with its present population of 38,000,000; Germany, with its population of 50,000,000; Austria, with its population of 40,000,000; Turkey, with its population of 33,000,000; Norway and Sweden, with their population of 7,000,000; Holland and Denmark, with their population of 7,000,000; France, Belgium, and Switzerland, with their population of 47,000,000, and the United States, with its population of 70,000,000, are all in the struggle for gold in order to preserve their redemption funds. Thus 252,000,000 people are now demanding this metal which in 1873 only 38,000,000 were demanding. Is it any wonder that gold, notwithstanding its recent increased annual product, has been going higher and higher in value each year? How can anyone who recognizes truth in the principles of supply and demand claim with reason, in view of this situation, that gold has not increased in value?

It seems to me, therefore, conclusive that, in point of theory, by reason of the demonetization of silver and the shifting upon gold of all the burdens of primary money, which both metals formerly bore, that gold has enormously increased in value.

FALL IN PRICES.

The second proposition is that in actual experience the theory that there has been an enormous increase in the value of gold has proven true.

As the increase in the value of a standard or measure can not be calculated by the standard itself, the only way that it can be measured is by its increased purchasing power. That increased purchasing power in gold is manifested in the fall of the price of everything that gold will buy. When you see one commodity get cheaper, while all others remain of stationary value, in order to ascertain the cause of the decline in price of the one you naturally look to the question of supply and demand as to that one commodity, but when you find that all commodities and properties, except those that are buoyed up by some special advantage, are declining in price year after year you are bound to come to the conclusion that it is not on account of overproduction, but that the fault is in the increase of the measure of value. That there has been a continual fall in the

price of almost all commodities can hardly be questioned. It is always best to take from an undoubted authority the statistics by which a fact is proven.

The tables of Mr. August Sauerbeck, an eminent statistician of London, are perhaps the most complete and reliable of any to be found in the world. They were not framed with any relation to the silver question, and hence any prejudice for or against silver could not have entered into their compilation. These tables show the range of prices in the London market of forty-five of the principal commodities in the world for a series of years. In one set of these tables he takes as his base, or par value, which he designates as the 100 mark, the average price of the commodities for the eleven years between 1867 and 1877. According to this set of tables the average price of those commodities fell in 1895 to 62 per cent of what they averaged in the period above stated. This percentage of decline in the price shows conclusively that gold, since that period, has increased in purchasing power as regards those commodities 61.3 per cent. Another set of tables (deduced from Mr. Sauerbeck's tables), showing the range of prices of the same forty-five commodities, takes as its base, or 100 mark, the average price of the commodities for the year 1873. This set of tables shows that the average price of those commodities in 1895 was only 55.8 per cent of what their price was in 1873, which shows that gold in purchasing power as to those commodities has increased 79.2 per cent.

I ask leave to insert in my remarks the following table:

Mr. Sauerbeck's Index Numbers, to which is added the annual average price of silver in London and to which is added index numbers of the same 45 commodities, taking as their base the average prices of 1873.

Year.	Sauerbeck's Index Numbers of 45 principal commodities taking average price of 1867–1877 as their base=100.	Index Numbers of same 45 principal commodities taking the average price of 1873 as their base=100.	Sauerbeck's Index Numbers of silver taking the price 1867–1877 of 60.84d.=100.	Annual average price of silver in London.
				Pence.

The fall of price in commodities generally has not been denied, to my knowledge, upon the floor of this House, in this debate. Various members have attempted to explain the causes of this decline, but none have denied the fact itself.

The claim they make is that the decline in price has been caused by overproduction. If this decline had only been for one year, or if the price of a large number of commodities had gone higher, while as to others it had fallen, that theory might be a reasonable explanation; but when this fall in price of almost all commodities has been continuing year after year, you are driven to the conclusion that it is not overproduction that has caused the decline. Man will not year after year continue to overproduce all commodities.

HAS THERE BEEN OVERPRODUCTION OF SILVER?

The theory of overproduction will not account for the decline in the gold price of silver. It is true that in recent years the production of silver has been increasing, but it must be remembered that the annual production of gold has also been increasing. It was not until 1882 that the annual product of silver exceeded that of gold, and yet the gold price of silver had been declining ever since 1873. The table which I hold in my hand, and ask to have incorporated in my remarks, shows the world's production of gold and silver from 1792 to 1894. It was issued from the Treasury Department, Bureau of the Mint, August 16, 1893, and can be found in the Government publication called "Coinage Laws of 1894," at page 103. (It is also verified in the report of the Secretary of the Treasury for 1894 at page 304.) To that table I have added the world's production of gold and silver for the years 1893 and 1894 as estimated by the Treasury Department.

Production of gold and silver in the world, 1792–1894.

Calendar years.	Gold.	Silver (coining value).	Total.
1792–1800	$106,407,000	$328,860,000	$435,267,000
1801–1810	118,152,000	371,677,000	489,829,000
1811–1820	76,063,000	224,786,000	300,849,000
1821–1830	94,479,000	191,444,000	285,923,000
1831–1840	134,841,000	247,930,000	382,771,000
1841–1848	291,144,000	259,520,000	550,664,000
1849	37,000,000	39,000,000	76,000,000
1850	44,450,000	39,000,000	83,450,000
1851	67,600,000	40,000,000	107,600,000
1852	132,750,000	40,600,000	173,350,000
1853	155,450,000	40,600,000	196,050,000
1854	127,450,000	40,600,000	168,050,000
1855	135,075,000	40,600,000	175,675,000
1856	147,600,000	40,650,000	188,250,000
1857	133,275,000	40,650,000	173,925,000
1858	124,650,000	40,650,040	165,300,000
1859	124,850,000	40,750,000	165,600,000
1860	119,250,000	40,800,000	160,050,000
1861	113,800,000	44,700,000	158,500,000
1862	107,750,000	45,200,000	152,950,000
1863	106,950,000	49,200,000	156,150,000
1864	113,000,000	51,700,000	164,700,000
1865	120,200,000	51,950,000	172,150,000
1866	121,100,000	50,750,000	171,850,000
1867	104,025,000	54,225,000	158,250,000
1868	109,025,000	50,225,000	159,950,000
1869	106,225,000	47,500,000	153,725,000
1870	106,850,000	51,575,000	158,425,000
1871	107,000,000	61,050,000	168,050,000
1872	99,600,000	65,250,000	164,850,000
1873	96,200,000	81,800,000	178,000,000
1874	90,750,000	71,500,000	162,250,000
1875	97,500,000	80,500,000	178,000,000
1876	103,700,000	87,600,000	191,300,000
1877	114,000,000	81,000,000	195,000,000
1878	119,000,000	95,000,000	214,000,000
1879	109,000,000	96,000,000	205,000,000
1880	106,500,000	96,700,000	203,200,000
1881	103,000,000	102,000,000	205,000,000
1882	102,000,000	111,800,000	214,800,000
1883	95,400,000	115,300,000	210,700,000
1884	101,700,000	105,500,000	207,200,000
1885	108,400,000	118,500,000	226,900,000
1886	106,000,000	120,600,000	226,600,000
1887	105,775,000	124,281,000	230,056,000
1888	110,197,000	140,706,000	250,903,000
1889	123,489,000	162,159,000	285,648,000
1890	118,849,000	172,235,000	291,084,000
1891	126,184,000	186,447,000	312,631,000
1892	138,861,000	196,459,000	335,320,000
Total	5,663,216,000	5,077,529,000	10,740,745,000
1893	157,228,100	209,165,000	366,393,100
1894	180,626,100	216,892,200	397,518,300
Total	6,001,070,200	5,503,586,200	11,504,656,400

The treatment by the advocates of the single gold standard of the annual production of silver as compared with the annual production of gold has been exceedingly unfair. For instance, take the production of the year 1892—$138,861,000—of gold compared to $196,459,000 of silver (coinage value). They contend that as there was one-third more silver than gold produced in that year there ought to be an equivalent fall in the price of silver. Because the production of silver in any one year has exceeded the production of gold, it does not follow that the decrease in the price of silver should be in proportion to the excess of silver over gold in that year. The man who makes such an argument makes the mistake of treating silver as a commodity which is consumed in the using of it. That principle would apply to wheat or any of the products that are consumed each year. But silver is an indestructible metal and its annual production is but a very small per cent of the total amount of silver in the world, and when produced it does not constitute a separate mass upon which the principle of supply and demand can operate, but forms a part of the total stock of silver in the world.

When silver falls it affects the entire mass of silver, not the annual product only. Hence, on the theory of overproduction, you would have to double the entire mass of silver in order to produce a fall in price of 50 per cent, and if measured in gold you would have to make the increased mass of silver double the mass of gold. It can therefore be readily understood how insignificant must be the effect of the annual increase of production upon the total silver of the world. The way to find the relative increase of silver over gold is to add the annual product of silver to the total silver stock, then add the annual product of gold to the total gold stock and find what per cent the total silver thus found bears to

the total gold thus ascertained. By this calculation you will find that in the year 1891, when the greatest excess of silver over gold ever was produced, when the production of silver exceeded that of gold by $60,000,000 that it represented an increase in the total silver of the world over gold of less than one-half of 1 per cent. On the theory of overproduction no greater change in value could have occurred than that.

But we find that while the percentage of the increase of the total mass of silver over gold has been very small, and has existed only since 1882, that the decline in the gold price of silver has been enormous, although silver in purchasing power of staple products has comparatively kept a steady value. If the annual product is of such an important character, what can be said in defense of that theory (of overproduction of silver causing fall of its price) when the world's product of silver for 1895, as near as can be ascertained at the present time, is less than 5 per cent more than that of gold.

It is manifestly unfair to take the annual product of either metal for a short period of time and attempt to fix thereby their relative value. The history of the production of the precious metals shows that the greater annual product will oscillate from one to the other. It is only by taking the production for a long series of years that any fair conclusion can be deduced therefrom. It is shown by the last table to which I have referred that the total production of gold for more than the past century, namely, from 1792 to 1894, has been almost exactly equal to the total production of silver in the same period. According to the theory of relative supply their value should have remained the same. It is therefore conclusive that the fall in the gold price of silver is not due to the production of more silver than gold, but is due solely to the increased demand upon gold and the decreased demand upon silver, produced by the demonetization of the latter, which caused all the burdens which both metals have borne as primary money to be shifted onto gold alone.

HAS LABOR FALLEN IN PRICE.

It is claimed that labor has not declined in price, and therefore the appreciation of gold is not the cause of the fall in prices. Our opponents usually take the year 1860 as the date of the comparison of wages. In the first place that date is not a fair one, because at that time nearly one-half of our nation afforded a poor market, if any, for labor on account of the existence of slavery therein. The price of labor in the remainder of the Union was most seriously affected by the proximity thereto of the cheap labor that slavery afforded. But the principal reason why there has not been as much reduction in wages of those actually employed as there has been in the price of commodities, is because wages have been held up by all manner of human devices in the shape of trades unions and labor organizations. Labor never had a fair opportunity to compete with capital until within the last few years. But notwithstanding these advantages, if you take into consideration the number of men out of employment, there is a far less total sum paid for labor than if all were employed at greatly reduced wages. It is absurd to say that the products of labor may fall year after year and yet not affect the price of labor.

I hold in my hand a statement compiled by the Secretary of Agriculture in response to a request from Senator HANSBROUGH of North Dakota showing the world's production of wheat from 1885 to 1892, which I ask leave to print in my remarks. Of course, it is not possible to compile with accuracy the world's product of wheat, as the data from various countries are very incomplete, and hence this statement is an estimate only. The following is the table.

Approximate statement of the world's wheat crop from 1885 to 1892, inclusive.

*Unofficial.
†Preliminary.
‡Estimated.
§No official figures for South Australia were published for 1886, 1887, 1888, or 1889, and the figures for that colony incorporated in the totals for Australasia for three years were consequently unofficial.

By this table it is shown that there has been a very equal production of wheat each year. The greatest yield of wheat in any one of those years was in 1887, and yet in that period wheat fell far below the price of that year.

HAVE IMPROVED PROCESSES CAUSED THE FALL IN PRICES?

The theory that the introduction of improved machinery and the lowering of transportation charges accounts for the decline in the price of commodities is erroneous. The price of a commodity is not determined by its cost; it is determined by the operation of the principle of supply and demand. If the price of a commodity were determined by its cost, it would never sell for less than cost, no matter how much the market in that line was glutted, and it would never sell for any considerable profit, no matter what scarcity existed in that product. The only influence that the cheapening of the cost of production and transportation has is to make the profit of the farmer greater instead of less, and the very desire to make more profits stimulates production, and thus increases the supply, and in that way only affects prices. These influences of cheapening the cost of production ought to operate to the advantage of the farmer instead of his loss. Yet everyone knows that the farming interests of this country are in a most deplorable condition, and that no adequate return can be made upon a farm investment. But even if there was some truth in the assertion that improved machinery and lower transportation charges has cheapened the price of farm products, it must be remembered that farm products, like everything else, are measured in gold and their price fixed in gold.

There can be no doubt that there have been in the past twenty years improved processes in the treatment of gold ores, in the hoisting apparatus used in mining, in the use of electricity in drilling, mining, and igniting explosives, and in the character of high explosives for blasting, which have lowered the cost of the production of that metal far more than the improved processes in farming have lowered the prices of farm products. As a matter of fact,

the great era of labor-saving machines in farming was from 1850 to 1873, and during all of that time there was a general rise in farm products. People unfamiliar with mining may think that transportation charges constitute a very small per cent of the value of the ores, and hence would affect the general cost of marketing very little; but they are mistaken. The greatest yield and the most constant yield is from the mines that net a very small sum per ton over the cost of mining and shipping to the smelter. And freight charges often determine whether a mine can be worked at all. When we know that there are thousands of tons of ore from the Rocky Mountain regions smelted in Chicago and in Wales, one may realize that the haul is not a short one.

If the cheapening of the cost of raising products and of mining gold ores had been the same, and had controlled prices, the fall in each being the same, there should have been no fall at all when measured by each other. But the cheapening of the cost of raising and marketing farm products in the past twenty years having been less than the cheapening of the cost of mining and marketing gold ores, we are led to the inevitable conclusion that relatively there should have been a rise in farm products measured in gold, instead of a fall. We therefore conclude that this theory is erroneous, that it is the great principle of supply and demand, and not the cost of production, that controls the price of gold as well as that of farm products; that the great fall in the gold price of products is due to the fact that the demand for gold has so enormously increased; that having to bear all the burdens of primary money that both gold and silver bore, gold must have increased in value, and therefore decreased the price of every product measured by that metal.

IS LESS MONEY NEEDED NOW THAN FORMERLY?

It is contended by the single gold standard advocates, and it has been asserted on the floor of this House time and time again, that in the last few years banking facilities have become so perfect that very little money is needed to transact the commerce of the world compared to what was needed twenty years ago. At the first statement of the proposition it is apt to produce a strong impression because of the progress that has been made in the wealth and commerce of our nation. But I most emphatically deny the truth of that assertion. There is no better test of the amount of the business which is done by checks in one period over another than is found in the reports of the clearing house of such a city as New York, which had about the same number of banks twenty years ago as now. I have before me a tabulated statement of the clearings of the New York clearing house from 1869 to January 1, 1895, which I ask to have incorporated in my remarks.

It is shown by this tabulated list that the clearings for 1872 were far greater than for 1894; that those for the year 1873 were in excess of the clearings of 1893: The clearings for 1872 being $33,844,369,568, and the clearings for 1894 being $24,230,145,363; the clearings for 1873 being $35,461,052,826, and the clearings for 1893 being $34,421,380,870.

This list shows conclusively that, notwithstanding the enormous increase in the commerce and wealth of New York City, not as much of it is conducted by checks as in 1872 and 1873.

It is often asserted by the single gold standard advocates that the use of checks in the last few years has become so universal that now 95 per cent of the business of the United States is done by checks. That proposition also I most emphatically deny. This same statement of the clearings of the New York Clearing House shows that it takes 5 per cent in cash to pay the balances among banks, and it must be plain and clear to any one that if it takes 5 per cent in money to settle balances among institutions which are created for the purpose of saving cash transactions, how great must be the per cent of cash in the ordinary retail transactions in city and country. This same statement shows that it requires more money now to settle balances among the banks of New York City than it did twenty or twenty-five years ago; that in 1872 and 1873 it took 4.2 and 4.1 per cent in money, while in 1892 and 1893 it took 5.1 and 4.9 per cent in money to settle balances.

Twenty-five years ago the farmer ran his bill for all he needed at the general merchandise store and made his settlement once a year, and that settlement, often, if not generally, was in the products of his farm. Such a thing as a strictly cash house was almost unknown in those days. To-day there are vast numbers of strictly cash houses, and where credit is obtained the bills must be paid every thirty days. It seems to me that the fallacy of this claim should be settled forever by the admission of the Comptroller of the Currency, Mr. Eckels (who can not be said to favor the silver question in any particular), on page 381 of the Report of the Secretary of the Treasury for 1894. That statement shows that from returns made by national banks all over the United States, that 41.1 per cent of the deposits of retail commercial houses are in money. How much greater then must be the per cent of moneyed transactions with savings banks and among the people!

CAN A PARITY BETWEEN GOLD AND SILVER BE MAINTAINED?

It is claimed by the single gold standard people that there can be no parity maintained between the metals, because there is a variation in the amount of each produced. They seem to lose sight of the fact that, in addition to the question of production, there is an increased demand made for the cheaper metal by reason of the legal tender quality given to the money coined therefrom. The history of the production of gold and silver is directly contradictory to this contention. From the years 1800 to 1841 there was three times as much silver produced in the world as gold, and from the year 1850 to 1873 there was more than three times as much gold produced as silver, and yet during all that time, while the mints of France were open to the free and unlimited coinage of silver, the variation between the market price of both silver and gold did not exceed the difference between the coinage ratio of the various nations. The Paris price, where the mints were situated, was always at a parity. I hold in my hand a tabulated list of the commercial ratio of silver to gold from 1687 to 1892, taken from the Report of the Secretary of the Treasury for 1894, at page 288, which I ask to have incorporated in my remarks.

Commercial ratio of silver to gold for each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from the tables of Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1878 to 1892 from daily cablegrams from London to the Bureau of the Mint.]

1726....	15.15	1768...	14.80	1810..	15.77	1852..	15.59	1893..	26.49
1727....	15.24	1769...	14.72	1811..	15.53	1853..	15.33	1894..	32.50
1728....	15.11	1770...	14.62	1812..	16.11				

By that tabulated list it is apparent that only in two years up to 1873 did silver fall below the ratio of 16 to 1, and then only by a very small fraction, and that was in the years 1812 and 1813, when European wars disturbed all commercial transactions, and the difference between the London price, where free coinage did not exist, and the Paris price, where free coinage did exist, must have been at its maximum. From the time that the nations of the world began to take away the principal demand for silver, by demonetizing it, silver began to decline in value as compared to gold. The fault in the argument of the single gold standard people is that although they apply the principle of supply and demand to every commodity, they will not apply it to gold and silver. They are continually claiming that silver should not be restored to its lawful place as a money of ultimate redemption, until its commercial value equals that of gold, when they are at the same time denying to silver the very use which creates the demand that gives to it that value.

You can not take away the unlimited demand for a metal that free coinage gives and expect it to retain its equality with a metal to which you give the right of free coinage. Much less can you expect that silver thus deprived of that demand can ever equal in commercial value gold to which you give the right of free coinage. It is the equal treatment of the metals as to coinage that can ever restore their parity.

WHY 16 TO 1?

Why should the coinage ratio between silver and gold be fixed at 16 to 1? Because that is the proportion, as near as can be ascertained, in which the metals are stored in the earth.

I wish to again refer to the table showing the total production of gold and silver from 1792 to 1894. The table shows that there was

produced in that period $6,001,070,200 of gold and $5,503,586,200 of silver (coinage value). That means that for the period of more than a century, ending with the year 1894, there was almost exactly sixteen times as many ounces of silver produced as of gold. There can be no doubt that if equal mintage rights and equal treatment of silver were restored to the world, the safe ratio would be the approximate ratio in which the metals are found in the earth.

INTERNATIONAL BIMETALLISM.

Every advocate of the free coinage of silver by this nation alone would like for bimetallism to be established through international agreement. But the difficulty of the situation is, that there is no hope for such an agreement. As long as it is to the interest of England and other creditor nations to have their foreign bonds and other securities appreciate in purchasing power, and to have the commodities they are compelled to buy from other countries depreciate in price, so long can we never hope for an international agreement. It would be expecting that human nature in the wealthy, who surround, support, and control the thrones, would not be guided by self-interest. The nations have been holding international monetary conferences ever since 1878, and yet the proceedings of the last conference show more determination on the part of England and other creditor nations not to return to bimetallism than ever before. In that conference there was not even asked for a vote on the question whether it was the sense of the conference that there should be international bimetallism. How long, oh, how long will suffering humanity have to wait for relief from such nations? Silver was demonetized without international agreement and it will be restored without such an agreement.

Statement showing by comparison the transactions of the New York clearing house for twenty-six years, and for each year, the number of banks, aggregate capital, clearings, balances, average of the daily clearings and balances, and the percentage of balances to clearings.

Year.	Number of banks.	Capital.*	Clearings.	Balances paid in money.	Average daily clearings.	Average daily balances paid in money.	Balances to clearings.

* The capital is for various dates, the amounts at a uniform date in each year not being obtainable.

CAN THE UNITED STATES MAINTAIN THE PARITY OF THE METALS?

Can the United States alone undertake the free and unlimited coinage of silver and maintain that metal on a parity with gold at the ratio of 16 to 1?

It is conceded by those who believe in international bimetallism that if the United States can make a greater demand upon silver than there is silver in the world available for coinage, that such demand would establish the parity of the metals, and that the parity would be maintained if the demand thereafter kept pace with the production.

The question, then, must be determined by the greatness of the demand which the United States can make for that metal.

Mr. Mulhall, an eminent English statistician, in an article in the North American Review last June states that the effective force of the United States is equal to that of Great Britain, France, and Germany combined.

Professor Francois, a French economist, has recently estimated that the United States contains one-fourth of the wealth of the entire world.

Such wealth and power backing the legal tender quality given to silver is bound, under free coinage, to create an almost unlimited demand for that metal. But let us analyze this demand.

It is estimated by the Secretary of the Treasury that there is in the United States $636,256,023 of gold stock. The gentleman from Maine [Mr. DINGLEY] stated this afternoon that if free coinage was established and gold went to a premium of 1 per cent that all the gold would leave the country or go out of circulation. Let us assume, for the sake of the argument, that his statement is true. What would follow?

There would be created by that withdrawal of gold an instantaneous demand for silver to take its place. Where would the silver come from to supply that demand?

First. We know that outside of the United States Treasury there is no large quantity of silver available for coinage anywhere in the world. If as much as $25,000,000 of silver bullion were stored any place the public would know it. So it is clear that hardly any part of the demand could be supplied from bullion in existence.

Second. We know that the silver to supply such a demand could not come from the arts, because the workmanship spent on silver articles makes those articles worth more than the coinage value of silver.

Third. We know that the silver coins of Europe would not come to this country for coinage because they are in circulation in Europe on a gold valuation at a lower ratio than ours. The ratio in Europe is 15½ to 1, which makes an ounce of silver worth $1.33 (coinage value); whereas the ratio in this country is 16 to 1, which makes an ounce of silver worth $1.29 (coinage value). It cost the Europeans $1.33 to get an ounce of silver coins, because they maintain the parity of silver coins as we do; then why would any holder of European silver coins, which costs him at the rate of $1.33 an ounce, have them minted into American coins that are worth only $1.29 an ounce? He would not. Therefore the European coins, which constitute the great mass of silver coins in the world, would not be sent to America for coinage.

Fourth. The only countries from which any silver coins might come are from those that are upon a silver basis, namely, Mexico, India, Japan, China, and a few insignificant countries. The stock of silver in all these countries constitutes practically all their circulating medium. It amounts to only $4.38 per capita in Mexico, $2.01 in Japan, $3.31 in India, and $1.80 per capita in China. Can these countries spare any of their coins, especially in view of the great manufacturing development that they are now enjoying? If so, must it not be limited to only a few million dollars? Can anyone with reason maintain that as much as $636,256,023 in silver coins would be shipped from those countries to our mints? It must be borne in mind that if they bring their silver here for coinage they must use it here. It will not circulate in their country any more than a foreign coin will circulate here. In order to use it they will have to buy something with it, and if they purchase our goods or products it is so much to our advantage. All these facts are serious obstacles in the way of anyone sending foreign silver to this country for coinage. I conclude, therefore, that it is hardly in the range of possibility that $636,256,023 in silver would be shipped from foreign countries to our mints for coinage; that therefore there is not a sufficient available supply of silver in the world to meet the demand of the United States for that amount.

But that is not the only demand which the United States can make on silver. There are $346,000,000 of United States notes called greenbacks, and there are $137,000,000 of United States Treasury notes issued under the Sherman Act. The only reason they are kept in existence is on account of there not being sufficient primary money to take their place. The Secretary of the Treasury wants the Government to get out of what he terms the "banking business." The United States could, therefore, make a legitimate demand upon silver for silver certificates for both of these sums, aggregating $483,000,000. Can there be any doubt now that the demand upon silver for $636,256,023 and $483,000,000 would be more than doubly

the possible shipments of silver from foreign countries to our mints. Remember that when there is a demand for silver at 16 to 1 which is unsatisfied that it is bound to establish the value of the metals at that ratio.

But these are not the only demands which the United States can make on silver. There are $212,000,000 of national-bank notes in circulation. There is no excuse for the existence of any of this credit money, except that there is a deficiency in primary money. A legitimate demand upon silver for certificates to take the place of these notes can fairly be made. Thus we have a demand for $1,331,256,023 of silver, which the United States can create without increasing the circulating medium of the nation one dollar. That demand represents an amount which is more than the mines of the world can produce, less the quantity that goes into the arts, in thirteen years.

With such an enormous demand on the limited silver bullion of the world, it could not help but establish and maintain the parity between the metals.

But these are not all the demands that could be made upon silver in this country. There are over $20,000,000,000 indebtedness in this nation, more than one-half of which are obligations payable in lawful money of the United States. The minute that silver would get to a discount of even 1 per cent that minute there would be created a demand by those debtors for that money with which to discharge their obligations, and that very demand would increase the value of silver until it reached a parity with gold. It has been asserted upon the floor of this House that there are credit transactions in the shape of short-time notes, thirty-day credits, and checks that amount each year in this country to $150,000,000,000. All of those transactions are in lawful money and they constitute an exceedingly large demand for the money that circulates.

With all these demands that can be made upon silver for coin or certificates, first, by the greatest and most powerful Government on earth, second, by the people in the payment of the greatest number of obligations of any nation, and third, by the greatest commerce that the history of the world has ever known, it seems that the parity between the metals could be established with as much certainty as it is possible to foretell any future event.

It must be remembered that the commercial value of the two metals would become approximately equal if half the nations in commercial importance had the gold standard and half the silver standard. It can therefore be readily understood what great influence in establishing the commercial equality of the metals a powerful nation would have in withdrawing its demand on gold and making its demand on silver.

When the parity is once established a bimetallic tie acts as an automatic regulator. When one of the metals becomes more valuable the demand is shifted from it onto the cheaper metal and that demand restores the parity.

We have had an experience that ought to teach us the power of this Government in financial matters. The Senate of the United States in 1890 passed a free-coinage bill. It was thought that the House of Representatives was a free-coinage body. Silver rose, in anticipation of that legislation, until it reached $1.21¼ an ounce (within eight points of par), not only in the United States, but in the London markets and throughout the entire world. If silver rose to such a height in anticipation of such legislation, notwithstanding the hazards of final enactment and Executive approval, can there be any doubt that it would have risen to $1.29 per ounce under the legitimate demand that the actual operation of the law would create?

The free coinage of silver in this country, when once established, would be bound to succeed, because it would then be to the interest of the capitalist to make it succeed. It would then become his interest to make the silver money just as dear as he now desires the gold money to be. It is the history of all depreciated currencies that no class has been so active in bringing them to par as the creditor class. We therefore conclude that the demand which the United States can make upon silver is almost unlimited, and that by the exercise of that demand silver can be restored as an equal primary money to gold.

The question of the free coinage of silver is, in my judgment, the most momentous question of the present age. The terrible effects of the increasing gold measure has fallen with crushing force upon all the people of our nation except the creditor class. Business, in the past twenty years, has been compelled to operate on falling markets, which in the long run means ruin and disaster. It is no wonder that Mr. John G. Carlisle, in the House of Representatives, in 1878, said in relation to the destruction by legislation of silver money that "The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world." The remonetization of silver will do more than any other legislation that has ever been suggested to alleviate the sufferings of mankind, to give employment to the laborer, to permit business to be operated upon stable markets, to allow the tiller of the soil to get some little return for his work, and to produce an era of prosperity unequaled in the history of the world.

Coin Redemption Fund.

SPEECH

OF

HON. JAMES C. McDEARMON,

OF TENNESSEE.

Saturday, February 8, 1896.

IN THE HOUSE OF REPRESENTATIVES,

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. McDEARMON said:

Mr. SPEAKER: We are confronted with a very important, grave, and serious duty. An emergency exists which has attracted the attention of every patriotic citizen of the United States, and when this Congress assembled with its overwhelming Republican majority, charged with the conduct of affairs of this great Government, it was officially notified, and in tones almost approaching the pathetic, it was appealed to by the President of the United States and his Secretary of the Treasury to relieve the Treasury from the peculiar and perilous position to which it had been brought. It was well known to every citizen of this country that Mr. Carlisle, in the attempt to execute laws which the Republican party had placed upon the statute books, and in the attempt faithfully to follow in the footsteps of his Republican predecessors, had brought the Treasury of the United States to a grotesque and ridiculous condition; that it was practically held up and looted by a few European and American bankers, and that this humiliating spectacle called the "endless-chain process" was continuing; that it had depleted the Treasury of the United States time and time again, and that the startling condition existed of the necessity of issuing United States bonds in a time of profound peace.

The attention of this Congress was called to the fact that more than a quarter of a billion dollars of thirty-year 4 and 5 per cent bonds had been and would in the near future be issued. The Secretary of the Treasury called attention to the fact that in the redemption of greenbacks and Treasury notes he had followed the policy of Mr. Sherman and others of his predecessors, and had surrendered to the holders of those notes the option which the law had placed in his hands, of redeeming them either in gold or silver, and was paying them in gold alone, and that these dishonest and unpatriotic bankers and speculators had taken advantage of that policy and had exhausted the gold reserve again and again; that $162,000,000 of bonds had already been issued, and that another $100,000,000 was ready to be issued, and that this process was still going on.

The President of the United States placed upon the Republican majority of this House the responsibility of relieving the Treasury of that condition. This boastful party, which had been charging and pretending to believe that the Democratic party did not possess enough patriotism, intelligence, or statesmanship to conduct the affairs of this Government upon its return to power and responsibility in this House, is met face to face by this plain and imperative duty.

By some incomprehensible providence the people of the United States trusted the Republican party and placed in their hands again the power to run the affairs of this Government, so far as this House is concerned. Now, this distressing and alarming condition of affairs stares the Republican majority squarely in the face. The Secretary of the Treasury asks Congress to change existing laws, which he contends make it imperative upon him to pursue the course which has resulted so disastrously.

That responsibility and that duty can be performed. There are two ways by which the issuance of bonds can be stopped. The Secretary of the Treasury points out one, and that is to authorize him to retire the greenbacks and Treasury notes; that is when they are once paid to cancel and destroy them. He points out the fact that $407,000,000 have already been redeemed, but that they have under the law been reissued, and that the volume of notes has not been diminished, but that every solitary dollar of the $500,000,000 is outstanding to menace and threaten and jeopardize the affairs of this Government.

Now, Mr. Speaker, the Republican party can take the advice of Mr. Carlisle and can pass a bill repealing the act of 1878, which requires these notes to be reissued when paid. They can by law provide for their cancellation and redemption when they reach the vaults of the Treasury.

I do not, of course, mean to intimate that I think this the proper remedy, or that I would vote for such a bill, but I desire to call attention to the proposition urged by the President and the Secretary of the Treasury.

And if they possessed a fraction of the wisdom and statesmanship of which they boast, they could devise a plan for the issuance of some safe and good currency to take the place of these retired notes, so as not to contract the volume of currency; but they saw proper not to adopt the recommendation of the Secretary of the Treasury. There is another way to stop the issuance of bonds, and that is by statute to take away from the Secretary of the Treasury the power to surrender the option of redeeming these notes in gold or silver, and to compel him to redeem them in silver as well as in gold, which in my humble opinion is the true remedy. Now, when this Congress met I confess that I came here impressed with the idea that perhaps there was some truth in the statement that there were patriotism, statesmanship, and courage among the leaders of the Republican party.

I expected that perhaps they would rise above partisanship and would address themselves to this plain and simple duty of relieving the Treasury of the United States, and that we would hear no more of issuing bonds in time of peace. And if you will excuse me for referring to it, impressed with that idea, I had the honor, on the 10th day of December, soon after this Congress met, to introduce a bill which, in my judgment, would relieve the Treasury of the United States and would not contract the currency one single cent. That bill simply provides that the tons of silver, piled up like pig iron in the vaults of the Treasury, purchased under the Sherman Act, which cost the Government $155,000,000, for which Treasury notes were issued, and in the purchase of which we made a profit of between $40,000,000 and $50,000,000, shall be coined into silver dollars: and that silver certificates shall be issued upon the coined silver, and upon the silver bullion to the extent of the Treasury notes issued in payment for the silver bullion, and of the seigniorage or profit realized by the Government in the purchases under the Sherman Act; and that Treasury notes and United States notes in an amount equal to the coinage value of all the silver bullion on hand, including the seigniorage, shall be canceled and retired from circulation, thus reducing the volume of the notes outstanding, which are presented for redemption and under the pernicious policy of the Administration paid out of the gold reserve, from about $500,000,000 to about $300,000,000; and the currency will not be contracted at all, for the silver now lying idle in the Treasury would be converted into coin and coin certificates and would take the place of the canceled notes.

I introduced this bill, not as an expression of what I preferred, nor what I would suggest as the proper remedy, but simply as an improvement upon present conditions, and a measure which I thought might possibly be passed by this Congress, so overwhelmingly Republican in its politics.

The gentleman from Maine [Mr. DINGLEY] the other day ridiculed the idea of issuing silver certificates upon bullion, and said such certificates would express a lie, as silver certificates in form certify that "there have been deposited in the Treasury of the United States" so many silver dollars.

Mr. Speaker, gold certificates are now issued upon gold bullion; and if a gold certificate can be issued on gold bullion in the Treasury, I do not see any reason why a silver certificate should not be issued on silver bullion. But I say that that bill, or some bill like it, authorizing and requiring the Secretary to coin the silver bullion, and to issue silver certificates against the seigniorage, at least, as provided for in this bill which the Senate adopted as a substitute and sent back here, would convert in a few hours the seigniorage of $40,000,000 or $50,000,000, a sum which our Republican friends insist the Treasury needs, into available assets. The Republicans of this House say that the Secretary of the Treasury needs more greenbacks, Treasury notes, and silver certificates; and therefore they proceed to levy a tax upon the American people—upon their wearing apparel and other necessities of life—to the amount of $40,000,000 or $50,000,000, when the Secretary of the Treasury thrusts in their faces the fact that he does not need the money, and that he has now a surplus of over $120,000,000 in the Treasury, outside of the gold in the Treasury reserved for redemption of United States and Treasury notes. But suppose they are right. Suppose the Treasury does need the money. Then, I say, you have an asset of $40,000,000 or $50,000,000 lying in the Treasury, not represented by anything, in the way of seigniorage, which can be converted into an asset as quickly as the certificates can be issued.

But, Mr. Speaker, the Republican majority have not addressed themselves to the solution of this perilous problem. They have ignominiously retreated from the duty that lay in their path, and I believe that the American people will not hold them guiltless for this cowardice in shrinking from the performance of a duty. But this discussion will do good. It came like a firebell at midnight. This substitute providing for the coinage of silver came from the Senate when this House by parliamentary skill had steered, as they thought, between Scylla and Charybdis and thought there would be no silver discussion in this House, that we would not hear anything of free coinage of silver at 16 to 1 during this session of Congress.

The Senate, in my judgment, has voiced a sentiment that is in the hearts of more than 60,000,000 of Americans in this country. They have stricken out the proposition to authorize the Secretary of the Treasury to go on with the issuance of bonds ad infinitum, and as a substitute propose that our mints be opened to the coinage of silver and gold.

The bill passed by this House was no response to the appeal made to it by the President and Secretary of the Treasury. They beseech Congress to "relieve the Treasury and remove the cause of its distress by legislation which will stop the redemption of United States notes and Treasury notes in gold and will prevent the issuance of bonds."

The Republican majority by its action refuses to consider the grave problem, and in substance indorses and ratifies the policy of the Administration in paying out gold in redemption of greenbacks and Treasury notes and the issuance of bonds to keep up the gold reserve, contenting themselves with the reduction of the rate of interest which the bonds shall draw. And this is a fraud and a false pretense. There is no difference between a 4 per cent bond sold on a 3 per cent basis and a straight 3 per cent bond.

Mr. SPALDING. But the bonds did not bring 3 per cent.

Mr. McDEARMON. They brought somewhere about that.

Mr. SPALDING. They brought 3¼ per cent.

Mr. McDEARMON. But this bill authorizes the issuance of 3 per cent bonds. Now, I say: What is the difference between issuing even a 6 per cent bond and selling it on a 3 per cent basis and issuing a straight 3 per cent bond? There is none. I say that the Republican party dodges the responsibility and refuses to consider this great problem. They deliberately ratify and confirm the policy pursued by Mr. Carlisle of borrowing gold to keep up the reserve fund, and of paying out gold in redemption of greenbacks and Treasury notes. By the two bills which were hurried through the House posthaste, without discussion and without due consideration, our Republican friends have voted for "high taxes and more bonds."

Mr. Speaker, the American people will not approve of Mr. Carlisle's policy of issuing bonds. I believe they think that he ought to go back and resume the power that the law armed him with and pay these notes in silver as well as in gold.

The newspapers say that when Daniel Manning was Secretary of the Treasury a raid was threatened upon the gold reserve by presenting greenbacks and demanding their redemption in gold, for the manifest purpose of harassing the Treasury, and of compelling the Government to issue bonds for the purchase of gold, as is now being done; and that Mr. Manning called a meeting of bankers in New York and notified them that he would not submit to their villainous game, but would, if they attempted it, exercise the discretion given him by law and would pay the greenbacks in silver or gold as it suited the convenience of the Treasury. And I believe, Mr. Speaker, that any Secretary of the Treasury whose heart beats in unison with the interests of the great mass of the common people of this country would pursue the same policy, and would not be "held up" by these men who are raiding the Treasury like freebooters, and would not be compelled by them to put additional burdens upon the American people, already so heavily laden.

Mr. HILL. You do not honestly believe, do you, that the Republican party will be held responsible for the actions of a Democratic Administration?

Mr. McDEARMON. I believe that you will be held responsible, gentlemen, for your actions in this House, and for this bill, by which you propose to indorse the policy of the Secretary of the Treasury in issuing bonds. He tells you that he has been issuing bonds, that the portentous amount of $162,000,000 has been already issued, making, with the other hundred millions about to be issued, more than a quarter of a billion of dollars, which, with the interest to be paid, will amount to more than one-quarter of the cost of the great war between the States. The gentleman from Missouri [Mr. HALL] stated here on Saturday, on the authority of a prominent official of the Treasury Department, that in all probability the bond issues would reach one thousand million dollars. And why not? Why will not the same causes and the same influences which have emptied the Treasury during the past few months empty it again? What is to stop it, and where is the process to end? I charge upon the Republicans that they have, in a spirit of cowardice, ignominiously fled from the consideration and performance of a plain and solemn duty.

Mr. FOWLER. Has the gentleman from Tennessee ever been connected with any financial institution in any way?

Mr. McDEARMON. I never have.

Mr. FOWLER. If you were trying to find out what you were worth you would try to ascertain what you could get for your property, would you not?

Mr. McDEARMON. I think I would.

Mr. FOWLER. Then, if the United States wanted to find out what that silver was worth, on which you say they made a profit of forty millions, they would better go into the market and find out, and they would then discover that they had lost $75,000,000, would they not?

Mr. McDEARMON. Well, sir, I will agree to take all the silver dollars that the mint will coin out of that bullion at 99.9 cents on the dollar. I say that every dollar that they might coin out of that bullion would pass current, side by side with the present silver dollar and with the gold dollar, and would serve to pay debts, both public and private, and would be a blessing and a benediction to the distressed people of this country. But I did not intend to devote so much of my time to such a small matter as the Republican majority in this House. [Laughter.]

I believe that the Senate did right, and, if we are correctly informed as to their action, I will add that I think they have done right with that other measure, that twin measure, the misbegotten companion bill to this one, the proposition to heap additional tariff burdens on the shoulders of the overtaxed people of this country. That bill was passed in face of the fact that there now rests in the Treasury vaults a surplus of $120,000,000 in greenbacks, Treasury notes, and silver certificates, $120,000,000 over and above the gold held for redemption purposes. The Secretary of the Treasury says—and he speaks upon the authority of experts in the Department, many of whom were appointed by Republican Administrations and have become so expert and efficient by long service that they are, in a sense, indispensable to the conduct of the public business—the Secretary of the Treasury, speaking on the authority of those experts, says that the Wilson-Gorman tariff bill is a success; that in 1897 there will be, according to the estimates of the best authorities, a surplus of nearly $7,000,000, and that therefore this additional revenue is not needed.

The reports of the Secretary of the Treasury show that for the fiscal year ended June 30, 1893, the receipts were $461,716,561.94, and the expenditures $383,477,954.49, showing a surplus of $78,239,607.45; and for the fiscal year ended June 30, 1894, the receipts were $372,802,498.29 (net decrease, $88,914,063.65), and the expenditures $442,605,758.87 (net deficit, $69,803,260.58); and for the fiscal year ended June 30, 1895, the receipts were $390,373,203.30, and the expenditures $433,178,426.48 (deficit, $42,805,223.18).

Net increase in receipts over 1894	$17,570,705.01
Net decrease of ordinary expenditures	11,329,981.54
Fiscal year ending June 30, 1896:	
Estimated receipts	431,907,407.00
Estimated expenditures	448,907,407.00
Deficit	17,000,000.00
Fiscal year ending June 30, 1897:	
Estimated receipts	464,793,120.75
Estimated expenditures	457,884,193.92
Estimated surplus	6,908,926.83

The Secretary in his report for 1895, pages 53 and 54, says:

> The cash balance in the Treasury on the 1st day of December, 1895, was $177,406,386.62, being $98,072,420.30 in excess of the actual gold reserve on that day and $77,406,386.62 in excess of any sum that it would be necessary to use in replenishing that fund in case the Secretary should at any time be able to exchange currency for gold. There is, therefore, no reason to doubt the ability of the Government to discharge all its current obligations during the present fiscal year and have a cash balance at its close without imposing additional taxation in any form upon the people.

The Secretary of the Treasury says and reiterates to this Congress that he does not need any more money. He says in plain terms that no additional taxes upon the American people are necessary or justifiable under the circumstances. Therefore I believe the Senate has done right in taking a pen and striking out every word and every letter of both these bills. It seems, perhaps, a little ridiculous for them to continue to pass free-coinage bills, but I suppose they are actuated by the same spirit that inspired the old Roman Senator, the elder Cato, whose great soul was impressed with the idea that Rome could not exist as long as Carthage prospered, and who closed every public address that he made with the significant words "Delenda est Carthago." And, Mr. Speaker, if the Senate would rise to the importance and the dignity of this great question, and would strike out even every appropriation bill that this House sends to it, and would put in its place a free-coinage-of-silver bill, I think their action would be approved by a large majority of the American people. This brings me to the discussion of the substitute adopted by the Senate.

The problem which we are considering can not be figured out by mathematical rules, nor can it be solved by illustrations on blackboards or charts. The man who delves and gropes in the labyrinths of any exact science, seeking a definite and mathematical demonstration of this stupendous question, will, if he is honest with himself in such research, be sadly disappointed.

Politics is not an exact science, but is, if I may be pardoned for the expression, the science of practical common sense, and rises above any science which has been or can be reduced to precise and arbitrary rules and inexorable laws. In considering and investigating great questions of state and political economy, we must lift our minds above the minute details of pure theory and philosophical exactness, which are necessary in investigating any single branch of human knowledge.

In great questions like these we must go "from headland to headland," and not stop to explore and survey the valleys and hillocks—the nooks and corners that intervene.

Life is too short. If, as the poet has so graphically said—

> Could a man be secure
> That his days would endure
> For a thousand long years as of old;
> What deeds could he do,
> What things could he know,
> And that without worry or care.

But, Mr. Speaker, our life is but a span, and whatever we do, we must do quickly. This subject has been, perhaps, more universally studied and discussed than any which has engaged the thoughts of mankind for the last twenty-two years. About the year 1873 something happened which violently disturbed the financial and commercial affairs of the human race.

A rude and sudden shock was felt which jarred the financial world from center to circumference and sent a paralyzing tremor throughout the civilized world, and extended ultimately to the remotest habitations of man. Disturbances and interruptions of commercial activities are not uncommon. The pages of history are replete with accounts of such phenomena that have occurred before, and we are familiar with those which have taken place since that of 1873. They were natural results of apparent and well-understood causes; such as war, famine, pestilence, overspeculation, and the like.

Intelligent observers and thinkers could easily point out the causes and suggest the manifest remedies for all the financial evils, panics, and disturbances that ever convulsed the financial or commercial world prior to or since that of 1873. All previous troubles were of short duration, and the world soon recovered from their effects and gained wisdom from the sad experience which they afforded. But, Mr. Speaker, the phenomenal evil which befell the world in 1873 has no counterpart in history or tradition. It came at a time when the world was at peace. It fell upon the masses of mankind like a poisonous vapor. Its deadly effects were felt ere its hateful presence was realized. No avant-coureur heralded its approach. It came like the thief in the night.

I do not deny, Mr. Speaker, that there was discussion of the subject long before the complete demonetization of silver was effected, both in Europe and America. It is also true that the great transaction was accomplished by degrees. Step by step was taken through a series of years. The international conference of 1867, held in Paris, on the occasion of the Universal Exposition, recommended the establishment of the gold standard, and successive steps toward that end were taken. One prop after another which supported the double standard and unity of gold and silver as money metals were removed. But the superstructure did not tremble or totter until the great support of the United States of America was taken away. Up to the very day that the act of 1873 went into effect the coinage and commercial value of silver remained at an exact parity with gold. But in less than ten days thereafter, for the first time in all the world's history, gold and silver parted company.

By an act of Congress in 1873 silver was dethroned as a joint standard and a joint measure of values and was placed upon the auction block. It was for the first time made a commodity; an object of barter and sale. Before that it was a measure; in other words, silver was money, in a sense, whether coined or uncoined. The image and superscriptions upon coins are mere certificates that so much coin has been tested as to its purity and weighed by authority of a government.

By law the main ingredient or constituent element of value which silver possessed was destroyed. The principal use to which the metal had been devoted was by law taken away. Men could no longer have money made out of their silver. It was no longer a money metal, but was degraded to a level with copper and nickel, out of which a kind of money is made, but which are in no sense money metals.

When silver was divorced from its ancient partner, gold; when the link connecting gold and silver, which was forged by authority of God Himself, was wickedly severed, and silver became a base metal, a common commodity, it no longer fixed or measured values or prices, but became obedient to the laws of supply and demand, and took its place in the market subject to the vicissitudes of trade and traffic, as other articles of merchandise. Contemporaneous with the demonetization of silver as a money metal, which was in effect reducing the standard by which all possessions were estimated and valued about one-half, the change which

I have endeavored to describe was felt in financial and commercial circles all over the civilized world.

The general level of prices of all things bought and sold began to fall; and, with other commodities, for the first time in all the world's history, silver was discovered in the price list and on the shambles of the market; values continued to sink as months and years rolled by. The cause of the ruinous and alarming state of things was not discovered for a long time. Wiseacres assigned first one and then another theory of the trouble.

The Congress of the United States, in obedience to a powerful public sentiment, in 1876 appointed a commission consisting of able and experienced statesmen to investigate the origin of the universal and continuous fall in prices.

We have the report of that "silver commission" of 1876, which report is in substance that the cause of the general fall in prices was the demonetization of silver, and the only remedy was its remonetization.

Years rolled on, and the strange and unparalleled shrinkage in all values, including silver, continued.

In 1886 the Government of Great Britain, impelled by a public sentiment it dared not ignore or disregard, appointed the "royal commission" to inquire into the causes of the world-wide evil, reciting in the preamble to the commission, "Whereas it has been represented unto us that it is expedient that a commission should forthwith issue to inquire into the recent changes in the relative values of the precious metals shown by the decrease in the gold price of silver." The membership of that celebrated commission, twelve in all, embraces some of the most distinguished statesmen, scholars, and thinkers of Great Britain, the present first lord of the treasury of England, Hon. Arthur J. Balfour, being one of them. The final report of the commission, signed by all, recognizes the continued and phenomenal depreciation in all values the world over, and fixes the date of the beginning of the troubles in 1873. Six members of the commission, including Mr. Balfour, join in a report in which they suggest as the only remedy "free coinage of both metals into legal-tender money, and the fixing of a ratio at which coins of either metal shall be available for the payment of all debts at the option of the debtor."

Mr. Speaker, the dark pall of sinking prices enshrouds the world yet, and will continue until the true remedy is applied.

In the conventions of the two great political parties of 1892 platforms were adopted plainly declaring in favor of a return to bimetallism as the permanent policy of this Government. I will not burden the RECORD or detain the House by quoting them.

However, I hazard nothing in saying that they pledged the Democratic and Republican parties to the policy of bimetallism, including, of course, the parity of both metals, which is declared possible by international agreement or "safeguards of legislation." The great contest for the restoration of silver which began in 1873 still continues. But, Mr. Speaker, a new phase of the contest confronts us. As far as I know or can recall, no prominent man in this country ever openly advocated the single gold standard as the permanent policy of America before the beginning of the year 1895. Three very significant events transpired early last year:

First. The English Parliament adopted a resolution declaring in general terms in favor of the return to bimetallism by Great Britain.

Second. The German Reichstag adopted a similar resolution soon thereafter.

Third. Within a very few days after the latter event Mr. Carlisle, Secretary of the Treasury, left his office in Washington, ascended the hustings and openly and vigorously denounced and ridiculed bimetallism, and in substance advocated the single standard, thus greatly discouraging the powerful advocates of international bimetallism in England and Germany and placing the United States in an unfriendly and positively antagonistic attitude toward the cause of international bimetallism.

The issue is shifting from one as to the best method of securing bimetallism to the square issue between gold monometallism and bimetallism. The present Administration has disrobed itself of all disguises and masks and clearly and boldly assumes the aggressive upon the proposition that the gold standard must be maintained, and that all efforts to return to bimetallism by international agreement, safeguards of legislation, or otherwise must be opposed.

Mr. Speaker, I salute the Administration and congratulate it upon its candor and courageous boldness. I despise shams and false pretenses. I admire the man who has the nerve to say what he means. And I admire the opponent of this substitute who puts his opposition to it upon the high plane occupied by Mr. Cleveland and his able Secretary of the Treasury far more than I do the cowards who ridicule the efforts of the great majority of Americans to restore bimetallism, but pretend to be bimetallists and imagine that they deceive people by advocating international bimetallism while they applaud the policy of the Administration.

Mr. Speaker, I am in favor of the Senate substitute, which provides for free and unlimited coinage of gold and silver, "without discrimination against either metal or charge for mintage."

I believe that, under the blessings of God, nothing is impossible with the United States of America. She has achieved greater things than the restoration of silver as a money metal, and can achieve that. I believe that a great majority of the people are in favor of bimetallism, and desire that this Government shall take the lead in this, as it has in almost every great movement which has resulted in the amelioration of the condition of the human race.

Mr. Speaker, we can not afford to give up the cause of bimetallism. The gold standard is not suited to this age of the world. The stock of gold in the world is not enough with which to do the world's business. The stock of gold coin and bullion of the earth, as estimated by the Director of the Mint in his report for 1895, is $4,086,800,000. The production of gold in the world in 1894 was $180,626,100. It is estimated by high authorities that not less than one-third of the product of each year is consumed in the industrial arts.

I maintain, Mr. Speaker, that the annual net increase of the stock of gold coin in the world does not equal the annual net loss by abrasion, fire, and flood, and other accidental losses, and that the world's stock of gold coin is actually diminishing. But whether I am correct or not in that assumption, I do not hesitate to confidently assert that the net increase of the stock of gold coin is far less than the net increase in numbers of the human family and infinitely less than the annual increase and multiplication of commercial activities and needs for money. Hence it follows that with the single gold standard to measure prices of all other things, we will have a constantly shrinking standard; in other words, steadily declining prices.

The volume of actual money, which, according to all authorities, without exception, measures and regulates prices of all commodities, should be increased and added to in the same ratio that human activities or, in other words, demands or necessities for money are multiplied. Our race is yet in its youth; the human family is increasing in numbers more rapidly than ever before since the creation of the earth. The human mind is developing and expanding most marvelously, as illustrated in the wonderful inventions which almost daily astonish the world. As beautifully said by the poet:

> We are living, we are moving, in a grand and awful time,
> In an age on ages telling, to be living is sublime.

As we move higher and higher to new elevations and conceptions of life and civilization our necessities are varied and multiplied. A person who lives and moves in a community of average intelligence and culture of the present day in this country consumes and is compelled to have probably ten times more of the products of labor and the handiwork of toil than he would have needed fifty years ago. The number of commercial and financial transactions among civilized people, and in consequence the needs for money now, are many hundredfold more than they were even forty years ago, a time within the memory of many of us. The people of this country are the foremost in point of progress, development, and commercial activity of all the nations of earth.

An average live, progressive American consumes more clothing, food, fuel, and other necessaries, and enjoys more of the conveniences and luxuries of life, and needs more money, than perhaps twenty of his salmon-colored brethren of the Orient in the same relative station in society.

Mr. Speaker, we need more money; I mean real money, not paper representatives of money, mere promises to pay money, but more absolute money than can be had under the single gold standard. The remonetization of silver will meet this want and supply this demand. But our friends who oppose the coinage of silver say that the parity between the metals can not be maintained and preserved under free coinage by the United States alone, and that such a course will result in driving gold out of circulation and in establishing the single silver standard and putting this country upon a silver basis. Now, Mr. Speaker, this is mere prophecy and conjecture, a bare assertion, without authority or reason to support it.

I insist that if all the uses and functions which belong to gold were restored to or bestowed by law upon silver it would have the same value as gold at the established ratio, and that the parity of value would immediately be restored. If a law should be enacted by this Congress and signed by the President providing for the unlimited coinage of silver and gold at the ratio of 16 to 1 silver bullion would certainly instantly and constantly enhance and appreciate in market value. No holder of an ounce of silver would take less than $1.2929 for it, because under the law he could have it converted into that much legal-tender money at the mints of the United States. It seems to me that this is a self-evident proposition. And we have, within the memory of us all, I think, a recent occurrence which demonstrates the truth of the proposition. It is this: The average value of silver bullion in the year 1890, as shown by the last report of the Director of the Mint, was 80.9 per ounce in New York. The highest price in London during that year was 54⅛d. and the lowest was 43⅛d.

The Congress of the United States undertook to legislate in behalf of silver. The Sherman Act requiring the purchase of four and one-half million ounces of silver bullion each month was passed. This was an untried experiment, but it was supposed to be legislation in the interest of silver. It had the sanction and support of the great financiers of this country. And pending the trial of the experiment silver began to rapidly advance in market price the world over. It jumped from 80 cents per ounce to $1.21 per ounce in New York, but when the scheme began to be fully understood and its fallacy was demonstrated, of course silver declined. The demand was limited and was not equal to the supply. Holders of silver bullion underbid each other, and bullion as a commodity declined.

Does any gentleman deny the proposition that if, instead of the law requiring the purchase of silver bullion in 1890, a law providing for the conversion of every ounce of silver that might have been taken to our mints into $1.2929 of United States legal-tender money had been passed, silver bullion would have advanced to that figure?

That experiment was tried by the United States "single handed and alone," without the concurrence of any other nation, yet it caused silver to go up in the markets of the world over 40 cents per ounce while it was being tried.

Some of our delightful "gold-bug cranks" in one breath argue that bimetallism can be established by the concurrence of the leading great commercial nations of Europe and America, and then in another they ridicule bimetallism and say it was never a success and that the parity of the two metals was never maintained; and as proof of their assertions point to the apparent but not real discrepancy between the coinage and commercial values of silver and gold prior to 1873. By reference to the Report for 1895 of the Director of the Mint, on page 239, will be found a table showing the "commercial ratio" of silver and gold each year since 1687, which shows that for nearly two hundred years before 1873 there was practically no "commercial price" of either gold or silver; they were both metals out of which money could be made at the different ratios prevailing in different countries from time to time, and they constituted a joint or double standard or measure of all values.

For instance, the "commercial ratio," so called, is fixed in the table referred to in 1687 at 14.94, in the year 1787 at 14.92, in 1873 at 15.92. There is no greater difference in the "commercial ratio," so called, during these two hundred years before 1873 than about 1 cent in the ounce. I assert that no greater difference can be found in the statistics for any period of the world's history before 1687. Now, Mr. Speaker, I insist that this shows that before 1873 neither gold nor silver had any commercial price outside of the amount of money into which each metal was convertible. The mind can not conceive of the idea of buying a dollar. It is absurd, and as said by Mr. Carlisle at Memphis, speaking of the double standard, "It is a physical and metaphysical absurdity."

Silver and gold were both money; that is, the substances of which money was made, at arbitrary ratios established by law.

The apparent rises and falls of the "commercial ratios" simply resulted from a diversity of coinage ratios. Holders of gold or silver bullion would naturally send it to the mints which would coin it upon the most favorable terms. For instance, before 1873 the United States mints had only coined about 8,000,000 silver dollars. The reason is manifest. Silver-bullion holders could have their metal coined in Europe at the ratio of 15½ to 1 and thus save one-half ounce in every 16 by exporting the bullion to Europe more than they would get by having it coined in the United States mints. Our silver bullion was exported and exchanged for gold bullion, and it was brought to our mints and coined into American money. As an absolute demonstration of this statement I call attention to the Report of the Director of the Mint for 1895, page 268, which shows that from the organization of the United States mints in 1792 to the fiscal year ended June 30, 1895, there had been coined $1,755,813,763 of gold and $685,023,701.90 of silver. During the same time the total product of the United States mines was: Gold bullion, $1,587,410,923, and silver bullion, $773,699,708.81, showing that we have coined at our mints about $200,000,000 more gold than the total products of our mines, about one-third of which was consumed in the industrial arts, indicating that over $700,000,000 of foreign gold was sent to our mints for coinage, simply because we coined it upon more favorable terms; in other words, charged less toll for coining gold than the mints of Europe. To state it differently, gold bullion came to our mints to be coined and silver bullion went to the European mints.

The important fact remained that silver was money; that is, could be converted into money at the ratio fixed by law. The holder of silver spoons or plate could convert them into money.

Every ounce of silver bullion which Mother Earth yielded in this country, less that used in the arts, was convertible into money upon better terms at the European than at the American mints. But, Mr. Speaker, it is impossible in a short speech to enter into a satisfactory discussion of this complex subject. It needs no argument to establish the well-known fact that prices have been declining since 1873 and are still declining. We need more money in circulation. Bimetallism will remedy the evils which afflict the world. I believe that true and real bimetallism is possible.

I am not wedded to any particular ratio. My judgment is that it would be wise for this country to adopt the European ratio of 15½ to 1, but I repeat that I care but little as to what ratio is adopted. The great and vital object to be attained is to change the law which demonetized silver, restore to it the functions of which it was deprived by law, and place it upon its true merits at some proper and just ratio with gold as money.

Let us be honest with ourselves and with each other. If a man is a believer in bimetallism let him boldly say so, and let him say what steps he is in favor of this country taking to accomplish it. If he believes in the policy of bimetallism, but has despaired of it ever being again put into practice, and is opposed to any efforts being put forth for its restoration, but favors a supine submission to the inevitable, let him say that. If he believes in "international bimetallism" let him advocate an international conference at once. If he believes with the President that the single gold standard is best for this country, let him be a man and have the courage to come out in plain terms and so declare; but, sir, I submit that it is neither consistent, courageous, nor manly to pretend to believe in some sort of bimetallism based upon the concurrence of certain nations of Europe and America, and in one breath to say that there is no hope for such concurrence, and in another to ridicule bimetallism and charge that it has been tried for centuries and found to be a failure.

Mr. Speaker, I am a bimetallist. I believe that it is the only remedy for the evils which afflict our nation and our race. I believe that it can be accomplished, and I am in favor of the continued, persistent, and unending struggle for it until success shall crown our efforts. [Applause.]

Coin Redemption Fund.

SPEECH

OF

HON. CHARLES L. MOSES,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. MOSES said:

Mr. CHAIRMAN: I have sat here during three Congresses listening to the promises and predictions of these advocates of a sole gold standard. They have always promised prosperity and plenty if Congress would obey them. They said in the Fifty-second Congress, "Kill free coinage." They said in the Fifty-third Congress, "Repeal the Sherman purchasing law, and prosperity will come to all." Just before we take this vote I propose to recall to the memories of these gentlemen some of the prophecies they have uttered in the past. If I had the time, I could show by the record that every prophecy made by the enemies of silver on this floor during the last twenty years has proved utterly false. They have led us to disaster and ruin. Stagnation and death have seized upon all lines of legitimate business and the Government itself has been placed in the hands of a receiver, with the Rothschilds in control.

You have failed to give relief to the people and the country has repudiated you. You have well-nigh destroyed the Democratic party, and when we appeal to you to return to the good old paths our fathers trod, you denounce us as "silver lunatics" and Populists.

BIMETALLISM IS NOT POPULISM.

Those of us who stand on this question as we stood four years ago, and still vote as Democrats have always voted, are now denounced by this gold crowd and by the little editors under their control as Populists. Mr. Chairman, were Jefferson, and Madison, and Calhoun, and Jackson, and Stephens all Populists? Were Mr. Carlisle and the men who voted solidly with him for silver at 16 to 1 in the Fifty-first Congress all Populists? We believe that gold and silver, the money of the Constitution, should be the primary money of the country, and all paper notes are but promises to pay so much of one or the other of these coins. Unlike the Populists, we do not favor silver coinage simply because it increases the volume of currency. The gentleman from Kansas [Mr. BAKER], a leader of the Populist party, said on this floor a few days ago he would have the bulk of the currency to consist of greenbacks. I asked him if he would make the greenbacks re-

deemable in coin, and he said he would not. The Populists advocate an irredeemable paper currency. In the Fifty-second Congress, when it was thought free coinage would pass, Mr. Watson, their leader, announced to his followers that they must not be satisfied with that sop thrown to them; that there was but little in free coinage of silver, and it meant only about 50 cents per capita added yearly to the volume of currency.

WHAT DEMOCRATIC BIMETALLISM IS.

We believe it to be the duty of Congress to establish a standard of values for all the States. The Constitution says gold and silver jointly shall be this standard. If you have the right to reject one you have the right to reject both metals and so leave the people without any money. We declared by law that 412½ grains of silver or 25.8 grains of gold should be a dollar. This is the law to-day. Every outstanding debt in the country was made with the understanding that the debtor could discharge it with either metal. To demonetize silver and make all debts payable in gold would double the burden of the debtor class, because gold would be dearer on account of the increased demand.

BIMETALLISM VERSUS A GOLD STANDARD THE ISSUE.

Mr. Chairman, we have at last the issue squarely drawn between bimetallism and a single gold standard. Heretofore the gold men have loudly claimed to be the true friends of silver and the only true bimetallists.

Following Mr. Carlisle, they now say there can be no such thing as bimetallism. It is a "physical and metaphysical impossibility." We have at least to thank them that they have at last thrown off the mask and made the issue clear.

There are those who favor silver coinage, but are opposed to the ratio of 16 to 1. I say to them the great question now is, Shall we have silver coinage at any ratio? It is their avowed purpose to fasten upon the country the single gold standard.

In the Fifty-second Congress they objected only to the ratio of 16 to 1. They said they would vote for a higher ratio. Knowing the people demanded that this question should be settled some way, we afterwards submitted to them a bill increasing the ratio to 20 to 1. They refused to vote with us; they had changed their minds.

In the Fifty-third Congress they came to us and said, "Let us repeal this Sherman purchasing law. It is nothing but a miserable makeshift. It can not be patched. Let us repeal it outright and follow it up with Democratic silver legislation." Oh, how eloquently they discoursed about "clearing the deck for action." Mr. VOORHEES in the Senate and Mr. Wilson in the House both gave assurance that repeal was to be followed with other silver legislation. I charge here that the repeal of the Sherman law was secured by fraud and deceit. They cleared the deck for action, and then it was found that the Democratic guns had been spiked by these traitors to their party.

SOUTHERN DEMOCRATS WERE BETRAYED IN THE FIGHT FOR THE REPEAL OF THE STATE BANK TAX.

In the Fifty-second Congress it was known that we earnestly desired the repeal of the tax upon State bank issues. Thinking they might divert us from silver, Eastern members urged us to concentrate our energies upon this measure and they would help us. In the preliminary contest of that Congress they spoke for us and voted with us. In the next Congress, when we hoped we were strong enough to win, we found, when it came to the tug of war, that these men had deserted us. One of them had been placed upon the Banking and Currency Committee as our special friend, but he used the power we gave him to defeat our measure. Thus we have ever received Punic faith at your hands. Can you again ask us to accord you our confidence?

The truth itself is not believed
From those who often have deceived.

Mr. Chairman, these advocates of a gold standard have failed to give any relief to the country. They offer none now. They would lead us into hopeless ruin. We say to them frankly if they will restore to the people the free coinage of gold and silver and prosperity does not come to the entire country we will join them in repealing the law. Even a partial recognition of silver has always been followed by rising prices and prosperous times.

We did not rally from the panic which began in 1873 until we began to coin silver in 1878. That act, known as the Bland-Allison law, was denounced as silver coinage is to-day. All manner of evil was predicted as sure to follow its enactment. But the next decade was one of great prosperity. Again, in 1890, when there was a still larger recognition of silver, and the world began to think that the United States would stand by silver, that metal rose to $1.20 an ounce—almost to parity with gold—in all the markets of the world. And well do we remember that the Southern farmer in 1890 and 1891 sold his cotton for 10 and 11 cents per pound.

We also remember the dire results that followed the unconditional repeal of the Sherman law. Instead of prosperity, as was promised, prices began to tumble and the people were plunged deeper into distress and poverty. The Southern farmer sold his cotton for less than 5 cents per pound. By fastening upon us the single-gold standard they have robbed the South of the God-given heritage which it had in cotton. The Southern farmer is forced to sell on a gold basis in competition with his Eastern competitor, who receives his price in silver. Our competitors in silver-using countries now receive about 14 cents per pound, while we are forced to sell at 7 cents measured in gold. How like mockery to Southern ears now sound the beautiful words of Henry Grady, who thus spoke of the cotton plant:

What a royal plant it is! The world waits in attendance on its growth. The shower that falls whispering on its leaves is heard around the earth. The sun that shines on it is tempered by the prayers of all people. The frost that chills it and the dew that descends from the stars is noted, and the trespass of a little worm on its green leaf is more to England than the advance of the Russian army on her Asian outposts. It is gold from the instant it puts forth its tiny shoot. Its fiber is current in every bank, and when loosing its fleeces to the sun, it floats a sunny banner that glorifies the field of the humble farmer; that man is marshaled under a flag that will compel the allegiance of the world and wring a subsidy from every nation on earth. It is the heritage that God gave to this people forever as their own when he arched our skies, established our mountains, girt us about with the ocean, loosed the breezes, tempered the sunshine, and measured the rain. Ours and our children's forever.

Mr. Grady did not anticipate the blighting, withering curse which the gold standard was to bring upon his people. His paper is now begging the people of the South to reduce the acreage of this "royal plant." This will give only temporary relief, because as we reduce our acreage India will increase hers more rapidly. The trouble to-day is not that there is an overproduction of clothing and food. Under the gold standard prices have fallen so low that the masses of the people do not receive wages sufficient to buy even the necessaries of life, and they cease to be consumers.

Mr. Chairman, it is ruinous folly to make gold the only money of final redemption. For thousands of years the world has considered itself fortunate if the annual supply of both gold and silver was found to be equal to the demand for primary money. This is what Mr. Carlisle said upon the subject in 1878:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world. With an ample currency, an industrious and frugal people will speedily rebuild their works of internal improvement and repair their losses of property, but no amount of industry or economy on the part of the people can create money. When the Government creates it, or authorizes it, the citizen may acquire it, but he can do nothing more.

The stock of gold is not sufficient to do the business of the world.

In the last Treasury report it was announced there were outstanding in this country $499,000,000 gold coin. How much of this is in circulation? At that time the national banks held in their reserves $127,000,000. Since then the Secretary of the Treasury has bought $111,000,000 of it, and to-day, according to the estimates of President Andrews and other eminent authorities, there are not in in free circulation over $150,000,000 gold. No wonder it is easy for the gold syndicates to corner our gold and put us at their mercy.

Silver men want honest money. We want the dollar that is most stable in its value, not a depreciating dollar and not an appreciating dollar. These gold monometallists would deceive us with their cry for honest money. Robbers are often known to rush through the streets shouting "Stop thief!" to divert attention from their own thefts. It is not honest to require the debtor to pay his debts in a constantly appreciating currency. This is what John Sherman said on this subject in 1869 when it was proposed to change immediately from a paper to a specie standard:

A measure to require a debtor now to pay his debt in gold, or currency equivalent to gold, requires him to pay 135 bushels of wheat when he agreed to pay 100; and if this appreciation is extended through a period of three years, it requires him to pay an interest of 12 per cent in addition to the rate he has agreed to pay. The appreciation of currency is a far more distressing operation than Senators may suppose. Our own and other nations have gone through this process before, and always with the sorest distress. It means the ruin of all debtors whose debts are twice their capital, though one-third less than all their property. It means the fall of all agricultural productions without any great reduction of taxes. To attempt this task suddenly by a surprise upon our people, by at once paralyzing their industry, by arresting them in the midst of lawful business and applying a new standard of value to their property, without any reduction of their debt or giving them an opportunity to compound with their creditors or distribute their loss, would be an act of folly without example in modern times.

I submit, Mr. Chairman, a table showing how gold has appreciated during the last twenty years. A gold dollar will purchase more now than it would then by the following amounts:

More wheat by 108 per cent.
More flour by 76 per cent.

More sugar by 60 per cent.
More iron by 64 per cent.
More cotton by 95 per cent.
More lead by 110 per cent.
More wool by 93 per cent.
More leather by 24 per cent.
Average increase on these articles, 78¼ per cent.

This constantly appreciating standard is not an honest one. The Democratic party has always stood for honest money. In our platform of 1884 we find the following;

We believe in honest money, the gold and silver coinage of the Constitution, and a circulation convertible into such coin.

There we have the Democratic definition of honest money. Mr. Chairman, who are the men who are sending out tons of literature from New York to educate the people upon the subject of sound money? They are the same old gang who came to Congress in 1869 with billions of bonds, for which they had paid depreciated greenbacks and which were redeemable in greenbacks. At their command Congress changed the law and said their bonds should be redeemed in coin—gold or silver—at the option of the Government. They went to work at once to discredit silver and cause gold to appreciate, and now in their honesty they come and say, "Strike out this word 'coin' and make the bonds payable in gold alone." These are the men for whose benefit a quarter of a billion of bonds have just been placed upon the overburdened taxpayers of this country. Tell me they are the apostles of honesty! Why, sir, the pirates who sailed under their black flag were honest men in comparison with these bloodthirsty shylocks.

SOME OBJECTIONS TO SILVER ANSWERED.

Now, briefly, in reply to some of the objections to silver which have been urged here: It has been said that silver has greatly depreciated on account of its overproduction. The production of silver to-day is running far behind that of gold. The output of gold in 1895 was $30,000,000 more than silver even at its coinage value. The total stock of silver in the world is much less than that of gold. The silver dollar, even at its bullion value, will buy as much as it ever would. It has not depreciated except in comparison with gold.

Again, they say if we opened our mints the bullion of the world would be "dumped" upon us. Where is the dump to come from? Outside of what we have in the Treasury there is no great stock of bullion in the world. The nations of Europe could not send us their silver money because its current value there is greater than its coinage value would be with us. And we must not forget that Europe is constantly demanding bullion to replenish its subsidiary coinage. But coin the entire output of the United States and draw all you can get from Mexico and you would not add more than $1 per capita to your metallic money annually.

But, Mr. Chairman, they say, "Why do we want silver when all Europe rejects it?" The great masses of the people there would gladly vote to restore silver. They are bound by the shackles of the gold despotism and have no voice in the matter. They say free coinage would Mexicanize this country. Mr. Chairman, Mexico is to-day making greater progress than any gold-standard country in the world. Look at Japan. Under the silver standard she is to-day enjoying marvelous prosperity, and is already shipping her manufactured goods into our Pacific States. As has been said by another, why do you not point us to Turkey and Egypt? They are gold-standard countries, but we hear nothing encouraging from them.

They say if we cut loose from Europe we would have to go it alone. Two-thirds of the population of the globe use silver money exclusively, and our return to silver would give us a tremendous advantage in securing the trade of these nations. I submit an extract from the Financial News of London, showing how apprehensive they are upon this subject:

There is a plain moral in the remark that if the United States would venture to cut herself adrift from Europe and take outright to silver she would have all America and Asia at her back and would command the markets of both continents. The barrier of gold would be more fatal than any barrier of the custom-house. The bond of silver would be stronger than any bond of free trade.

There can be no doubt about it that if the United States were to adopt a silver basis to-morrow British trade would be ruined before the year was out.

Mr. Chairman, we should strike for a bold American policy and not wait for the monarchies of Europe to legislate for us. The people look to us for relief. The gold men stand helpless and suggest no remedy. We offer you no untried experiment. For four thousand years the world has found it safe. Restore silver to the place it occupied in 1873 and if prosperity does not follow we will join you in again repealing the law.

[Here the hammer fell.]

Mr. BLACK of Georgia. I ask that the gentleman from Georgia may be permitted to proceed for five minutes longer.

There was no objection.

Mr. MOSES. I thank the committee for its consideration.

Now, what about the course of the Democratic party? It has been asked, "What are Southern Democrats going to do in the next election?" We answer, we shall preserve the integrity of our party. We will not abandon the money of the Constitution. As long as common honesty is dear to our people they will repudiate this juggling with the currency. They will never consent to legalize robbery. They will never advocate a single gold standard, because they respect the old commandment which says, "Thou shalt not steal."

The States that never go Democratic may force upon us a gold-standard platform and candidate; but you can not drive us from our party. On election day many of our people may take to the woods, but whatever may happen in other sections of the country old Georgia will carry the Democratic banner to triumphant victory.

Coin Redemption Fund.

SPEECH

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. BRUMM said:

Mr. SPEAKER: I do not propose in the short time that is allotted to me to go into a scientific discussion of gold or silver, or the monetary question. That has been done quite extensively on both sides. I propose to get down to practical facts and practical operations—not so much theories as remedies.

I want to say first that I am not in favor of free silver as understood by the free-silver men, principally because I am opposed to the Government paying more for silver or any commodity than the market value thereof. More than that, I am in no sense a monometallist, and especially a gold monometallist. To me it is entirely incomprehensible that any intelligent man should contend for a moment that we could under our system sustain the single gold basis in this country.

Gentlemen have expressed fears that we might not be able to sustain both. Have they reflected how much harder it will be to sustain the one alone, especially gold monometallism? As to the method and what we should exactly do, I doubt whether there are twenty men on the floor of this House who have their own opinions on this question who would agree. What a Dolly Varden piece of patchwork the various thoughts and methods advocated on this floor would make. They are mostly theoretical, relying upon statistics alone, without knowing what other factors enter in that may make wonderful changes in the practical operation of their theories. If our protectionists would apply the same reasoning and heroic methods to this question that they do to the tariff there would be but little trouble in solving the problem.

My very distinguished friend [Mr. DINGLEY], chairman of the Committee on Ways and Means, insists upon the House bill. Sir, I did not believe there was a member of this House who, under existing conditions, would now favor the bill as it passed the House. The condition that confronted us then was that there was a threatening contingency, and that some relief must be supplied at once; there was a financial crisis pending, and back of that a menace by the Executive that unless we at once came to the relief of the Treasury by passing some kind of a bond bill he would exercise the power he had to issue bonds under authority heretofore given.

The House passed the bond bill, which cured the evil for the time being. By it we stopped the Executive from again entering into a contract through his own law partner to sell to a foreign syndicate at private sale bonds upon higher rates of interest and longer terms than those specified in the bond bill that we passed. The result of the bids, I think, fully showed the wisdom of the passage of the bill at that time. But now the exigency has passed. The bond bill as we sent it to the Senate did its work, and now would be of no use to the country. The moment it passed this House and went to the Senate it was a warning to the President that came like a thunderbolt from a clear sky and forced him to put into practical operation the main feature of that bill, and in my judgment no one was more surprised and disappointed at the successful results than the President and his Secretary of the Treasury.

The other clause of the bill, to issue notes temporarily, is not a crying want at this time; and therefore I contend that it would be wrong to insist upon the House bill. My friend Governor DINGLEY finds fault with the Senate bill, and says it is not germane to the question. I say it is germane to the question.

The issue is how to relieve us from financial distress, and the only question is, which is the better way to do it?

The Senate saw fit to pass a free-coinage bill to help us out of the trouble. I do not believe in their bill as they passed it. I do not believe that they were wise in insisting on so radical a measure; but I do believe, and here I want the attention of my Republican friends to this fact—I do believe that if the Morrill amendment had been passed by the Senate and added to that bill it would have been a wise measure; it would have cured the defect; and it is for that reason that I have offered the Morrill amendment, incorporating in it, however, gold as well as silver, and ask the Republican members of this House to stand with the Republican majority of the Senate and show them that while they could not pass it in a Democratic and Populistic Senate, here, in this Republican House of Representatives, we can pass that amendment; and if we want to redeem our promises we ought to stand by the amendment that I have offered and show the people we are in earnest in this matter, and that the Senators were in earnest when they offered that amendment as a compromise between the extreme free-silver men on the one hand and the extreme gold men on the other.

"But," says the distinguished chairman of the committee, "I believe in a do-nothing policy; do nothing at this time, because we can not accomplish anything." Mr. Speaker, I dispute the proposition. This is a Republican House by a very large majority. There is no power that can stop the Republicans of this House from doing what they believe to be right, and it is their duty to make a record and let it go to the Senate, and if the Senate chooses to take the responsibility not to agree, then let the responsibility rest where it belongs.

But I believe, Mr. Speaker, that if you will pass my amendment, and send the bill back to the Senate with that amendment, the Senate will pass it, and then throw the responsibility on the Executive. Send it there, and let the Executive put himself on record when the chance is given him to relieve the country in a substantial way by establishing true bimetallism, without injury to the country and without any risk of reducing us to a monometallic basis of either gold or silver.

Sir, I believe that if the Senate bill, with my amendment, would be passed the President would not dare to veto it, and if he would carry out the spirit and letter of the law it would eventually settle this question forever, for it would in a short time restore the parity of the two metals, and thus force all Europe to a firm and everlasting bimetallic basis.

Before going into the general discussion of this question I want to say a word to my friend from Massachusetts [Mr. WALKER] who is not here, unfortunately, and it is only for the reason that I can not in my presence allow this error to go by unanswered that I desire to make this statement. He says that the greenbackers asked for an unlimited issue of paper. Why, Mr. Speaker, he never knew what the greenback theory is if he says that any man is foolish enough to ask for an unlimited issue of anything. We only asked for the issue of greenbacks with full legal tender of an amount sufficient to serve as a healthy circulating medium, for the Government would at all times be master of the situation.

No such idea as you were attempting then to gull the people with, that we would start our printing presses and issue paper money in unlimited quantity, was ever advocated by greenbackers. You forget—and it is a question that is a material one in discussing this question—you forget, sir, that the Government is not and ought not to be a bank of issue, to loan its money out on discount or in any other way. The Government is not so paternal that it will give one dollar away for nothing. The Government can only issue its money for value received, and when it is issued, the Government gets 100 cents in value for it, and when that dollar passes into the hands of a man he receives on it a hundred cents, and when it passes around and comes back to the Government, the Government will only receive it by giving a hundred cents for it again.

There it stands, an absolute and positive representative of the value of 100 cents to every dollar every time it passes from one to another. That is only part of the argument that these men have for years been using to hoodwink the people. But again, the gentleman from Massachusetts says that human effort makes the price of all things. Well, I need not stop to answer that now, except to say that the cost of an article is only a factor in making and regulating the price up to the point of healthy competition, and that the law of supply and demand is the greatest factor in making the price of all commodities, especially gold and silver. Indeed, in making or regulating the price or value of gold or silver (like that of diamonds and other purely natural products) the only factor is that of supply and demand.

The cost of production has nothing whatever to do with their price or value. They are products of nature. They are like the waters that flow from the fountains, only not quite so plentiful. They are, like the air we breathe, natural products. You can not manufacture gold or silver. You can not grow gold or silver. You can not create them. You can not change the supply by turning your corn field into a gold field or silver field as you can turn it into a wheat field, and so on. You can only slightly stimulate supply by enhancing their value through enlarged demand. Silver and gold are the two stubborn instruments of nature that have been grasped by the money power for ages to enslave humanity. The idea of the cost of production being a material factor in price of other commodities does not apply to either gold or silver. They are of all things in the world the two things that can be most readily and most positively "cornered" by the rich men of the world. They are of all things the most potential scepter in the hands of tyrannical power to control humanity and to govern individuals as well as monarchies and republics. And when you tell me, sir, that their price depends on the cost of production, you tell me that which is not founded on truth.

"But," says my friend from Massachusetts [Mr. WALKER]—I see that he has just come in, and I am glad of it—"England imports more than she exports, and yet holds her gold." That is true; but how does England hold her gold? Let us see. England proper is not the producer of gold. But she is the great creditor nation of the world. England imports more than she exports, but she pays for much of her importations by the blood and sweat that she draws from her colonial possessions in the shape of taxes, penalties, dividends, interest, subsidies, etc., besides the income from her other creditors, and in that way she takes good care to keep her gold at home.

In support of this I read from page 87 of The American, edited by Wharton Barker:

> It may here also be remarked that as Great Britain's imports much exceed her exports a fall in prices would inure to her benefit, even if the prices of British manufactures exported fell proportionately with the raw materials which she imports. This difference between the volume of her imports and exports, and amounting to a yearly average of not less than $600,000,000, represents the sums due to Englishmen for the use of their ships by foreigners and interest on capital which they have invested abroad, which they take in the shape of merchandise. For 1895 the imports into Great Britain amounted to £416,688,000, and less reexports of produce imported from foreign countries of the British colonies to £356,716,867, while exports of British produce amounted to £226,169,174. This left a merchandise balance against Great Britain of £130,547,693, or approximately $650,000,000.
>
> But did England send abroad gold in payment of this adverse merchandise balance? No; on the contrary her imports of gold exceeded exports by £14,736,715, and her net imports of silver amounted to £302,246, a net total of £15,038,961, or $75,000,000. England thus imported $725,000,000 more than she exported. This is the sum that represents the interests on money loaned abroad by Englishmen, the money spent in England by travelers in excess of money spent by Englishmen traveling on the continent or elsewhere, and the freights paid their shipowners for the use of their ships. The further prices fall the greater will be the quantity of goods required to be sent to England in settlement of this immense sum. Is it not apparent that America that suffers the most from falling prices, must take the initiative in restoring bimetallism—not England that suffers the least? It is folly to wait on England, a nation that is ruled by a class that actually profits by the fall in prices.

Although the balance of trade between this country and England proper is in our favor, yet England gets very much of the gold with which she pays the other countries and hoards herself from this country, for we pay tribute to the Old World, most of it to England, to the extent of almost $1,000,000 a day. And yet gentlemen ask us to reason from analogy in this matter and agree that because England imports more than she exports and yet retains her gold, therefore the same rule is applicable to this country. And, Mr. Speaker, let me say just here, that one of the great errors that our people fall into is, that they forget that we are the greatest debtor nation in the civilized world, as well as the greatest consumers. They do not consider this country as the protectionists do, that is, as a country standing, as it were, isolated and alone, peculiar in our institutions, peculiar in our conditions, peculiar in our methods, our wants, and our necessities; so that the rules that are applicable to the countries of the rest of the world ought generally to be reversed when applied to this country.

But the gentleman from North Dakota [Mr. JOHNSON] the other day thought he "proved" everything very conclusively in behalf of the monometallic idea. With his spasmodic figures and charts he attempted to show that the price of silver had no effect at all upon the price of wheat, and yet by that very chart he did show that wheat had jumped and hopped from the lowest to the highest and from the highest to the lowest rung of the ladder almost in the twinkling of an eye, and that silver had jumped in the same way, and his first chart showed that that was the effect in India. Now, does any sane man believe that that sudden spasmodic jump and fall was the cause of the demonetization or of a threat to demonetize silver? Or must he not rather acknowledge the fact that it was caused by the famine in Russia and the cornering, speculating, and robbing that has taken place because we have permitted the monometallists to contract the basis of value to a single commodity—gold—which is the only product that need be affected to bring on a financial spasm in this or any other gold-basis country; but that the steady fall of all commodities is due to the steady fall of silver?

"But," says the gentleman from North Dakota, "oh, the horror, the horror of anything like bimetallism! See the millions

that are deposited in our banking institutions! See the holders of insurance policies! In other words, look at our creditors, have a care for them! Lo, the poor creditor!" Aye, gentlemen, that has been the battle cry for ages; but you seem to forget, when you are stretching a point in behalf of the creditor, that there is another man who is affected, and that is the debtor. There can be no creditor unless there is a corresponding debtor. There is at least one debtor to every creditor, and that debtor owes what the creditor demands. Therefore, if you are so afraid that the creditor will be affected, why do you not have some regard for the debtor? Let me tell you, sir, that besides the creditors of the banking institutions and the insurance companies, you should consider also the men who pay the premiums year after year and semiannually.

Then you have those who get discounts from the banks. The borrowers of money, whether on bond or mortgage; the debtors, whether corporations or individuals, must part with more of their production or labor to liquidate their liability. They must pay back the money with interest, no matter whether money rises or falls. You have, besides those, the taxpayer, who is always in debt. In the taxpayers, from the highest to the lowest, are included every citizen of the land, all affected adversely by a falling market, or cheap prices and dear money. But the worst feature of the case is, that this debtor in taxes, indirectly at least, and in all other forms of debt, owes a large amount of it to the creditor abroad; yet you are more solicitous for the creditor abroad than you are for the debtor at home; you are willing to wring the last drop of blood from the debtor at home for the purpose of establishing what you call "confidence" for the benefit of the creditor abroad. I will speak of this later.

Sir, if there is to be wrong committed, if there is to be robbery of one class for the benefit of another, I would rather rob the rich to pay the poor, than rob the poor man of the little that he has to make the rich richer, and I would rather rob the foreign robber who is trying to rob me than rob from my own flesh and blood. But, sir, both are wrong, and I believe that neither is necessary. Adopt my amendment, and by an easy process things will adjust themselves; there will be a healthy advance in prices, and by checking in a great degree unnatural fluctuations we can with a protective tariff establish such stability as will bring to our people untold progress and blessings.

The gentleman from Missouri [Mr. HALL] is not now in his seat. I am sorry he is not, for I desire to comment on some of his remarks. Of all things that have surprised me in this debate the gentleman's remarks were the worst. Here we have a man who voted for free silver last session, and now he comes here, not as a bimetallist, not trying to right himself and his country, but he has jumped the traces completely, has gone clean over, and is one of the most avowed gold monometallists on the floor of this House. And the only reason he gives (and this is right in the line of my thought) is that he wants "confidence" restored. He says that the credit circulation will contract if you agitate increased basic money. Yes, it will contract, and that is just what we want. We want the credit money to contract, and we want a substitute for it, as far as we can get it, in basic money; that is, we want genuine, honest cash money.

When you tell us that you want confidence, we reply, that is just what we want. But the confidence that you want is a confidence based upon a lie—it is the "confidence" that the gambler wants his victim to have when he leads him to fight the tiger; the "confidence" that the stool pigeon of the "three-card-monte" man or thimble-rigger wants his victim to have when he brings him up to rob him of his money. Sir, the "confidence" that we want is the confidence that has a solid gold *and* silver backing. The confidence that you ask for is confidence with nothing behind it. The "confidence" that we ask for is absolute—a true, living fact, based not upon a mere idea or theory or mere promises, but upon two solid metals rather than upon one. The confidence that you want is the confidence that would ask a man to pass upon a gang plank with but one prop, and that in the center, so that when he passes the center the plank goes down, while you are trying to persuade him that there is no danger; the "confidence" we ask puts the gang plank on two props, one at each end, so that men, women, and children can walk across it in safety. Yet the gentleman from Missouri justifies his action on that false basis alone, and then prides himself on his courage and wisdom, and because of these self-arrogated virtues compares himself with Gladstone. (I am sorry he is not here; I almost hesitate to go on; yet I feel I ought to do so.) For he says, "Yes, I was a free-silver man at the last session, but I have changed my mind; all great men change their minds; Gladstone changed his mind;" from which no doubt he would have us infer that Gladstone, the Grand Old Man of England, changed his mind, and the grander young man from Missouri changed his mind—me and Gladstone! [Laughter.] His modesty is only excelled by his logic. The gentleman's attitude can, in my judgment, be characterized by one word, a word which originated in the Senate—"cuckoo." "And there are others," but none so glaring as they who can give no good reason for their change of faith, but go to the housetops and proclaim and attempt to justify their change by traducing the men with whom they have battled for years and tell them that they are like the Chinese and the lower order of animals, which never change, "while we great and mighty men do change."

Now, I want to say one word to my Democratic friends. The gentleman from Mississippi [Mr. WILLIAMS] says, "Supply and demand regulate the value of money and all products." You are right, my friend. And the gentleman from Alabama [Mr. WHEELER] says.

Falling prices are desired by bondholders and the money power only.

You, too, are right, my Democratic friend. And then he continues:

Our nation ought to be independent of Europe. Like the Numidian lion, we know not our strength. For God's sake let us assert it.

Oh, how I congratulate my Democratic friends that they have at last come over to the protective idea that supply and demand regulate the price; that we ought to be independent of England and the world; that, like the Numidian lion, we have been unconscious of our strength, but, now that we know it, should assert it. I trust our Democratic friends will be ready to assert it at all times, whether we are considering the financial question or the tariff question.

I wish I could say that your Secretary of the Treasury, Mr. Carlisle, had shown the same progressive spirit. He seems still to stand on the old free-trade doctrine, for in his speech in New York, at the bankers' banquet, he said: "We are now getting down to normal conditions, and I am glad of it." Ah, my free-trade brethren, the present doctrines of Mr. Carlisle are what you have been advocating for years, although he, too, vamps "cuckoo" on this question, as shown by extracts from his remarks at end of speech.

Yes, we are getting down to normal conditions and low prices! Why, Mr. Speaker, in the West the farmers are using their corn for fuel instead of consuming our coal; potatoes selling at 15 cents per bushel in Philadelphia, and that is what the Secretary of the Treasury and the gold advocates of the country mean when they say we must come down to normal conditions, namely, low prices, cheap wages, cheap products, cheap men, and cheap women. God forbid!

Sir, I would like some of these gentlemen to designate the standard of the normal conditions they want to drag us down to. Do they mean that we must reduce prices—cheapen all things to the standard of the gold-using countries? And when we have done that we can stop there and all will be well? Sir, that is only one step toward normal conditions, for the next step will be to drag the so-called civilized world with ourselves down to the next standard, to wit, the standard of the silver-using countries, and when we have all gotten down to that standard, the so-called civilized gold countries and the uncivilized silver countries will together go down farther. For not until we get to the standard of barbarism, which is the bed rock, will we have gotten down to normal conditions. Yet this is the logical sequel of the gold monometallist and free trader.

Sir, in a country like ours, being the most heavily burdened debtor nation in the world, with a system that makes our Treasury the medium for exchange of all securities and values for gold, no matter how low the standard at which these values were purchased, it is impossible to maintain gold monometallism. It is infinitely harder to do that than to bring about the parity of gold and silver, single-handed and alone, by a moderate and conservative system of unlimited coinage of both gold and silver at a ratio based upon the natural production of both metals.

Sir, it is absolutely impossible much longer to carry out our present system, for under this system our Government is the only one which has undertaken the impossible task of exercising the sovereign function of coining money and regulating the value thereof and issuing bills of credit redeemable at the option of the holder and at the same time discriminating against one of its redemption metals. There is no nation on the face of the earth, excepting ours, which attempts to perform the function of a bank of exchange and under our system to pay out gold under all circumstances.

Every other nation in the world retains for itself the option in all its payments. In France they pay out from 10 to 100 per cent in silver when demands are made upon the Banque la France. In England they raise the discounts to prevent a run on their gold, and so in Germany and every other civilized nation they protect themselves by always retaining the option. In fact, no Government in the world attempts per se in any instance to exchange one kind of money for another at option of holder except this Government of ours, and in that way we furnish facilities to the gamblers, the speculators, the jobbers, and the robbers to ply their vocation, in comparison with which the gambling hells of Monte Carlo pale into utter insignificance.

Sir, the best evidence of our mighty power and resources lies in the fact that for so many years we have been able to do that which no other country would dare to undertake; but the time is now at hand when the last straw is being placed on the back of the Treasury, which will break it and bring on destruction and ruin unless speedy relief is given. The passage of the Senate amendment, which gives to the Treasury the option and not the holder; which enables the Treasurer to say, "Yes, if you want the redemption of the greenback or Treasury note, here is your silver or gold," just as the Treasury desires, and not as the holder of the security may wish—for no man will contend that they are not redeemable in silver as well as gold—would stop the endless chain and enable us by the passage of my amendment to coin the American product and give to the Government the seigniorage or difference in the market and coin value of the silver brought to the mint.

It would obviate the necessity of passing any revenue laws to prevent the influx and coinage of foreign silver, as no foreign silver would find its way to our mints so long as they could not get more for it at the mints than its market value at home. For remember that the market value of silver is fixed abroad, in London, and not in this country; but I believe that, by the passage of my amendment, in a very short time the market value of silver would be on a parity with gold and that this country could very readily sustain it on that parity, especially if we were to adopt reciprocity measures with the silver-using countries that would enable us to pay our balances to these countries in silver. For, mark you, the balance of trade is in our favor with all gold-using countries, but is largely against us in all silver-using countries, and under our present vicious system, that forces us to make all our exchanges through London, we pay to the silver-using countries the balances not in silver measured in silver prices, but measured by gold values, thus paying 50 per cent more not only for the debts that we have incurred, but the debts that we may incur, and the current balance of trade against us. Change our system, and these silver-using countries, all of whom are our creditors, would drain us of the seeming surplus of silver that our gold advocates claim to be so much afraid of. Yes, it is time that we cut loose from the chains that are forged around us by the monetary system of England and, like the Numidian lion, assert our strength, and I believe in a few years the great clearing house of the world will be in New York instead of London, and America will wield the commercial scepter of the world.

Mr. PICKLER. Let me interrupt the gentleman to ask if that will not still be keeping silver as a commodity and not as a money metal?

Mr. BRUMM. I am treating it as a commodity, just as I treat gold as a commodity, for there is no such thing as dollars or money of the world. And here is the infamy of the false war cry of the goldites, "Money of the world," "Honest money," etc. Sir, it is the old cry of "stop thief," to divert attention from the truth—for what we bimetallists want is honest money of all kinds, not the favored gold dollar that is dishonest to the debtor and begets the unfavored silver dollar which is dishonest to the creditor; but we want the fair-play gold and silver dollar placed on an equal footing under the law, and then make both of them honest dollars for both debtor and creditor, and this can only be done by harmonizing their bullion value. Our foreign exchanges are all made with bullion, and the value of it will only rise and fall as it will be influenced by that grand talisman of power, "supply and demand," which the Rothschilds and their associates so well know how to control, and by their ability to manipulate become the rulers of the world. But the effect of my amendment will be to put a stop at once to the introduction of foreign silver; there will be no inducement to send it here, since they can get no more for it here than they can abroad, as I stated before, and this is another reason why I am opposed to free silver. I therefore beg the attention of the gentlemen who favor bimetallism to the fact that my amendment will prevent the rush of foreign silver, that some of you claim we could not heretofore take care of, and thus bring about bimetallism without creating a ripple on the financial surface.

I maintain, sir, that the question of parity is not controlled so much by the amount of silver or gold that is coined as it is by the equal opportunity for coining. That is, let the Rothschilds and speculators in basic money know that there is no limit to the coinage of either metal. They will at once see how useless it would be for them to attempt to corner either one or the other alone and by these horrible fluctuations bring repeated disasters upon us, for then they would have to corner both metals, which would make it so expensive that it would hardly pay them to do it, for their main implement of war is the antagonism of the two metals, by which they use the one to corner the other; therefore, by harmonizing the two you deprive them of their most potent engine of destruction. The fact that before 1873 there was very little silver coined in this country, though under the laws there was free coinage of gold and silver, and the foreign coinage of silver amounted to comparatively little, yet the metals maintained their parity, strengthens the position that I have taken—that is, that it is not altogether the question of the amount that is coined, but is largely a question as to the opportunity for coining in case a controlling of the supply and demand of the metal is attempted by the money sharks of the world.

Moreover, this would remove all danger resulting from the operation of the so-called Gresham law and thereby getting down to a silver basis, as it would instantly stop the throwing back on our market of our securities whenever there is a flurry in the money market. The reason our securities are thrown upon us at the time we are least able to take care of them is because they can always make the Treasury exchange these securities at par with gold values upon demand. Who ever heard of Canada or Argentina or India or Mexico or any other country having their securities cast back upon them when they are supposed to bring the lowest in the market? Even in the great crisis brought about by the failure of the Barings the securities were not thrown back upon South America, but were held, because there was no Government so foolish as to make of itself the medium that would enable them to exchange the securities at gold values. But, sir, unless some measure like this is adopted we will inevitably be forced into a single-standard country, and that standard will be silver, for our system gives them every opportunity to take from us all our gold and to force upon us all their silver.

For the last century this has been the operation of our cursed system, for proof of which let me remind you of the fact that England and all gold-using countries are not producers of gold to any extent. We are the producers of more than half of all the gold of the world, and although the balance of trade is, and has been for the last century, in our favor largely with these gold countries, yet they have increased their gold reserve, while ours is constantly decreasing. In the last century we have produced in round numbers $2,000,000,000 in gold, and have now at the highest estimates only $500,000,000 in the country, and of this but between $200,000,000 and $300,000,000 is in sight. Where, I ask you, has this gold gone? The arts have taken but comparatively little of it. The balance of it, sir, has gone to England and the gold countries, and is there being used to lash us into submission to their imperial will.

From the year 1849 to the year 1879 we produced in round numbers $1,500,000,000 of the precious metals, of which we exported over $1,000,000,000 in this short period of thirty years, and this, sir, was when there was no agitation of the silver question; but it was drawn from us for the payment of our debts held by foreigners and the interest on them and to settle balances due by us to silver not gold using countries.

Sir, until our foreign debt is paid we can not prevent a draft on our precious metals. Neither would the destruction of every greenback and Treasury note prevent that draft; but if the Treasury paid at its option, it would assist largely in maintaining the parity of the metals and by unlimited coinage and reciprocity would increase our ability to pay it just 100 per cent.

Sir, our foreign indebtedness draws from this country almost a million dollars every day, and is increasing from year to year. This can not last always. The remedy must be supplied, and that in a short time, or discredit, bankruptcy, and ruin must be the inevitable result. We must begin to liquidate our foreign indebtedness, and this can only be done by enhancing the value of our products with which we pay that indebtedness, and not by lowering their value.

All gold-using countries are comparatively fully developed. There is a surplus of wealth seeking investment. They can not have it at home. They will continue to seek undeveloped countries for their investments. None so agreeable, so opportune, and so safe as ours. If there should be a relative increase of investments with high rates of interest and dividends and a relative decrease of the value of products, it will take no great mathematician to tell you what the ultimate result of this must be. But besides this, sir, the evil affects us in another way. The silver-producing countries are threatening our manufacturing and agricultural industries. They produce their commodities at silver prices, and force them at this price upon the markets with which we are in competition at gold prices. Thus they not only lower the prices of the production, but by their cheapness force them upon the European gold-standard countries, thereby crowding the surplus product of the gold-standard countries on our markets as well as their own.

Sir, no tariff can be high enough to protect us against this evil, and I now appeal most earnestly to our protectionists to look at this question from that standpoint. To you I want to say that your attitude is the most incomprehensible and most inconsistent of any. When you talk finance you advocate the single gold standard, which you know means dear money, cheap prices, or the free traders' normal condition, with expansion of credit and a more uncertain basis of confidence. Sir, I am a protectionist, because I am opposed to cheap prices and a system of revenue that forces

me in competition with the foreigner on his so-called normal condition or low standard, and because I want a more isolated and distinctive American system based upon American prices, American conditions, and American civilization, and which can be made as little subject to fluctuation by foreign manipulation as possible, and I apply the same reason, the same rule, the same method, to the financial question that I do to the tariff question because I want the same results.

Why, do you know, sir, that American capital is even now seeking investment in Japan, not only because labor is cheaper in Japan, but because it is paid in silver, the material is bought in silver, it is completed in silver, and they make the profit between the silver and gold prices. Even American industries are abandoned here and taken to these silver countries, whose civilization is increasing and whose progress is recently second only to the progress of our own people; and how, I ask you, can we avert this terrible calamity unless we adopt heroic treatment and tell the gold-using countries we will no longer be made the cat's-paw to enable them to degrade and enslave us by giving both the gold and silver countries undue advantage over us?

How strange it is that so many of our protectionists, who denounce the theoretical free trader, and who are so heroic in adopting practical tariff methods for protection, out-Herod Herod in their devotion to the low-priced financial theory. In other words, they want tariff to raise prices and want monometallism to reduce prices. "Oh, consistency, thou art a jewel, indeed!"

Now, Mr. Speaker, in conclusion I wish to say that if the Republican party would only do this, first pass my amendment that would give the Government the difference in the coin value and the market value, which would enable us to coin only the American product of silver; next adopt that part of the Senate amendment which stops the Government from being the exchange banker of the world—then give us a practical revenue bill with specific instead of ad valorem duties, and such reciprocity as will enable us to pay our debts to silver countries with silver and open the markets of the world to our products; and finally place a healthy limitation on foreign immigration, and the problem is solved. Prosperity and happiness will be restored. Our glorious Republic will then progress and develop into greatness until it illuminates the world with its glory. [Applause.]

Oh, my Republican friends, it will not do to go to the people with mere promises. It will not do to say, "Yes, this is what we will do." Sir, I would rather go to the people with our banner to the front and proudly point to the acts we have done. Then say, with the mother of the Gracchi, "These are our jewels." Now, give us a House that will repeat, a Senate that will concur, and a President that will approve our acts—and the people will respond at the fall election with a mighty voice from all quarters of this great Republic, "Well done, good and faithful servants." [Applause.]

Extracts from speech of Hon. John G. Carlisle, February 21, 1878, in the House of Representatives, on Senate amendments to the bill (H. R. 1093) to authorize the free coinage of the standard silver dollar and to restore its legal-tender character (CONGRESSIONAL RECORD, volume 31, 1878, Forty-fifth Congress, second session, Appendix, page 41):

My position upon this subject is briefly this: I am opposed to free coinage of either gold or silver, but in favor of unlimited coinage of both metals upon terms of exact equality. No discrimination should be made in favor of one metal and against the other, nor should any discrimination be made in favor of the holders of either gold or silver bullion and against the great body of the people who own other kinds of property. A great Government should treat all its citizens alike, and whenever it attempts to do otherwise it will engender a spirit of discontent, which sooner or later must disturb the harmony if not the peace of society.

Page 43:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world. With an ample currency, an industrious and frugal people will speedily rebuild their works of internal improvement and repair losses of property, but no amount of industry or economy on the part of the people can create money. When the Government creates it or authorizes it the citizen may acquire it, but he can do nothing more.

Page 44:

The struggle now going on can not cease, and ought not to cease, until all the industrial interests of the country are fully and finally emancipated from the heartless domination of syndicates, stock exchanges, and other great combinations of money grabbers in this country and in Europe. Let us, if we can do no better, pass bill after bill, embodying in each some one substantial provision for relief, and send them to the Executive for his approval. If he withholds his signature, and we are unable to secure the necessary vote, here or elsewhere, to enact them into laws notwithstanding his veto, let us, as a last resort, suspend the rules and put them into the general appropriation bills, with the distinct understanding that if the people can get no relief the Government can get no money.

Coin Redemption Fund.

SPEECH
OF
HON. HUGH A. DINSMORE,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. DINSMORE said:

Mr. CHAIRMAN: I have hitherto refrained from participation in this debate. I have not believed that anything I could say would add to the literature of the subject or would influence the mind of any gentleman of the House on the final vote. It could not be hoped at this time, after so much has been said, after the mature reflection and earnest study of the subject brought forward by the pending measure, that I, or even one more competent to speak, could offer anything for the enlightenment of the committee. I have no such ambition. My only excuse for asking the attention of the committee is the duty which I feel incumbent upon me, representing the people of one Congressional district of this great country, to speak in their behalf, in the expression of their convictions and in contention for their rights as they understand them, upon what they consider the most vital question that engages public attention.

Too much has been said in crimination and recrimination in the division of parties on this subject. It is well known that the Democratic party, as well as the Republican party, is divided into two factions, each holding diametrically opposite opinions. Since the debate has begun gentlemen upon this side have deplored the fact that this discussion has been injected into the deliberations of the committee, and in doing so they are prompted by feelings which I admit are commendable in a measure, since they are hopeful of unity and concord in a party which we all love. But, sir, to my mind these injunctions are vain, and we might as well boldly meet the question which confronts us. It is one which will not down at any man's bidding, and we should at once recognize the fact that it is a battle to be fought out in the party, and I for one have nothing to disguise. So profoundly am I impressed with the importance of the question, and the justness of the contention of those who believe in the free and unlimited coinage of silver, that I hold it to be my duty to announce here and now that it is a question which admits of no compromise; and for one I intend, in my poor way, to strive to the utmost to commit the party to which I belong in its next assembly in convention, as it has committed itself in the past, to the free and unlimited coinage of silver. I am a Democrat and believe that the integrity of my party is vital to the welfare of our people under republican government. I should regret it as a great national calamity if that party should go into disintegration. I shall stand by it; and upon this question I have the more reason to do so in my belief that the best hope of the cause for which I stand lies in its success.

Mutual reproaches have been indulged in by gentlemen on account of recent events in the different States and the transferring of power from the Democratic to the Republican party. Particularly has this been so with reference to the State of Kentucky. Democrats have been charged with abandoning the platform. It has grown quite common all over the country for Democrats to declare that the national platform of 1892 was what they are pleased to term a "sound-money" platform, as opposed to the free-silver view.

Mr. Chairman, I want to enter my solemn protest against the justness of this position. There is nothing in that platform which warrants the assertion; there is not a distinct declaration in it on the subject which does not declare for the free and unlimited coinage of silver. It declares that "we hold to the use of both gold and silver as standard money, and to the coinage of both without charge for mintage, and without discrimination against either metal." These are distinct declarations of the party that are, notwithstanding anything more that was said, susceptible of but one construction. And the subsequent clause in the platform which refers to the maintenance of the parity of the two metals, either by international agreement or by prudent safeguards of legislation, can not be understood to change their meaning, but

only to indicate that by international agreement, if possible, bimetallism should be accomplished; and if not possible, then Congress should provide for it by law in the free and unlimited coinage of both gold and silver, and by safeguards of legislation provide for the maintenance of the parity of the metals.

Now, sir, I wish to ask in this connection if there has been any effort made by anybody in the Democratic party opposed to the free and unlimited coinage of silver, speaking in its behalf and upon its responsibility, to put on foot any legislation looking to the carrying out of the provisions of the platform which irrevocably committed us to the coinage of both gold and silver as standard money without cost of mintage and without discrimination against either metal. Every effort at legislation upon these lines has been met with obstructions, and when a measure passed both Houses in a Democratic Congress which only went the small extent of providing for the coinage of the seigniorage, it was overturned by the veto power of the President.

It is not for me to criticise public officials as individuals and I wish to disavow any intention on my part to do so. Each one must act within his own responsibility, under his own convictions, responsible to his people and to the high court of conscience, for the discharge of his personal duty. As for myself, I am impelled not only by the obligation which my party has assumed but my personal conviction that the welfare of the people of this country who eat bread by the sweat of toil and who are engaged in honorable and what should be fruitful industry demands that the volume of redemption money should not be kept within the narrow limits of a gold basis. We are already living upon this basis, and we have long witnessed the constant narrowing of the volume of money which represents all the property in our country, in proportion to the rapidly increasing interests which demand its use.

The contention of those who believe in the free and unlimited coinage of silver is that the constant downward tendency of prices of all commodities is due almost entirely to the fact of the elimination of silver from our money of ultimate payment, making gold the only money that measures values in trade and commerce at home and abroad.

Having no intention of going into the discussion of the details of this question, I shall only refer to them in passing, in the brief time which I shall occupy. The points are not new. This question has been fought over for so long that there can be nothing new in it; but the forcible presentation of old arguments, which to my mind are irrefutable, it seems to me should be sufficient to convince each and all not only that to continue the present system will constantly increase our distress and ultimately bring us to financial ruin, but also that the remedy is a prompt and resolute opening of our mints to gold and silver at a fixed ratio on terms of perfect equality.

To those who have taken the pains to investigate in a careful way conditions which have resulted from the adoption of the single gold standard by the civilized world, applying their investigations to our own country, it is strange to me that the result is not appalling. Our friends upon the other side, always ready and watchful to attribute everything to the effect of a protective tariff system or the lack of it, have contended that our great difficulty is lack of revenue to defray the expenses of the Government and lack of confidence in the Administration of the Democratic party. They may convince manufacturers that such is the case, but I do not believe the country can be deceived. A surplus of revenue would not arrest the downward sinking of prices, dragging with them the prosperity of the people. The gold people in all parts of the country, particularly Democrats, have told us persistently that the difficulty was a lack of confidence on the part of the people, growing out of the fear that the Government would pay its debts in a cheap and discredited money. The President of the United States and the Secretary of the Treasury have uniformly used this argument, and reiteration of it has been constantly dinned into our ears here.

This was the excuse given by the Government for the contract entered into with the bankers' syndicate for the issuance of the bonds of January, 1895. We were told in a special message from the President, when asking for authority to issue bonds payable in gold rather than in coin, as the law now provides, that he would be driven to this expedient; that capitalists could not be induced to take the bonds on favorable terms when they were confronted by the possibility of having to receive depreciated silver dollars. But only a few days were required to make it obvious to the world that there never was the slightest ground for fear of the credit of the United States. And the quotations for the same bonds, payable not in gold but in coin, immediately afterwards showed beyond question that they could have been sold on such terms as would have saved the Government several millions of dollars that went into the pockets of the shylocks who have from the beginning reaped the benefits of this destructive financial system.

Mr. Chairman, there is no belief stronger in my mind than that the credit of this Government never has for one instant been impaired or shaken in the minds of the people of the world, and every transaction of public business has made this manifest. Every gentleman who speaks for the gold standard in pathetic tints paints the picture of dishonor of this proud Republic repudiating her debts and paying less than her obligations demand. This, sir, is waste of sentiment. There is no man who believes with me on this question who for a moment assents to the idea of repudiation, or that anybody wishes to pay our debts with debased money. We hold it to be the right of the Government to pay its debts in the money of the contract, and that money is coin, either gold or silver, at the option of the Government. Many private contracts have been made for payment in gold. All others, either public or private, have been made, in view of the law authorizing payment in gold or silver, at the option of the debtor, and of the repeatedly expressed purpose of all political parties to return to silver coinage. All the while gold has been rising steadily in value, making each year the dollar of debt harder to pay. Since and by demonetization its purchasing power has been almost doubled; and yet when we insist that the creditor should be compelled to accept the dollar of the contract, which he agreed to take, instead of this enhanced dollar of increased value, we are charged with dishonesty and a willingness to dishonor our country.

We believe, sir, that the very moment the Government of the United States manifests its purpose in good faith to establish bimetallism by the opening of its mints to the free and unlimited coinage of silver the wide hiatus which has been created between the two metals by the policy of governments, by the demonetization of the white metal, will be closed up, silver going up to meet gold coming down. Increased demand for silver as money will send it up in the markets of the world, and the demand for gold being relieved by that much, it will descend to its normal place, side by side with the silver dollar.

I presume at this time that there are very few individuals who will deny that gold has been enhanced in value. I know that the better informed of those people who have advocated the gold standard admit that there has been an enhancement of gold. No less a person than the distinguished Senator from Ohio [Mr. SHERMAN] has committed himself irrevocably to this idea. But they tell us that we are unable by legislation to inject value into a depreciated silver dollar. My friend the able member from Louisiana [Mr. BOATNER] has even now reiterated that oft-repeated statement. Can not legislation undo that which it has already done? If legislation has deprived it of its value, reverse legislation, under like conditions, ought to restore it. It seems to me that is clear.

When we assert our belief in the possibility of restoring and maintaining the parity, the gold-standard advocates cry out with airs of triumphant confidence, "How are you going to do it? You have not told us how it can be done!" The answer has been given to them a hundred times. Open the mints to the free coinage of both metals at the ratio of 16 to 1, thereby creating a demand for every ounce of silver bullion in the world for money use, and the rate fixed for the ratio will fix the price of the bullion wherever it is in existence.

If the answer is not sound, is not correct, it then furnishes ground for argument, for legitimate discussion. But gentlemen are content to waive it aside with contemptuous expression, and do not even attempt argumentative answer. It will not be necessary to have the silver coined to give it the vitalizing growth in value; the fact that it can be coined will impart it.

The theory of overproduction has been so thoroughly and satisfactorily exploded that nobody can stand on it consistently for a moment. If legislation could take its value away, I insist, sir, that reverse legislation can restore the value which has been taken from it. We do not rely upon the force of argument alone that this will be true; we have experience to enlighten our minds. We have witnessed whenever there has been any legislation tending in any wise to increase the use of silver as money that silver as a commodity has responded with sensitive alertness and has invariably gone up in the markets. Was it not so when the Bland-Allison Act was passed providing for the coinage of $2,000,000 worth every month? And when there had been a slight retrogression and the Sherman law was passed in 1890, repealing the provisions of the Bland-Allison Act and substituting the purchase of 4,500,000 ounces instead, was there not an immediate and instantaneous increase in the value of silver in the markets of the world?

Let me give an object lesson on this point. At the time the silver-purchasing law of 1890 was passed I was representing the United States Government at a foreign court. At the time of the passage of the law I happened to be in the city of Yokohama, Japan. Under the regulations of the Department of State I was in the habit of drawing my drafts on the Secretary of State for gold. Gold not being in use in that country, I converted these drafts into silver dollars, Mexican dollars or Japanese yen, which were of about the same value, to defray my individual expenses and the expenses of the legation in my charge. At the time I had some drafts in my possession, drawn on the Secretary of State, for gold dollars, and took them to the Hongkong and Shanghai

bank to convert them into silver dollars. When I presented them the cashier smiled and said, "You ought to have come yesterday." Upon asking why, he said, "The Sherman law. We have just received news that the Sherman law has been passed and silver has gone up, and you lose about 4 per cent on your drafts." Will gentlemen now tell us that legislation does not affect the value of silver, if the legislation which made so slight an increase in the use of silver affected it to this extent, not in the United States, not in the adjacent countries of Europe, but at the other end of the world, whose night is our day and whose twilight our dawn? [Applause.]

Why, sir, it responded instantaneously to our legislation and illustrated the truth of what was said by the Paris commission of 1868, composed of six bimetallists and six monometallists, that any country of sufficient commercial importance could, by the enactment of law, maintain the parity between gold and silver at a fixed ratio, not only in the country passing the law, but throughout the civilized world. But we are answered that silver did not remain up, but again declined. That is true, but not as is claimed. There may have been a slight actual decline in the value of silver, because the increased demand for it was as a commodity, not as ultimate money. But if its increased value had remained steady and stationary, the value of gold did not, but continued to rise steadily higher in comparison with all commodities, silver included, because with increase of business there was a constantly growing demand for it as the only money of final payment, the only measure of values. Silver practically kept its place side by side with all other commodities, the purchasing power of an ounce being as great as it had ever been until the repeal of the Sherman law and the closing of the Indian mints against it in 1893.

Suppose, Mr. Chairman, instead of providing for the purchase of 4,500,000 ounces of silver, our Government had thrown open its mints, increased its minting facilities, and fixed the ratio at 16 to 1, or any other reasonable ratio. The powers of our country are so great, its people so multitudinous, its interests so varied, its energy so unlimited, its wealth so unmeasured, its resources so extended, there can be no doubt that from that moment we would fix the gold price of silver in the United States at a parity with gold, and would thus control its price in every country of Europe and throughout the Orient in accordance with the price in the United States.

Mr. Chairman, America is great—the greatest of nations—I have no disposition to indulge in vaunting adulation of my country, but it has been truly said, and the statement is supported by the testimony of the most enlightened and learned scientists, that America possesses more wealth and greater population and more vital energy than the whole of Great Britain, Germany, and France, to say nothing of the Latin Union. And yet the Latin Union maintained the parity between the two metals and kept silver in the United States at a premium over gold, and for no other reason than the difference in the ratio, France coining it at the ratio of 15½ to 1, while the ratio in the United States was 16 to 1, and this after other nations had dishonored it. I do not admit, sir, that any nation on earth is more capable of accomplishment, of achievement than ours, and to those who declare themselves bimetallists, but are deterred from supporting the principle by fear that we can not maintain the parity, I point to the experience of countries that have put it to the test.

I have followed my friend from South Carolina [Mr. ELLIOTT], who has just taken his seat, who, having responded to his duty, as he sees it, of giving voice to the sentiment of his people, says that they are in favor of "sound money." He insists that we can not leave the gold standard. We must have "sound money." I desire to protest, Mr. Chairman, in behalf of my people against the use of that expression. We, too, want sound money, but we say that that money which is forcing constantly downward the prices of everything our people have to sell and depriving them of the just profits and remuneration of their labor is not sound money. [Applause.] We want the money which has been promised to the people of this country by every party that has dared hope for their support, bimetallic money. We want gold and silver; not silver as used at present. It is no answer to us to say that under the present system of financial affairs more silver dollars have been coined than heretofore in our history. They are not coined as ultimate money, and that is what we demand; that the volume of money which measures the values of things which the people of the country have to sell shall be increased, shall be restored to where it was before silver was "stricken down." I use that expression which has been criticised upon the other side of the Chamber.

Mr. Chairman, my friend from South Carolina says that his people believe in "sound money," meaning gold money, because, he says, our trade is with gold-money-using countries, the countries living by the gold standard; and he says that the people of the South, planters and producers, would be embarrassed by the adoption of gold and silver as standard money if, as the result of that, there should be a confusion of exchanges in the course of the transaction of their business.

The gentleman asks, "With whom do we trade? Do we trade with silver-using China and Japan, or do we trade with the countries of Europe that have adopted the gold standard?" Mr. Chairman, America to-day trades with the world. She does trade with China and Japan, and with Mexico and the South American States; and while she sends her bales of cotton to Liverpool she sends her bales of the manufactured products, her kerosene, and many other commodities to China and Japan, Mexico and South America, which are sold in those markets; and those who export and sell them in those countries receive the profits of their venture. They sell them to silver-using countries at silver prices, having paid gold prices here. But does anybody suppose for a moment that they lose the difference between gold and silver in this exchange? They sell for silver prices; and those are converted into merchandise, which is sold for gold prices in this country. Commerce is maintained in a healthful condition throughout the whole transaction, just exactly as when we had a depreciated currency in this country after the war, when in one of our most prosperous periods we conducted foreign commerce without any detriment, but with profit to our trade.

[Here the hammer fell.]

Mr. WILLIAMS. Mr. Chairman, I ask unanimous consent that the time of the gentleman from Arkansas be extended.

There was no objection.

Mr. DINSMORE. I thank my friend and the committee for further indulgence.

Mr. Chairman, those who worship at the shrine of the golden calf are fond of reasoning thus: They say we can not establish and maintain the parity of gold and silver dollars, and that the result will necessarily be two dollars, a good dollar current throughout the world and a bad dollar good nowhere, but one which our people will be forced to take; that the bad dollar will drive out the good dollar and leave us nothing but debased dollars. But that, nevertheless, many of the debts of the people being made payable in gold, they can pay in no other money; while they can never receive any other than the debased silver dollar for what they have to sell. Illustrations are indulged in. For instance, they say the importer will contract with the planter for 100 bales of cotton at the market price and force him to take payment in depreciated silver dollars. He will then take the cotton to Liverpool and sell it for gold, convert it into silver, and repeat the operation; the gold advocates assuming that the farmer loses the difference between the silver dollar and the gold one and that the importer gains it.

Are these gentlemen sincere? Is that argument ingenuous? Let us say, and I by no means admit it except for argument, that we are mistaken and that we could not create or maintain a parity; that the gold would go out and leave us on a silver basis. What will happen? They tell us that our silver dollars would only have a commodity value measured in gold. If so, they will stand in the same relation to gold as cotton and all other commodities; and the price of cotton on the plantation in the United States will be fixed in silver with reference to the market relation between silver and gold, because the Liverpool market, fixing the price of cotton in gold, will control and fix the silver price of cotton in the United States. Hence the farmer will get enough silver dollars for his bale of cotton to equal the value of gold dollars obtained for it by the exporter less the latter's profit and the cost of handling and transportation. A tyro in business would recognize this fact; yet our friends ignore it and argue otherwise. If it is a fact, what has the farmer lost? And what has the exporter gained? Obviously nothing. But the whole people have received the benefit of an increased volume of money and have lost the benefit of not a single gold dollar, because it is the money in the world and not in the United States alone—ultimate money, money of final payment—that measures our values. Locke expressed it in this way:

> The value of money in general is the quantity of all the money in the world in proportion to all the trade.

Again, it can not be denied—will not be by any intelligent person of fair disposition—that even if we should fail to advance silver to a parity with gold, the value or the purchasing power of the latter metal would be at least greatly reduced, resulting in increased prices and a more just relation between debtor and creditor. Our friends are not appalled by the fact that though our exports of farm products have more than doubled since 1873 they return to us less money than then. They say it is overproduction, yet investigation discloses that consumption is decreased per capita. They say there is an overproduction of wheat, yet it is known and admitted that the wheat-eating people of the world consumed per capita one-sixth of a bushel less than in 1881, when our crop brought high prices in the markets. This is true of other farm products. When confronted with these facts we are told to wait yet a little while longer until "confidence is restored," and that then all will be well. But while we wait for confidence, though in profound peace with all the world, we must issue bonds every few months, imposing a heavy debt upon posterity as a result of our own folly.

The people are tired, Mr. Chairman, awaiting the fulfillment of the prophecies of the gold theorists in this country. We were told that prosperity would follow immediately upon the repeal of the obnoxious Sherman law, but relief has not come. We were promised revival of business and prosperity, but the revival did not revive, and prosperity lagged; and though God has blessed us abundantly in every provision of nature the stagnation of our industries and the languishing of our people cry aloud against the present ruinous system, that fulfills no prophecy of good but every one of evil, and demand the redemption of promises and the consummation of our hopes and ambitions by legislative provision for the promotion of the public weal. Even experiment would be better than the existing vicious system, which stands in the path of our welfare.

Now, in conclusion, Mr. Chairman, I do not deny that the return to the bimetallic standard would lessen the profit of the people who hold the debts resultant from those debts. I do not deny that it would lessen the amount of the toll which the capitalists of the country levy upon those who labor and delve; but the fact of their loss is the gain of the laborer and producer and the debtor. Their loss is but the just relinquishment of unearned gains acquired by the increased value of money. To my mind, sir, it is abhorrent that idle money should draw interest to its holders from poor debtors. Under a healthful and just system no money can earn profit other than active, circulating, invested money.

The justness of our demand, moreover, lies in the terms of the contract and assurances which have been given the people of this country that silver and gold should be the money of final redemption. In the name of my people I demand it. I can submit to the taunts of those who tell us we have not progressed. I have no ambition, sir, to be that kind of a progressionist. I am not a financial progressionist in that sense, nor am I a financial contortionist. I plant myself firmly and erect upon the Constitution of my country, which declares gold and silver to be the money of our people—the Constitution from which Webster said, in speaking of this particular provision of it, that neither any State nor Congress could take anything away. I stand upon the platform of my own party, which has declared for bimetallism and promised its restoration. I hold up the faith of the people in those promises, and in their name demand their fulfillment; and never, Mr. Chairman, will I yield my influence to failure to perform them and carry out our plighted pledge in letter and spirit to a full consummation. [Applause.]

Coin Redemption Fund.

SPEECH

OF

HON. H. ST. GEORGE TUCKER,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. TUCKER said:

Mr. SPEAKER: I can not give my sanction to the bill now before the House, though I should be very glad, if opportunity presented, to vote for the second, third, and fourth sections of the bill.

I have been unable, with the best thought I could give to the subject, to bring myself to the conclusion that the "free and unlimited coinage of silver at a ratio of 16 to 1" by the United States alone, *under present conditions*, would be of any benefit to the people of the country or consistent with good financial legislation. The key which seems to me should unlock the door to the judgment of every man in this House upon this question is this: Would such a step by the United States alone bring the value of the silver in the silver dollar up to par? For it is admitted that to-day the silver in the silver dollar is worth, commercially, only about 50 cents, while the gold in the gold dollar is worth 100 cents; that is, if a man takes a silver dollar and with a hammer mutilates the eagle or the Goddess of Liberty on its face and takes the mutilated coin into the market he can get only about 50 cents for it; but if you mutilate the gold dollar in the same way and take it to the silversmith you can get 100 cents for it.

Now, if the free and unlimited coinage of silver will increase the value of the silver in the silver dollar or so diminish the value of the gold in the gold dollar as to bring them together at par so that the one would be intrinsically the equal of the other, then indeed would the free coinage of silver be, in my judgment, a blessing to the people of the country. But if such action should fail to bring the commercial value of the two together, as I confidently believe would be the case, its enactment into law would prove equally disastrous to the country; for, Mr. Speaker, it would be putting upon the country two dollars of unequal value, the one worth a dollar and the other less.

What is meant by the ratio of 16 to 1?

When the Government was first organized, after the adoption of the Constitution, and gold and silver were recognized in that instrument as the money of the people, Mr. Hamilton, as Secretary of the Treasury, was called upon to formulate a plan by which gold and silver could be coined. He ascertained that in the commercial world gold was worth about fifteen times as much as silver, and therefore he concluded (in which Mr. Jefferson concurred) that if fifteen times as much of silver was put into a silver dollar as there was of gold in a gold dollar the two must be equal. From the very beginning of our Government, therefore, it was recognized that the gold and silver dollars in order to circulate freely among the people must be of equal intrinsic value.

So primal was this principle that in 1837, when the commercial value of silver and gold seemed to have changed, the Government deemed it necessary to change the ratio from 15 to 16 to 1, and that ratio has remained to this day. The Government, not only in 1790, when the ratio of 15 was first established, but in 1837, when it was changed to 16 to 1, recognized the necessity of the equality of the metals in any sound financial scheme, and yet, with this principle imprinted upon the very first coinage act of the Government and reasserted in 1837, it is now sought to be whistled down by the suggestion that the ratio adopted in 1837 of 16 to 1, when silver was worth $1.29 an ounce, is a proper and suitable ratio to-day for the free and unlimited coinage of silver, when an ounce of silver is worth only about 65 cents.

But some one will ask me, and is now prepared to propound a question, which I will anticipate, "Why should this be? The silver dollar of to-day you have just stated contained only 50 cents worth of silver, and it is recognized on all hands and received in business and all commercial enterprises just as a gold dollar is received. If so, then why would not the dollars which would be coined under a free and unlimited coinage act, though worth only 50 cents commercially and as bullion, be equal to the gold dollar as the silver dollar is to-day?" The answer is plain and evident. We have of silver dollars to-day 430,457,987, and the mints are closed against further coinage of them, except to a very limited extent, and the Government, which pays out about $500,000,000 a year in the conduct of its operations, has agreed to accept and receive each one of the silver dollars now coined at its face value whenever presented to the United States Treasury, and has pledged its faith by law and otherwise to do all in its power to keep the two metals at a parity. In other words, *the Government has gone security for them.*

The dollar has 50 cents of intrinsic value in it, and the Government has practically said by its action, "I will go security for the other 50 cents." If the Government allowed the silver dollar to stand on its own merits or on its own inherent value it would to-day be worth but little more than 50 cents. Take away the Government prop and down it would go. But in order that it may be used among the people, the Government has, in effect, put its name to the obligation, so that wherever it goes in the commerce of the country it promises to see that it shall be worth a dollar to every person that accepts it, and it boldly stands out as the guarantor of its solvency. But such would not be the case under the free and unlimited coinage of silver at a ratio of 16 to 1, for the Government would be no longer the guarantor or responsible for its solvency, and the silver dollar would stand no longer with the Government back of it as its security, as it does to-day as to those we have, but would stand on its own intrinsic worth and its own inherent value, as the gold dollar does. But even if the Government were to undertake the same relationship to an *unlimited* number of silver dollars, as contemplated by this bill, which to-day it occupies toward a *limited* number, its security would not be sufficient to keep them at par, for its plighted faith, however sincere, could never be equal to the unequal task of maintaining at par an *unlimited* number of depreciated dollars with *limited* credit. Every gentleman must understand this distinction.

My friend who sits before me is worth $10,000. He owes me $5,000, and I gladly and willingly take his note for it, knowing it to be good. But can it be said that because the gentleman's note of $5,000 to me is good his note for the same amount to 10, 15, or 20 gentlemen around me would be equally as good? Or could it be contended that because the $5,000 note to me is good an indefinite number of $5,000 notes issued by him would be good? You see at once that there is a limit to his credit, and that limit is gauged by the proportion of his obligations to his assets, and so it is with the Government.

If, as I have said, the Government in effect goes security for the 430,000,000 of silver dollars we now have out, and they are thereby made equally as good as gold, could the Government undertake to carry an unlimited number of silver dollars with only

a limited credit? This being the case, and I think the facts can not be successfully denied, the question again recurs, could the United States alone among the nations of the world by its action maintain the free and unlimited coinage of silver at a ratio of 16 to 1 and keep the two metals at par? Now I do not subscribe to the doctrine so often advanced that if we had the free and unlimited coinage of silver at 16 to 1 the dollar resulting from it would be a 50-cent dollar, but I contend that it would be a dollar less in value than 100 cents.

It can not be denied that if you take from a substance one of its qualities or one of its functions that substance will be diminished in value to the extent of the value of the quality which you have taken from it.

Equally true will be the fact, under like conditions, if that quality or function is put back into the substance, its normal value will be restored. This, it seems to me, is a common-sense principle; and so we are met with the argument that under the act of 1873 the Republican party took away from silver one of its most important, if not the most important, quality it possessed, namely, that of being made into money freely and without limit, and that, therefore, silver has gone down in price until to-day it is worth about one-half of what it was in 1873.

This argument would be conclusive to my mind *if the conditions were the same*, but no student of this question can look at it for a moment without seeing that the conditions are absolutely and entirely changed. In 1873, at the time of the demonetization of silver, the silver in the silver dollar was worth $1.03. Since the act of 1873 it has constantly gone down; but why? Since 1871 Norway, Russia, Sweden, Denmark, France, Greece, Italy, Roumania, Switzerland, Bulgaria, India (who annually consumed $40,000,000 of silver), and the United States, have refused to admit silver to their mints for free and unlimited coinage. If, then, it required the powerful cooperation of those great countries with the United States to keep silver at a par with gold in 1873, how can we expect the United States alone to do to-day what it required them all to do in 1873?

Now, let me illustrate, so that gentlemen may not misunderstand me. If I offer my friend here a horse for $100, and he agrees to take him at that price, and just as the bargain is about to be concluded I say to him, "I sell you this horse on one condition, and that is that you are not to plow him," my friend will answer at once, "I like the horse; I think he is worth $100; I am willing to give you that sum for him; but one of the chief values of the horse is to plow with him, and if you put that restriction on him, that he is not to be plowed, I can not give you the $100 for him, but I can only give you $50."

If, however, I yield to my friend and take the restriction from the horse and say you may plow him, the value which has been taken from him will at once be restored; and so if the United States in 1873, after the demonetization of silver, which tended to destroy one of its most valuable qualities, had immediately or shortly after by the action of the Congress restored it to its original free-coinage privilege I doubt not that the value which had been taken from it by its demonetization would have been immediately restored, at least for the time. But let me carry my illustration a little further: Three years ago a gentleman came to this city with a horse to sell. He went to a dealer who, after examining the horse, agreed to give him $150 for him. During his stay in the city he had noticed the cruelty exhibited toward horses which were working in the street cars, and after the bargain had been struck he said to the dealer, "I must make one condition on the sale of this horse, and that is that he is not to be worked in the street cars." The dealer said, "I can not give you the $150 for your horse, though it is worth that, because one of the chief values of horses in this city is that they can be worked in the street cars," and so my friend took his horse back home. Last week he came back with the horse, and though the horse was three years older, his condition was even better than it was when he first presented him to the dealer, but when he went to the same dealer and told him that he had brought him the horse for which he had offered him $150, and that he was willing to take the restriction from him that had been imposed when he was here before, the dealer at once replied, "Three years ago I was prepared to give you your price for the animal, but to-day *the conditions have entirely changed.* Whereas all of the street-car lines in the city were propelled by horsepower three years ago, to-day there remains but one, as electricity and the cable have supplanted the use of the horse."

This illustration gives the exact condition of silver in 1873, twenty-three years ago, and to-day. The great nations of the world which I have just enumerated, including the United States, all declared against the free and unlimited coinage of silver, which action tended to destroy its value. Now, then, can its value be restored to-day by the action of the United States alone, when the demand for silver has been so circumscribed and cut off by all of the great countries of the world by refusing it admission to their mints? This, Mr. Speaker, is the test which controls my vote on this bill.

If I could believe that the action of the United States alone would bring the intrinsic value of the silver dollar up to par, I should welcome it as one of the most important measures that could be brought to the attention of the American Congress. More than that, sir, I would vote most cheerfully, as I have done before, for any measure looking to the free and unlimited coinage of silver, with the addition of enough silver to the dollar to make it the equal of any other dollar.

I believe that the present bill would tend to increase the value of the silver in a silver dollar. But how much? Can any gentleman here tell how much? Would it go to 60, 65, or 70 cents? No human eye can discern the point, and no human wisdom has been able to fix it. It is all empirical—experimental. It is an untried sea upon which we are asked to embark. The safe, conservative policy is to give to the country only a dollar that is worth a dollar and not one dollar worth 60 or 70 cents running alongside another worth 100 cents.

For ten years prior to 1873 the average amount of silver mined in the world was about fifty millions, and silver then sold at $1.29 an ounce. For the year ended June 30, 1894, the world's product was two hundred and seven millions, and it is a recognized fact that where the supply of an article is increased and the demand remains stationary the price must fall.

What, then, must be said of a condition that shows the annual increase of silver in the world from fifty millions to over two hundred millions, while the great countries which I have just enumerated have declined to use it, and thereby diminished the annual demand for it $40.000,000.

And, indeed, the increase of the production of silver in the world in its relation to gold has been no less instructive, for in 1873 the world's production of silver amounted to $81,000,000, and of gold $96,000,000. In 1894 the world's product of silver amounted to $216,000,000, while that of gold was $180,000,000. That is, while the production of gold increased not quite *double* in that time, that of silver was nearly *trebled;* or if we look only to the product of the United States at those dates we find that in 1873 $35,000,000 worth of silver was produced by our mines and $36,000,000 worth of gold, while in 1894 we produced $64,000,000 worth of silver and $39,000,000 worth of gold—that is, the increase of silver between those dates is nearly 90 per cent, while that of gold is only about 10 per cent.

So that while we believe the demonetization of silver in 1873 by the Republican party of itself did seriously affect its value, it will not be denied that the great increase of silver in the world and in the United States in its relations to gold must be considered among the causes which have produced the decline in the value of silver.

But it is urged by some gentlemen around me that so great and powerful is the United States and so extensive is the development of her resources in various directions that the demand for silver by the United States alone, without the cooperation of other nations, would be such as to restore it to a parity with gold. It must not be forgotten that in 1873, when silver was demonetized, only 8,030,000 silver dollars had been coined in the entire history of our country. It is true this did not represent the entire amount of silver used by this country, because the Spanish dollar was for a number of years in constant use, but it at least represented the demand of our country for our silver bullion for coinage purposes. Since 1873, when silver was denied admission to the mints freely, under the various limited coinage acts which we have had, about 430,000,000 silver dollars have been coined. We have coined and used and are now using about seventy times as many silver dollars as were used in the country from 1790 up to 1873, and in spite of these startling facts the price of silver has fallen from $1.29 an ounce to about one-half of that, or from a ratio of about 16 to 1 to a ratio of about 32 to 1.

EFFECT OF TWO DOLLARS OF UNEQUAL VALUE.

What now, I ask, would be the effect of the adoption of such a measure, which, as I have sought to prove, would result in the circulation of two dollars of unequal value? Who would it hurt? Who would it benefit? I claim, without fear of successful contradiction, that if such a measure should become a law bankruptcy and ruin would mark its adoption, and to every man in the country who is laboring under a load of debt it would be the beginning of the end. The laboring man would be the first to feel it. His wages would be paid him in the depreciated dollar, and his sweat would be coined into poverty and misery instead of comfort and happiness. The farmer would be the next to feel it in the payment to him for his produce in the cheaper money. The merchant would be the next to feel it in the exchange of his goods for a depreciated dollar. The last of all to feel it would be the capitalist and banker, who is always able, in any contention, to take care of himself.

Suppose it were possible next November to elect a President in favor of the free and unlimited coinage of silver at a ratio of 16 to 1, and with him a Congress favorable to his views, what would be the effect? A man who then owed a thousand dollars payable in the gold or silver dollar of to-day would have to meet his creditor at the court-house at the next rule day in his demand for the

payment of the bond because of the creditor's fear that if he waited to collect his debt until the free-coinage bill became a law he would have to accept the depreciated dollar for his debt. No extension of time would be given for the same reason. The election deciding the question would have been held in November, 1896, and the Congress would meet in December, 1897. The whole world would know what such a Congress and such a President would do. Eighteen months, at least, would probably elapse between the election of the President and Congress and the time in which the free-coinage bill could go into effect. That eighteen months would be strewn with the wrecks of bankruptcy and ruin. Every man that holds a bond against his neighbor would endeavor to collect it. Every mortgage upon the home and every trust deed upon the cabin would be enforced. The auctioneer's flag would be hoisted on every stile. No renewals of debts would be thought of. The fear of their payment in depreciated money would stop further indulgence, and the bill which had been looked forward to by many as the solution of all troubles and the panacea for all woes would be the source of their keenest torture and the consummation of their ruin.

The bank or the capitalist who lends money is not actuated by charitable motives in the lending. It is done to make more money. Can anyone doubt, with the fear of loss impending in the payment of his debt, that each creditor would be swift to see that his judgment lien was first upon the docket, while decrees of sale of "the old homestead" in every neighborhood would fill the land with "lamentation and weeping and great mourning"?

The only hope of the debtor class to-day is to tide over the hard times without being compelled to liquidate. Force them to pay up, as this bill would do if enacted into law, and their destruction would be certain.

GREENBACKS OUGHT TO BE REDEEMED IN COIN.

The fourth section of this bill, which I should be glad to vote for, practically requires the Secretary of the Treasury when greenbacks are presented at the Treasury for redemption to pay out gold and silver alike. In round numbers we have to-day $350,000,000 of greenbacks as currency, which are debts against the Government, but, unlike the note given by one man to another for a debt, they are not canceled when redeemed by the debtor (the Government), but by a specific law are required to be reissued. When a man pays his note of a hundred dollars to his neighbor the note is canceled and the debt extinguished. When the Government pays a hundred dollars in greenbacks by redemption they are not canceled, but by law are required to be reissued in the payment of the current expenses of the Government. So that the greenback is, under existing law, a continuing obligation of the Government, which is being continually redeemed and reissued. By paying them the Government is not relieved of its debt, because it is required to reissue them.

These greenbacks, by a law of Congress passed in 1869, are payable by the Government in coin, which means gold or silver, but, by a construction of the Treasury Department, which has existed for some fifteen years or more, the "coin" has been construed to mean gold at the option of the holder, as if an obligation by one man to another to pay a hundred bushels in grain must be paid in wheat, and not in corn or oats, at the option of the holder of the note. This construction of the Treasury Department, in construing the word "coin" to mean gold, at the option of the holder, is sought to be justified on the ground that such action is necessary in order to maintain the parity between gold and silver.

In addition to the greenbacks, under the Sherman law of 1890 (which the Fifty-third Congress promptly repealed), there have been issued by the Government $150,000,000 of obligations, known as Sherman notes, also payable in coin. By the same process of construction these notes are redeemable at the option of the holder in gold. So that there exists to-day $500,000,000, in round numbers, of outstanding obligations of the Government payable in coin, but by said construction held to be payable in gold at the option of the holder.

RAIDS ON THE TREASURY.

The trouble which the Treasury Department is suffering from, and has been suffering from for the past few years in the maintenance of the gold reserve for the redemption of these notes, is due, in my opinion, to the construction put upon the word "coin" by the Treasury Department, first under a Republican Secretary of the Treasury and since uniformly followed by his successors. The process is simple: The greenback is presented to the Treasury, the holder demanding gold for it; the gold is paid, the Treasury loses it, and gains in its stead the greenback for which it was exchanged. If the process stopped there it would be all right, but the law requires that the greenback which has been redeemed at the expense of an equal amount of gold taken out of the Treasury must be reissued, when it speedily falls into the hands of the speculator, and he brings it back to the Treasury to take out its equivalent in gold again, and so the process continues, and becomes an endless chain, or an endless raid upon the Treasury by the speculator, and an audacious attempt to break down the credit of the Government.

To meet this trouble and to preserve the gold reserve it has been earnestly contended that the greenbacks and Sherman notes should be retired permanently by issuing $500,000,000 of gold bonds with which to cancel them.

This proposition is not only one which I believe fraught with great danger to the people, but it is admitted on all hands that it can not in the near future be accomplished by any party. The distinguished Secretary of the Treasury in the last Congress proposed a bill which would have greatly relieved the situation, if not entirely, providing for the retirement of the greenbacks and the substitution of State-bank issues in their place, but it hardly received a respectful consideration from either party in the country, so that it seems to be a settled fact that at least for two or three years, under present conditions, nothing will be done to retire the greenbacks, and we are to stand in the same position in which we find ourselves to-day, for the present Congress seems both unwilling and afraid to suggest any remedy.

THE PRESENT QUESTION.

The question is, Can the country afford to continue its present mode of procedure, issuing bonds to secure gold to put into the Treasury to preserve the gold reserve, which may be in twenty-four hours taken out of the Treasury, and a demand for an additional sale of bonds be made at once to replenish that which is already gone? In other words, can the country stand what may be the unlimited mortgaging of the revenues of the Government for the future to obtain gold which may be taken from us the day after it is put into the Treasury?

The credit of an individual may be lost in two ways—first, in his failure to pay his obligations as agreed, or secondly, in mortgaging his assets or estate so that in the near future he will be unable to pay. The condition presented to-day is just this: If the Government fails to pay its obligations in gold, as claimed above, by reason of the failure to maintain the gold reserve, it may go to protest. If the Government, in order to pay its obligations in gold, mortgages its revenues indefinitely for the future by bond issues, its credit will be as certainly destroyed as if it failed to-day to pay its obligations in gold. The one is just as certain as the other. There is no escape from it. What, then, should be done? What, then, is the remedy for the Treasury Department, the object or plunder by the speculators? It is this, to firmly and positively announce that the raids made upon it for personal aggrandizement at the expense of the public credit must stop; and that a presentation of the Government's obligations, payable in coin, will be met by coin, as agreed upon in the contract—that is, in gold and silver. Such a process under any circumstances could not be considered a breach of public faith. Such a process, as against the studied and settled policy of the speculator to fleece the Government, would be only just and proper.

SYSTEM IN FRANCE.

The Bank of France, until the past few years, has carried more silver than we did, and yet it reserved the right to pay its obligations in both metals, not according to the option of the holder, but according to its own option. A distinguished member of the present House of Representatives has told me that in presenting a £600 note of the Bank of England at the Bank of France, in Paris, he was required, before the gold was paid him, to state for what purpose it was desired, the officer telling him that if the money was desired for domestic purposes he would be paid in gold and silver, but if desired to pay a gold debt, he would be paid in gold.

It is inexplicable to my mind to see how the payment of an obligation of the Government in silver or gold, according to the terms of the contract, could be a departure from the letter or the spirit of the obligation. It has been the boast of our Government that though the intrinsic value of the silver dollar to-day, of limited coinage, amounting in round numbers to 500,000,000 in circulation among the people, is only about one-half of the value of the gold dollar, it has yet been preserved at a parity with the gold dollar, and passes current with it in all exchanges. If such be the case—whatever be the reason assigned for the fact—that the gold and silver dollars are on a parity, which means equality, why should not the silver dollar be paid on the obligations of the Government, which, at least, are in part redeemable in it, according to the letter and spirit of the contract? Why should the Government refuse to pay out on obligations due by it the same money it receives on obligations due to itself? To refuse to pay it is to deny the parity; but the parity is admitted by all, and if admitted, then it should be so paid. On the other hand, to refuse to do so is to launch the Government on the dark sea of bond issues, the limits of which no human eye can discern, and to leave to our children a heritage of debt which "anticipates the labor of coming ages and appropriates the fruits of it in advance; which coins the industry of future generations into cash, and snatches the inheritance from children yet unborn."

Mr. Speaker, I will go with gentlemen in doing everything pos-

sible consistent with sound reason to restore silver to its position as primary money. I would gladly vote for the coinage of the seigniorage in this bill (as I have done before) were it disassociated from the objectionable feature of the bill. To the silver dollar we now have I would give the fullest recognition, and deny to it no power or capacity accorded any other dollar in the land. But I can never vote for a bill that would create one dollar less valuable than another, and I stand ready at all times to vote for any bill to legitimately increase the volume of currency and create a dollar *which shall be the equal of every other dollar in the land.* To do otherwise, with my belief of the result, would be little short of criminality.

Believing, therefore, as I do, that the enactment of this bill into law would result in the impoverishment and bankruptcy of the people whom I represent, and the destruction of the public as well as the private faith, I can not give it my sanction.

Extermination of the Alaska Seal Herd.

SPEECH

OF

HON. MARTIN N. JOHNSON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 25, 1896.

The House having under consideration the bill (H. R. 3206) to amend an act entitled "An act to prevent the extermination of fur-bearing animals in Alaska," and for other purposes—

Mr. JOHNSON of North Dakota said:

Mr. SPEAKER: The report (No. 451) of the Committee on Ways and Means on H. R. 3206, "A bill to amend an act to prevent the extermination of fur-bearing animals in Alaska," concludes with the following language:

Your committee therefore unanimously recommend the passage of the accompanying bill.

That is true. There is no minority report, and no opposition, factious or otherwise, to the passage of the bill. It does not follow, however, from this unanimity of conclusion that there is any unanimity of opinion as to whether the effect of the bill, if it becomes a law, will tend to the preservation or the extermination of the seal herd. For my own part, I am frank to say that I believe the effect will be to facilitate the extermination of the herd promptly, "decently, and in order."

I do not know what the chairman believes on this point, but his testimony agrees with my belief.

On page 13 of the official report of the hearings, February 18, 1896, we read:

Mr. HOPKINS. This bill will result in the extermination of the seals?
Mr. DINGLEY. Yes.
Mr. HOPKINS. And put an end to the policing of Bering Sea and that expense?
The CHAIRMAN. Oh, certainly, when the seals are killed.

Neither is there among those who agree in opinion as to the effect of the bill any necessary unanimity of emotion in contemplating the result.

In the Fifty-third Congress the word "decrease" as applied to this herd was preceded by the adjective "alarming." The report now before us betrays no emotion, evidently viewing the inevitable with philosophic complacency. For myself, I must look upon the unavoidable extinction of such wild beasts as the buffalo and the fur seal not entirely without sentimental regret, but yet, after all, as "a consummation devoutly to be wished." I am not sure of the unanimous concurrence of all my colleagues on the committee in these views, but I am sure that my own convictions grow stronger from year to year the more I study the subject.

When a similar bill was under discussion last year I said (page 3323, volume 27, CONGRESSIONAL RECORD):

Mr. DINGLEY. I yield five minutes to the gentleman from North Dakota [Mr. JOHNSON].

Mr. JOHNSON of North Dakota. Mr. Speaker, we have tried and failed utterly to protect this seal herd. You might as well try to restore the buffalo to the Western plains, or to turn the prairies of Illinois and Kansas into wolf pastures, as to try to set aside the Bering Sea as a preserve for this seal herd. The fur seal should have disappeared before man appeared upon the globe. He belongs to the Glacial epoch. His nature is such that it is utterly impossible for him to live in contact with civilization. He can not be tamed. He utterly refuses to touch food in domestication, and when pursued by man, especially on shore, he is incapable of either defense or flight. He has disappeared from every corner of the globe where he has come in contact with civilization.

Nothing but a very curious combination of the late discovery of the land and the almost perpetual fogs at sea in that part of the world has preserved this herd. It is bound to go. You can spend millions on it, but you can not save it. The fur seal belongs with the mastodon, the Irish elk, and the great auk. Instead of trying to struggle against nature; instead of trying to accomplish the impossible; instead of looking with alarm upon the destruction of the seal herd, as the committee say in their report, let us look with complacency upon the government of the universe as we find it.

Not by employing the entire Navy can you preserve that seal herd over five years. Let us not throw away any more good money in resisting the inevitable. We did very well for twenty years under the Alaska Commercial Company's régime. From 1870 to 1890 they took something like 100,000 prime male seals a year without detriment to the herd, and the Government made some $6,000,000 from this source; but there it stopped, and you can never restore that industry again. Last year we only got $500 all told as the revenues of the Government from this business, while our expenditures, if we include the Paris award, were nearly a million. In fact, for the last three years the total receipts of the Government were only $71,000.

It is not an American industry. There are not 500 American people who earn a living out of the business. The company has a contract with the Aleuts, with the natives who were transported to the Pribilof Islands for the sole purpose of working for this company, that they shall have a monopoly of this labor. Not a white laboring man gets employment there. In consideration of their good behavior and doing their work in a certain way they have a contract for the monopoly of the entire labor, and for the last three years we have appropriated about $19,500 a year as a part of the pay of these employees; for it amounts to that. It has appeared in the sundry civil bill as being for fuel, food, and clothing for these natives. These Aleuts are not natives of the islands. They were brought there for the purpose of working for this company, and they have the exclusive right to work for the company. That is all the labor the business furnishes so far as these islands are concerned.

Then, when the skins are removed they are all carried to London. Not one of them is tanned in America. There are in London 50,000 people who find employment in dressing these skins. Mr. Blaine in his letter to the British minister stated that $12,000,000 had been earned in England as wages by the laboring men there in the dressing of these skins.

There are no more laboring men employed in that business in America than there are employed in a single store in this city or on a single farm in North Dakota.

It does not amount to a commercial interest. Instead of paying out another quarter of a million of dollars on an international commission, as we did last year, let us stop negotiation and save what there is left of them by harvesting the entire herd when they go ashore next June. We paid last year $224,000 commission expense, $158,000 (not including pay and subsistence of officers and men) for naval and $40,000 for revenue-cutter patrol of that sea, besides over $50,000 in other expenses. Our only chance to save anything out of the wreck is to kill and skin them all this summer. I propose to offer an amendment, if opportunity is given, to strike out that part about the international commission.

The last section of the bill, which is simply to capture the herd next summer, is all right. For many years that herd was simply seen twice a year, like a flock of birds of passage, as it skipped through the passes of the Aleutian Islands, its summer resort being somewhere in the Bering Sea, to its winter resort in the Pacific Ocean. For many years the Russians employed quite a fleet in trying to find either their summer or winter resort. They were especially anxious of finding their winter habitat, supposing that the furs would be more valuable in the winter than in summer. Finally, about a hundred years ago, a Russian navigator discovered their summer resort in the midst of Bering Sea.

Their winter resort or tour is now known both to us and the English. Our Treasury agents discovered and reported their course prior to 1890, but the Treasury Department very properly refrained from publishing the reports. In 1892 Sir George Baden-Powell employed four English war vessels to follow the herd and discover their winter course. He publicly boasted of his success in a speech on his return to London.

English and Canadian sealers furnished with this knowledge by the English Government now have the herd at their mercy. Exposed as our seal herd now is, the herds in the South Atlantic, South Pacific, Indian Ocean, and Japan Sea have all vanished. Ours is doomed. Let it go without regret. They eat 50,000,000 pounds of fish a day.

What has become of other herds? Captain Cook discovered seals on Desolation and South Shetland Islands, nearly south from Cape Horn. They were stripped of seal life in a few years—320,000 skins being taken in 1820 and 1821.

Kergulen Land, Southern Indian Ocean; discovered in 1772. In twenty-eight years 1,200,000 skins were taken there and the herd exterminated.

Crozett Islands, same ocean, same fate.

Mas-a-Fuera Island, in South Pacific, off coast of Chile; discovered in 1797; herd at that time estimated at 2,000,000 or 3,000,000; 3,000,000 carried to China in seven years and herd destroyed.

South Georgia, in the South Atlantic, produced over a million skins in a few years; herd extinct.

Coast of South America about Cape Horn teemed with seal life when discovered. Now only a few stragglers are found; not enough to pay to hunt.

As late as 1854 a small seal island less than a mile in diameter was discovered in the Japan Sea by Americans. A herd of 50,000 seals was exterminated in three years.

Now, there are only three herds left in the world.

First. A small herd on the Lobos Islands, in the mouth of the River La Plata; capacity, 5,000 to 12,000 skins per annum; protected by Republic of Uruguay.

Second. The herd on the islands of Copper and Bering, coast of Kamchatka; capacity, 40,000 skins per annum; protected by the Russian Government.

Third. Our Alaska herd on the Pribilof Islands; estimated from 6,500,000 in 1887 down to 175,000 in 1895.

It is idle to talk about restoring a seal herd when once broken up. It has never been done. In the Southern Hemisphere there are well-authenticated cases where a depleted herd was not hunted for fifty years—left undisturbed—and yet it did not recuperate. Our Alaska seal herd is an anomaly.

So long as that herd was only exposed to slaughter for a few days in the spring, while rushing between the Aleutian Islands in passing from the North Pacific to Bering Sea, and again for a few days in the fall, while passing the same points going back to the Pacific, so long as no man knew whence they came or whither they went or where they lived either in winter or in summer, they were comparatively safe. But when Pribilof discovered the islands of St. Paul and St. George, in Bering Sea, where the seals resort and stay in summer, then it became possible to exterminate

the herd any summer. They would have been so exterminated in a very few years but for the protection of the Russian Government.

Being safe in summer under protecting regulations and safe in winter under their ancient shield of secrecy as to where they were in the almost boundless Pacific, it was still possible for this herd to exist for a few years. But when the British Government sent four war ships into the Pacific for the express purpose of following the herd all winter and of revealing the route to Canadian sealers—when that expedition succeeded in its plan and published its charts, then the herd was doomed.

In addition to what I said on that point last year I wish simply to add a brief extract from the official report of the hearing of this year before the Committee on Ways and Means, pages 5 and 6.

(Interrogatories by members of the committee; responses by Mr. Hamlin, Assistant Secretary of the Treasury.)

Mr. DALZELL. The treaty was in view of the arbitration proceedings. Is it not under the treaty that award is made functus officio?

Mr. HAMLIN. No, sir; we are proceeding under the decision of the arbitration under that treaty and legislation enacted by both Governments to carry out that award. Great Britain might claim that this bill is practically a violation of the award; that the award was passed to protect the fur-seal herds, and you propose——

The CHAIRMAN. It was to protect them really on the high seas.

Mr. HAMLIN. Certainly. And you propose under this bill to destroy the rest—the subject of the treaty—as soon as the herd reaches the islands. Now they might say, we will thereupon allow our sealers to follow the herd in May and June up to the islands and to kill them in spite of the closed season.

Mr. JOHNSON of North Dakota. Do not they allow them to follow them during the winter, from November until the following spring?

Mr. HAMLIN. Yes, sir; but there is practically no sealing at all from November until about the latter part of January

Mr. JOHNSON of North Dakota. Is it known to the American sealers where this herd is during the winter?

Mr. HAMLIN. We know.

Mr. JOHNSON of North Dakota. You know because you have the reports. Have you published those reports?

Mr. HAMLIN. You mean the charts; we have regular charts.

Mr. JOHNSON of North Dakota. The British Government sent Sir Baden Powell for the expressed purpose of finding the winter habitat of the seals, and that information has been given to their sealers, and, as I understand it, that habitat is known to them, but I understand in the United States the information has never been published as to where that herd is.

Mr. HAMLIN. They are all published in the regular official report of the tribunal at Paris.

Mr. JOHNSON of North Dakota. When did the winter habitat of the seals first become publicly known?

Mr. HAMLIN. I should say that not until just before the time of the Paris award was their course definitely known with precision.

Mr. JOHNSON of North Dakota. That is, the British commission.

Mr. HAMLIN. This Government had a commission, as also did Great Britain. From that time the habits of the fur seal became definitely known. To-day I could almost tell you within a few miles on the chart where the herd is as it is going along up the coast toward Sitka.

With these charts, given first by the British Government to the Canadian butchers and pot-hunters in 1892, and to all the world in the report of the Paris tribunal in 1894, and now accessible to every pirate and poacher on the broad Pacific, with the herd already reduced from six and a half million in 1887 to a beggarly 175,000 in 1895, with "44,000 seals, mostly females, having been killed during the last season by the pelagic sealers," and with 30,000 dead pups, starved to death, counted on the rookeries last fall, does it not occur to members that we are a wee bit late in passing bills for the preservation of the Alaska seal herd?

With thirty-seven times as many seals in the herd in 1887 as we have now, with that herd then safely feeding in secret seclusion from November to June in the Pacific, and under our protection on the islands and in the Bering Sea—which we then held as a closed sea—from June to November again, we have seen this once splendid property almost destroyed.

Now, with only a miserable remnant, one-thirty-seventh, pursued and slaughtered all the year, and with the Bering declared an open sea, it is seriously suggested by some men to undertake to restore that herd! Such an impossibility I do not care to argue.

In this crisis, my countrymen, I regret exceedingly to have nothing better to offer you than the "consolations of philosophy."

THE GRAPES ARE SOUR.

When Ole Bull went to Moscow to play before the Czar he was requested by a pompous official music master of the court to first play a sample piece in order that said official might determine whether the music was really good enough for the Czar.

Mr. Bull replied: "I play either for money or for honor. Playing before you would involve neither."

I take it that Uncle Sam is playing either for money or for honor. Neither has been involved since 1890 in this miserable fur-seal business.

Is either money or honor in sight as far ahead as the lookout from the crow's nest on the ship of state can penetrate the mist of the future with his telescope? Hardly. The report states that—

The Government expended in 1894 about $450,000 in a vain attempt to prevent the killing of seals in Bering Sea.

That is true so far as it goes. We spent about that sum on the Navy alone. It is not mentioned in the report, but it is true, nevertheless, that we also spent in 1894 $56.439 on the Revenue-Cutter Service, $10,308 on salaries of agents, $18,319 on support of natives, $224.514 on Paris Tribunal of Arbitration, and that we never got a red cent of income to the Government from this fur-seal business.

As I figure the balance sheet, so far as money is concerned, for the last five years the account stands about this way:

Expenses.

Year.	Policing Bering Sea by Navy.	Patrol by revenue cutters.	Salaries of agents.	Support of natives.
1891	$133,281	$51,650	$15,896	----------
1892	233,931	66,672	16,071	----------
1893	183,067	47,385	11,168	$11,337
1894	452,768	56,439	10,953	18,319
1895	----------	148,677	10,308	25,563
Total	1,003,047	370,823	63,896	55,219

Total of four items foregoing		$1,492,985
Expense of Paris Tribunal of Arbitration		224,514
Damages tentatively agreed on by Gresham and Pauncefote, and recommended by Mr. Cleveland to be paid		425,000
Total expense for five years		2,142,499
RECEIPTS.		
In 1891	$46,749	
In 1892	23,972	
Total (no receipts in 1893, 1894, or 1895)		70,721
Loss to United States in five years		2,071,778

In addition to what I said last year and in support of the position that not only is there no money in this business now for the Government, but there never was a time in its palmiest days when the business furnished a living for 500 American citizens, I wish to quote from page 7 of the hearings. It was always a British industry, almost as exclusively so as any craft in London.

Mr. HAMLIN. No, sir; the North American Company, which rents the islands——

Mr. JOHNSON of North Dakota. But how many American men do they employ on the islands, for instance?

Mr. HAMLIN. Very few. But they have a force employed in Dutch Harbor and San Francisco.

Mr. JOHNSON of North Dakota. How many men do they employ in London to dress the skins?

Mr. HAMLIN. It has been estimated at from 7,000 to 10,000, but I think that is rather an overestimate. This force is employed by the London brokers and fur dressers.

Mr. JOHNSON of North Dakota. You think 500 Americans make a living out of seals, either by dressing the skins or catching the seals?

Mr. HAMLIN. As regards the North American Company, I should say perhaps not 500, but as regards American pelagic sealers, at least 500.

Mr. JOHNSON of North Dakota. What I want to bring out is that it is a British industry practically, and that 10,000 people in London make a living out of dressing the skins, and not 500 American citizens are lawfully engaged in the matter.

Mr. HAMLIN. I think 1,000 would be a fair estimate. I think it will not exceed 1,000 people.

Mr. JOHNSON of North Dakota. Do you not think these seals eat 50,000,000 pounds of fish a day, and would not these fish be of great benefit to——

Mr. HAMLIN. No, sir; they live largely on cod, and the cod fisheries of Alaska are inexhaustible, practically the greatest cod fishery in the world.

Mr. STEELE. How much a day did you say they ate of fish?

Mr. JOHNSON of North Dakota. They eat 50,000,000 pounds a day, enough to put a pound of fish before every man, woman, and child in the United States every day, if it was diverted from these seals and put on the table of American people.

Sections 1, 2, 3, and 4 of the bill provide for another international commission. I am heartily sick of international commissions, and am against these four sections.

The fifth section provides for killing the whole herd when they land next summer on the islands, selling the skins and covering the money into the Federal Treasury—estimated at $5,000,000—in the event of failure to get international action.

That is practical sense and the only way in the world to ever get back any of your money. I consider sections 1, 2, 3, and 4 harmless surplusage, and therefore support the bill as heartily as those who think only of those four sections, and who scarcely dream of section 5 being put in force. The American people are intensely practical and not given to bluffing. Our neighbors may as well understand that our financial welfare and selfish interests, as well as our sentiments of humanity, prompt us to end this history in one final chapter next summer.

I admit that another international commission might be profitable to a few individual American citizens, statesmen, and others in and out of jobs. I append the following itemized statement of expenses of the Tribunal of Arbitration of Paris:

Baron de Courcel	$2,412.50	
G. W. W. Gram	2,412.50	
G. W. W. Gram, personal expenses	1,737.00	
Marquis Venosta	2,412.50	
Marquis Venosta, personal expenses	2,991.50	
		$11,966.00

Arbitrators.		
John M. Harlan	13,000.00	
John T. Morgan	13,373.75	
		26,373.75
Counsel.		
James C. Carter	15,000.00	
James C. Carter, special appropriation	15,000.00	
E. J. Phelps	16,000.00	
E. J. Phelps, special appropriation	15,000.00	
Henry W. Blodgett	12,698.82	
Frederic R. Coudert	15,427.97	
F. W. Whitridge	3,500.00	
William Williams	5,848.81	
Robert Lansing	5,955.00	
Russell Duane	1,365.42	
A. Porter Morse	500.00	
John B. Moore	100.00	
		106,396.02
Agent.		
John W. Foster		15,000.00
Disbursing clerk.		
E. W. Halford		1,800.00
Clerks.		
John T. Coughlin	1,020.00	
Hubbard T. Smith	1,256.50	
Francis S. Jones	1,312.68	
William H. Lewis	1,824.50	
John W. Hulse	1,955.75	
J. Stanley Brown	1,965.00	
E. H. McDermott	1,421.06	
		10,755.49
Miscellaneous.		
Clerical services	8,967.65	
Traveling expenses, hotel bills, affidavits, etc	6,209.07	
Printing	18,375.53	
Ocean transportation	1,594.00	
Photographs, maps, etc	2,629.74	
Stationery	176.91	
Cablegrams	478.80	
Freight and expressage	951.18	
Hotel Continental, Paris	8,764.72	
Loss by exchange	219.00	
Miscellaneous, including documents, press clipping, cab hire, boxes, books, and office expenses in Paris ($155.53)	3,866.13	
		52,222.73
Total		224,514.39

I append a statement of the number of seals taken for all purposes on the seal islands during the years 1870 to 1890, both inclusive, together with the respective amounts paid by the lessees each year as rental and tax for the privilege:

Year.	Seals taken.	Rental and tax.	Year.	Seals taken.	Rental and tax.
1870	23,773	$101,080.00	1881	105,063	$316,885.75
1871	102,960	322,863.38	1882	99,812	317,295.25
1872	108,819	307,181.12	1883	79,509	251,875.00
1873	109,177	327,081.25	1884	105,434	317,400.25
1874	110,585	317,494.75	1885	105,024	317,489.50
1875	106,460	317,584.00	1886	104,521	317,452.75
1876	94,657	291,155.50	1887	105,760	317,500.00
1877	84,310	253,255.75	1888	103,304	317,500.00
1878	109,323	317,447.50	1889	102,617	317,500.00
1879	110,511	317,400.25	1890	20,995	
1880	105,718	317,594.50			

For purposes of comparison I also give the number annually taken since 1890, as follows:

Year.	Seals taken.	Year.	Seals taken.
1891	13,482	1894	16,031
1892	7,549	1895	15,000
1893	7,500		

Total number of seals lawfully taken on the islands in five years, 58,562.

The following table is also necessary to a complete statement of the case:

Contraband seal skins marketed.

Year.	Seals taken.	Year.	Seals taken.
1885	*13,000	1891	*45,000
1886	*25,000	1892	*46,000
1887	*34,000	1893	28,000
1888	*25,000	1894	55,000
1889	*43,000	1895	44,000
1890	*40,000		

*Includes Asiatic herd.

The report estimates the possible value of the catch at the final "round-up" next summer at $5,000,000. Of course, that is largely conjectural, depending, first, on the number of skins; second, on the price. We think the number would be not far from 175,000.

As to prices, I submit the following table of prices obtained for 124 lots of ordinary mixed skins at the last great annual sale in London:

Public sale of salted fur-seal skins at London, December 4, 1895.

[6,944 skins, salted fur seal, N. W. coast, 22,752 skins, chinchilla, salted fur seal.]

Lot.	Shillings.	Lot.	Shillings.	Lot.	Shillings.	Lot.	Shillings.
1	46	32	39	63	29	94	49
2	49	33	26	64	22	95	48
3	50	34	50	65	46	96	44

16	51	47	50	78	55	109	32
17	51	48	47	79	56	110	37
18	53	49	40	80	56	111	25
19	53	50	28	81	56	112	51
20	53	51	28	82	56	113	54
21	46	52	22	83	47	114	55
22	36	53	39	84	40	115	57
23	27	54	25	85	27	116	57
24	40	55	49	86	42	117	57
25	27	56	52	87	28	118	57
26	47	57	54	88	47	119	48
27	51	58	46	89	51	120	37
28	52	59	36	90	42	121	44
29	42	60	26	91	27	122	46
30	33	61	46	92	32	123	34
31	25	62	42	93	54	124	28

Average price, 41 shillings, or not far from $9.85 in our money.

As the seals lawfully killed on shore furnish skins very superior to the average—being selected males killed with clubs so as not to rend the skins, as must necessarily be the case where pelagic hunters resort to spears and firearms—I also append the London price of 11 lots of this grade, and give it for 1893 and 1894, in order to show the great fall in price on account of overstock:

Sales in London of Alaska seal skins, November 30, 1894, and November 30, 1895.

	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
November, 1894	72 10	79 0	90 9	89 0	89 9	92 0	{65 0 / 70 0}	61 9	69 0
November, 1893	90 1	100 3	114 6	109 1	108 5	101 0	80 0	72 0	77 0

Perhaps the knowledge that the enormous lot offered next fall by Uncle Sam was a positively closing-out sale to go out of business would enhance prices. Possibly the increased supply might "bear" the market. All that is conjecture. One thing is sure: If we once are rid of these expensive boarders on the bounty of our sea food we would have to ourselves, undisturbed, a shore line of 36,000 miles from Sitka to the Arctic, much of it traversed by the warm Japan current, loaded with seaweed, jelly-fish, and other fish food, swarming with cod and salmon and mackerel heretofore wasted on these wolves of the sea.

The Coin Redemption Fund.

SPEECH

OF

HON. IRVING P. WANGER.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 8, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. WANGER said:

Mr. SPEAKER: The hostility of the American people to an increase of the bonded indebtedness of the nation to meet the ordinary expenditures of the Government is alike reasonable and undoubted. And if the measure which passed the House, in lieu of which the pending bill has been returned from the Senate, had in any sense tended to justify the policy of the present Administration in antagonizing all propositions for supplying by custom-house and internal taxation the revenue necessary to the discharge of the demands on the National Treasury, it would have had united Republican opposition instead of general Republican support.

But as it followed another measure which would have yielded from forty to forty-five million dollars additional annual revenue and have greatly aided the revival of prosperity to agriculture, man-

ufactures, and commerce, and as it provided against the scandalous conditions attending the sale of bonds to a syndicate of foreign bankers, to their great profit and to the exclusion of patriotic American investors, and further provided for a great saving of interest and armed the Treasury with the power of defense in times of emergency it had our hearty support, and we can believe the public interest was not well served any more than the proprieties of legislative procedure were respected by the Senate in wholly changing the character of the measure from one of support to our existing financial system and monetary standard to one for the revolution of the latter.

We have the satisfaction that the negotiations or interviews intended to result in a renewed syndicate contract for the purchase of our bonds at 10 or more per cent below the market rates were abandoned and the opportunity given the American people generally to make an investment satisfactory to them and advantageous to the Government, although not so favorable to the latter as if the law permitted (as we proposed) the issue of bonds bearing a lower rate of interest. Specious as the argument that the higher interest bearing bonds realize an equivalent in premium, it is not borne out by experience, and while our measure was opposed by the Administration and its friends in this Chamber, President Cleveland, in the course of a recent newspaper interview, gave the following evidence substantiating our claim to this merit:

> Seldom, if ever, have I taken so much interest in anything as I have in the success of this bond issue. Both Secretary Carlisle and myself have had it very much at heart. * * *
>
> My preference would have been to have the present loan much more popular than it appears on its face, but we have done the best we could. The people who hoard small savings of gold or the equivalents of gold are unaccustomed to transacting business on the basis of which these bonds had to be issued. They are unused to premiums or to the formalities of making bids.
>
> If we could have sold them a 3 per cent gold bond at par, I think it would have brought out a good deal of this gold; but the only bond the law allows us to issue had to be sold considerably above par in order to keep the net rate of interest within reasonable limits.
>
> As I have said, I wish it could have been obviously still more of a popular loan, but from such information as comes to me from various private sources I am convinced that more small holdings of gold will be drawn into the Treasury by the present arrangement than appears on the surface. The small country banks, for instance, which are buying bonds for their customers, have made their bids through their New York and Boston correspondents, and this gives the loan the appearance of having been taken up by the big financial institutions at the money centers, although, as a matter of fact, not a little of it will ultimately come from the small investors.

The satisfaction of the President in the success of this bond issue is creditable to him, and, it is to be hoped, convinces him that the wealth and strength and patriotism of all the people is greater than that of even the most prominent New York bankers with their foreign allies, and will cause him to place less reliance than heretofore upon the wisdom of these bankers, a firm of whom, having a branch office in this city, said of the then proposed loan, in a circular dated January 9, 1896:

> We do not believe that the total public subscription to the proposed issue will approximate more than one-third of the amount needed, and that in order to save the loan from failure and to preserve the country's credit the Administration will be forced to sell the bonds to Mr. Morgan's syndicate. * * *

In view of the offers, exclusive of that from Mr. Morgan's syndicate, of from four to five times the amount of the loan, an example of persons wholly wanting in judgment of the American public can be found in this firm of bankers.

It has been said that the proposals for the recent one-hundred-million-dollar bond issue were invited before the Senate with the exercise of all dispatch could reasonably have been expected to act upon the measure and that therefore the saving could not have been realized in this issue, but the condition of the gold reserve is so contingent upon the existence of confidence respecting future conditions that with a zeal on the part of the Senate (which lacks a Republican majority) at all commensurate in like defense of financial ability and integrity, the depletion of the reserve fund would doubtless have ceased and with it the occasion for any further bond issue, so that the entire interest charge and the last hundred millions of increased indebtedness might have been saved. So much for our action and its actual and conjectural effect.

THE MEASURE NOW PENDING.

The Senate having substituted for our measure, which might have had Executive approval in view of the new light the President has had, a provision for the free and unlimited coinage of silver, we might resent the action as infringing upon the rights of the House and refuse consideration for that reason, but the proposition may have to be met some time in this Congress, although nothing could be more certain than a veto if it were adopted, and perhaps consideration is as well now as hereafter.

We now have in concurrent use at a parity gold, silver, and paper, and the American people desire this condition to continue with any enlargement of the volume of any or all of these forms of money and currency under national auspices which is safe and practicable.

The advocates of the pending measure claim that it will give us more money and better times, and if eloquence and vehemence were proofs the claim could be entitled to credence. But against it is the experience of all the past and the judgment of all the leading commercial nations of the world. While theorists in this country advocate an unlimited coinage by the United States irrespective of the action of any other nation, the profound thinkers of Germany, France, and England only favor bimetallism through international agreement, and concede that the unity of silver and gold at a fixed ratio can only be restored through that medium.

If I understood the concluding illustration of my friend from South Carolina [Mr. TALBERT], it was that he would not follow the example of the African who proposed to take to the woods rather than go on either of the two roads said to be before him, the one leading to destruction and the other to hell and damnation. It is to be assumed, therefore, that my friend will take one of those roads. [Laughter.]

Mr. TALBERT. Mr. Speaker, will the gentleman yield to me for a moment?

Mr. WANGER. Not at present.

The SPEAKER pro tempore. The gentleman declines to yield.

Mr. TALBERT. I simply wish to say to the gentleman——

The SPEAKER pro tempore. The gentleman declines to yield. The House will be in order. The public business will be suspended until order is restored.

Mr. WANGER. Notwithstanding my love for the gentleman, if he contemplates the journey indicated, no matter which way he selects, I am unwilling to bear him company. [Renewed laughter.]

I regard the illustration most apt as applied to the coinage proposition advocated by the gentleman as a way out of the difficulties oppressing the people, and that it would lead to measurable destruction, even if not to the other termination. Now I will yield to the gentleman.

Mr. TALBERT. I just want to say to the gentleman—I do not mean to interrupt him, for I have too much respect for him—I simply wanted to say that I stated that one party claimed if we had free coinage it would ruin the country, and the other party claimed that if we did not get it that would ruin the country. I just used that simile. I did not admit that either way would lead to these destructions at all.

Mr. WANGER. No; and you did not prove that your way would not or that the other way would. [Laughter.] And when it comes to displacing a financial system under which the wonderful development of our resources, wealth, and power has occurred during the last twenty-three years, and the readoption of a system discarded by nation after nation for relief from its disadvantages, the reasoning for the change should be logically unanswerable. [Applause.]

Now, I will take the liberty of returning an interrogatory to my friend. He said this was a question of manhood or of money. My inquiry is: Where does he find the highest type of manhood—in the countries having the gold standard or in the countries which under the law have the free coinage of silver?

Mr. TALBERT. Does the gentleman wish me to answer that?

Mr. HARTMAN. Will the gentleman permit a question?

The SPEAKER pro tempore. Does the gentleman yield to the gentleman from Montana?

Mr. WANGER. If the gentleman from South Carolina does not wish to answer the question.

Mr. TALBERT. I asked the gentleman if he wished me to answer it.

The SPEAKER pro tempore. To whom does the gentleman from Pennsylvania yield?

Mr. WANGER. To the gentleman from South Carolina at present.

Mr. TALBERT. The gentleman asked me a question. I want to say in reply that I think from 1792 to 1873, when we had the free and unlimited coinage of silver, that we had in this country the grandest people upon the face of God's earth, unequaled anywhere in the world.

Mr. WANGER. That is not a reply to my question. We had good times and bad times between 1792 and 1873, just as we have had since the latter period. Now I will yield to the gentleman from Montana [Mr HARTMAN].

Mr. HARTMAN. I believe that the question the gentleman from Pennsylvania put to the gentleman from South Carolina is a very simple one. I suggest to him that that question of citizenship is a very unfortunate one for him to bring up. I take it that the citizens of Mexico, who are to-day enjoying much greater prosperity than many of the citizens of our own country, are at least the equals of the citizens of gold-standard Roumania, gold-standard Italy, gold-standard Spain, and five or six other gold-standard countries of the same kind, which I could mention. Now, I do not mean to say that that argument is worth anything; but it is worth just as much as the suggestion of the gentleman from Pennsylvania that the citizenship of the silver-using countries is inferior.

Mr. WANGER. Possibly. But my friend compares the best examples from a silver-using country with those of possibly the least intelligent and wealthy gold-standard nations, and was very

careful to omit all mention of the citizens of Great Britain, of France, of Germany, and of the United States of America.

Mr. HARTMAN. France is on a bimetallic basis.

Mr. WANGER. Then you do not regard those last three nations as being on a gold standard?

Mr. HARTMAN. Not at all. France is on a bimetallic basis.

Mr. WANGER. Then we have bimetallism and disproof from an authority of the argument that we have only gold as standard money and have demonetized silver.

From 1792 until 1873, when we had the free and unlimited coinage of silver in our statutes, we did not have the concurrent circulation of gold and silver, one or the other leaving us as it was undervalued in the coinage laws in its commercial ratio to the other, as must inevitably be the case when free and unlimited coinage is given to each and a difference exists between the commercial and coinage ratios.

According to the last report of the Director of the Mint, the metal moneys of the United States July 1, 1895, were, in gold coin and bullion, $627,293,201, and in silver coin and bullion, $624,347,757, while no country having its mints open to the unlimited coinage of both metals had at this time any gold in circulation and was suffering from a fluctuating difference in exchange which made business operations in such countries more in the nature of speculation than of stable enterprises.

Now, in reference to this talk about the great prosperity enjoyed in Mexico, there are two stories from that land, one of distressing conditions and the other of prosperity. My friend from Montana, in his admirable address recently delivered on this floor, referred to dividends paid there by some enterprises of, I think, 20 per cent.

Mr. HARTMAN. That is correct.

Mr. WANGER. It may be that those enterprises are like a concern in my neighborhood which some time ago paid a dividend of 33 per cent in one year and in the next called upon stockholders to contribute to its treasury to avoid a sheriff's sale. But assuming there have been instances of success, it does not establish a generally prosperous condition. Does the gentleman from Montana know of any great migration of the citizens of this country into Mexico on account of the superior prosperity enjoyed there?

Mr. HARTMAN. I will say to the gentleman in response to that that one of the distinguished Representatives from the State of Massachusetts on this floor made the statement a few days ago here in private conversation—and it is no breach of confidence to repeat it—that if he himself were going to engage in a manufacturing industry at the present time he would go to Mexico to invest, because of the wonderful opportunities presented by that country.

Mr. WANGER. Did he say that he regarded that condition as attributable to the monetary standard of Mexico?

Mr. HARTMAN. He did not say that they have a monetary system upon which the success is predicated. He did not say it was because of the standard. He was not giving a theory, but simply stating cold, conclusive facts.

Mr. WANGER. It may be that his judgment was a wise one; it may have been a vagary. Notwithstanding the high respect I have for all the Representatives of that grand old State, I must confess that I do not think they are all entirely free from the possibility of error. But, aside from that, there is in the situation of Mexico what accounts far more logically for the improving condition there than the monetary system. We all know that country was for years distracted by revolution and disorder; that there were race prejudices; that there was religious bigotry; that it was not safe for persons to invest capital there and expect either a return of their capital or protection of their persons. Happily there has been a great improvement in conditions there. Order has grown out of chaos. These race prejudices have been largely overcome. They have the cheapest kind of labor. They have great natural resources, the development of which has been retarded by the confusion prevailing. My friend will concede that we can not have prosperity out of chaos, no matter what monetary system we may have, but where you have a condition of that kind—rich natural resources, extremely cheap labor, a young country to be developed—you may find magnificent returns for investments, just as certain as stable government and protection to person and property is assured. And I submit, therefore, that it is not to the monetary system of Mexico that we must look for whatever of prosperity in recent periods there has been, but rather to the improved condition of social order.

Mr. SNOVER. May I ask the gentleman a question?

Mr. WANGER. One moment. I desire to ask my friend from Montana if it is not true that laborers are paid about 20 cents a day in Mexico?

Mr. HARTMAN. It is true in some of the industries, but I want to say to the gentleman that my only purpose—for of course the gentleman understands that I do not wish to embarrass him in his argument——

Mr. WANGER. I understand that.

Mr. HARTMAN. In referring to business there was to show this, that by reason of the growth of the manufacturing industries, which in the last eighteen months or two years have been growing very rapidly, the Mexican manufacturers have been enabled to produce and put upon the market in competition with the products of the manufacturers of the United States large quantities of goods. Certainly, the gentleman from Pennsylvania and myself would never consent to bringing our country to the level of wages with any country which pays so small wages.

Mr. WANGER. Certainly not.

Mr. HARTMAN. And I want to say right in the same connection that while the wages of Mexico are from 20 to 25 cents a day paid to their miners, the wages to exactly the same character of employees in gold-standard Spain are from 18 to 20 cents. Now, then, if it proves in the one instance that the silver basis is responsible for the 20-cent wages, then in the other instance it proves that the gold standard of Spain is responsible for the 18 cents a day; that is all.

Mr. WANGER. I did not contend that the silver standard had anything to do with the rate of wages in Mexico.

Mr. HARTMAN. I thought that was the point of your question.

Mr. WANGER. I believe that the low compensation paid is a reason why enterprises prosper in Mexico which would not prosper with the higher paid labor of the United States.

Mr. HARTMAN. I understand that; and the only reason I suggested it was that it becomes a vital question to the people of the United States as to whether by reason of cheap labor, by reason of the cheaper money, or by whatever reasons you may see fit to conjure up, that the manufacturing industries of the United States should not be driven out of their markets by the manufacturers of Mexico at the present time. That was my point; that is all.

Mr. WANGER. The gentleman and I are heartily in accord upon that phase of the question. I yield now to the gentleman from Michigan for his question.

Mr. SNOVER. Is it not true that free trade in our own country has forced our manufacturers to go to Mexico in order to take advantage of the cheap labor there, and does not that account for a good deal of the business push that is now being exhibited in Mexico?

Mr. WANGER. It has a great deal to do with it, of course. Because of cheap labor there are enterprises in this country—cotton mills throughout the Southern States—which have been declaring 20 per cent dividends and higher than that right along, even during the panic years of 1893 and 1894. I may cite an instance of the manufacture of cotton thread, in which some friends of mine are engaged in the city of Birmingham, Ala., where they have been enabled to earn more than 20 per cent per annum, while at their mill in Pennsylvania they are scarcely able to meet the expenses of operating the establishment, the difference resulting entirely from the fact that they have cheaper power and cheaper labor in Alabama.

Now, Mr. Speaker, my opposition to the Senate substitute is from my conviction that the free coinage of silver by this country alone would not only involve the perils of disordered finances and be no aid to the restoration of the monetary equilibrium, but it would be an obstacle in the way of attaining that end. When gentlemen speak about the ease with which bimetallic France held the two metals together at the ratio of 15½ to 1 prior to 1874, they fail to take into consideration the fact that on one end of the lever was a large number of nations which had free coinage of silver alone, and on the other end but one nation which had the single coinage of gold, while France, the United States, and a few other nations had free coinage of both metals, so that the gold and silver monetary pole was hanging in the balance. Therefore, under Gresham's law, whenever there was a change in the commercial price of either metal differing from the ratio, the cheaper moneys flowed into and took up a part of the field that had been previously occupied by the other money, lessening the demand on the latter and again restoring the equilibrium. Nobody will pretend that such conditions exist now—all the leading commercial nations having gotten upon one end of the pole and standing back from climbing upon the other while they seek to keep it as nearly balanced as possible to the extent that they can not lay the burden upon other shoulders. Much as we may regret the abandonment of silver by Germany and other nations using it until 1872 and later, we must concede the changed conditions.

When it is argued that by this country going on the silver basis and surrendering her gold we would have a cessation of falling prices, we must consider that the greater part of all our obligations are payable in gold and that there is not free room for the operation of the theory. The taunt that it is unpatriotic to contend for an international arrangement is not argument, and the contention for such an agreement is sustained by such bulwarks of the bimetallist faith as Mr. A. J. Balfour and Archbishop Walsh.

The trouble leading to the changing standards of the nations in the use of gold and silver and in the nature of their coins in circulation, before no less than since 1873, was the absence of uniform

mint regulations respecting ratio; the difficulties only became grievous when there was not a sufficient demand for silver for all purposes, money included, to maintain its value commercially toward gold at the ratio fixed in coinage laws.

It can not be denied that it was an ordeal of great cost to hundreds of thousands of our people to get from the inflated prices prevailing when specie payments were suspended to the standard finally reestablished in 1879. But to get upon firm ground was worth much, and none should deny that it is essential to our progress and prosperity to maintain the highest character for financial integrity.

To go upon a silver basis may temporarily raise prices of commodities in our currency, but not to those outside our land, and that basis of faith is too uncertain to justify assuming the movements of prices will not meet retrograde influences, continuing instability and taking from much we would do toward restoring the old-time ratio, for Japan is drifting from the silver standard, and even Mexico and India might gladly welcome the opportunity to exchange places with us unless we precede our action by treaty with them, and we might be in the sorry plight of having lost our good name, lost our standard, which gives confidence to all the world in our strength of resources and purposes, lost our energy and hope, and gained nothing but distressing experience.

If the hope of increased prices should be realized there is no guarantee of stability, and we should likely be plunged into confusion worse confounded. The people who earn bread in the sweat of their brows know how little hope they could have of wages rising commensurate with the increased cost of necessaries. Every disaster could be attributed to the change in financial policy, and the clamor to return to the standard selected by the laws of trade and commerce would probably prevail, and the ascent up the hill is very, very difficult—swift and easy the descent.

Mr. Speaker, I believe in the use of both gold and silver, and their free and unlimited coinage on equal terms whenever and under such conditions that may be safe and will permit the concurrent use of both. Until then let us maintain our present standard and make it to the interest of every other nation on the face of the earth holding commercial relations with us and having the coinage of both metals to keep it, and for the interest of those nations which do not now have it to agree to join with us in resuming the coinage of both metals at a fixed ratio at the earliest practicable period. There is an awful amount of selfish interest lying behind national as well as individual action. European nations will never agree to the restoration of the free coinage of silver simply because the American people want them to agree to it. When they see that it is to their advantage to do it, then, and not till then, will they agree to do it. The distinguished Speaker of this House, in a communication to a public journal, said some time ago that silver and protection were really one question, and to my mind so they are; and we might join with them, if in fact it is not covered by the single word "protection," the restoration of our merchant marine through our efforts to bring other nations to join us in restoring silver to its function as a standard money of ultimate redemption.

There is a way—I do not know that it is the only way—but to my mind it is one way, a perfectly safe way, a way in which there are no pitfalls and no snares, and something from which we can readily return in case we find that its operation is not what we have a right to expect from it—that is, in the collection of our customs duties, to permit on importations from foreign countries the payment of the duties in that standard money which they admit to free coinage at their own mints at the coinage value it has at ours. It seems to me that when monometallic nations found it essential to do that, and found that these United States had set their face steadily toward the accomplishment of this purpose, we should have not only conferences which would meet and discuss this question, but conferences which would avail something, conferences which would bring unity of action among the civilized nations of the earth, conferences which would be beneficent in the results of their action, which would restore and firmly establish the monetary equilibrium, obtain the full benefit of all our currency, all our credit, crown as acts of wisdom the persistence with which we have stood by our standard, and give to the people of this earth for all time to come the advantages of having as standard money gold and silver without prejudice against either at the mints of all nations and in the markets of the world. [Applause.]

Mr. Speaker, there has been considerable talk about the effect of the Gorman tariff bill on the manufactures of the country. All with whom I have conversed who are engaged in manufacturing enterprises are complaining of the difficulties that surround them, and are saying that they really can not hold out much longer if the disastrous competition with European labor now going on is to continue. As I have received some evidence of a place where that law has worked for the encouragement of manufactures, I will send the communication embracing this information to the Clerk, in order that it may be read.

The Clerk read as follows:

A MARKET FOR CHEAP GOODS.

The cloth manufacturers of the Dewsbury and Batley district have had a good year, the latter half having been exceedingly busy. It is almost astonishing to learn what undoubtedly is the fact, that within the last few weeks one firm in Dewsbury was compelled, through pressure o work in the execution of orders almost entirely for the United States, to refuse one of 4,000 pieces. This offer related to president cloths, a class of goods that of late has been produced from very common material at the order of transatlantic merchants. How far local firms are justified in producing a showy but half worthless cloth that will be sold to the American retail buyers—farmers, artisans, and the like—is another matter. The possibility, even a very few years ago, of manufacturing a cloth at 1s. 6d. per yard was scouted, but to-day there are makers to be found able to produce good-looking masses of the poorest shoddy, kept in form by low cotton warp, at from 1s. 3d. per yard. The general classes of fabrics produced in the neighborhood are of course very different from these cloths, and include stout, wear-resisting tweeds; Dewsbury serges, on both light and dark shades of color; fancy cloths, including ladies' mantlings, as well as the old heavy woolens, the making of which at one time almost exclusively occupied the looms of the district, comprising meltons, naps, beavers, and pilots. Manufacturers engaged on these goods have found trade to hang a little, chiefly through the mild, open weather of the late autumn and the winter so far experienced, and have turned their attention, as have their neighbors, to supplying the wants of the United States. The range of goods exported across the Atlantic since the amelioration of the McKinley tariff has been very great, but fancy cloths and Dewsbury serges and curls have taken the lead and are still running.—*Manchester (England) Guardian.*

Mr. WANGER. It is unfortunate that no such improvement can be noted in our own country, which has felt in manufactures, agriculture, and commerce, as it has in finance, the blighting effects of Democratic incompetency in legislation and in administration. Along with the promise of good times and the markets of the world under tariff reform was that of good woolen cloths in place of cotton and shoddy. As we have surrendered prosperity for panic and what markets abroad reciprocity brought us for a large invasion of our home market, so quality has also retrograded.

For all these troubles a remedy will be applied by the wisdom of the Republican party when it is again in control of the National Government, and the gloom and adversity which have been coincident with and largely occasioned by Democratic ascendency and blundering be buried beneath the sunlight and happiness of redeliverance unto Republican statesmanship, the synonym for broad and prosperous Americanism. [Applause.]

[Here the hammer fell.]

The Cuban Resolutions Tested by Precedent and the Traditional Policy of the United States.

REMARKS
OF
HON. RICHARD W. PARKER,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

The House having under consideration the following resolutions:

"*Resolved by the House of Representatives (the Senate concurring)*, That in the opinion of Congress a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples the pre-ent war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of Americans by intervention, if necessary"—

Mr. PARKER submitted the following remarks:

Mr. SPEAKER: The action proposed by the resolutions is similar to that taken by our Government in the early part of this century as to the South American Republics. From the first we treated their struggle as a civil war and granted belligerent rights to every city or faction that carried a flag, and we traded freely with both sides, even in arms and munitions of war, and admitted them to equal privileges in our ports. Notwithstanding this we preserved the most friendly relations with Spain and publicly and privately exerted our friendly influence with her, at first to obtain self-government and finally to secure independence for these Republics. The President declared this to be our policy in numerous messages. He likewise declared that the interests of the United States must be protected not only against paper blockades and buccaneering privateers, but also against any interfer-

ence by foreign Governments in the struggle between Spain and her colonies.

There is no ground for the suggestion so often made that we are departing from American precedents and traditions in acknowledging the existence of civil war in Cuba, or that these resolutions propose any new thing in American policy.

The action proposed by the first resolution is not only just and equitable, but in accordance with the traditional policy of this Government. There is no unfriendliness in it to Spain. It is merely the declaration that we stand neutral in the contest now waging, and that so far as we are concerned either party may carry on trade and war in the ordinary way.

The resolution proposes that we shall take no sides and shall give no aid, but that we shall put an end to the state of affairs in which our ports, as well as those of the rest of the world, are closed to the one party and open to the other, by which, as it were, one side is boycotted and cut off from human intercourse, by which it is debarred from all trade, by which our merchants render their ships liable to seizure if they attempt to send to that party goods, and by which it is treated simply as a bandit.

To do otherwise is to be forgetful of the traditional policy of the United States. A distinguished Senator from Delaware has called attention to the fact that in the early struggle of the South American Republics against Spain independence was not finally recognized until it had been fully established as to each State in the year 1823 and subsequently, while the war had been going on for years. The fact is noted that as early as 1818 resolutions of sympathy with the insurgents had been decisively voted down in this House, and it is inferred from this that belligerency had not been previously recognized. Nothing can be further from the truth. Belligerent rights, the freedom of our ports, and free and equal commerce had been actually and for years accorded to both parties and all parties among the many warring factions in Spanish America, to single cities that had assumed distinctive flags, and to the various leaderships that from time to time claimed to represent the colonists. The policy of the United States was that of absolute neutrality, allowing unrestrained trade with any and all parties occupying any part of Spanish America and full belligerent rights.

The record as to this is so explicit that it is astonishing that it has been overlooked.

It is true that in September, 1815, James Madison issued a proclamation that, on careless reading, might seem to proclaim a non-intercourse with any of the insurgents, and to forbid commerce in arms, munitions, or even provisions. But it is perfectly plain that the proclamation was directed only against armed and organized expeditions and not against peaceful trade. As early as December of the same year the Spanish Chevalier De Onis addressed to our Secretary of State a communication demanding, among other things, that our ports should be closed to the revolutionists and to the flags of Carthagena, Buenos Ayres, and the Mexican Congress, and that trade with them should be stopped, as being with bandits and pirates. But the answer of the United States was in no uncertain terms. It denied the right of Spain to make this demand, and declared that our ports should not be closed to either or any party, that in the convulsions that were taking place the United States would not discriminate, and that unless our ports and trade were equally open to all it would effect substantial injustice. The correspondence is too important to be omitted. The Chevalier De Onis, as minister from Spain, says in his letter of December 15, 1815:

> The third and last point is reduced to this: That the President will be pleased to give the necessary orders to the collectors of the customs not to admit into the ports of the United States vessels under the insurrectionary flag of Carthagena, of the Mexican Congress, of Buenos Ayres, or of the other places which have revolted against the authority of the King, my master, nor those coming from them. That they should not permit them to land; or to sell in this country, the shameful proceeds of their piracy or atrocities, and much less to equip themselves in these ports, as they do, for the purpose of going to sea to destroy and to plunder the vessels which they may meet with under the Spanish flag. This tolerance, subversive of the most solemn stipulations in the treaties between Spain and the United States, and diametrically opposed to the general principles of public security and good faith, and to the laws of nations, produces the most melancholy effects on the interest and the prosperity of the subjects of His Catholic Majesty. Certain it is that neither Carthagena nor any other place in the Spanish dominions in this hemisphere which has revolted can be in communication with any power friendly to Spain, since neither on its part nor on that of any other Government has their independence been acknowledged, and it is consequently an offense against the dignity of the Spanish Monarchy, and against the sovereignty of the King, my master, to admit vessels from other places manned and commanded by insurgents, and armed in the dominions of this confederation, particularly as they are all pirates, who do not respect any flag, are justly considered the disgrace of the seas, and are execrated by all nations.

The Secretary of State says in reply, under date of January 19, 1816:

> In reply to your third demand, the exclusion of the flag of the revolting provinces, I have to observe that in consequence of the unsettled state of many countries and repeated changes of the ruling authority in each, there being at the same time several competitors, and each party bearing its appropriate flag, the President thought it proper some time past to give orders to the collectors not to make the flag of any vessel a criterion or condition of its admission into the ports of the United States. Having taken no part in the differences and convulsions which have disturbed those countries, it is consistent with just principles, as it is with the interests of the United States, to receive the vessels of all countries into their ports, to whatever party belonging and under whatever flag sailing, pirates excepted, requiring of them only the payment of duties and obedience to the laws while under their jurisdiction, without adverting to the question whether they had committed any violation of the allegiance or laws obligatory on them in the countries to which they belonged, either in assuming such flag or in any other respect.
>
> In the differences which have subsisted between Spain and her colonies the United States have observed all proper respect to their friendly relations with Spain. They took no measure to indemnify themselves for losses or injuries; none to guard against the occupancy of the Spanish territory by the British forces in the late war, or to occupy the territory to which the United States consider their title good, except in the instance of West Florida, and in that instance under circumstances which made their interposition as much an act of accommodation to the Spanish authority there as of security to themselves. They have also prohibited their citizens from taking any part in the war, and the inhabitants of the colonies and other foreigners connected with them from recruiting men in the United States for that purpose. The proclamations which have been issued by the governors of some of the States and Territories at the instance of the President, and the proclamation lately issued by the President himself, are not unknown to your Government. This conduct, under such circumstances, and at such a time, is of a character too marked to be mistaken by the impartial world.
>
> What will be the first result of the civil war which prevails between Spain and the Spanish provinces in America is beyond the reach of human foresight. It has already existed many years, and with various success, sometimes one party prevailing and then the other. In some of the provinces the success of the revolutionists appears to have given to their cause more stability than in others. All that your Government had a right to claim of the United States was that they should not interfere in the contest or promote, by any active service, the success of the revolution, admitting that they continued to overlook the injuries received from Spain, and remained at peace. This right was common to the colonists. With equal justice might they claim that we would not interfere to their advantage; that our ports should remain open to both parties, as they were before the commencement of the struggle; that our laws regulating commerce with foreign nations should not be changed to their injury. On these principles the United States have acted.

The President by whose direction this reply was given was James Madison, one of the fathers of the Constitution, and joint author of the Federalist. That reply was given immediately after the struggles and sorrows of a war which had been in many respects disastrous and in which our Capitol had been burned. Our people were then in no frame of mind for further trials, and no jingo spirit prevailed then. It was the conservative action of a careful and most prudent statesman, and it was what we are asked to do to-day.

The President directed this act, but the Secretary of State who indited the letter was no less a man than James Monroe, he who defined American diplomacy in its widest American sense, and declared that the United States would not suffer foreign colonization or conquest on this side of the water, as the corollary and complement of the doctrine of Washington's Farewell Address, that we should not interfere upon the other side of the Atlantic.

It is from Monroe's messages also that we discover that the policy and action by these letters was no mere diplomatic correspondence, but the definite and settled policy of our country. In November, 1818, he declared in his second annual message that the civil war continued between Spain and the provinces in South America, and there was cause to be satisfied with the course theretofore pursued.

The description given of the confused state of the various revolts is interesting:

> The civil war which has so long prevailed between Spain and the provinces in South America still continues without any prospect of its speedy termination. The information respecting the condition of those countries which has been collected by the commissioners recently returned from thence will be laid before Congress in copies of their reports, with such other information as has been received from other agents of the United States.
>
> It appears, from these communications, that the Government of Buenos Ayres declared itself independent in July, 1816, having previously exercised the power of an independent government, though in the name of the King of Spain, from the year 1810; that the Banda Oriental, Entre Reos, and Paraguay, with the city of Santa Fe, all of which are also independent, are unconnected with the present Government of Buenos Ayres; that Chile has declared itself independent and is closely connected with Buenos Ayres; that Venezuela has also declared itself independent, and now maintains the conflict with various success, and that the remaining parts of South America, except Montevideo and such other portions of the eastern bank of the La Plata as are held by Portugal, are still in possession of Spain, or in a certain degree under her influence.
>
> By a circular note addressed by the ministers of Spain to the Allied Powers, with whom they are accredited, it appears that the allies have undertaken to mediate between Spain and the South American provinces, and that the manner and extent of their interposition would be settled by a congress which was to have met at Aix la Chapelle in September last. From the general policy and course of proceedings observed by the Allied Powers in regard to this contest it is inferred that they will confine their interposition to the expression of their sentiments, abstaining from the application of force. I state this impression that force will not be applied with the greatest satisfaction, because it is a course more consistent with justice, and likewise authorizes a hope that the calamities of the war will be confined to the parties only, and will be of shorter duration.

In his fourth annual message of November 14, 1820, he describes the gains of the colonies and concludes that it has been the uniform policy of the Government to promote an adjustment on the basis proposed by the colonies by friendly counsels with other powers, including Spain herself. How near to the policy proposed by the second resolution of the House this is need not be remarked.

> The contest between Spain and the colonies, according to the most authentic information, is maintained by the latter with improved success. The unfortunate divisions which were known to exist some time since at Buenos Ayres, it is understood, still prevail. In no part of South America has Spain made any impression on the colonies, while in many parts, and particularly in Venezuela and New Grenada, the colonies have gained strength and ac-

quired reputation, both for the management of a war in which they have been successful and for the order of the internal administration. The late change in the Government of Spain, by the reestablishment of the constitution of 1812, is an event which promises to be favorable to the revolution. Under the authority of the Cortes, the Congress of Angostura was invited to open a negotiation for the settlement of differences between the parties; to which it was replied that they would unwillingly open the negotiation provided the acknowledgment of their independence was made its basis, but not otherwise. Of further proceedings between them we are uninformed. No facts are known to this Government to warrant the belief that any of the powers of Europe will take a part in the contest; whence it may be inferred, considering all circumstances which must have weight in producing the result, that an adjustment will finally take place on the basis proposed by the colonies. To promote that result by friendly counsels with other powers, including Spain herself, has been the uniform policy of this Government.

I anticipate that suggestion will be made that the correspondence already referred to only provides for the admission of ships of the insurgents into our ports, and not to our carrying on trade with such parties, and certainly not to trade in contraband of war. Such a construction is not fairly to be drawn from the ringing statements of Monroe. But fortunately we do not have to argue this question, for on the 4th day of March, 1821, in his second inaugural address, President Monroe declared distinctly that both Spain and the insurgents had had equal privileges with us in trade and in obtaining munitions of war.

The passage is of the utmost importance.

This contest was considered at an early stage by my predecessor a civil war, in which the parties were entitled to equal rights in our ports. This decision, the first made by any power, being formed on great consideration of the comparative strength and resources of the parties, the length of time, and successful opposition made by the colonies and of all other circumstances on which it ought to depend, was in strict accord with the law of nations. Congress has invariably acted upon this principle, having made no change in our relations with either party. Our attitude has therefore been that of neutrality between them, which has been maintained with the strictest impartiality. No aid has been afforded to either, nor has any privilege been enjoyed by the one which has not been equally open to the other party, and every exertion has been made in its power to enforce the execution of the laws prohibiting illegal equipments with equal rigor against both.

By this equality between the parties, their public vessels have been received in our ports on the same footing; they have enjoyed an equal right to purchase and export arms, munitions of war, and every other supply, the exportation of all articles whatever being permitted under laws which were passed long before the commencement of the contest; our citizens have traded equally with both, and their commerce with each has been alike protected by the Government.

Respecting the attitude which it may be proper for the United States to maintain hereafter between the parties, I have no hesitation in stating it as my opinion that the neutrality heretofore observed should still be adhered to. From the changes in the Government of Spain, and the negotiations now pending, invited by the Cortes and accepted by the colonies, it may be presumed that their differences will be settled on the terms proposed by the colonies. Should the war be continued, the United States, regarding its occurrences, will always have it in their power to adopt such measures respecting it as their honor and interest may require.

Resolutions for acknowledging the independence of the Spanish provinces were adopted by the House only in the spring of 1821.

December 3, 1821, President Monroe noticed the success of the colonies during the past year, the extension of their territories, strength, and harmony. He believed that Spain could not retain them by force, and that no condition short of independence would be satisfactory to them, and hoped that Spain, guided by liberal counsel, would consent thereto, stating that it would be the object of the Government of the United States to promote this result by friendly counsel with the Government of Spain.

It is understood that the colonies in South America have had great success during the present year in the struggle for their independence. The new Government of Colombia has extended its territories and considerably augmented its strength; and at Buenos Ayres, where civil dissensions had for some time before prevailed, greater harmony and better order appeared to have been established. Equal success has attended their efforts in the provinces on the Pacific. It has long been manifest that it would be impossible for Spain to reduce these colonies by force, and equally so that no conditions short of their independence would be satisfactory to them. It may therefore be presumed, and it is earnestly hoped, that the Government of Spain, guided by enlightened and liberal councils, will find it to comport with its interests and due to its magnanimity to terminate this exhausting controversy on that basis. To promote this result by friendly counsel with the Government of Spain will be the object of the Government of the United States.

By special message of March 8, 1822, he favored the recognition of the independence of the southern Republics, and gave again historically the policy which had been pursued by the Government:

The revolutionary movement in the Spanish provinces in this hemisphere attracted the attention and excited the sympathy of our fellow-citizens from its commencement. This feeling was natural and honorable to them, from causes which need not be communicated to you. It has been gratifying to all to see the general acquiescence which has been manifested in the policy which the constituted authorities have deemed it proper to pursue in regard to this contest. As soon as the movement assumed such a steady and consistent form as to make the success of the provinces probable, the rights to which they were entitled by the law of nations as equal parties to a civil war were extended to them. Each party was permitted to enter our ports with its public and private ships, and to take from them every article which was the subject of commerce with other nations. Our citizens, also, have carried on commerce with both parties, and the Government has protected it with each, in articles not contraband of war. Through the whole of this contest the United States have remained neutral and have fulfilled with the utmost impartiality all the obligations incident to that character.

In his annual message of December 3, 1822, he still cherished this hope, but sets forth definitely that the United States has remained neutral, allowing each party equal rights, and claiming from each the suppression of piratical practices and marked blockades.

A strong hope was entertained that peace would, ere this, have been concluded between Spain and the independent Governments south of the United States in this hemisphere. Long experience having evinced the competency of those Governments to maintain the independence which they had declared, it was presumed that the considerations which induced their recognition by the United States would have had equal weight with other powers, and that Spain herself, yielding to those magnanimous feelings of which her history furnishes so many examples, would have terminated, on that basis, a controversy so unavailing and at the same time so destructive. We still cherish the hope that this result will not long be postponed.

Sustaining our neutral position and allowing to each party while the war continues equal rights, it is incumbent on the United States to claim of each, with equal rigor, the faithful observance of our rights according to the well-known law of nations. From each, therefore, a like cooperation is expected in the suppression of the piratical practice which has grown out of this war and the blockades of extensive coasts on both seas, which, considering the small force employed to sustain them, have not the slightest foundation to rest on.

Finally, in 1823, the Holy Alliance for the reestablishment of the power of Spain over her colonies rendered it necessary that the President should proclaim the doctrine so often cited, and which can not be quoted too often, in which, after stating the friendly sentiment of our citizens to their fellow-men across the Atlantic, and that we are unwilling to take any part in their own wars, he states that we owe it to candor and to those friendly relations to declare as to the Governments who have declared their independence and maintained it that "we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States."

In the war between those Governments and Spain we declared our neutrality at the time of their recognition, and to this we have adhered and shall continue to adhere, provided no change shall occur which in the judgment of the competent authorities of this Government shall make a corresponding change on the part of the United States indispensable to their security. * * *

It is impossible that the Allied Powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor can anyone believe that our southern brethren, if left to themselves, would adopt it of their own accord. It is equally impossible, therefore, that we should behold such interposition in any form with indifference. If we look to the comparative strength and resources of Spain and those new Governments, and their distance from each other, it must be obvious that she can never subdue them. It is still the true policy of the United States to leave the parties to themselves, in the hope that other powers will pursue the same course.

On December 7, 1824, he refers to the fact that we have ministers residing in Colombia and Chile, and have received ministers from Colombia, Guatemala, Buenos Ayres, and Mexico, and in the same message he states that they are settling their own Governments; that we have not interfered in their instituting such government as might suit them best in the expectation that other powers will pursue the same policy.

The deep interest which we take in their independence, which we have acknowledged, and in their enjoyment of all the rights incident thereto, especially in the very important one of instituting their own governments, has been declared, and is known to the world. Separated as we are from Europe by the great Atlantic Ocean we can have no concern in the wars of the European governments, nor in the causes which produce them. The balance of power between them, into whichever scale it may turn in its various vibrations, can not affect us. It is the interest of the United States to preserve the most friendly relations with every power, and on conditions fair, equal, and applicable to all. But in regard to our neighbors our situation is different. It is impossible for European governments to interfere in their concerns, especially in those alluded to, which are vital, without affecting us; indeed, the motive which might have induced such interference in the present state of the war between the parties, if a war it may be called, would appear to be equally applicable to us. It is gratifying to know that some of the powers with whom we enjoy a very friendly intercourse, and to whom these views have been communicated, have appeared to acquiesce in them.

It is unnecessary to point out that our policy throughout was one of strict fairness and equality. No acknowledgment of independence was made until that independence had been thoroughly established. President Jackson, in his message in relation to Texas, on December 21, 1836, protested rightly that an acknowledgment of independence is an act of great delicacy and responsibility, and that all questions relative to the government of foreign nations, whether of the Old or New World, had been treated by the United States as questions of fact only, and that his predecessors had cautiously abstained from deciding upon them until the clearest evidence was in their possession, to enable them not only to decide correctly, but to shield their decisions from every unworthy imputation. He proceeds:

In all contests that have arisen out of the revolutions of France, out of the disputes relating to the Crowns of Portugal and Spain, out of the separation of the American possessions of both from the European governments, and out of the numerous and constantly occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances avoided all censure and encountered no other evil than that procured by a transient estrangement of good will in those against whom we have been by force of evidence compelled to decide.

It has thus made known to the world that the uniform power and practice of the United States is to avoid all interference in disputes which merely relate to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to our particular interests and views, or to the merits of the original controversy.

But we have seen that in making this statement the President was referring to the recognition of independence and not to the granting of belligerent rights and privileges. He is speaking of the fairness of the United States, and that fairness had actually

consisted in granting equal rights of war and peace to all of the contending parties. He was not asked to prohibit trade with Texas, or to deny the rights of war, and never did so.

The accord of belligerent rights is an act. It is necessary for fairness when war is really being carried on. If any party really carrying on war is to be blockaded, or rather embargoed, by every civilized nation, its condition is wretched indeed. It is not neutrality, but taking sides, to refuse to give to each of two belligerents the rights of war and peace. When we consider that two years ago the Administration allowed the Navy of the United States to open a blockade which had been established by one party in Brazil against the other as to the city of Rio Janeiro, and that we did this upon the ground that the blockaders had not been recognized as belligerents and therefore could institute no blockade, it becomes idle to pretend that refusal to recognize belligerency is not taking sides. That interference of our Navy absolutely crushed the party against whom it was taken.

This resolution proposes an act of fairness, that we shall stand off and help neither side, but that each shall be free to fight it out with equal privileges in our ports and trade. It means no unfriendliness to either; it means that we will give fair play to both. We do not speak here of barbarities, cruelties, oppressions, and reprisals otherwise than to deplore the horrors of war. We are not arbiters as to which side is responsible, but we do say by this resolution that in accordance with the traditional policy of our Government, the ordinary rights of war, including such trade as may lawfully be carried on with a belligerent according to the law of nations, shall not be denied to either of the contestants. And in so doing we rely not only upon the law of nature and nations, the rules of fairness and equity, but upon the expressed declarations and example of a father of the Constitution and of the great captain and guide who formulated and established the American policy and the American law of nations.

Coin Redemption Fund.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. WHEELER said:

Mr. CHAIRMAN: The very distinguished gentleman, the chairman of the Committee on Ways and Means, the premier of the House of Representatives [Mr. DINGLEY], who has just concluded his remarks, most unquestionably made an eloquent, able, and very forcible argument upon the question now before the House, and his speech appeared to be so plausible that men who have for a long time been favorable to silver legislation murmured around me that the arguments of the gentleman from Maine were unanswerable. They presumed, of course, that the premises laid down by the gentleman from Maine [Mr. DINGLEY] were correct; but I assert, without fear of contradiction, and I shall prove it, that every statement made by him tending to support his advocacy of the gold standard, so far from being founded on fact, was directly the reverse; and I further assert that every correct premise laid down by him, so far from sustaining this gold-standard argument, had the contrary effect.

UNQUESTIONED TRUTHS.

Before I proceed with my argument I will lay down the following unquestioned truths:

Every law ever enacted by this or any other country which tended to enlarge the money of ultimate redemption was followed by a period of great prosperity.

Every law ever enacted which tended to reduce the money of ultimate redemption has been immediately followed by panic and distress.

The laws enacted by the Roman people which reduced the amount of money were followed by poverty, misery, degradation, and serfdom which prevailed throughout that period called the "Dark Ages."

The introduction of the enormous production of gold and silver from the mines of South America was followed by an era of prosperity and a new civilization. When we come to our country we find that the same causes were followed by like results. The free-and-unlimited-coinage laws which were enacted prior to 1850 and the bounteous supply of gold which commenced at that period were followed by a period of great prosperity. The law of 1857, which deprived foreign silver of its full legal tender, was followed by a money panic. The law of 1873, demonetizing silver, was followed by panic, falling prices, and distress. The act of 1878, providing for silver coinage, was followed by an era of almost unparalleled prosperity. The acts of 1890 repealing the coinage law and the acts of 1893 which stopped all increase of money were followed by panic, falling prices, and distress, from which we are still suffering.

MY DUTY TO MY PEOPLE.

My investigation of this question has imbued me with a deep-seated conviction that silver coinage is essential to the prosperity of the people I represent. I regret very much that my duty impels me to differ on this question from men very high in power and for whom I have the most profound regard and esteem. Their associations have been very largely with the moneyed people of New York and other commercial centers, and no doubt they are right that the wealth and prosperity of that class of people would be enhanced by maintaining the gold standard; but just in proportion as they are benefited the great farm producers of the South and West are made the sufferers.

The history of the world shows that all countries which legislate for those who have wealth or fixed salaries is certain to decline and decay, and that all countries which have legislated for the benefit of the producing and industrial classes have been blessed with progress, happiness, and prosperity.

I shall now, as heretofore, concede to those who take a different view from myself the most unquestioned integrity of purpose, and my only regret is that they do not realize the effect of the gold standard upon that most worthy class—the farmers of the United States—who grow the cotton and wheat which we export in competition with the silver-producing countries.

I shall also comply with the request of the distinguished gentleman who preceded me, and shall not, to use his language, spend my time—

in mere assertions and declamations about the importance of bimetallism.

But, to again use his language, I shall endeavor to—

present to the House and country the grounds on which I assume that such coinage would result in giving us such bimetallism.

LORD MACAULAY ON THE AVARICE OF WEALTH.

Lord Macaulay, in one of his writings, in referring to the cupidity of the creditor and the money class, said:

If large financial interests were interested in denying the law of gravitation, that proposition would be ably disputed.

If Macaulay had lived until to-day he would have seen a remarkable exemplification of the truth of this in the speeches and arguments of the gold-standard advocates.

PROSPERITY A STRONGER FORCE THAN GRESHAM'S LAW.

Mr. DINGLEY asserts as positively as is possible to be done in the English language that silver coinage would speedily drive all gold from its use as money in this country. His exact language was:

For myself, I never was more confident of any fact in finance than I am that such coinage of silver as is proposed would speedily drive gold from its use as money in this country and leave us with nothing but silver. I shall listen attentively and with a receptive mind to any facts and arguments which may be adduced to maintain otherwise.

This is precisely the argument which was made by every advocate of the gold standard when the silver bill was being discussed in 1877 and 1878. The gentleman read tables similar to those we find on page 294 of the Report of the Director of the Mint, which show that during the sixteen years prior to 1878 the United States exports of gold exceeded our imports of gold by $583,831,117; in other words, the United States had lost gold to that amount. The reports of the Secretary of the Treasury also state that in 1878 the Treasury Department estimated the specie in the country at $102,-047,907. This included both gold and silver, and the voices of the gold-standard men resounded through this Hall proclaiming that if we enacted the silver-coinage law then pending every dollar of gold would leave us.

SILVER COINAGE BRINGS GOLD TO THE UNITED STATES.

Notwithstanding this scarecrow talk, we enacted the silver-coinage law of 1878, and instead of gold leaving the United States, as was so emphatically predicted, it commenced coming to our country; and during the twelve years of the existence of the silver-coinage law of 1878, so far from losing any gold, we gained gold to the amount of $165,254,995. As this is a very important point, I give below the exact figures of imports and exports of gold to and from the United States from 1861 to 1878, during which we had practically no silver coinage of standard silver money, the total coinage of silver dollars during that period being but $3,462,-180. I also add a table giving the total amounts of exports and imports of gold during the twelve years' existence of the silver-coinage law of 1878.

Table showing the value of gold coin and bullion imported into and exported from the United States from 1862 to 1877, the sixteen years before the passage of the silver-coinage act.

Year ending June 30—	Exports.	Imports.	Excess of exports over imports.	Excess of imports over exports.
1862	$35,439,903	$13,907,011	$21,532,892	
1863	6,169,276	5,530,538	638,738	
1864	100,661,634	11,176,769	89,484,865	
1865	58,381,033	6,498,228	51,882,805	
1866	71,197,309	8,196,261	63,001,048	
1867	39,026,627	17,024,866	22,001,761	
1868	73,396,344	8,737,443	63,658,901	
1869	36,003,498	14,132,568	21,870,930	
1870	33,635,962	12,056,950	21,579,012	
1871	66,686,208	6,883,561	59,802,647	
1872	49,548,760	8,717,458	40,831,302	
1873	44,856,715	8,682,447	36,174,268	
1874	34,042,420	19,503,137	14,539,283	
1875	66,980,977	13,696,793	53,284,184	
1876	31,177,050	7,992,709	23,184,341	
1877	26,590,374	26,246,234	344,140	
Total, 1862-1877	762,704,090	188,982,873	583,831,117	

This is unquestioned proof that in a period of sixteen years during which we did not coin silver we lost $583,831,117. It is true that gold was at a discount all that time, and that, of course, is one reason why we lost gold. I now give a table which I have prepared, showing that during the twelve years of silver coinage we gained $165,254,995 of gold. Bear in mind that during that twelve years we coined silver to the amount of $382,318,867, an annual average of $31,859,905.58. The table is as follows:

Table showing the value of gold coin and bullion imported into and exported from the United States from 1878 to 1890, while the silver-coinage act was in force.

Year ending June 30—	Exports.	Imports.	Excess of exports over imports.	Excess of imports over exports.
1878*	$919,861	$1,623,266		$703,405
1879	4,587,614	5,624,948		1,037,334
1880	3,639,025	80,758,396		77,119,371
1881	2,565,132	100,031,259		97,466,127
1882	32,587,880	34,377,054		1,789,174
1883	11,600,888	17,734,149		6,133,261
1884	41,081,957	22,831,317	$18,250,640	
1885	8,477,892	26,691,696		18,213,804
1886	42,952,191	20,743,349	22,208,842	
1887	9,701,187	42,910,001		32,208,814
1888	18,376,234	43,934,317		25,558,083
1889	59,952,285	10,284,858	49,667,427	
1890	17,350,193	13,097,146	4,253,047	
July 1 to 14, 1890	1,396,876	802,454	594,422	
Total	263,379,215	421,235,210	94,974,378	260,229,373

*From April to June 30.

Now, to show how thoroughly this was the free-coinage period of our country, I will call attention to the fact that during this twelve years we coined more silver than during the remaining ninety-four years of the existence of our Government under the Constitution, our entire silver coinage during those ninety-four years being only $329,665,546.25, an annual average of $3,507,080.25. This shows that during the period to which I have alluded our average annual silver coinage was ten times as great as during the other years of our history.

With the numerous evidences of the beneficence of silver coinage before us, the Republican party in 1890 repealed the silver-coinage law of 1878 and enacted the disgraceful bullion law called the Sherman Act. This stopped the coinage of silver, and gold immediately commenced to leave our country just as it did prior to the passage of the silver-coinage act. I now present a table which I have prepared showing the exports and imports of gold from July 1, 1890, the time of the repeal of the coinage law, to July 1, 1895. The table is as follows:

Table showing value of gold coin and bullion exported from and imported into the United States during the years 1890 to 1895, and showing excess of exports over imports during those years.

Year ending June 30—	Exports.	Imports.	Excess of exports over imports.
1891	$86,462,880	$18,516,112	$67,946,768
1892	50,305,533	50,162,879	142,654
1893	108,966,655	22,069,380	86,897,275
1894	77,162,228	72,989,563	4,172,665
1895	66,502,136	36,384,760	30,117,376
Total	389,399,432	200,122,694	189,276,738

This shows that during the five years since the repeal of the beneficent and wise silver-coinage act of 1878 we have lost $189,276,738 of gold. But the real condition is worse than that, because during that time we have exchanged interest-bearing bonds for $182,000,000 of gold to replenish the constantly diminishing gold in the Treasury, and it is contended that most of this came from Europe; so that during this period of legislation which Democrats denounced we have lost gold to an amount exceeding $300,000,000; and most of this has been lost since the repeal of the purchasing clause of the Sherman Act, on November 1, 1893. I predicted such a result in my speeches upon that bill.

GOLD GONE TO EUROPEAN TREASURIES.

I will now present a table showing that the gold we have lost since November, 1893, has gone to European banks.

Table showing amount of gold in eight principal banks of Europe at the date of the repeal of the Sherman Act and at recent dates.

Bank.	November, 1893.	Recent reports.
Bank of England	$126,416,000	$224,800,000
Bank of France	330,620,200	402,795,335
Austro-Hungarian Bank	51,954,400	124,250,000
Imperial German Bank	189,238,700	249,369,193
National Bank of Belgium	19,918,500	26,074,707
Netherlands Bank	13,923,000	21,903,985
Bank of Spain	38,536,900	40,020,000
National Bank of Italy	43,232,000	56,433,200
	813,839,700	1,144,646,420

LOSS OF GOLD TO THE TREASURY SINCE SILVER DEMONETIZATION.

I will now present a table which I have prepared showing the gain of net gold to the Treasury during the silver-coinage period, 1878 to 1890; also the loss of gold from July 4, 1890, to November 1, 1893; also the loss from November 1, 1893, to the present time.

Table showing the gain of gold to the Treasury during the silver-coinage period, and the loss of gold since the enactment of the law of July 14, 1890, repealing the silver-coinage law.

	Net gold.
Gain of gold to the Treasury from June 30, 1878, to date of coinage repeal, July 14, 1890	$86,669,872
Loss of gold to the Treasury during operation of Sherman law, from July 14, 1890, to November 1, 1893	105,847,543
Loss of gold to Treasury from November 1, 1893, to date	235,765,151
Loss of gold to Treasury since the act of July 14, 1890, which repealed the silver-coinage law	341,612,694

On February 1, 1896, the outstanding obligations payable in coin, any or all of which may be presented at any time for redemption, were as follows:

United States notes, called greenbacks	$345,745,840
Treasury notes, act July 14, 1890	110,221,185
National-bank notes	203,086,897
	559,053,922

I have included the national-bank currency in the above because this currency can be presented at the counters of the national banks for redemption, or it can be presented in the reserve city where the banks located out of cities keep their accounts.

These reserve banks would of necessity redeem the national-bank currency in either greenbacks or gold or standard silver dollars, but practically they would redeem them in either greenbacks or gold, because there are only $56,629,676 standard silver dollars in circulation, and nearly all of these are in the hands of the people and not in possession of the banks.

INEVITABLE ALTERNATIVES.

It must be clear to anyone that if we continue to pay out gold when these obligations are presented (any one of which can be just as well paid in silver) that this drain upon the gold in the Treasury will never cease. The one way to stop it is to provide for silver coinage and pay the obligations in silver as is authorized by law. If we do not do this, it can only be stopped by retiring the entire $559,000,000 of obligations, and this would bring about such a contraction of the currency as would cause a distress never before experienced by the American people. These propositions can not be denied. I call upon any member of this House to attempt to controvert them. Congress may resort to makeshift after makeshift, but they will finally find that we are reduced to one or other of the two alternatives which I have announced.

Mr. DINGLEY says:

The people of this country, in my judgment, will never consent to the adoption of any policy which will deprive us of gold.

I respectfully ask if the evidence I have produced does not show that the Senate bill will tend to bring gold to us and not to deprive us of that metal?

During all this period of twelve years of the existence of the silver-coinage law of 1878 the gold in the gold dollar was worth on an average about 20 per cent more than the silver in the silver dollar, and the Gresham law, a law or principle the force of which I fully admit, was constantly acting upon our gold and driving it, or tending to drive it, in a steady current from our shores; but this driving force of the Gresham law during the twelve years' existence of the silver-coinage law of 1878, was met, counteracted, and overcome by a force so far exceeding the strength of the Gresham law as to more than meet and neutralize its power, and that force was the energizing effect of the silver-coinage law of 1878.

This law told the world that this, the greatest silver-producing country of the world, had entered upon a field of bimetallism.

The owners of money throughout the world knew that this law, if executed in good faith, would practically double the money of ultimate redemption in the United States.

The businessmen of this country and the moneyed men of other countries who invest in the United States believed that a law enacted by so nearly a unanimous vote would be executed in good faith by the executive branch of the Government, and they believed that it would energize every industry and cause all products and all other property to rise in value.

This presented a most inviting field for the investor, and almost immediately after the passage of that law the falling prices and lethargy which had characterized our history since 1873 underwent a change. Industries of all kinds were inaugurated; labor was all employed and wages were increased; property took a steady rise, and an era of great progress and prosperity commenced.

If I had time I would show the effect of demonetization and remonetization upon all kinds of property, but it will sufficiently illustrate my argument to show the effect upon the leading railroad stocks as quoted in the New York market.

GREAT PROSPERITY FOLLOWS COINAGE ACT OF 1878.

In order to show at a glance the marvelous decrease in the value of property caused by the demonetization of silver in 1873 and the phenomenal increase in values by the partial remonetization of silver in 1878, I ask the attention of Congress to the following figures taken from the Financial Review of 1882, published under the shadows of Wall street, New York.

I place in the first column the selling price of the principal railroad stocks just prior to the demonetization of silver in February, 1873. In the second column I put the selling price of the same railroad stocks after the people had realized the baneful effects of the iniquitous act of 1873. I then put in a third column the selling price of the same stocks after the country began to feel the effect of the restoration of silver by the act of 1878.

	Price just prior to demonetization of silver, 1873.	Price after the demonetization of silver.	Price after the remonetization of silver, 1878.
Albany and Susquehanna	95	58	133
Chicago and Alton	122	85	156
Chicago, Burlington and Quincy	155	78	182
Chicago and Rock Island	118	63	148
Columbus, Chicago and Indiana Central	95	2	28
Cleveland, Columbus, Cincinnati and Indianapolis	94	32	101
Cleveland and Pittsburg	92	72	142
Delaware, Lackawanna and Western	103	30	131
Dubuque and Sioux City	63	39	88
Erie	69	4	75
Erie preferred	82	14	82
Harlem	122	118	250
Illinois Central	126	40	146
Lake Shore	97	45	135
Louisville and Nashville	79	29	109
Marietta and Cincinnati first preferred	28	2	24
Memphis and Charleston	55	4	93
Michigan Central	110	36	126
Missouri, Kansas and Texas	40	3	54
Morris and Essex	92	51	131
New Jersey Central	106	6	112
New York Central and Hudson River	106	85	155
Ohio and Mississippi	49	3	60
Ohio and Mississippi preferred	75	4	126
Panama	130	80	280
Pittsburg, Fort Wayne and Chicago	95	81	142
Rensselaer and Saratoga	104	87	146
St. Louis and Iron Mountain	97	5	86
Union Pacific	40	25	130

These figures show that the demonetization of silver in 1873 caused the withdrawal of money from the markets and a fall in the value of all kinds of property. It shows that railroad stocks fell in many cases to a mere fraction of their value prior to 1873, and it also shows after the remonetization of silver in 1878 all property rose in a remarkable degree in value. It is no doubt true that the prices of these stocks were affected in some degree by other causes than the demonetization and remonetization of silver, but I insist that that was by far the most potent of all influences that bore upon them.

Other things besides stocks were affected in the same way. Wheat sold for $2.25 a bushel just prior to February, 1873, and after 1873 fell as low as 83 cents a bushel, and after the remonetization of silver it rose, selling as high as $1.59 a bushel.

We have seen that cotton was 26 cents just prior to demonetization and that it fell to 8¼ cents after the demonetization, although the slight increase in the crops was by no means equal to the increased demand.

Now, after the remonetization of silver, cotton rose to 12¾ cents in the face of the fact that crops increased from 4,800,000 bales in 1876–77 to 6,992,234 bales in 1882–83.

This is another proof of the detrimental effects of demonetization of silver and the energizing and beneficial effects of its remonetization. [Applause.]

I think the unquestioned evidences which I have presented not only fully refute Mr. DINGLEY's argument that silver coinage will cause gold to leave our country, but also prove precisely the contrary. The fall in prices after demonetization in 1873 shows that this caused money to be withdrawn from investments and from this country, and also shows that the silver-coinage act of 1878 caused money to come to this country to seek investment.

The reason why silver coinage caused gold to come to our country is perfectly clear to any man who has given this subject proper investigation and study. The enactment of the silver-coinage act of 1878 informed the world that the United States had adopted the policy of coining substantially her entire silver product into standard silver dollars, which were to be receivable in payment of all dues and debts. This was understood to mean that silver was to be treated the same as gold, and that the money of ultimate redemption was to be doubled, and every moneyed man in the world understood that this would cause a rise in the value of all products and property, or, which is the same thing, a fall in the value of money. This of necessity caused everyone who had money to seek to invest it in property or in manufacturing and other enterprises. This of necessity energized every industry, and money was sent to America to enjoy a profitable investment in enterprises and the general enhancement of property. During this twelve years of silver coinage the value of silver in the silver dollar was on an average worth in the markets about three-fourths as much as the gold in the gold dollar, and therefore the Gresham law was constantly working with full force on all the gold in the country, and the reason why it did not cause gold to leave the country was that the energizing effect of silver coinage upon our industries was such and the profit in all investments was so great that all the force of the Gresham law was overcome, and the current of gold was toward our country and not from it.

ANOTHER MISTAKE OF MR. DINGLEY AS TO EFFECT OF SILVER COINAGE.

After stating that the value of 371¼ grains of fine silver bullion would be substantially the same as the silver when coined into a standard silver dollar, the distinguished gentleman makes the assertion that it follows that if we enacted a silver-coinage law gold would not be brought to our mints for coinage, and that even the gold already coined would be withdrawn from use as money, and gold bullion and coined gold would become merchandise.

Mr. DINGLEY's language was:

> It must be conceded that under free and unlimited coinage of private silver bullion there could be no material difference in market value between 371¼ grains of fine silver in the form of bullion before coinage and 371¼ grains of silver coined into a standard silver dollar.

Mr. DINGLEY also stated in his speech:

> It is idle to claim that if the mints of the United States could be opened to the free coinage of silver on the basis of 16 to 1 the old relative value of silver and gold which existed before these new conditions came in would be restored.

These two assertions by Mr. DINGLEY show that his contention is that unlimited silver coinage would not enhance the value of silver.

On the contrary, we insist that if our Government coined and treated silver the same as gold, the silver in the silver dollar would rise in value, and as the discrimination in favor of gold would cease and gold would no longer be the only money of ultimate redemption, the value of the silver in the silver dollar and that of the gold in the gold dollar would rapidly approach each other.

MR. DINGLEY'S ARGUMENT REFUTED BY HISTORY.

Now, Mr. DINGLEY seeks to combat this position, and, contrary to all precedents and teachings of history, asserts that it would follow that no gold would be brought to our mints. His words were:

> It follows from this that gold would not be brought to our mints for coinage on the basis of regarding 1 ounce of gold as the equivalent in coinage of only 16 ounces of silver—

And he insists this would be the result unless this coinage doubled the value of silver as measured by gold. And unless this

result was attained, which he contends would not be possible, Mr. DINGLEY says:

Gold would not be taken to our mints for coinage, and even that already coined would be withdrawn from use as money, and both gold bullion and coined gold would become merchandise and be sold and exported as such.

A BRAND-NEW SCARECROW.

This, Mr. Chairman, is a brand-new scarecrow which the gold-standard advocates have thrust upon the people, and it is as fallacious and unfounded and untrue as their many other arguments and assertions which they make to substantiate their position. In utter refutation of this position taken by Mr. DINGLEY I appeal to history and experience.

In 1877 the House passed a free silver coinage law, and in 1878 a law which was substantially a free-coinage law was enacted by Congress. Now, if the gentleman was correct in the statement that the passage of a free-coinage law would have the effect to stop gold being carried to the mints, then that law of 1877 and 1878 would have stopped gold being carried to the mints for coinage; but quite the contrary. The year preceding the passage of that law the coinage of gold in the United States was but $43,999,864, while in the year after the passage of the law it rose to $62,308,279, and the next year to $96,850,890. So that the very reverse took place, and instead of gold not being carried to the mints it was carried to the mints in increased ratio.

It is true that in 1883 and 1884 there was a falling off in the coinage of gold, but the reason for that was that there was a falling off in the production of gold, and the additional reason that the demand for gold for the arts was so largely increased that in 1883 $14,458,000 and in 1884 $14,500,000 was used for the arts in the United States, and the gentleman will see from the Report of the Director of the Mint that every dollar of gold produced in America after the passage of the free-silver laws of 1877 and 1878, that was not used in the arts, was carried to the mints for coinage.

The fact that the law of 1878 provided for the annual coinage of nearly $40,000,000 of silver of necessity largely occupied the capacity of our mints, and therefore very naturally, to some extent, impeded gold coinage; but it appears that even this impediment was overcome and gold coinage rapidly increased.

THE REFUTATION COMPLETE.

I respectfully ask the gentleman from Maine, does he want any more thorough refutation of his statement than that? I can easily add additional evidence. If the logic of the gentleman is correct, that the coinage of silver would prevent the coinage of gold, then by the same logic a law which repeals a silver-coinage law and demonetizes the metal would cause a great increase in the coinage of gold; but we find on examination that when we demonetized silver in 1873 gold coinage did not increase, but actually decreased. In 1873 we coined $57,032,747.50 in gold. The year after demonetization, instead of the gold coinage rising, it fell to $35,254,630, and the next year it fell to $32,951,940. We thus see that Mr. DINGLEY is refuted on all sides.

Gold-standard advocates tell us that the gold, silver, and paper money which now exists in the United States is much greater than it was during the period of great prosperity from 1850 to 1861. I do not doubt this; but no one denies that, notwithstanding this large increase, nearly all of it is concentrated in the banks of New York and other large cities.

CAUSE OF MONEY FAMINE IN RURAL SECTIONS.

The money in the rural sections has been gradually decreasing until there is a money famine in all the rural sections of the United States. The reason for this is apparent to everyone, and to remedy this unnatural condition is the effort of the Democratic party. Prior to 1861 the States of the entire Union in exercising their soverign power enacted banking laws, which were gradually improved and perfected. Under this system banks were established in all parts of the United States, the vault of each bank being the point of issue and redemption of its currency. The consequence was that the financial and business needs of every locality determined the amount of currency which was issued by the banks of each section of our land. When the war commenced, Congress enacted what are called the national banking laws. They were framed and dictated by the moneyed men and the bankers of New York, who took special pains to so frame the laws as to give them the monopoly of banking and the substantial control of the money of the United States. By these laws all bankers other than national bankers were prohibited from issuing any currency by the attachment of a penalty of 10 per cent on every dollar issued. This gave the national bankers the monopoly of issuing currency. These men possessed vast amounts of personal property, and in order to give them the monopoly of borrowing from these banks they secured the enactment of a provision which prohibited national banks from loaning money unless it was secured by the kind of property which they had and which the mass of the people did not have. This made it impossible for the great mass of our people of the United States, whose property consisted of land or other real estate, to borrow one dollar from the national banks, which under the law were the only banks of issue allowed to exist. This monopoly, of course, resulted in the northeastern moneyed men becoming owners of substantially all the money and bonds issued by the Government.

REPUBLICANS LEGISLATE FOR BONDHOLDERS AND CAPITALISTS.

In 1869 the currency of the country was at a discount of 30 or 40 per cent, and all bonds stated upon their face that they were payable in this currency. The bondholders were so powerful that in March, 1869, they induced a Republican Congress to enact a law stating that their currency bonds should be paid for in coin. At that time the silver in a silver dollar was worth as much and even more than the gold in a gold dollar, and therefore they did not designate the kind of coin that they were to receive; but, realizing that to reduce the amount of coin would enhance its value, in 1873 they again exercised their influence over Congress and secured the enactment of a law demonetizing silver, which, of course, enhanced the value of gold and at the same time necessitated the payment of their bonds in that metal. The depression and distress which followed this enactment brought about a revolt, which resulted in the passage of the silver-coinage laws of 1877 and 1878. At that time the House of Representatives was overwhelmingly Democratic, but this same moneyed power induced the Republican Congress in July, 1890, to repeal this law, and from that time to this the struggle has continued between the moneyed power to maintain the gold standard and the people to restore bimetallism.

It was this same influence which secured the repeal of the purchasing clause of the Sherman Act. This moneyed power has become possessed of substantially all the gold in the United States, and they are here insisting that this gold which they own, and which could be put into one large iron safe, shall be the money of ultimate redemption in the United States.

ALL GOLD NOW CENTERED IN NEW YORK.

I have heretofore illustrated how the financial legislation of the Republican party has concentrated the wealth of the land in New York and other money centers. The bank clearings of New York City last week were $560,862,293, while the bank clearings of all the rest of the United States were only $439,044,111, and those of the South were absolutely insignificant.

In this same line, the newspapers of to-day publish the list of the successful bidders for the $100,000,000 of bonds, showing that substantially all the gold in the United States is concentrated in New York, Boston, and Philadelphia. The entire amount to be paid for the bonds is $111,378,836, and of this $97,196,477 is to be paid in the city of New York, while all the States south of the Potomac and Ohio rivers only secured $196,600 of the bonds, for which they are to pay $222,086. In other words, New York City alone was able to purchase 450 times as much as all the States south of the Ohio and Potomac.

The population of New York City is 1,515,301, while the population of the States south of the Potomac and Ohio is 18,327,704, more than 12 times the population of the city of New York, and therefore the gold per capita of New York City is 5,400 times the per capita in these Southern States, and this is the result of the financial legislation which I denounce.

A THREADBARE GOLD-STANDARD SCARECROW.

The distinguished gentleman [Mr. DINGLEY], in referring to the Senate substitute, which provides for silver coinage, says:

If this substitute should become law there is not a man in this country who has money to loan to the Government but would take alarm if such legislation should be had at this time.

Now, Mr. Chairman, this is one of the threadbare scarecrows which the gold-standard men have been reiterating for the last twenty years. To show its utter fallacy I have only to state that less than five days ago the Senate of the United States by a very decided majority passed the substitute we are now considering, which provides for the free and unlimited coinage of silver and also provides that the Secretary of the Treasury shall redeem obligations which are payable in—

either gold or silver coins or both, not at the option of the holder, but exclusively at the option of the Treasury Department.

Now, with this decisive action of the highest branch of the law-making power of our country, we see by this morning's paper that the people of the world are offering to buy $100,000,000 of coin bonds at a premium of more than $11,000,000, and that the anxiety to take this loan is so great that 44,640 persons or syndicates have applied for the loan, and the total applications aggregate $558,269,850. This shows conclusively that the enactment of this law would not alarm persons who have money to loan, and it is an overwhelming argument that the financial men of the world believe as I do, that if this great and powerful Government enacts this law and reaffims the determination which was expressed in the Democratic platform of 1892—

To hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal—

it will establish and maintain a parity between gold and silver and cause the financial men of the world to be indifferent whether the payment of these bonds is made in one metal or the other.

During years of service with Mr. DINGLEY I have been deeply impressed with his great learning and superb ability, and the fairness and logical trend of his arguments, and when we see that this distinguished man, the premier of the House of Representatives, has been betrayed into laying down as the premises upon which he based his argument a series of fallacies and unwarranted assertions, we naturally look in astonishment to find how such a phenomenon has been accomplished.

Anyone who has watched the press of the Northeast during the last few years must have been forcibly impressed that some gigantic power was exercising itself in an effort to convince the people of the United States that the interest of our country could be best served by the establishment of the gold-standard policy.

GOLD STANDARD LITERARY BUREAU.

Not willing to trust this matter to the influence of the great dailies of the Northern cities alone, the bankers and money monopolists established what they denominated a reform club, the purpose of which is to publish documents in advocacy of the gold standard, which documents for the last two years have been spread all over the United States. I hold in my hand a report of the committee of the club, which is engaged in this work. We find by this report that prior to its publication they had distributed 9,700,000 of these documents and were sending them out on an average of about 1,000,000 documents a month. It seems to me that this report shows that they have exercised every conceivable means which the use of money could by any possibility exercise to influence public opinion in favor of the gold standard.

1. They employ and pay public speakers.
2. They send out what they call sound-currency periodicals.
3. They advertise in newspapers throughout the country that this sound-currency literature will be supplied from the newspaper offices free of charge.
4. They supply, free of charge, any and all papers of the United States, which will accept them, broadside supplements of type and form similar to the papers to which they are sent, filled in with gold-standard arguments.
5. Plates containing gold-standard arguments are also sent to all the papers that will accept them.
6. A special bureau is established which employs a corps of contributors of articles advocating the gold standard.
7. They have a cartoon bureau which distributes cartoons intended to be arguments for the gold standard.
8. They then have a general distributing bureau to aid all the other bureaus.
9. They inaugurate plans for conventions to pass resolutions in favor of the gold standard, and adopt any and all means to exercise influence over political conventions.

These are only some of the methods adopted by this bureau, and they express their determination to place the documents they have prepared advocating the gold standard before every reader in the United States, and as everything distributed by them is prepared by men of the highest possible literary attainments, it is not surprising that they are so plausible as to deceive and mislead the general public, and therefore we are not surprised that they have misled as thoroughly an informed man as we all know Mr. DINGLEY to be.

COINING SILVER AND PAYING IT OUT THE SAME AS GOLD IS NOT BAD FAITH.

The gentleman from Maine [Mr. DINGLEY] had much to say about "honor and good faith," "discharging debts in inferior money," "distrust in our good faith," "honesty," "straightforward dealing," "bad faith," etc., repeating these expressions several times, the apparent effort being to create the impression that opponents of the gold standard do not desire to act in good faith with the creditors of the Government.

Let us look into the matter and see what the strictest good faith demands. There are two parties to these transactions, the people on the one side and the creditor on the other. We are the trustees of the people, and it is our duty to keep good faith with them, and as their agents it is our duty to keep good faith with their creditor, and see that he is paid every dollar to which he is entitled under, either the letter or the spirit of his contract.

To give him less or to give him money less valuable than is due him under the contract would not be honest; and on the other hand we would be dishonest to the people to pay the creditor more than was due, or to give him more valuable money than was nominated in the contract.

Let us examine the tenor of the contract. The contract which the creditor presents designates that it is payable in coin.

THE MATTHEWS RESOLUTION FOR SILVER.

A few days before the passage of the silver-coinage act of 1878, by a two-thirds vote in both Houses, Congress adopted the following resolution:

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor.

Mr. Carlisle voted for the resolution and was one of its strong advocates. This certainly shows that every man who has come into possession of a Government obligation since 1878 knew that it was redeemable in silver dollars. The bankers and moneyed men, however, contend that the Sherman law, enacted July 14, 1890, gave them a right to demand gold. Mr. DINGLEY recites the expression they rely upon, which is in these words:

The established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

I insist that if this stood alone, unqualified, it would not give them the right to demand gold.

SHERMAN LAW AS IT REALLY IS.

The expression, as it really stands in the law, is as follows:

That upon demand of the holder of any of the Treasury notes herein provided for the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

It will be seen that the law expressly authorizes the Secretary of the Treasury to—

redeem such notes in gold or silver coin at his discretion—

but these controlling words are seldom, if ever, quoted or alluded to by gold-standard advocates.

REPEAL LAW OF NOVEMBER 1, 1893.

I wish also to call to the attention of those who assert that Congress has committed itself against the coinage of silver that the act of November 1, 1893, which repealed the purchasing clause of the Sherman Act, contained these words:

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

MR. DINGLEY'S STATEMENTS SHOW THAT BIMETALLISM CAN BE MAINTAINED.

Now, Mr. Speaker, I will give another reason why bimetallism could be maintained, if we should now enact laws for the coinage of silver, which I think will appeal to my friend, Mr. DINGLEY. The Report of the Director of the Mint for 1892, pages 56 and 57, says:

According to the revised figures, the world's production of gold and silver for the last three years has been as follows:

World's production.	Gold.	Silver.
In 1890	$113,149,600	$172,234,500
In 1891	120,518,800	186,733,000
In 1892	130,816,600	196,695,200

It will therefore be seen that during the three years prior to the meeting of the Republican national convention in 1892 the production of gold was less than two-thirds the production of silver. With that condition staring them in the face, the Republican party, of which our chairman, the very distinguished premier of this House [Mr. DINGLEY], was a prominent member, declared with all possible emphasis in favor of silver coinage.

The silver plank in the Republican platform of 1892 was in these words:

SILVER AND CURRENCY.

The American people, from condition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money—

These were their precise words, and the following language did not lessen the force of this pledge for bimetallism—

with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of the values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

Their candidate, President Harrison, in his letter of acceptance indorsed all that had been said by his party and used this emphatic and unmistakable language:

COINAGE AND CURRENCY.

The resolution of the convention in favor of bimetallism declares, I think, the true and necessary conditions of a movement that has, upon these lines, my cordial adherence and support. I am thoroughly convinced that the free

coinage of silver at such a ratio to gold as will maintain the equality in their commercial uses of the two coined dollars would conduce to the prosperity of all the great producing and commercial nations of the world.

And the New York Tribune, in speaking of this plank of the Minneapolis platform, said:

The declaration of the silver question is free from ambiguity.

The Republicans realized that these propositions were so self-evident, and they so fully appreciated that the people would not support a party which did not subscribe to them, that they incorporated in their campaign book a distinct announcement in favor of these principles.

I read from the Republican Campaign Book, page 157:

Some money lenders who are money monopolists want scarcer money that it may be dearer. The honest wage earners, the tillers of the soil, and other producers who would rob no man want more money, but good money. More money, they believe, is required by the constant growth of commerce and industry.

In the next paragraph, the same page, the book says:

No party has ever favored money monopolists, a contraction of the currency, or an unchanged volume of circulation which, with growing business, would involve a relative contraction.

In the great anxiety of the Republican party to secure votes they proceed in the next paragraph of their campaign book to use these expressions.

The subhead of this paragraph is as follows: "The Republican a bimetallic party."

The book then says:

Nine-tenths of the people are bimetallists. They want both money metals used, because they believe both needed to sustain the world's commerce. The Republican party intelligently and honestly answers their wishes. President Harrison is a bimetallist, as his official papers and his speeches plainly show. The Republican platform declares for bimetallism, and in that respect faithfully represents the course of the party.

The Republican pledges in favor of silver in 1890 were quite as emphatic as they were in 1892. From page 19 of the Republican campaign book of 1890 I read as follows:

In its last national platform the Republican party declared this doctrine: "The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver."

AN UNANSWERABLE ARGUMENT FOR SILVER.

Now, bear in mind that these declarations and pledges of Mr. DINGLEY'S party to the people, in which he heartily joined, for the equal coinage of both gold and silver, were made at a time when the gold production of the world was less than two-thirds the production of silver. Now, the distinguished gentleman tells us that the production of gold this year will be $250,000,000, while we know the production of silver will be but little, if any, more than $200,000,000.

Mr. DINGLEY'S language was—

Since 1890 the increase of [gold] production has been greater than ever before, rising from $118,000,000 in 1870 to $205,000,000 in 1895, with the probability that the production this year will reach $250,000,000.

Mr. DINGLEY also added that this production—

Is almost twice the production of any year of the Californian period.

Now, if Mr. DINGLEY felt justified in promising the people bimetallism by the free coinage of both gold and silver when the production of silver was nearly double that of gold, how can he state that free coinage of both metals would not give us bimetallism when the relative production of gold and silver is reversed and the production of gold is now one-quarter more than the production of silver. I think this is a very complete compliance with our distinguished premier's demand—

That we present to the House and country the grounds on which we assume that silver coinage will result in giving us bimetallism.

PLEDGES OF THE DEMOCRATIC PARTY FOR SILVER.

Having shown that the pledges of the Republican party bind them in honor to support bimetallism, I will now show that the pledges of the Democracy bind them with double—yes, even treble—force to vote for and sustain bimetallic legislation.

The Democratic Campaign Book for 1890, page 374, says:

DEMOCRATIC PARTY ON SILVER.

The records of the Fifty-first Congress show that the Democratic Senators and Representatives are practically a unit in support of the free and unlimited coinage of the white metal.

The Democratic platform of 1884, reaffirmed in 1888, spoke as follows on the coinage:

"We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss."

The Republican platform of 1888 spoke thus:

"The Republican party is in favor of the use of both gold and silver as money."

The meaning of these declarations can be best learned from the history of silver-coinage measures in Congress.

In all its years of power the Democratic party never enacted a law to demonetize silver, but constantly and unceasingly maintained its free and unlimited coinage from 1792 to 1873, when the Republicans, being in a large majority in both Houses of Congress, and having all departments of the Government, enacted a law in February prohibiting the coinage of the standard silver dollar.

In November, 1877, a Democratic House of Representatives enacted a free silver coinage bill, which went to its grave in a Republican Senate.

The book then proceeds to give the vote upon silver, showing that the Democratic vote in the House in 1877 was 97 votes for the free coinage of silver and only 10 against it. Various other votes upon the silver question are then given, including the vote of June 7, 1890, at which time the House gave a direct vote upon the question of free coinage. The Democrats in the House were almost solid for free coinage, only 13 Democrats voting against the bill, and all of them were promptly retired to private life.

Among those who voted for free coinage I recall Breckinridge of Arkansas, Breckinridge of Kentucky, Bynum, Caruth, CATCHINGS, CLARKE of Alabama, Crain, CRISP, Edmunds, MCCREARY of Kentucky, Montgomery, Oates, O'Ferrall, Outhwaite, Springer, Stone of Kentucky, TUCKER, TURNER of Georgia, WASHINGTON, and the distinguished gentleman from West Virginia, Mr. Wilson.

With this overpowering expression of the Democracy in favor of free coinage fresh in the minds of the people, the election of 1890 took place and resulted in the great Democratic victory which gave this House 150 Democratic majority.

This vote in favor of free coinage was made a very prominent feature in the campaign. It was made very noticeable in the campaign books, and it was regarded as a declaration and pledge on the part of the Democracy for free coinage.

Two years later, in 1892, the Democratic party again went before the people on the positive declaration in favor of the free coinage of silver.

The platform promised the people—

Coinage of both gold and silver without discriminating against either metal.

The only conditions imposed were that—

The dollar unit of coinage of both metals must be of equal, intrinsic, and exchangeable value.

This plank of our platform closes with these words:

We insist upon this policy as especially necessary for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

THIRTY-ONE STATE PLATFORMS FOR SILVER.

Not only did the Democratic platform promise the people free silver, but in addition to that, thirty-one States, in their conventions, adopted free-silver platforms, and substantially all of the Congressional districts which expressed themselves on the subject were emphatic for free coinage. The New York Tribune of June 21, 1892, refers to this subject in these words:

Behind Cleveland is a party which in the last three years has declared for free silver in thirty-one State platforms, and in two Congresses has voted for free-silver bills with substantial unanimity.

One of those thirty-one States was the State of Alabama, which in the State convention expressed itself unequivocally for silver.

I read from the fourth plank of the Alabama State platform of 1892.

That the Democratic party of Alabama expresses its condemnation of the Republican party for their administration of the finances of the country, under which the demand of the people for a sufficient circulating medium has been ignored, and silver has been driven from its time-honored and rightful place and uses under the Constitution of the United States, where it was maintained so long as our party had control of the national legislation.

Every public man knows that in 1873, when the Republican party was in control of every branch of the Government, that party demonetized silver. Every public man knows that after the Democratic House had, in 1877, passed a free silver coinage bill at 16 to 1, the bill was defeated in a Republican Senate.

The bill I refer to passed the House on November 5, 1877, just twenty days after the meeting of that Congress and one week after the committees were appointed.

It was passed by the Democratic party, such grand Democrats as Blount, Carlisle, Forney, Sunset Cox, Garth, Herbert, Kelly, Hewitt, R. Q. MILLS, and Reagan voting for and supporting the bill.

ANOTHER GOLD STANDARD ERROR.

Mr. DINGLEY then speaks of—

A change in the conditions of mining causing the remarkable decline of silver.

He then puts in a subhead, "The overshadowing cause of silver decline," and says:

It is this abnormal increase in the production of silver.

VALUE OF GOLD INCREASED—SILVER HAS NOT DECLINED.

The gentleman is wrong when he tells us that silver has fallen in value. I have prepared tables showing the production of silver and its value in 1873, 1892, 1893, and 1894, and the same with regard to the staple products of America, and these tables show that the increase in the production of silver has been less than that of any of the staples, and the decrease in price of silver has been also less than that of any of these staples, showing conclusively that silver has not fallen in value, but that gold has increased in value.

Table showing increase in production of silver and various other staple American products from 1873 to 1892, their value in 1873 and 1892, also their value in 1892 compared with that of 1873.

Articles.	Production in 1873.	Production. in 1892.	Increase of production, 1873 to 1892.	Value in 1873.	Value in 1892.	Value in 1892 compared with 1873.

*1891.

In order to refute the statement that the fall in values has been caused by excess in production, I have prepared another table showing the production of these articles in the United States, so far as I could get the data, for the years 1892, 1893, and 1894. The table also shows the value in 1892 and the value in 1894; also, the percentage of value in 1894 to what it was in 1892.

Table showing production of silver and various other staple American products in 1892, 1893, and 1894 and their values in 1892 and 1894; also their value in 1894 as compared with that of 1892.

*1891.

One reason why money has been hoarded and prices have declined since the repeal of the purchasing clause of the Sherman Act is that every step taken by this Government which helps to fasten upon this country the gold standard has a tendency to reduce the amount of money of ultimate redemption, which must lower prices; and when this tendency exists, all those who have money see that its purchasing power will increase, and therefore their interest is best served by holding and hoarding, instead of investing.

ANOTHER GOLD-STANDARD ERROR.

The gentleman from Maine then states:

It is significant in this connection to recall that the United States has used five times as much silver as money in the seventeen years since 1878 as it used in the first seventy years of the existence of this Government under the Constitution.

This is another of the many errors into which the gold-standard men have fallen and which they reiterate as a standard antisilver argument. If they had taken the trouble to look into the history of our country, they would have found that during the first seventy years of our Government we did not depend upon American silver. In fact, during that period our entire silver coinage was $122,832,462, and the entire production of silver of the United States was only $1,500,000, and the silver money of the United States was almost entirely foreign silver.

In 1847 the Secretary of the Treasury estimated the amount of specie in the country at $120,000,000, and as this was before the discovery of gold in California, the most of this was silver and was mostly foreign silver, and this $120,000,000 of course only included the specie which was visible and could not include that in the hands of the people, of which no account could be taken. The excess of foreign coins over those from our mints was so great that contracts for payment of money very frequently stipulated that the payment was to be in so many Spanish milled dollars, and the statutes of some of our States also mention Spanish milled dollars as the money in which contracts were to be liquidated. Now, all this Spanish money was used, and it shows that the gentleman from Maine [Mr. DINGLEY] was fearfully in error when he stated that the United States has used five times as much silver in the seventeen years since 1878 as it used in the first seventy years of the existence of our Government. If he had used the word "coined" instead of "used" he would have been practically correct.

ANOTHER ERRONEOUS GOLD-STANDARD ARGUMENT.

The distinguished gentleman [Mr. DINGLEY] also says:

The suggestion that France compels the holders of the French paper currency to sometimes accept silver in part payment, at least, of notes presented for redemption, and yet preserves the parity of these notes with gold, overlooks the fact that it is not the Government of France that issues circulating notes, but a corporation distinct from the Government, known as the Bank of France, which maintains a coin reserve of nearly $634,900,000 (of which nearly $385,000,000 is gold) against a note circulation of only $675,000,000.

In reply to this I will say that the liabilities of our Treasury Department, which are payable in coin, are much less than this, and if we had adopted the same policy which is acted upon in France the gold in our Treasury would have far exceeded that which is now held by France.

At the end of Mr. Cleveland's first term the net gold in the Treasury was	$197,874,423
Received from sale of bonds	182,000,000
Received from banks	10,000,000
And the amount the Treasury is now receiving from the late bond sale	111,378,836
Total	501,253,258

And I very much fear that under our policy in a few months there will be another cry that the Treasury reserve is being exhausted.

FRANCE MAINTAINS HER GOLD RESERVE BY A METHOD CONTRARY TO THAT ADOPTED BY THE UNITED STATES.

The reason why France is able to maintain this reserve of $385,000,000 of gold is that the holders of obligations know that when they present them they may get silver and not gold; and the reason we have lost nearly $400,000,000 of gold is that holders of our obligations, which are payable in either gold or silver, know they will be unjustly favored and given gold for obligations which the law authorizes the Secretary to pay in silver. And yet in the face of these facts, which are known to the whole world, our distinguished chairman, the gentleman from Maine, tells us that France—

Maintains her full legal-tender silver at a parity with gold precisely as the Government of the United States maintains our silver.

Now, I assert, and everybody in the House knows, that we maintain our parity by a method exactly contrary to the one adopted by the French nation. France maintains her parity by honoring silver and treating silver precisely as that nation treats gold. We, on the contrary, exercise all the powers of our Government in discriminating in favor of gold and against silver, and then we maintain the parity by selling bonds for gold, thus mortgaging the earnings of honest bread earners for years to come. Including the present loan, we will, for this purpose alone, during only two years, have incurred an obligation for interest amounting to $244,000,000, and both principal and interest amounting to $506,000,000.

Mr. BOATNER. Would it interrupt the gentleman if I were to ask him a question at this point?

Mr. WHEELER. I will answer it with pleasure.

Mr. BOATNER. Can you inform us whether France gave any pledge to redeem paper circulation, such as the greenbacks or the silver certificates?

Mr. WHEELER. It has six hundred and seventy-five millions of paper circulation, and they pay it in coin, silver or gold, as they see fit.

Mr. TUCKER. But is not that the circulation of the Bank of France?

Mr. WHEELER. I will explain that.

Mr. BOATNER. The question I wanted to ask of my friend, if he had any knowledge on the subject, is whether the French Government has not retired all of its pledged obligations, so that it has no obligation of this class that may be presented for redemption?

Mr. WHEELER. Well, but even if that be so, I submit to my friend that this very paper circulation which is issued by the Bank of France has the same relation to that country as our notes and obligations have to ours. The gentleman's argument is that the $675,000,000 of French paper currency, to which the gentleman from Maine referred, is not issued by the French treasury itself, but by the Bank of France, and therefore the gentleman contends that the action of the Bank of France in paying out gold and silver at its discretion is no reason to justify the United States in adopting the same plan. Now, the gentleman himself has insisted, and all the gentlemen who advocate the gold standard insist, that the United States Treasury has, under the laws which now exist, become a banking institution, as they say our Treasury is just like the Bank of France, and that being the case, it follows that

the system adopted by the Bank of France is applicable in all respects to our Treasury.

If we had retained in the Treasury the gold which was in it when Mr. Cleveland turned over the Government to Mr. Harrison and added to it the $182,000,000 which we have obtained by selling bonds since, we would have more gold in our Treasury than France has in hers.

Mr. BOATNER. Will it interrupt the gentleman to ask him a question right there?

Mr. WHEELER. No, sir.

Mr. BOATNER. If France, by the payment of silver partially, sustains it at a parity, why can not Mexico, Japan, China, and other silver-using countries, which pay it altogether, maintain it at a parity in those countries?

Mr. WHEELER. Because those countries are what are called silver countries, and they do not pay out any gold at all. France is a bimetallic country, and that is what we want to be. We do not want to adopt the plan of Japan, China, or Mexico. I say that we ought to adopt the plan of France, a plan which meets the full approval of the gentleman from Maine, a plan which I am confident would establish us on a bimetallic system.

Mr. BOATNER. Yes; but the gentleman will admit that his argument is that the United States discredits silver by refusing to pay it out.

Mr. WHEELER. Yes, sir.

Mr. BOATNER. And thereby discriminates against it?

Mr. WHEELER. Yes, sir.

Mr. BOATNER. And France, by paying it out only partially, you say does not discredit it; then why is it that the payment altogether in that money which is to give it an appreciation over gold—how is it that silver in all silver-using countries is exactly at the same disparity that it is everywhere else?

Mr. WHEELER. The gentleman is mistaken.

Mr. BOATNER. How does the gentleman account for that?

Mr. WHEELER. I account for it by saying that it is not true. My friend from Louisiana is mistaken in his premise. [Laughter.] Silver in all those countries has almost the same purchasing power that gold has in gold-standard countries.

The Secretary of Agriculture tells us that the average price of wheat in the United States in 1893 was 54 cents, which of course meant gold. The same year the average price in India in silver, taking the average of twelve different localities, was 67 cents. We thus see that when the London merchant wishes to buy wheat he can buy silver with his gold and buy almost 2 bushels of wheat in India for the same money for which he can buy 1 bushel in the United States.

Mr. GROSVENOR. Will the gentleman explain to the House the difference between the treatment of the United States and the treatment of France of silver as money?

Mr. WHEELER. I am sorry that the gentleman did not hear me. I was explaining it.

Mr. GROSVENOR. What is the difference?

Mr. WHEELER. The difference is that France pays out gold and silver at its option or discretion. We pay out gold in redemption of obligations which the law says are payable either in silver or gold.

Mr. GROSVENOR. How long is it since France coined silver?

Mr. WHEELER. The Latin Union was virtually dissolved in 1876, and that is the date generally given; but France has coined a great deal of silver since that time. The report of the Director of the Mint shows that last year France coined half as much silver as gold, and the French coinage prior to 1876 was very great.

Mr. GROSVENOR. We have coined more than France in proportion to our gold.

Mr. WHEELER. I can not tell exactly what the amount of our gold is, but I think it is largely overestimated, because we see that one or two great houses like the Rothschilds and the Morgans have "cornered" the gold of the world; and we also see that the gold to purchase the $100,000,000 of bonds came almost entirely from New York City.

Mr. GROSVENOR. Ah, now you are getting onto another proposition entirely.

MR. DINGLEY'S ERROR AS TO THE EFFECT OF BIMETALLISM.

Mr. WHEELER. The distinguished chairman of the Committee on Ways and Means then asserts:

It is said that somehow or other, by the adoption of free coinage of silver at the ratio of 16 to 1, we will furnish a fund for redemption.

He then asks how the Government is to get such silver dollars, and says:

Even with such coinage, the only way the Government can get such silver dollars for its greenback-redemption fund is by issuing bonds.

It will be seen here that Mr. DINGLEY assumes that we desire silver coinage only for the purpose of using the dollars so coined to redeem the greenbacks.

No bimetallist has ever made any such suggestion. If we enact the Senate substitute, or if the Secretary of the Treasury would commence now to pay out silver in part payment for greenbacks presented, which he has a right to do, it would immediately stop the raid which is now being made on the Treasury.

The only reason why the greenbacks are now presented is that we have discriminated in favor of gold and made it more valuable than silver, and the holders of greenbacks know that by demanding gold they can compel the Government to repeatedly issue bonds.

Mr. DINGLEY then tells us that the report of the Secretary of the Treasury of February 4 shows that of the 353,000,000 silver dollars in the Treasury, 346,000,000 are represented by outstanding silver certificates, leaving but 7,000,000 available to pay coin obligations.

Mr. DINGLEY then says:

Only 7,000,000 of silver dollars outside of the fund under the act of 1890 are in the Treasury to-day, belonging to it in such a way as to be made available for the redemption of the greenbacks. Therefore what is proposed is to disturb confidence in this country still more—to create the impression that we propose to repudiate something whether we do or not—all because of simply $7,000,000; and every one of these silver dollars can be used for other purposes, instead of greenbacks.

Mr. DINGLEY speaks of increasing distrust, and says:

The end of using these $7,000,000 for redemption purposes does not justify the means.

Mr. DINGLEY here tells Congress that the purpose sought to be obtained by the bill before the House is simply to require the Secretary of the Treasury to pay out these 7,000,000 silver dollars for the redemption of coin obligations.

THE REAL PURPOSE OF BIMETALLISM.

It is surprising that a gentleman of Mr. DINGLEY's learning and intelligence should make such an assertion. The advocates of bimetallism know it can only be accomplished by treating silver the same as gold, coining it the same as gold and paying it out for the redemption of coin obligations the same as gold; in other words, complying with the pledge which is contained in the platform upon which this Administration was placed in power.

The advocates of the bill as it passed the Senate believe that if the measure becomes a law it will finally have the effect of doubling the money of ultimate redemption, and that this would cause a rise in prices of all products of American toil and energize every industry in our land.

VALUES AFFECTED BY AMOUNT OF MONEY.

The history of the world shows that an increase in the amount of money of ultimate redemption in any country has the effect of increasing the value of all products and property; and that a reduction in the amount of money of ultimate redemption has the effect to reduce the value of all products and property, is asserted in all works on political economy which have ever been published; and I believe that no one has ever denied this unquestioned truth.

It rests upon the principle of supply and demand. When the supply of money is small, the demand for it is such that it requires more property to procure it; and when the supply of money is large, the reverse of this proposition obtains.

Mr. Cleveland fully realizes the force of this unerring principle. In his last message he said:

Everyone who receives a fixed salary would find the dollar in his hand ruthlessly scaled down to the point of bitter disappointment, if not to pinching privation.

This means that silver coinage would result in reducing the purchasing power of a fixed salary; which, of course, means that it would cause products and all property to rise in value. Mr. Cleveland contends, however, that the reduced price which the gold-standard farmer receives for his products finds a compensation in the reduced price which pays for the articles he purchases.

The experience of the farmer has taught him the error of this contention. He makes 10 bales of cotton and 400 bushels of wheat. Under silver coinage prior to 1873 he received $1,200 for his cotton and $700 for his wheat. He supports his family, educates one or more children at a first-class institute or college, sends the others to a neighboring school, pays his taxes, gives his family an annual excursion to a neighboring city, subscribes to his church, and lays up $300.

Under the gold standard none of the expenses that I have mentioned are materially reduced.

He sells his 10 bales of cotton for $250 and his 400 bushels of wheat for $160. Instead of laying up $300, he falls behind about $1,000, and in two or three years his home is sold by the sheriff.

Some farmers, seeing the inevitable fall in prices, took their children from school, and denied themselves and family all the comforts they had before enjoyed. But even with the utmost pinching and economy very few have been able to meet their annual expenditure.

When Mr. Rothschild, a delegate to the Brussels conference, was reminded of the effect of the single standard on the price of products he said:

I hold that wheat at 30s. a quarter instead of 45s. is rather a blessing than otherwise.

Secretary Morton in a recent interview, in referring to the same subject, said, that he wanted the American dollar—

to have the largest possible purchasing power.

For the last two years Mr. Morton has been surrounded by people who draw fixed salaries, and no doubt their comforts would be increased just in proportion as the purchasing power of their salaries is enhanced. This would evidently cause the wheat, cotton, corn, and other products of the farm to be sold at the least price possible, which means the utter destruction and ruin of the most valuable interests in our land.

SILVER COINAGE BENEFITS FARMERS.

Only yesterday Mr. Balfour, first lord of the British treasury, said (as it appears by a cable dispatch) that agriculture suffered doubly owing to the present condition of the currency, and expressed his personal belief that the reduced prices were largely due to the artificial appreciation of gold which followed the demonetization of silver.

I quoted similar expressions in my last speech from the editor of the London Economist. He said:

The effect of a depreciation of silver as against gold is to give a bounty on exports from India and the other silver-using countries.

Mr. Nicholson, an eminent Englishman, said:

India wheat is the very wheat that is complained of by Secretary Manning as having lowered the price of European and American wheat.

The effect on wheat applies in the same way to cotton and enables India to disastrously compete with us in all markets in the sale of cotton goods.

ALL GREAT STATESMEN WERE BIMETALLISTS.

The greatest statesmen that this country has produced, from Alexander Hamilton to that noble Roman, Allen G. Thurman, have insisted that the coinage of both gold and silver—bimetallism in its fullest sense—is essential to the best interests of the people of this country.

JEFFERSON, HAMILTON, WEBSTER, AND HUNTER WERE BIMETALLISTS.

In 1791 Alexander Hamilton said:

To annul the use of either of the metals as money is to abridge the quantity of circulating medium, and liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

In February, 1792, Thomas Jefferson wrote to Hamilton:

I concur with you that the unit must stand on both metals.

Daniel Webster, in his great speech of December 1, 1836, said (I read from the Boston edition of his speeches, Volume IV, page 80):

I am certainly of opinion, then, that gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country; and that neither Congress nor any State has authority to establish any other standard or to displace this.

Forty-three years ago Senator Hunter said:

The mischief would be great indeed if all the world were to adopt but one of the precious metals as a standard of value. To adopt gold alone would diminish the specie currency more than one-half, and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race.—*R. M. T. Hunter*, 1852.

BLAINE, GARFIELD, AND CARLISLE WERE BIMETALLISTS.

Hon. James G. Blaine made a very able speech upon the free-coinage bill February 7, 1878. I read from the CONGRESSIONAL RECORD, page 820. This great statesman said:

I believe gold and silver coin to be the money of the Constitution; indeed, the money of the American people anterior to the Constitution which that great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare that either metal should not be money. Congress has therefore, in my judgment, no power to demonetize silver any more than to demonetize gold; no power to demonetize either any more than to demonetize both.

Mr. Blaine also said:

Few persons can be found, I apprehend, who will maintain that Congress possesses the power to demonetize both gold and silver, or that Congress should be justified in prohibiting the coinage of both; and yet, in logic and legal construction, it would be difficult to show where and why the power of Congress over silver is greater than over gold; greater over either than over the two. If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of ordering it to be resumed. If it has been restricted, I am in favor of having it enlarged.

I now read from his speech, page 821:

The responsibility of reestablishing silver in its ancient and honorable place as money in Europe and America devolves really on the Congress of the United States. If we act here with prudence, wisdom, and firmness, we shall not only successfully remonetize silver and bring it into general use as money in our country, but the influence of our example will be potential among all European nations, with the possible exception of England. Indeed, our annual indebtedness to Europe is so great that if we have the right to pay it in silver we necessarily coerce those nations by the strongest of all forces—self-interest—to aid us in upholding the value of silver as money.

I read further on the same page:

I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in the end throughout the world.

The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property.

Further on Mr. Blaine also says:

I do not think that this country, holding so vast a proportion of the world's supply of silver in its mountains and its mines, can afford to reduce the metal to the "situation of mere merchandise." A vast source of wealth to this entire country is destroyed the moment silver is permanently disused as money. It is for us to check that tendency and bring the Continent of Europe back to the full recognition of the value of the metal as a medium of exchange

On February 1, 1878, President Garfield spoke in the House of Representatives upon this subject.

I read from volume 28 of the CONGRESSIONAL RECORD.

Mr. Garfield said:

Every man who is opposed to the use of silver coin as part of the legal currency of the country I disagree with. Every man who is opposed to the actual legal use of both metals I disagree with.

Mr. Garfield also said:

I would endow the two dollars with equality and make the coinage free.

Secretary Carlisle also advocated unlimited coinage of silver with great force.

Mr. BOATNER. In which he said something about a "gigantic crime"? [Laughter.]

Mr. WHEELER. Yes. Mr. Carlisle characterized the attempted legislation against silver as—

the most gigantic crime of this or any other age.

I read from Mr. Carlisle's speech, page 42 of the Appendix to the RECORD. Mr. Carlisle said that—

he was in favor of unlimited coinage of both metals upon terms of exact equality. No discrimination should be made in favor of one metal and against the other; nor should any discrimination be made in favor of the owners of gold and silver bullion and against the great body of people who own other coins or property.

He continued, on page 43:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.

In 1878 the United States produced $51,200,000 of gold and $45,200,000 of silver, the total being $96,400,000. The property in the United States was about $38,000,000,000. Therefore the property of the United States was about three hundred and ninety-five times the production of gold and silver. The property of the United States to-day is estimated at $75,000,000,000.

Last year we produced $39,500,000 of gold and $64,000,000 of silver, the total being $103,500,000. We therefore see that the property in the country now is seven hundred and twenty-five times greater than the production of gold and silver, and we also see that the proportion of precious metals to property is now about one-half what it was when Mr. Carlisle made his speech, and consequently that the reasons for coining silver are now twice as strong as they were when Mr. Carlisle made his able argument upon this subject.

Mr. Carlisle then says:

According to my views of the subject, the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

It will be here seen as just stated by Mr. Boatner, that to strike down silver, as is now proposed, was denounced by Mr. Carlisle as a gigantic crime—the most gigantic crime of this or any other age.

Mr. Carlisle then proceeded in the following emphatic language:

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of half of the metallic money in the world.

This language by the present distinguished Secretary of the Treasury is stronger and more emphatic than any expression I can use; but he does not stop with these words, he goes on to express his emphatic advocacy of silver coinage, not by law alone, but he demands that it be made permanent by a constitutional amendment. I read from Mr. Carlisle's speech on page 44 of the RECORD.

I am in favor of every practicable and constitutional measure that will have a tendency to defeat or retard the perpetration of this great crime, and I am also in favor of every practicable and constitutional measure that will aid us in devising a just and permanent ratio of value between the two metals, so that they might circulate side by side, and not alternately drive each other into exile from one country to another. Our ratio, as recognized by the present bill, is 15.98 to 1, while the ratio established by the states composing the Latin Union—France, Belgium, Switzerland, Italy, and I believe Greece also, is 15½ to 1. We therefore undervalue silver, as compared with the valuation put upon it by those countries.

Mr. Hewitt of New York moved to lay the bill and amendments on the table. I read from page 1283. But Hewitt's motion was defeated by a vote of 205 to 71. Mr. Carlisle and his colleague, Mr. Herbert, in the present Cabinet, both voted against Mr. Hewitt's motion and for the largest use of silver.

The Senate amendments limited silver coinage to not more than $4,000,000 a month, and Carlisle and Herbert both voted against these amendments, thus declaring themselves in favor of unlimited silver coinage.

Mr. DINGLEY reiterates the assertion which has been so frequently made by gold-standard men that silver fell slightly in value during the existence of our silver coinage of 1878, and insists that this proves that a silver-coinage law could not now diminish the difference in value between gold and silver.

UNFAIR DISCRIMINATION AGAINST SILVER CAUSED ITS DECLINE WHILE SILVER-COINAGE LAW WAS IN FORCE.

My reply to this is, that President Arthur and his Cabinet exercised all their power to defeat the silver-coinage law of 1878 while it was pending in Congress. Notwithstanding their efforts, the law was enacted by a vote of almost three to one. President Arthur then vetoed the bill, and both the Senate and House passed it over his veto by much more than a two-thirds vote. President Arthur and his Cabinet then commenced a war upon silver, discriminating against it and in favor of gold in every way possible. From the day of the passage of the silver-coinage acts the Republican Secretary of the Treasury paid all coin obligations in gold, thus declining to use silver for one of the principal purposes for which Congress directed it to be coined. At that time the Secretary did not have the parity clause in the act of 1890 to justify this action, because not only did the act of 1878 contain no such expression, but within a few days of the passage of the silver-coinage act Congress passed a resolution by a very large majority declaring that the Government obligations referred to were—

Payable, principal and interest, at the option of the Government of the United States, in silver dollars containing 412½ grains each of standard silver.

And they also declared that the coinage of silver for that purpose—

Is not a violation of the public faith, nor in derogation of the rights of the public creditor.

I repeat that in the face of this almost unanimous declaration of Congress the Republican Secretary of the Treasury under President Arthur refused to use silver dollars for the purpose indicated, and did everything in his power to discriminate against and degrade them.

We have the testimony of our present Secretary of the Treasury, Mr. Carlisle, that if the policy of the Government, as expressed by the laws of Congress, had been followed by the Secretaries of the Treasury, the difficulties under which we are now suffering would have been obviated. Just a year ago, in referring to this subject, Mr. Carlisle said:

If the policy of reserving to the Government at the beginning of resumption the option of redeeming in gold or silver all its paper presented, I believe it would have worked beneficially, and there would have been no trouble growing out of it; but the Secretaries of the Treasury from the beginning of resumption have pursued the policy of redeeming in gold or silver at the option of the note holders.

We see here that we are sustained by Secretary Carlisle in our statement that the slight fall in the price of silver while the silver-coinage law was in force was due to the policy of discrimination against silver inaugurated by the Secretary of the Treasury, Hon. JOHN SHERMAN.

Mr. DINGLEY then proceeds with his argument against silver coinage, and says:

Notwithstanding this country purchased, between 1890 and 1893, 54,000,000 ounces of silver per annum—substantially the American product and one-third of the product of the world—yet after a temporary boom silver began to fall more rapidly than before.

DEMOCRATS OPPOSED SHERMAN LAW BECAUSE IT STOPPED SILVER COINAGE.

The reason why Democrats voted solidly against the Sherman law in 1890 was because that measure did not make silver coinage imperative, and we knew that to pile up unused silver in the Treasury until the world was gazing on one bulk greater than the yearly production of the whole world, and with a full knowledge that this great bulk of unused silver could be thrown upon the market at any moment, was a menace to the price of silver which could have no other effect than to cause the depression which resulted. The temporary boom to which Mr. DINGLEY refers was due to section 3 of the Sherman Act, which was incorporated by the influence of Democrats, which made it imperative upon the Government to coin 2,000,000 ounces of silver a month until July 1, 1891, and the accumulation of unused silver did not commence until after that date.

WHY DEMOCRATS OPPOSED THE REPEAL OF PURCHASING CLAUSE IN 1893.

The reason why Democrats who love the people opposed the repeal of the purchasing clause was because that was one of the least objectionable of the features of the Sherman bill, and those who were persuaded into casting their votes in this Hall for that repeal in August, 1893, were deceived by assertions of the gold-standard men—

1. That the repeal would immediately restore confidence throughout the country.

2. Would immediately cause hoarded money to flow into the channels of trade.

3. Would immediately cause gold to flow into the Treasury.

4. Would immediately cause gold to flow from Europe to America.

5. Would immediately cause cotton to rise to 10 cents, and wheat to $1 a bushel.

6. That the proposed repeal of the purchasing clause would be immediately followed by the enactment of a law providing for the unlimited coinage of silver.

FOREBODINGS REALIZED.

In each of the speeches that I made on this floor on August 11, 12, 25, and November 1, 1893, I asserted that the repeal of the purchasing clause of the Sherman Act would have an effect exactly the reverse from that which was promised us, and my prediction has been more than verified, for the moment of the passage of that act cotton and wheat commenced to fall until they dropped down to little more than half their value at the time the repeal was enacted. Money commenced to fly from our shores to Europe, and to pour out of the Treasury almost like water through a sieve.

I also warned my fellow members that even if two-thirds of the members of the House favored a free coinage bill, the northeastern Democrats could, together with the Republicans, filibuster and prevent its passage.

As I feared the falling prices caused money to be hoarded and shun the channels of trade, and as I predicted, when we attempted to pass a bill to coin the seigniorage which lay useless in the Treasury, the northeastern Democrats and Republicans filibustered against that just and proper measure.

COTTON SHOULD BE SEVENTEEN CENTS.

Gold standard advocates now tell us that cotton has risen in value during the last year notwithstanding the gold standard.

In reply, I will say the general tendency has been downward since the date of unconditional repeal, November 1, 1893. At that time cotton was 8.31 in New York, and now it is only 7.40 cents in the face of a falling off of supply unprecedented in the history of the United States.

A New York cotton circular of February 1, which I hold in my hand says, that the deficiency at that date was 2,463,871 bales.

This indicates a deficiency in the crop of at least 3,800,000 bales, a much greater deficiency than has ever before occurred.

In 1872 our deficiency was 1,377,966 bales, about ⅓ of the deficiency this year and cotton rose from 16 to 21 cents.

The crop of 1866 was 1,580,153 bales less than the crop of 1860 to 1861 and cotton rose from 13 cents to 44 cents.

I insist that were it not for the financial legislation under which we are suffering, the present deficiency in the crop would cause cotton to sell for at least 16 or 17 cents instead of less than one-half that figure.

OUR LOSS OF EXPORTS OF MANUFACTURED COTTON GOODS.

I had the honor very recently to give the expressions of eminent economists which illustrated how we suffered great disadvantage in our competition with silver countries and in the wheat and cotton markets of the world.

Seven years ago Hon. J. Shields Nicholson said, in addressing the royal commission on gold and silver:

Now, it seems to me probable if the price of silver rose to its old level *wheat could not be profitably exported from India until prices rose in a corresponding degree.* For India, being a silver country, the price of wheat there *is independent of the relative value of gold and silver.* An exporter to England at present will give the Indian price in silver, and he can buy his silver for less gold, and thus competition will lower the price. If the price of silver rose the exporter from India must get more gold. Thus *a rise of silver would, on this view, raise the price of wheat to a corresponding degree.*

This was in reply to the following direct question by the chairman of the commission:

Indian wheat is the very wheat that is complained of by Secretary Manning, Secretary of the United States Treasury, as having lowered the price of European and American wheat, and he attributes it all to the divergence of gold from silver. You do not think tying gold and silver again would raise the price of English and American wheat by 25 per cent?

A work recently written by Mr. Bagehot, editor of the London Economist, on page 54 said:

The necessary effect of a depreciation of silver as against gold is to give a bounty on exports from India and the other silver-using countries to England. An English merchant can now buy many more rupees than he formerly could with the same number of sovereigns, and therefore he can import from India, though prices at Calcutta are not at a level at which it would have paid him to operate if he had not had that novel facility in getting rupees.

These gentlemen were Englishmen, but their remarks referred more to the effect of the gold standard upon the United States than England.

Our distinguished Speaker, Mr. REED, in discussing the subject very recently, said:

* * * It is evidently important for debtor nations, on which list we stand first, to raise the price of silver and thereby reduce that bounty on exports which Asia now enjoys.

I have heretofore shown that India and other silver countries are rapidly usurping our foreign market for American products.

I showed from official reports that our exports of wheat had fallen from $210,000,000 to be as low as $43,000,000, and that India and other silver countries had sold their products in the market which we had lost.

The cotton farmers of the South suffer from India's taking from us our foreign trade for manufactured cotton goods.

I have prepared a table showing the exports of manufactured cotton from British India and from the United States during the ast eight een years. It is as follows:

Table showing value of exports of manufactures of cotton from British India for the years ending March 31, 1877–1894, inclusive, and the same for the United States for the same years ending June 30.

Year ending—	Exports by sea from British India.	Total exports from the United States.
1877	$9,417,641	$10,235,843
1878	11,169,002	11,438,660
1879	12,564,442	10,853,950
1880	13,324,068	9,981,418
1881	15,125,209	13,571,387
1882	16,231,169	13,222,979
1883	19,308,374	12,951,145
1884	21,695,185	11,885,211
1885	22,933,170	11,836,591
1886	25,452,640	13,959,934
1887	29,272,060	14,929,342
1888	34,727,925	13,013,189
1889	40,956,225	10,212,644
1890	42,867,415	9,999,277
1891	49,439,665	13,604,857
1892	44,829,330	13,226,277
1893	49,621,790	11,809,355
1894	39,842,270	14,340,886

We therefore see that eighteen years ago our exports of cotton goods exceeded those of India, and they also show that during the last five years their exports have been nearly four times ours.

Our coinage of silver during the period from 1880 to 1890 helped the general prosperity of the United States, but the refusal of the Secretary of the Treasury to use silver as money of ultimate redemption tended very much to put us at a disadvantage in the cotton and wheat markets of the world, which is shown by the figures that I have given.

GOOD FINANCIAL LAWS WOULD MAKE US PROSPEROUS.

I believe if we should treat silver the same as gold, as was contemplated by the Constitution, and repeal the unconstitutional 10 per cent tax upon the circulation of banks other than national banks, and thus restore to the States their constitutional rights, and again allow them to enact laws for the establishment of banking systems, we would soon be blessed with an era of great prosperity.

In 1860 most of the States had perfected banking systems as good as any that ever existed. An extreme advocate of the present national banking system, Mr. Horace White, has recently published a book on money and banking. He speaks of the State banks of Louisiana, South Carolina, and New York as being perfect.

From 1854 to 1861, during which occurred the panic of 1857, the entire losses by discount on bills issued by New York banks was only $12,351, all of which resulted from the failure of the following-named 18 banks, which were the only bank failures in that State during that period:

Tabular statement of data as to failed banks of New York State from 1854 to 1861.

Banks.	Failed.	Circulation outstanding.	Rate.	Loss.
Bank of Carthage	1854	$53,643	Par	.....
Empire City Bank, New York	1854	110,464	Par	.....
Exchange Bank, Buffalo	1854	17,235	Par	.....
S. Bank, Sacketts Harbor	1856	48,462	Par	.....
Island City Bank	1857	99,528	Par	.....
Hamilton Exchange Bank	1857	43,016	84	$6,882

THE PEOPLE DENOUNCE THE GOLD STANDARD.

The disapproval of the mass of the people of the position taken by certain Democrats against silver coinage has been expressed by the people at the polls in thundering tones that have never been heard in any government before since the beginning of civilization. In 1892 they voted for Mr. Cleveland upon a platform which pledged—

The coinage of both gold and silver without discrimination against either.

And the Democratic press were emphatic in declaring that this meant free and unlimited coinage of silver. Congress and the Administration refused to redeem this pledge, and in 1894 the States which appear in the following table went before the people with gold-standard candidates upon gold-standard platforms. The result was that these States with silver-coinage candidates and silver-coinage platforms gave 221,469 majority in 1892, and in 1894 with gold-standard Democratic candidates and gold-standard platforms the Democratic party in these same States was defeated, the majority against the Democratic party being 566,769, a Democratic loss in two years of 788,238 in only nine States.

I give below a table the first column of which shows the Democratic majorities in nine States in 1892 with silver-coinage candidates upon silver-coinage platforms, the second column showing Democratic defeat, the defeat of Democratic gold-standard candidates upon gold-standard platforms or Republican majorities against them. The third column shows the Democratic loss in two years.

Table showing Democratic majorities with silver-coinage pledges in certain States in 1892 and the defeat of Democratic gold-standard candidates in 1894, and the loss to the Democratic party during two years.

States.	Democratic majority, 1892.	Republican majority, 1894.	Total Democratic loss in two years.
New York	45,518	156,108	201,626
Illinois	26,993	123,427	150,420
Kentucky	40,020	*8,912	48,932
North Carolina	32,609	20,751	53,360
Ohio	50	137,087	137,137
Wisconsin	6,544	53,900	60,444
Indiana	7,125	44,673	51,798
Maryland	21,130	*18,767	39,897
Missouri	41,480	3,044	44,524
	221,469	566,669	788,138

*1895.

Now, in marked contrast, let me call attention to the fact that in every State where the Democratic candidates and platform were favorable to silver the Democratic party was triumphant. It is true that when the Democratic candidate for governor of Kentucky saw the tendency of the people he attempted to save his party by speaking against the gold standard.

The advocates of high tariff cannot attribute this revolution on the part of the people to tariff legislation, because the revolution was manifested in 1893, before a tariff bill was introduced, McKinley's majority over Neal that year being 80,995 and the Republican majority in New York in 1893 ranging from 19,924 to 101,064.

Before I conclude, there is one feature of the Senate substitute to which I wish to call attention. Three years ago the gold-standard men very generally expressed a willingness for free coinage of silver, provided a clause be inserted which would prohibit national banks from issuing bills of less denomination than $10. We have that provision in section 3 of this bill, and to our surprise the gold-standard men are just as implacable as ever.

I think the gentleman who preceded me will admit that I have not indulged in mere "assertions and declamations," but that I have presented to the House some grounds to prove not only the great advantage that would follow the coinage of silver, but that it would make the United States a bimetallic country.

ENGLAND WILL NOT LEAVE THE GOLD STANDARD.

That France will not consent to free coinage unless joined by Germany is becoming apparent. That Germany will not act unless joined by England is also becoming evident, and anyone who has watched the British Government must have learned that the moneyed power which controls that nation will hold to the gold standard.

At the conference in Paris, 1878, the English delegation—

Declared that England would not recede from the monetary legislation of 1816, establishing the "single gold standard."

Mr. Goschen, the English delegate, said:

England had plainly stated her intentions of maintaining her gold standard.

Mr. Gladstone, in a late speech in Parliament, asserted that England was the greatest creditor country of the world, and that foreign countries owed her $10,000,000,000. He then spoke strongly against silver coinage, and said:

I think under these circumstances it is rather a serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice.

And in speaking of debtor countries he said:

We have nothing to pay to them; we are not debtors at all; we should get no comfort, no consolation out of the substitution of an inferior material, of a cheaper money, which we could obtain for less and part with for more. We should get no consolation, but the consolation throughout the world would be great. [Loud laughter.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. WHEELER. I did not commence until twenty-five minutes after.

The CHAIRMAN. The time of the gentleman has expired. The gentleman has had sixty minutes.

Mr. CULBERSON. I ask unanimous consent that the gentleman may have time to conclude his speech.

Mr. WHEELER. I ask for just three minutes.

The CHAIRMAN. Unanimous consent is asked that the gentleman from Alabama be allowed to have three minutes more to conclude his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. WHEELER. I thank my friend and the House for this courtesy. I shall close in a very few moments.

WE SHOULD HAVE AN AMERICAN POLICY.

Although our distinguished chairman of the committee knows that we can not induce either England or Germany to join us in silver coinage, he nevertheless reiterates the oft-repeated assertion of gold-standard men that we can not coin silver without the concurrent action of European nations.

Mr. DINGLEY then says:

It is for this reason that international free coinage of silver becomes the hope and safety of full bimetallism.

Mr. Blaine, in advocating silver coinage, said:

The influence of our example will be potential among all European nations.

And in referring to the tendency of Europe to discriminate against silver, Mr. Blaine said:

It is for us to check that tendency and bring the Continent of Europe back to the full recognition of the value of the metal as a medium of exchange.

As a patriotic American, as an American who loves his country, I applaud the statesman-like expressions from Mr. Blaine and I deprecate the unpatriotic, un-American expressions which we now hear on the floor of this House.

One hundred and twenty years ago, when we were but 3,000,000 people, did we not declare ourselves independent of the greatest of European nations? And after seven years of battle, blood, and suffering the efforts of our patriotic forefathers were crowned with victory.

The brave spirit which actuated the patriots of 1776 descended to their children, who have made the United States the greatest, the most powerful, and the richest country on earth.

Now we stand in the family of nations like the imperial Numidian lion of the forest unconscious of our almost omnipotent power. Every patriotic American believes that we should proclaim and maintain our own financial system and our own policy with regard to foreign nations. That alone will give to us the prestige and respect throughout the world which a nation like ours should enjoy.

Now, Mr. Chairman, in closing I desire to say that the people of the South, a part of whom I represent, have no desire for the enactment of any law which can have a detrimental effect upon the country at large. They realize that this great question is sectional in its character and that this country has become, by the financial legislation of the Republican party, divided into two great classes—the great millionaires, so few in number that they could be covered by the roof of this building, who now own three-fourths of the wealth of the land, while there are 70,000,000 toilers working to support and educate their children. Most of them own no home, many of them are without decent clothing or shelter, and some of them are suffering the pangs of hunger.

When Europeans visit our country they are invited to gilded palaces, and they are dined upon plates of gold, and on their return to Europe they speak in glowing terms of the prosperity of this land of liberty. Europeans read of the charming American farm life which we enjoyed under forty years of Democratic government, and they do not know that the American farmer has become the victim of the Republican legislation which has transformed this country into millionaires on the one side and struggling farmers and laborers on the other. If these people could see the homes of the producers of wheat and cotton, be told of the falling prices, of the fall in the value of land and products of the farm, they would appreciate how a people once happy and prosperous are now suffering from the financial enactments which we denounce, and they would say to the people at home, "America is following in our trail. They are rapidly dividing, like ourselves, the suffering laboring masses on the one side and a moneyed nobility on the other. If the financial laws of that country are continued their Government will be as monarchial and imperial as that of any other nation on earth." [Applause on the Democratic side.]

Coin Redemption Fund.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. WHEELER said:

Mr. CHAIRMAN: When I made my speech in reply to the chairman of the committee upon this question a few days ago, I referred to the extraordinary and unwarranted statements which were made by the gold-standard advocates in their frantic efforts to sustain their position. I quoted an expression from the great Macaulay, who, in referring to the cupidity and avarice of the moneyed class, said:

If large financial interests were interested in denying the law of gravitation, that proposition would be ably disputed.

As the debate has continued the gold-standard men seem to vie with each other in their extravagant assertions. While I was prepared to hear a great many statements which were entirely without foundation, I admit that I was astonished when my old and highly esteemed friend of more than a third of a century and once fellow-soldier, Colonel PATTERSON, asserted that during the period from 1850 to 1860 and the period from 1880 to 1890 our country was on a gold standard.

My friend Colonel PATTERSON is a man of great ability, profoundly learned, and is an eminent lawyer, and to see him fall into such an error is a vivid illustration of the extent to which the advocates of the gold standard have been misled by the pamphlets which emanate from the club which is sending out gold-standard documents.

Although this same statement has been made by others, I do not hesitate to assert that it is hardly possible for a man to make a more erroneous or unwarranted assertion.

The report of the Secretary of the Treasury tells us that from 1850 to 1860 our visible specie averaged about $250,000,000, which by no means included all the specie in the country, and of this it is very evident that more than $100,000,000 was silver, the greater part of which was foreign silver. And in my speech the other day I quote from reports of the various Secretaries of the Treasury which referred to the vast amounts of silver money brought from Mexico to the United States, of which the Government had no record or account.

UNLIMITED COINAGE OF SILVER FROM 1850 TO 1860.

The act of 1806, 1819, 1823, 1834, and 1843 made nearly all foreign coins, both gold and silver, legal tender of the United States. The laws of 1792 and 1837 made both gold and silver coins of the United States legal tender, and also provided for free and unlimited coinage of both metals. These were the laws in force January 1, 1850, and they continued in force from 1850 to 1860, except that in 1853 a law was passed providing for the coinage of half dollars and smaller silver pieces of reduced weight, and providing that these coins of light weight, coined in conformity with this law, should be legal tender for all debts not exceeding $5; but this law did not deprive minor coins issued before that date of their full legal-tender power.

The effect of this law was rather to increase the silver in circulation than to reduce it, because it checked the tendency to export silver, which was at that time of relatively more value than gold, and these small silver coins were so much needed for business purposes that they were readily received in payment of all debts. In fact, the purpose of reducing the amount of silver in these coins was to cause them to be more certainly retained in circulation as money.

In 1857 a law was passed providing that certain foreign coins of 25 cents and less should be received at the Treasury at 20 per cent less than their face, and that they should be recoined, and this silver when recoined into silver dollars immediately became full legal tender for all debts and dues. It is also true that this law repealed former acts which had made foreign coins a legal tender at their full face value. The purpose of this law was to compel the recoinage of foreign silver, but to show how sensitive the business interests of the country are to any reduction of the money of ultimate redemption, I will call the gentleman's attention to the fact that the enactment of this law was almost immediately followed by the great panic of 1857. This was the first check to the tide of prosperity which had rolled over our country between 1850 and 1860.

This shows that the laws of our country from 1850 to 1860 provided for unlimited coinage of both gold and silver, and that during a part of the time all coins, foreign and domestic, were full legal tender, and the greater part of the coins were full legal tender during all of the period.

A FORCE STRONGER THAN THE GRESHAM LAW.

It is true that during that time the production and coinage of gold was very great, the world's production being almost four times that of silver, and the silver in the silver dollar was worth in the market about 4 cents more than the gold in the gold dollar. The Gresham law therefore acted upon all silver, tending to drive it abroad, but this tendency was neutralized by the great prosperity of our country, which was due to the unlimited coinage of both metals, which instilled such life into all industries and caused such a rise in prices as to invite money to the many profitable investments. This met and counteracted the force of the Gresham law, and both gold and silver circulated side by side.

GOLD-STANDARD MEN REFUTE THEIR OWN ARGUMENTS.

But if the gentleman from Tennessee [Mr. PATTERSON] was right in his contention that we were on the gold standard from 1850 to 1860, and that it caused the great prosperity of that period, he, by this assertion, destroys with one blow the most cherished and valued argument of his gold-standard friends, because he asserts that the great prosperity of 1850 to 1860 was due to the adoption by this country of the cheaper me al as our standard, and therefore to be logical and fair he ought to insist that the same great prosperity would result now by following the same plan and adopting the cheaper metal, silver, as our standard.

During that ten years the world's production of gold was $1,332,981,000, and the world's production of silver was $372,261,000; and in order to enhance the value of their money the Rothschilds and their associates demanded the demonetization of gold, and that silver, the scarcer and relatively more valuable metal, should be the only money of ultimate redemption.

They succeeded in causing the enactment of laws demonetizing gold in Holland and also in Germany, but England refused to change the standard from gold to silver, because her colonies were then enormous producers of the yellow metal.

During that period, both in this country and in Europe, men who thought and spoke like the gold-standard men of to-day were loud in demands for the demonetization of gold, alleging as the reason that the gold dollar was only worth 96 cents as compared with silver, but our country was then under the control of true Democrats, and single-silver-standard men were unable to accomplish their purpose.

This shows how utterly devoid of reason and logic are the arguments of gold-standard advocates.

They blow hot and cold in almost the same breath. In one breath they say that the unlimited coinage of silver will double the value of the product of the silver mines of America, and that the only effect will be to double the profits of silver miners, and in the next breath they assert that unlimited coinage of silver will enable every debtor to cancel his debt by paying it in dollars which are actually worth but 50 cents each. Now, both of these assertions can not be true. If one is true, the other is absolutely false.

Having shown that Mr. PATTERSON was utterly in error in asserting that we were on the gold standard from 1850 to 1860, let us examine his assertion that we were on the gold standard during the other prosperous period, from 1880 to 1890.

SILVER COINAGE, 1880 TO 1890.

During this period our silver coinage was $382,318,867, of which $312,529,000 was standard silver dollars, which were full legal tender for the payment of all debts and dues, but the silver-coinage law of 1878 provided that—

All silver dollars heretofore coined by the United States shall be legal tender, etc.

The coinage law which was in force during all this period required the coinage of practically all the silver produced in the United States. In fact, the coinage at that period consumed every ounce of silver that was not exported or used in the arts, and it was this substantially unlimited coinage which caused the great prosperity which we enjoyed during all that period. The reason why this law did not bring silver and gold to a parity was, as I have before illustrated, that the Secretary of the Treasury, the Hon. JOHN SHERMAN, discriminated against silver in favor of gold and refused to use these silver dollars for the purpose contemplated in their coinage, and that discrimination against silver and in favor of gold has been continued by the Treasury Department up to this time.

FROM 1880 TO 1890 WE WERE FARTHER FROM GOLD STANDARD THAN AT ANY OTHER PERIOD.

To show how far we were from the gold standard at this period, I will call attention to the fact that the $382,318,867 of silver exceeded the amount of silver coined by our mints during all the remaining ninety-six years of our Government.

During those ninety-six years our total coinage was $329,665,546, an annual average of $3,434,016; while the average during the ten years from 1880 to 1890 was $38,231,886. This is another illustration of the fearful errors which appear in the statements of our gold-standard friends.

They even go so far as to assert that we were on the gold standard during the ten years in which all silver dollars were full legal tender for all debts and dues, and during which our annual silver coinage was more than ten times as great as the average of other years.

MY FRIEND'S ILLOGICAL POSITION.

Now I want to call attention to another illogical position of my distinguished friend. Only about four years ago my friend was an ardent advocate of silver coinage and maintained that it would bring about bimetallism.

The excessive production of silver was then the argument against silver coinage. At that time the United States produced two and one-third times as much silver as gold, and the world produced one and one-half times as much silver as gold. Mr. DINGLEY asserts that last year the world produced $205,000,000 of gold, which is about the same as the silver production. Mr. DINGLEY also asserts that this year we will produce $250,000,000, and my friend [Mr. PATTERSON] himself says in his speech that we will soon produce $300,000,000. In other words, that the gold production in the world will exceed that of silver, and yet——

Mr. PATTERSON. My friend is mistaken in that statement. I said no such thing. I said that the estimate was that in 1900 it would reach that amount.

Mr. WHEELER. The RECORD says so.

Mr. PATTERSON. You are mistaken as to the RECORD also.

Mr. WHEELER. Well, the gentleman now says that by 1900 we will produce gold to the amount of $300,000,000. Now, if my friend believes that gold will so increase, and the gentleman says it will increase, that shows that the production of gold would soon so far exceed the production of silver that bimetallism would be eminently possible.

Mr. PATTERSON. Will my friend inform me at what time and place I made a speech four years ago advocating the free coinage of silver?

Mr. WHEELER. I think my friend made a great many such speeches when his friends insisted he should be a candidate for governor of Tennessee. His able arguments aided in strengthening my views as a bimetallist. [Laughter.]

Mr. PATTERSON. You are mistaken.

Mr. WILLIAMS. Does the gentleman from Tennessee deny that he made free-coinage speeches?

Mr. PATTERSON. Yes, sir. I made no speech advocating the free coinage of silver four years ago.

Mr. WHEELER. The gentleman who has just taken his seat has——

[Here the hammer fell.]

Cuba.

REMARKS
OF
HON. CHARLES W. WOODMAN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

The House having under consideration the following resolution:

"*Resolved*, That, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest equally in the interest of Spain, the people of Cuba, and other nations would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of our citizens, by intervention if necessary"—

Mr. WOODMAN said:

Mr. SPEAKER: There are periods in the existence of men and of nations when it becomes proper that they be protected against

themselves—protected against that abuse of themselves and their kindred which is the overflow effect of unrestrained and senseless passion.

Of all the civilized countries of the world, Spain now has most need of such protection, because it is by every possible means endeavoring to commit national suicide. Time was when Spain was one of the greatest powers of the world—great in the operations of her explorers; great in the accomplishments of her armies of conquest; great in her successes in the reduction of savagery and the upbuilding of civilization where had before only reigned chaos. Spain conquered the intricacies of navigation and gave us a new world; Spain waged warfare against natives, and turned the golden trinkets which were captured into good Spanish coin; Spain opened up territory to the commerce of the world, protected the missionaries which were sent by the church for purposes of Christianization, and Central and South America stand as monuments of her historical greatness. Spain was great. For three hundred years she held a leading place among the nations of the earth in wealth, in territory, and in intelligence.

True greatness, however, must involve, besides all other elements, the spirit of progress in intelligence and in virtue. An eminent historian has ascribed the decline of the Roman Empire to its lack of Christianity and to its seeking after gods which were new and strange and speculative. But the wisdom of the world has called the historian wrong. It has considered that its lack of virtue and its lack of progressiveness, engendered by the satiety of immediate desires and a blind faith in the future, were the responsible elements leading to its destruction. It is not difficult to draw the parallel with modern Spain. From a nation of the first class she has ceased to be more than formally respected by the nations of the world. Her boasted intelligence, while perhaps great for the fifteenth century, dwindles into comparative insignificance when placed in comparison with that of the world in the time when the nineteenth century is getting ready to put on its shroud. Spain's supremacy is a thing of the past, a matter of history, perhaps, but that is all.

Among the most marked evidences of the degeneracy of this once great State is the fact that her colonial territories are constantly withdrawing from her. South and Central America long since tired of her rule and set up and maintained Governments, generally Republics, of their own. The progressiveness of the Western half world was theirs, and so well did they exercise it in the appropriation of advantages which nature produced that Spain finds herself with but the one territorial possession of any importance on the western side of the Atlantic Ocean, and it is entirely an open question whether or not she can do more than simply "claim" that.

The people of the Island of Cuba have been in a state of almost continuous revolt against Spanish domination for almost a hundred years, and it has been the policy of Spain during all these years to as promptly as possible kill those engaged in fighting for the right to live.

Back in 1823 the subject was one of elaborate diplomatic correspondence, but at that time the question was more one of changing sovereigns than of acquiring absolute independence. The yoke of Spain was a hard one, one that galled the necks of an intelligent and industrious people. But in the wisdom of such statesmen as Monroe, Adams, and Clay it was better that Cuba remain a province of Spain than that it should pass into the hands of any other European power. In 1852 President Fillmore considered it desirable to allude in his annual message to the uneasy condition of affairs on that island. This uneasiness grew to such a degree that in 1854 the President appointed a commission, consisting of the ministers of this Government at London, Paris, and Madrid, to confer with each other and to carry on negotiations with and at the several courts to which they were accredited, looking to the satisfactory adjustment of affairs with Spain in regard to Cuba. The report of this commission contains—after reciting the fact that the Government of the United States had never acquired a single foot of territory, even after a successful war, except by purchase or by reason of the voluntary application of the people—the following statement:

> Our past history forbids that we should acquire the Island of Cuba without the consent of Spain, unless justified by the great law of self-preservation. We must, in any event, preserve our own conscious rectitude and our self-respect. While pursuing this course, we can afford to disregard the censures of the world, to which we have been so often and so unjustly exposed. After we shall have offered Spain a price for Cuba far beyond its present value, and this shall have been refused, it will then be time to consider the question, Does Cuba, in the possession of Spain, seriously endanger our internal peace and the existence of our cherished Union? Should this question be answered in the affirmative, then by every law, human and divine, we shall be justified in wresting it from Spain, if we possess the power; and this upon the very same principle that would justify an individual in tearing down the burning house of his neighbor if there were no other means of preventing the flames from destroying his own home. Under such circumstances, we ought neither to count the cost nor regard the odds which Spain might enlist against us. We forbear to enter into the question whether the present condition of the island would justify such a measure.

Mr. Buchanan, one of the members of that commission, who had in the meantime become President of the United States, said in his message to Congress in 1858 that the Island of Cuba, commanding as it does the mouth of the Mississippi, with the large and increasing trade of that noble river, then embracing half of the sovereign States of the Union and now more than two-thirds, that this trade, of vital importance to that great region, was constantly exposed to the danger of being destroyed in time of war, and had hitherto been subjected to perpetual injury and annoyance in time of peace. He further states that "our relations with Spain, which ought to be of the most friendly character, must always be placed in jeopardy while the existing colonial government over the island shall remain in its present condition."

Why did President Buchanan feel it necessary to make so strong a statement regarding Cuba at that time? It was before the rebellion in the United States was seriously thought of. There could have been no reason, except that Mr. Buchanan was actuated by the ideas of the preservation of our own noble Government and the interests of its people, and that leading to a cessation of that brutality which, then as now, the Spanish Government visited upon those engaged in rebellion against its authority.

Again, in 1870, President Grant, in his message to Congress, calls attention to the lamentable disregard of human life which prevailed at that time, and to the violation of those rules of warfare which modern civilization has prescribed in mitigation of the necessary horrors of war. The subject was one of almost constant diplomatic correspondence with Spain, largely relating to the rights of American citizens on that island, but constantly deprecating the manner in which the strife was conducted, the reckless and wanton and cruel disregard of human life, of material wealth, and the established rules of civilized warfare.

That war continued, with all of its murders and massacres, for nearly ten years. The avowed intention of Spain, as set forth in the proclamation of the Count de Valmaceda, dated April 4, 1869, was to murder every male individual above the age of 15 years found away from his habitation, and to destroy with the torch every habitation found unoccupied, or which failed to float a white flag. Regarding this proclamation, on May 10, 1869, Secretary Fish presented this note to Señor Lopez Roberts:

> In the interest of Christian civilization and common humanity. I hope that this document is a forgery. If it be indeed genuine, the President instructs me in the most forcible manner to protest against such mode of warfare.

And on the day following Secretary Fish sent a note to Mr. Hale, minister at Madrid, with instructions to him to protest "against the infamous proclamation of the Count of Valmaceda."

In spite of protests, in spite of the humanity of the age, in spite of the decrees of modern civilization, Spain continued to wage a cruel and relentless warfare. As nearly as can be ascertained, up to the close of 1873 5,986 political prisoners—not prisoners of war, but those who had claimed the right to do their own thinking—had been executed in cold blood under what Secretary Fish had referred to as the "infamous order" of the Count of Valmaceda. Nearly 6,000 inoffensive citizens murdered by reason of the fact that they dared to think after having been commanded not to do so. Those captured in battle, or with arms in their hands, were summarily executed to the number of some 37,000, besides over 13,000 Cubans killed in battle, making a grand total of more than 57,000 persons slaughtered in that sanguinary conflict.

When it is taken into consideration that large numbers of those so disposed of were women and children the monstrosity and heathenishness of the matter become still more apparent and conclusive. Outrages on females were frequent, and the murderous machete completed the work with all—men, women, and children. But for all its cruelty, its murderousness, its lack of the mercy of Christian civilization, the war kept up. Spain could not subdue Cuba.

Finally the war was brought to a close and the republican government of Cuba disbanded under articles of peace signed by Captain-General Martinez de Campos, and approved by the Government at Madrid, providing a measure of self-government to the people of the unhappy island. The whole cost of the war, over a thousand millions of dollars, was to be borne by Cuba. The Cubans assented. They were willing to pay the bill if thereby freedom should result. Not actual freedom, not entire freedom—they did not even exact that—but such a degree of freedom as would secure to them the rights of person and of property and the pursuit of happiness.

But the freedom did not come. New captain-generals and new officers came over from Spain with new schemes for political reorganization, but not one contained any element of relief. It was the same old story year after year. The promises of Spain were not fulfilled. There were the same enormous taxes imposed by Spain, amounting almost to confiscation of property; there was the same old-time disregard of personal rights; there was the same enormous stealage on the part of petty officials, adding to the burdens under which the people labored. Oppression ran riot. Cuban happiness was out of the question. Their rights—they had none. They were as completely slaves as though the whip of the master cracked over their heads in physical as it did in moral and mental and financial fact.

There was no relief but in independence, and independence meant war. From past history the Cubans were aware that that war would be most horrible, would be conducted on a basis of murder and assasination and wanton cruelty, but they did not hesitate. A million and a half of people decided, as did our forefathers in 1776, that there were no hazards too great to be undertaken looking to the removal of the unbearable load from their shoulders.

From 1776 to 1783 Americans had their fill of cruelty. The hordes of ruthless savages at the West, armed and let loose, and urged by the Government from which we had separated, swarmed down on the inoffensive settlements, murdered and outraged the women, children, and old men left in them; and the soldiers, the able-bodied men who were at the front fighting the enemy, found on their return to their homes only bones and ashes and desolation and ruin. Gone were the wives and daughters, either to death or dishonor; if perhaps it were mercifully death, the skeletons lay bleaching on the greensward or blackened in the ashes of the burned habitations; gone were the little ones, their innocent prattle forever hushed; gone were the homes which had been prepared with such care for those loved ones, and gone was every element that made life worth living, except the one of freedom—the right to pursue happiness, which could be transmitted to future generations.

And in the transmission of that freedom our forefathers left us not only the enjoyment of its rights, but an appreciation of its sentiment. At no time in the history of this country or in any of its wars has there been cruelty practiced by those who were to the manner born. Mercy and honor and a recognition of the rights of combatants have always characterized our people. Even in the war of the rebellion, when millions of men were pitted against each other, there is a record of but a single instance of continued and wanton cruelty, and that by an alien who subsequently reaped his reward. No American on either side, either in the passion and heat of battle or in the coolness of spirit which comes from long marches, would so far do violence to his own nature, to his Americanism, to practice methods which, by the principles of heredity, it was his nature to look upon with horror and disgust.

A year ago the Cubans, having found all their hopes, not only of freedom from the enthrallments which surrounded them, but also their hopes for justice at the hands of Spain, founded on the promises of 1878, unfulfilled and frustrated; having found that no longer might they look for justice, but only be the slaves of a colonial conspiracy for plunder; having found that the faith of Spain had been entirely forfeited and that its promises of justice, made by itself, had only been made as a matter of deception, to be set at naught without even recognition—a year ago these million and a half of people decided to be free.

Since then Cuba has been in the throes of conflict. Beautiful, sun-kissed Cuba, the garden spot of creation, has again been deluged with blood. The gentle winds which waft over her surface have, from hundreds of fields of conflict, absorbed the blood of humanity. The waves which caress her shores have lapped up the blood of patriotism and oppression alike. The soil of that magnificent island, whence most of the sweetness which we assimulate is derived, is fertilized by the blood of thousands.

Originally, Mr. Speaker, Spain sent over some boys to quell what they called an insurrection. The boys, not being acclimated, died of disease. Then more mature soldiers were sent, the flower of the Spanish army, led by the greatest of Spanish generals, he who had negotiated and arranged for peace eighteen years ago. This man, Martinez de Campos, went to Cuba at the head of a great army to put down and again enslave the people of that island. In spite of the fact that the promises which he had made were, after all these years, unfulfilled, it was evidently expected that more promises, more deceptions, accompanied by a show of great armed force, would make the people hunt their habitations, and with their heads concealed, like the bird in Æsop's fable, consider that they were shielded from the wrath of the expected visitation.

Such was not the result. Instead of subduing Cuba, General de Campos was obliged to withdraw his troops into the very strong garrisons of the island. Up to and around these garrisons the armies of the Republic of Cuba roamed at will, and the general of the Spanish forces found himself powerless.

On the 19th of September, 1895, the Cubans had perfected the organization of the Cuban Republic, under a constitution previously adopted at a convention held at Camaguey. There were then elected the following officers:

President, Salvador Cisneros Betancourt; vice-president, Bartolomé Masó; secretary of war, Carlos Roloff; secretary of foreign affairs, Rafael Tamayo; secretary of the treasury, Severo Pina; secretary of the interior, Santiagos Cañizares; general-in-chief of the army, Maximo Gomez.

These gentlemen are all of the highest standing in the island for intelligence, social rank, and means. The president is the same person who as president laid down the scepter of government in 1878 in response to Spanish promises to the people which were destined to be dishonored. He comes of a family which has furnished many examples of greatness in the legal and scientific history of Cuba. His estates were confiscated in 1868, and he then renounced his title of nobility.

Bartolomé Masó, the vice-president, is a tried patriot, who has rendered valuable services to the cause of liberty. A sincere republican, he has always been highly respected and esteemed for his liberal ideas and his sterling character.

Gen. Carlos Roloff, secretary of war, was born in Poland, but went to Cuba when a mere youth and established himself at Cienfuegos, where he attained a distinguished position for his intelligence, industry, and integrity. In 1869, at the head of a number of young men from the most prominent families of that city, he joined the revolution, and until the end of the war in 1878 occupied the first rank, both for his bravery and military talents.

It may be well to add in this connection that the assistant secretary of war is Mr. Mario Menocal, so well known in this country on account of his distinguished work with the Nicaragua Canal engineer corps.

Rafael Portuondo y Tamayo, secretary of foreign affairs, is a distinguished member of one of the most prominent families of Santiago de Cuba, both for social rank and wealth, no less than for the talents of some of the individuals belonging to it, who have distinguished themselves in the liberal professions.

Severo Pina, secretary of the treasury, is a prominent citizen of Sancti Spiritus. He belongs to an old and wealthy family.

Joaquin Castillo Duany, assistant secretary of the treasury, is a gentleman not unknown in this country, having been one of the physicians who took part in the *Jeannette* relief expedition to the North Pole. No names stand higher in Santiago de Cuba for wealth, respectability, and integrity than those of Duany and Castillo.

Santiago Cañizares, secretary of the interior, is as prominent a citizen of Remedios as the others are of those cities and States mentioned.

The general-in-chief, Maximo Gomez, although born in Santo Domingo, is as much a Cuban in feelings, ideas, and aspirations as the best of them. As to his military talents nothing need be said, for they are too well known.

These men, Mr. Speaker, compose the Government of the Republic of Cuba. They are of the same class of gentlemen, in statesmanship, in material wealth, in intelligence, and compare favorably with those of our ancestors who in 1776 signed the document which made the great Bell of Liberty send out its peals of emancipation from foreign domination, and of whose intelligence and honor and patriotism there has never been question.

This Republic of Cuba, headed by the men whose names have just been given, have waged a war of self-preservation. The people of that Republic have fought and are fighting for the protection of their homes and their families; they are fighting for the privilege of tilling the soil and harvesting and enjoying its increase; they are fighting for the lives of their sons, the virtue of their wives and daughters, the protection of their homes, and their own lives, all of which, under present rule, is sacrificed.

To quell this desire on the part of Cubans—as well might they try to dam Niagara or flood Popocatapetl—the Spanish Government the other day withdrew General de Campos from his position as captain-general of Cuba and sent in his place the most ferocious butcher among all its leading officers, or who ever disgraced military standing, in the person of one General Weyler. This distinguished individual has arrived, has taken command, and among the first of his official proclamations is a practical duplicate of that which President Grant and Secretary Fish regarded as "infamous" when it was enunciated by the Count of Valmaceda in 1868. General Weyler orders that every male person over 15 years of age found away from his habitation shall be shot. He orders that all unprotected women shall retire to the garrisoned towns—perhaps to be the playthings of his soldiers! He orders that all houses found uninhabited are to be burned, and that all persons engaged in trade shall turn their effects over to his officers.

Can anyone imagine an order more far reaching and cruel?

The same order authorizes subordinate officials of the army to carry out the directions for butchery and make reports to him—the chief butcher. It is apparent that the same methods will and do prevail—as to the absolute inhumanity of its practices—which caused the war of twenty years ago to be the most horrible blot on the escutcheon of Americanism—a stench in the nostrils of Christendom. Shall the present generation permit a repetition of those horrors? is the question now before us. Shall we, as the embodiment of the spirit of freedom, as the representatives of that regard for human existence and that respect for the inherent dignity and justice and excellence and righteousness and even Godliness, of the right of the individual, male or female, to virtue, to intelligence, to property, and to physical safety, permit this?

We are faced with the question now, and it is one that burns, Shall this great Government, holding the ideas and sentiments of mercy it has always practiced and which the world of civilization has practiced since we came into being as a nation, permit those ideas, which are also the ideas of the world at large wherever the Stars and Stripes are known—shall it be permitted by us that

this monstrous wrong continue? Shall the fury of the soldiers of Spain be permitted to devastate humanity without protest? Shall the slaughter of the innocents be permitted to be resumed? If this war lasts for ten years, as did the former one, shall there be a record of blood, covering 6,000 people unarmed, noncombatant, untried and unconvicted, who will have been murdered? I think not.

Mr. Speaker, in order to give an adequate idea of affairs in Cuba it becomes necessary to go over a little more ground. The republican armies have been in the field for more than a year. The Government of the Republic has been in existence since the 19th of September last. This republican Government and its armies hold and have held control of all the territory of the island except that adjacent to a few seaports, for months past. That they have not control of seaports is due only to the fact that the guns from Spanish men-of-war are of sufficiently heavy caliber to reduce those cities to ashes should they come into the control of the Republic. To avoid this slaughter and this wanton destruction, Cuba has refrained from taking permanent possession of any of the cities of the seaboard. The railways of the interior are entirely within its control. The means of subsistence and existence belong to it so far as they are not dependent upon the outside world. The lines of warfare now consist of little semicircles drawn about the seaport towns, and in those towns are the soldiers of Spain, ready to do their alleged duty of shooting and hanging citizens, outraging, maltreating, and murdering their wives and sisters and daughters, and shooting down in cold blood their little sons. An embargo is placed upon the tongue, on the pen, and would be upon the brain, if the famous X rays of modern science had been sufficiently developed to enable the tyrant in charge to discover the thoughts of those who surround him.

These conditions prevail, Mr. Speaker, within 60 miles of our coasts, almost within sight of our shores. The Island of Cuba, which is the scene, controls the gateway to the Gulf of Mexico and the enormous trade of that section of the United States. I do not allude to the enormous interests of the citizens of the United States on the island; they are being protected mainly by the Cuban Republic.

Cuba, free and enabled to make her own laws of offense and defense, of revenue, and of duty, will be a most valuable neighbor. Of her subsistence, American flour, now admitted under a duty of one and one half times its value here, would find an open market, and its consumption by a million and a half of people will greatly relieve a pressure existing among our growers of wheat. The American producers of a thousand other articles of commerce would find an open market, subject only to such duties as might be decided upon for revenue purposes. The trade of this country in every direction will be enhanced by the freedom of Cuba. Not only will our commerce be relieved of the disagreeable and often prohibitive restrictions placed upon it by Spain, but we, by reason of proximity and by reason of commercial nearness, will be in the position of the "most favored nation," as it is known in diplomacy. Apparently, and from every standpoint of judgment establishable in the human mind, it is to the interest of the United States that Cuba should be free. Humanitarianism, self-protection, the lives and properties of our citizens, the openness of our commerce, all demand it; the rights of our own citizens are involved; the echoes of the grief and the enforced dishonor of thousands, wafted to our near-by shores on the winds of eternal humanity, demand that Cuba be free.

There can be no argument, from our standpoint, successfully made against the freedom of the unhappy island off our coast. Only the promise that Spain would take care of and protect her own prevented President Grant from taking definite action more than a quarter of a century ago. Those promises have been unfulfilled, and it becomes our duty, not only as Representatives, but as citizens of this great Republic, to see that this carnage ceases; to see that every man, woman, and child on the great Continent of America and its adjacent islands have the right to "life, liberty, and the pursuit of happiness."

We should not merely accord to Cuba belligerent rights—we should recognize her independence. What has Spain there? Only a few seaports and a standing army which keeps under the guns of the military posts. What has the Republic of Cuba? The whole island except those few seaports. The armies of the Republic keep the forces of Spain hemmed up in their garrisons like a lot of chickens driven to roost, yet we hesitate to recognize the fact. They can escape, but they can not conquer. The Cubans, being Americans, are unconquerable.

The only objection ever urged to the recognition of Cuban independence is that it would be a blow aimed at a friendly power. This I deny. No power can be or should be friendly to this Government, or to the people of this country, whose principles permit the enunciation of orders for murder and assassination, and which orders can be readily twisted by subordinates into license for untold evils and cruelty. No friendliness can exist between humanity and savagery, between mercy and butchery, between the civilization of the end of the present century and the cruelty and torture of the Dark Ages.

And yet the Government of Spain desires to insist that no condition of war exists in Cuba. "Only a few roving bands of persons dissatisfied with the present administration of affairs." But those same roving bands have driven the Spanish soldiers into their holes—the protected seaports—every time. All that Cuba requires to drive the last Spanish soldier from the island, the last element of Spanish control from its soil, is the recognition of its independence, or even a declaration of neutrality by the great nation nearest and most affected by it—the United States of America. It is not necessary to allude to the action of Spain previous to and during our late war; that is too well known.

The United States is under the same obligation to Spain that it is to any other nation—under the implied obligation to observe neutrality between it and the nations with which it may be at war. Spain does not desire that we observe that neutrality in her war with Cuba, but insists that we resolve ourselves into a nation of detectives to capture and imprison such of her enemies as may be found upon our soil, upon her unsupported statement that no war exists. The position she takes is in itself an insult to the intelligence of America and Americans—a position so full of self-evident fallacies that it can best be characterized by the somewhat vulgar but infinitely expressive term—"bosh."

This is the situation, Mr. Speaker: Shall we, as independent and free Americans, recognize the independence of our next-door neighbors, thereby placing them in a position whereby they may defend themselves and their families and possessions like men, or shall we sit supinely quiet and thereby give countenance to the unspeakable horrors and atrocities which mark the conduct of the Spanish arms on that island? Action has already been delayed too long. The record of murder and assassination and outrage and incendiarism, to say nothing of the oppression and the gags put upon free thought and free speech, is already too long. It is time for us to act, and we should act quickly.

In such case, Mr. Speaker, I can see in my imagination a few years hence a magnificently fertile and productive island lying a few leagues off our coast, possessing all the blessings and advantages which constitute the happiness of its people. As I see it in my mind's eye, it flows with milk and honey, as did the land of Canaan when Moses looked down at it from a high place. Its fields are well tilled and productive; its children are being educated by a system of public schools equal to those which our own children enjoy; reciprocal trade relations with their nearest neighbor and an honest and economical administration of public affairs place no embargo upon the accumulation of wealth; and the diffusion of intelligence, the free expression of thought, and the glorious rays of God's sunlight shining into hearts as well as upon fields, make it a land of peace and happiness and plenty.

The struggles of the past are remembered only as a sad, troubled dream. All present and future are surrounded by the luminous halo of supreme joyousness and love.

Do you like the picture? Compare it with the one you see at present, the one reflected by the page of every current newspaper, and then—vote.

Coin Redemption Fund.

SPEECH

OF

HON. NICHOLAS N. COX.

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. COX said:

Mr. SPEAKER: There is one thing we are all agreed on. That is, that the finances of this country and its business are in a most deplorable condition. That this has been the state of things several years there is no dispute. It is useless to charge each other with being responsible for the trouble when we all have or should have the same desire and patriotic motive to cure the evils we are laboring under. I have not heard a speech made or a statement uttered that denies the unfortunate condition we are in, and that remedial legislation is imperatively demanded. If we then shall be able to reach a broad, liberal conclusion and fully meet the question, we shall have done our full and patriotic duty.

The Republican majority of this House offers a remedy in what it terms an emergency bill. This bill, in any aspect you may take it, is a bill that looks to the borrowing of money. True, when the money is borrowed part of it is to be used one way and a part another way. Unlimited power is given to the President to borrow

money for the purpose of maintaining the so-called gold reserve. A limited power is given to borrow money to pay the expenses of the Government. Fifty millions is the limit for the latter purpose; no limit as to the former. In either case it involves the Government in debt. The proposers of this bill insist that it will be needed but for a short time, if by proper legislation the revenues of the Government are increased. This they propose to do by increasing the tariff. This, I may say in passing, is the universal remedy of that party for all political woes. The President meets this proposition by saying that such legislation as is proposed would be a complete failure. He answers the proposition to borrow money for the purpose of paying the expenses of the Government by saying that there is no need of it; that there is not only enough collected to pay our expenses, but more, and that he has a large surplus remaining idle already collected for that purpose.

As to the other proposition, the President insists that if carried into law it could not and would not protect the gold reserve unless you go a step farther and use the money as contemplated, and when so used every United States note, or any other kind of note that preys and eats upon the reserve, be destroyed when paid with the money so borrowed. To this last idea of the President the entire House, almost unanimously, and without reference to parties, dissents. These are the precise questions and differences between the President and this House as to this legislation. It ought not to escape attention that in the bill offered by the Committee on Ways and Means the use of two kinds of money is recognized. In the sale of bonds to protect the gold reserve, these bonds would have to be sold for gold. Although the bond is payable in coin on its face, it can not furnish gold to protect a gold reserve unless sold for gold. The other section authorizing certificates of indebtedness to be issued, as they are called, payable in lawful money. I desire to emphasize this distinction in showing the advantage given to one class of creditors of the Government over another. The holder of greenbacks obtains gold on his note, now at a premium, and the shipbuilder or other creditor receives silver, which you say is only worth 50 cents on the dollar. This is the position the Republicans occupy in passing this bill.

But, Mr. Speaker, let us compare the policy of the Administration with the bill proposed. No one will contend that to extend the authority to issue bonds and borrow gold and pay "greenbacks" and immediately put in circulation these paid greenbacks, will stop the raids for gold. There is not the least remedy in that to check or break the repeated withdrawal of gold from the Treasury; it only affords greater facilities to run the Government in debt and furnish the very best securities for the loaners of gold.

This is the view of the President, and certainly correct. No one doubts this position as being correct. The President, therefore, says that when you once borrow the gold and pay the greenbacks when presented, destroy them. This bill, taken alone and disconnected with the proposed tariff bill, says no, borrow the gold on a new kind of bond, and when you pay or redeem the greenbacks turn them out in circulation at once and borrow more gold, issue more bonds, and perpetually redeem and pay without end. This is exactly what is being done now. We have borrowed two hundred and sixty-two millions in a very short time, and not one dollar of the greenbacks has been destroyed. Under the policy recommended by the President, that is, the destruction of the greenbacks when redeemed, a contraction of the currency equivalent to the amount of the greenbacks destroyed must occur.

The tariff bill introduced, of course, is to be considered as a part and parcel of the proposed bond bill. This bill, considered with the other, proceeds on the idea that, notwithstanding the statements of the President and Secretary of the Treasury, the whole trouble grows out of the insufficiency of the revenue, that the Government is really borrowing money to pay necessary expenses. I confess that I do not see much difference in the Government borrowing gold to pay greenbacks and then using these greenbacks to pay necessary expenses and in borrowing gold to pay expenses. It does, however, make the greenbacks absolute gold securities. But how is the tariff bill to assist the policy and break what is called the endless chain? If the President is right, that is, the President assuring us he has ample revenues to pay expenses, and this tariff bill increases the revenue forty millions annually, then there would be placed in the vaults of the Treasury forty millions annually not needed. A contraction annually of the currency forty millions; this sum is not far from the amount of dollars our mints could coin in a year in silver.

But suppose the President is wrong, and that we are going in debt because of want of revenue in paying expenses, and that it will require this forty million annually to keep our accounts square. Now, how will this additional money collected in the least protect the gold reserve? If you say it will create a fund larger than is needed for expenses, and therefore there will be no demand for gold, you assume a position that the President and Secretary are either seriously mistaken in, or do not understand what they are saying about the matter. That is exactly the condition they claim surrounds them, and yet it does not stop the demand for gold. But suppose that the assumption of the committee is right and that a surplus of revenue will stop the demand for gold, I ask any gentleman present to tell me how this can be the result?

Under this idea of increased revenue by increased taxes you bring about the same burdens substantially as if the greenbacks were canceled and interest-bearing bonds placed in their stead. You tax the people to obtain surplus revenue; you tax the people to pay interest on bonds. But taxation for either purpose will not stop the raid on the gold reserve so long as the Government continues the present policy of selling bonds for gold, and then pay gold for greenbacks. If it is said that through an excess of revenue the dangerous greenbacks could be collected in and held in the Treasury, and in that way stop the gold operation, then it must be admitted that to get them into the Treasury they must be brought there by increased taxation, or at least by taxation, and when so obtained and held you have as completely contracted the circulation as would the plan of the Administration. The plan under the present bill, to protect the gold reserve, if it can have such effect at all, is to hold the greenbacks when they reach the Treasury, and thus destroy the means used to deplete the gold reserve. This must necessarily contemplate an excess of revenue over expenses at least equal to the amount of the greenbacks held in the Treasury.

The proposition is to my mind intolerable. It means, tax the people and take from their circulating medium, and when you have obtained it lock it up in the vaults of the Treasury, for fear that this money, this circulating medium, may be used to reduce what you term a gold reserve. How long do you propose to hold it in prison? How much do you propose to put in prison? If you leave out one hundred millions, yes, fifty millions, the reserve can with perfect success be depleted and your difficulties remain just as they are. So to chain this paper money that is used to obtain gold from the Government in effect destroys that much of our circulation, and you are guilty of increasing taxes and contracting the means to pay these taxes at the same time. The same results will be reached and the same effect had on our finance under this plan of the committee as the one proposed by the Executive.

Contraction of the currency and increased taxation are for one purpose only; that is, to hold this country to a gold standard.

But, Mr. Speaker, suppose this bill becomes a law, or that the policy of the Executive is put into legislation, and every dollar of greenbacks is destroyed or locked up in the Treasury, what have you got? One hundred millions of gold locked up, and over four hundred millions of greenbacks locked up or destroyed, and your circulation contracted at least one-third.

You are left with a paper circulation of national-bank notes and silver certificates.

It is conceded that we are on the basis of a gold standard; that property, labor, and all our currency used as money must be as good as the standard. There being but one standard, gold, all questions as to parity at once cease. The money is gold, and gold only, and it carries the paper and the silver dollar with it because they are convertible into gold. Every speaker on your side of the question claims that he is for the use of silver so far and no farther, as long as a silver dollar is as good as a gold dollar. No difference how many silver dollars you have, if they are convertible into gold dollars, the silver dollar will be but the representative of a gold dollar, gold being your single and only standard. But suppose the coined silver dollar can not be converted at will into a gold dollar; then you have reached that terrible calamity you refer to, of having two dollars of different values.

Let me make this point plain to show what I think is the absurdity of some positions advanced. Assume that under the proposed bill, or the idea of the Administration, the greenbacks are locked up or destroyed. Do you then propose to hold a gold reserve or abandon it? If the reserve is abandoned, and you hold no reserve whatever, will you tell me how the Government is going to keep its dollars all of equal value? Suppose A demands of the Government gold for his silver dollars, and the Government declines to exchange with him. Is not the value of the silver dollar lessened and the equality of the dollars destroyed? Suppose a certain amount of bank notes are sent in to the Government for redemption, the greenbacks all destroyed, will the Government redeem them in gold or silver? If in gold, then a gold reserve is again necessary, and the raid is on again through bank notes; and, as I see it, the same with silver dollars.

After the bank notes have been redeemed by the Government and the banks called to make good the redemption made by the Government in the first instance, will the Government demand of the banks to return the gold used for the redemption of the notes in the first instance? If so, then the demand for gold by the banks will send it to a premium at once. But suppose the bank declines to return the gold to make good the redemption made by the Government, but offers to return the silver when the Government has paid out gold, and the Government accepts it, how long will the Government be able to redeem in gold? But suppose the

Government declines to take the silver for the redemption and demands that the gold shall be returned, then the silver dollar has again parted company with the gold dollar, and you have dollars of different values.

The plain truth plainly told is that every dollar of paper and silver circulation outstanding is depending on gold for its value. There is no bimetallism or any question of parity. It is a question only how much silver and paper can be redeemed in gold, and that redemption to be made by the Government. Let me suggest here in regard to bank notes that while the banks may ultimately redeem their notes in gold, the Government must first redeem them, and this does not in the least lessen the demand for gold. Can it be expected that the banks under the circumstances will take out circulation when every note is a gold-demand note on the bank?

Mr. Speaker, just in this connection let me call the attention of the House to the absurdity of this financial system. It is settled by law that we have three kinds of money that are legal tenders, full and complete between individuals. A tender in court is a full response to any contract made between individuals when the contract is payable in dollars. Gold, silver dollars, and greenbacks are these moneys. When you assume that silver and greenbacks are redeemable in gold, then every contract is a gold contract whether named in the contract or not. A sues B, B tenders in court silver dollars; this satisfies the contract. A takes the silver dollars and demands of the Government the gold. The Government refuses to redeem; then the metals have again parted company. But suppose B tenders greenbacks; this satisfies the contract, and A presents the greenbacks, you pay him in gold. Now, is it not plain that the debtor will tender on the contract the cheaper money, and thus the silver dollar becomes less valuable than the greenback? How is the Government to preserve the equal value of these different dollars unless all are redeemable in gold if the gold standard is to be maintained? I would be glad to hear from any gentleman who will announce his willingness to vote and declare by law that every contract, private and public, is dischargeable alone in gold. This is exactly the effect of a single gold standard.

Say that I hold in my hand five dollars in gold, five dollars in silver, and five in greenbacks. Is the $5 in value the same? I can buy the five silver dollars with the gold. I can buy the five in greenbacks with the gold. The five in greenbacks will buy the five in gold, or the five in silver. What will the five in silver buy? It will not get the gold or the greenback, the equivalent of gold. I speak with reference to the operations of the Government. Then I ask if the Government itself has not created dollars different in value? But it has been repeated over and over again that the silver dollar is equal to the gold dollar. I deny it. The gold will buy the silver, but the silver will not buy the gold. Its purchasing power of commodities between individuals is a totally different thing, to be seen hereafter. So I conclude this proposition by saying that if the Government fails to redeem silver in gold just as it does greenbacks, which it virtually does, then silver is not the equivalent of gold. If it decides to redeem silver in gold, then the raid on the gold reserve can be made with silver if every greenback was burned up. Then tell me what relief this proposed bill gives, leaving both greenbacks and silver to attack the gold reserve by simply authorizing more bonds to be issued, leaving both the silver and greenbacks full sway to reach the gold reserve? What relief does it give if the greenbacks are still left to repeat their perpetual raids on the gold?

It was never expected that this bill would become a law. It was never expected that this bond bill and its running mate, the tariff bill, would either of them become laws. The object is to make a show of relief, when neither of them can have the least effect in changing our conditions, except to make them worse by increased taxation.

If I have been able to show that this proposed legislation will be an utter failure in preventing the Government from going in debt, and the present policy is to be continued of borrowing money under an unlimited authority to issue bonds, I ask, in all candor, where will this stop?

In times of profound peace and the Government in full operation, with all its power to tax, shall we continue to involve ourselves in debt at the rate of near one hundred millions a year, with no end to this scheme in sight? Are we to be the gold purchasers for the world and load our people with debt to accommodate the foreign gold gambler and the avarice of gold sharks? Shall we absolutely surrender our Treasury and our system of finance to the banking houses, money traders, and speculators in our securities at the sacrifice of one hundred millions annually of debt imposed on the labor of our country?

Will any gentleman on this floor tell me what has become of the proceeds of the bonds already sold? We have sold our credit to the amount of two hundred and sixty-two millions. We have received that sum in gold. What has become of the gold we got? The Treasury has it not, and will be again selling our credit for more gold. What has become of the greenbacks bought with this gold, if the gold was expended for greenbacks? Have we the greenbacks? The answer is no. The Secretary of the Treasury tells us that his receipts for expenses are more than ample. If so, where are the two hundred and sixty-two millions of gold borrowed or the greenbacks bought with the borrowed gold? Was there ever such a system devised or invented to absolutely cover this nation with an enormous debt? Will the credit of our Government be maintained by involving it in enormous debts? Does an individual business man maintain his credit by going in debt? I thought the way to maintain credit was to keep out of debt. But a new financial idea is born, and we now see the old mark rubbed out and learn that the way to have credit is to continually burden that credit with debt.

After weeks of labor and thought the Senate of the United States has proposed legislation that in its judgment will effectually cure these burning evils, and that leads this House up to the consideration of the soundness of the views expressed by that great body. It is beyond question that if the legislation suggested by the Senate is defeated, and I have no doubt it will be, then we are exactly at the place we were when Congress met, with the addition of one hundred millions more of debt. May we not well say to ourselves that although the Senate's proposition may not fully concur with our views, yet there can be no danger of making matters worse than they are? We should try something, even if doubtful.

There are three ideas in the Senate amendment I desire to discuss for a short time and keep as clear as possible from the array of figures and statistics that have been so fully used in this debate.

The great proposition is the free coinage of silver, and upon this the other two propositions mainly rest.

I assert confidently as a constitutional question that the money metals of this country under that instrument were recognized, and that the idea of money was based on the metals gold and silver. It was never intended to give to Congress the right to coin money out of either gold or silver. The proceedings of the convention in making that great organic law show beyond dispute that when the restriction was put on the States that nothing but gold and silver should be made a legal tender, the two money metals were placed exactly in the same position. If we should read the Constitution in its plain meaning and the meaning developed by the constructors of that instrument, connecting the two clauses in their meaning, you would have that Congress shall have the power to coin money out of gold and silver and regulate its value, and no State shall make anything else a legal tender in the payment of debts.

True it is that questions have arisen as to how much of one metal shall be equivalent in law to a given quantity of the other, but until very modern times it was never contemplated that money coined out of one metal should be the money of the country, and the other used for money only to the extent that its value was made equivalent in an amount under commercial, commodity regulations to the other. Some such value may be considered in fixing the value of the two, but never is that an argument that one is worth only what its commercial value would be as a commodity compared with the other. There would be no sense in following that abstraction alone. If 15 ounces of silver is worth as much as 1 ounce of gold—the latter coined into money, the former not—then by the coinage of the silver you could only get the ounce of coined gold, which you do without the trouble of coining. But when you fix gold as the standard money alone, and deprive silver of its greatest value, to wit, that of money, and then say you can not coin silver until its commercial value is equal to the money value of gold, you have simply announced a position in effect that gold money must control and govern silver as a commodity. But this theory or position does not answer the constitutional point that Congress must coin money out of both metals, and if Congress can destroy silver in use for money it can destroy gold; if it can destroy one it can destroy both, and make the money of the country anything that Congress wills. Then the States are left with no silver coined, no gold coined, but must have these metals, and nothing else, to make legal tenders. That means the States shall make nothing but gold and silver legal tenders, and Congress responds, we will not coin either gold or silver, or, that we will coin gold and deprive the States of the use of silver as legal tenders, in open violation of the Constitution. Mr. Webster's views are certainly conclusive on this point. He says:

> I am certainly of opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of values in this country, and neither Congress nor any State has authority to establish any other standard or to displace this standard.

Can language be plainer, more distinct or conclusive? But, just in this connection, let me quote from the father of Democracy. Mr. Jefferson says:

> If we adopt the dollar our unit we should strike four coins—a golden piece equal in value to $10; a unit or dollar itself of silver.

This was his language before the Constitution was adopted. Now, can any reasonable man say that our fathers in the Consti-

tution left it to the caprice of Congress to make legal-tender money out of anything a Congress might decide? Where would be the stability? Do not let it escape from the mind that the moment you recognize in Congress the right to make gold the only standard of money you recognize the right to make silver the only money. When you recognize the power to destroy either, both are at the mercy of Congress, and paper fiat money may be the result. There are no stronger constitutional arguments for paper fiat money than the single gold-standard men advance.

But I hope I may close this point of my argument with what Jackson said about it. Please remember always that the Constitution fixed the money metals of this country, and did not leave it to Congress.

He says:

> Congress having established a mint to coin money and passed laws to regulate the value thereof, the money so coined, with its value so regulated, and such foreign coins as Congress may adopt, is the only currency known to the Constitution.—*Veto Message United States Bank.*

I challenge the history of our country to find a single statesman, or even a politician, that ever contended that our standard money should be gold alone until the power of capital, gold capital, asserted itself in our legislation in Government securities. Name the man; name the legislator.

I can not stop here to go over in detail the votes in Congress of my party showing its construction of the Constitution and its advocacy of silver as a constitutional money metal. Suffice it to say that in every vote cast on this subject, with the exception of one vote, the repeal of the purchasing clause of the Sherman Act, an overruling majority of Democrats have stood by the constitutional money metals of gold and silver. With them has been a large element of the other parties, standing firmly by the same plain and convincing construction. I admit, with sorrow and regret, that men of my party have forsaken the doctrine of our fathers. I admit that men have tacitly confessed that after ten years, twenty years, thirty years of teaching the people for gold and silver as constitutional money metals they now in effect confess that while so engaged they now know they were wrong, and when they leap from that chasm of ignorance, as they seem to think, they leave their old followers, with rather a sorrowful sigh, in pitying the ignorance they have for a lifetime been engaged in formulating. Such expressions as "Fools never change," "Chinamen never change," and the "beasts never change," seem to be absolute consolation to them that they have escaped from an ignorance they were never able to observe, until at last the blandishments of power and flattery of patronage tore away the veil from their benighted, honest, ignorant conceptions. How easily are they consoled. May it not be well here to revive in our memories a familiar scene? You may furnish the characters:

> "Do you see yonder cloud that's almost in shape of a camel?
> By the mass, and 'tis like a camel, indeed.
> Methinks it is like a weasel.
> It is backed like a weasel.
> Or like a whale?
> Very like a whale.
> Then will I come to my" Grover.

If I have been able to show that our money should be under the Constitution made of gold and silver, and that has been the doctrine of the Democratic party without any change, then there must be some serious and momentous reason why we should abandon our faith, and there can be no justification for violating the Constitution. But suppose I am mistaken as to the constitutional question, then there must still exist great cause for our party to be justified in reversing its time-honored doctrine. We had both metals as money metals for over eighty years, and no greater prosperity ever blessed a people. If while we adhered to that idea we were blessed, and when we abandoned it we were cursed, certainly it is fair to assume that the money question has much to do with our present condition. In a short time after we inaugurated the gold standard our public men and the approaching depression admonished us trouble was coming on us.

What were the reasons that led up to the act of 1873? The arguments now used did not sustain the action then. Silver was not at a discount compared with gold. It was at a premium. Then, it was not demonetized because it was a cheap dollar. It was the best dollar. It was not to the mine owners then that such importance was attached as is now. Stop and think when this legislation commenced. What reason was there for it? None, except to increase the wealth of the gold holders and bow submissively to the dictates of England. It is said all the great commercial nations have stopped its coinage, but we were the first, excepting England, that so legislated. Let the country fully understand that the price of silver as compared with gold never had any difficulty until the United States stabbed it.

With great display of supposed statesmanship the query is now put, Would you make a dollar out of 50 cents? Let me inquire, what is the difference in effect on the people between making 50 cents a debt-paying dollar and making 50 cents of gold purchase what before required a dollar? You refuse to legislate silver up, but every hour of the day, by every means you can, you legislate gold up. It has gone to a premium, not only in purchasing power, but in actual selling price. Your boasted parity has been destroyed, and the whole country is suffering a loss in prices absolutely shocking.

Again, it is said if you open the mints to silver it will drive out the gold and you will be on a silver standard. If the mints were put in full operation they could not coin in a year 50 cents per capita. Would an increase of 50 cents per capita in our circulation drive out our gold? Would any man contend that even 50 cents per capita of bank issue would inflate the currency? Does not our population increase heavily every year, and does not the demand for more money increase as industry and population increase? Is it not proposed and recommended that the banks be permitted to take out circulation to the par value of their bonds? Is not that for the very reason that more circulation is needed?

Suppose we assume that free silver will drive out gold. I ask in candor if gold is not already driven out of circulation? The last loan showed biddings of five hundred millions, it was claimed, for one hundred millions of bonds. Who had the gold, and what had it been doing? It was locked up and absolutely out of circulation, and never showed its head in business enterprises that employ labor, but rises in its might when the Government, to obtain it, pledges its taxing power as security for it. It is just as certain to hide again and sleep until invited out by the offer of bonds—gold interest-bearing bonds, and in effect gold bonds, interest and principal. Can any intelligent man expect business will revive, when the standard money of the country absolutely shrinks from productive industries? If free silver drives out gold, pray tell me how it is, when our mints are closed to silver, and you confess you are on a gold basis, that your gold not only refuses to circulate but is absolutely driven out of the country? We can not with accuracy tell how much gold is in our country, but we do know that in about three years we have lost over one hundred and fifty millions, and increased our home debt two hundred and sixty-two millions. As our gold leaves us we increase the demand for it. Did our silver money drive out of the country this gold? Did the silver dollars move gold from this country? Will anyone dare answer yes?

If this system continues, it is only a question of time when we will be destitute of gold and the premium beyond our knowledge.

In every speech of the gold-standard men—sound-money men—the scare is held up that we will go to a silver basis. So the President argues. For the sake of this argument, let us assume that such a result will follow. Will this destroy this country or its prosperity? Gold, you say, will go to a premium and leave the country. It is at an enormous premium now, and leaving the country every day to find itself locked up in the war chests of European and other powers. Is it to be supposed that a man will seize his gold and fly from the country with it because we freely coin silver? What will he do with it when it reaches its place of safety? Invest it or lock it up? If he invest it, he will do so for profit. Can he not invest here much better than abroad? Where is the inducement to carry it away? If he locks it up, silver will take its place. Demand for silver increases, its purchasing power increases, until the two metals substantially reach a level. Both metals then become circulating money. If one rises in value over the other, readily the other takes its place, and the equilibrium is restored. In our business transactions 95 per cent is in our own borders. Shall this home interest be ruined to satisfy the avarice and gold love of only 5 per cent of foreign transactions?

Our opponents point to Mexico as a silver country and warn us of our fate. At the same time they say a dollar in silver coined at our mints is worth more than a Mexican dollar with more silver than ours. If silver destroys our manhood, energy, and enterprise, then I suppose you mean gold will elevate us. Decide for yourself as to manhood between silver Mexico and gold Egypt; decide between gold Turkey and silver Japan. Money does not make the man.

Another statement is made that if we open our mints to silver that our country becomes the dumping ground of all the silver in the world. Now, this assumes almost unlimited power in this country to absorb all the silver in the world. But how fallacious is such a position. Where will the silver come from, and why will it come? You answer, Mexico will rush her silver to our mints. If you mean her coined legal-tender silver dollars, then I ask what will be her legal-tender money? Will she adopt our American dollar as her legal tender? If so, that would wonderfully increase the demand for our silver dollar. If you mean she would coin her silver into our dollars and not make them her legal tenders, then what will Mexico have as a legal tender?

If you mean she would coin her silver into our dollars, depriving herself of her standard of money, and leave such dollars with us—certainly you do not mean that after she has her silver coined into American dollars the holder will make some American a present of them, when the same silver can be coined in Mexico into legal-tender dollars. But if you mean the silver will be left here in investments, in the purchase of our products and com-

modities, this could be no misfortune, but a blessing. The American would know the value of his property, and no purchase could be made without his consent. He would be goverened by the price of his commodities the world over. If the price offered in our silver would purchase more here than anywhere else, immediately the silver price of commodities would advance at other places and increase the demand for silver, bringing about the equilibrium of both metals. The very idea that silver would flow to this country and remain here presupposes that it would be worth more here in purchasing power than at home.

One more thought as to dumping silver here. Would an American dollar coined at the ratio of 16 to 1 bring French silver here, which is coined at 15½ to 1, and is equivalent to gold in France? If so, then the French silver, although the ratio is larger here than there, when coined here must be worth more than it is in France. This destroys again the idea of a 50-cent dollar. Would the silver of Japan be dumped here? She has her silver as her standard money; about $3 per capita circulation. If brought here it would be because it would be worth more here—it would purchase more than in Japan. If so, then her silver would advance in price in Japan equal to what it would be worth here, less cost of transportation. So the argument contradicts the conclusion of cheap fiat money. But does anyone think Japan would destroy her money system for a freak?

If these premises are correct, where is the force of the argument that the United States can not proceed alone?

Mr. Speaker, may I not inquire when shall we be stronger? How long until we shall bend the knee again to England? What a humiliating condition we are in. In this House speech after speech is made to prove that we must have the approval of England to make a financial policy for these United States. We beg her to assent, she declines, and holds the purse strings of this country. In a patriotic outburst we are ready to declare war against her on an American doctrine, and while these bugle notes of combat are sounding over our land, and great military chiefs are tendering their services, the Treasurer of the United States is on his knees borrowing English gold. Truly to an English statesman our position is one of weakness and humiliation, and to an American sorrowful.

Two hundred millions of our products at gold prices, or, rather, two hundred millions' worth of American labor at gold prices, must be given to foreigners every year to pay their interest. Foreigners own our railroads, mills, breweries, and millions of acres of American lands; their interest, dividends, and profits must be paid in gold, and these incomes clear of taxation. Yet America confesses she is too weak to have a financial system of her own. How long, oh, how long shall England dominate our financial policy and in this dominate our Government?

Will you before you declare war against England stop and negotiate to get her gold to fight her with? She holds our purse, and the idea of war was really never a serious matter. England is succeeding better with us without war. She is making our labor tributary to her wealth. She is taking charge of our carrying trade. If our Republican friends are to be trusted, she is destroying our manufactures, and doles us out money at her own price. How long shall we wait? How long hold down the heads of Americans, when as such we twice defeated her and brought her to terms regardless of a gold standard? Every war of the United States has been fought with silver and gold as our standard money. The soldier suppressing the Indian, the soldier defeating the Mexican, and the Union soldier offered his life for his country and rejoiced when he even heard of a silver dollar. The Confederate displayed gallantry and devotion, if ever equaled has never been excelled, and received his pay in a scrap of half-made paper, and so badly printed could hardly be read. But now gold, the coward in war and usurer in peace, is attempting to convert the American people to the idea that I, gold, am supreme, and you can not dethrone me until my great supporter and protector, England, shall say so. This she will never do.

Again, it is said that it is true depression is all over the country. Manufacturers are idle, labor is unemployed, and the great agricultural interest is prostrate. This is conceded. But gold says the reason is, we through improved machinery have destroyed the demand for physical labor and are producing too much. If it is true that our great inventions are making paupers, filling our prisons, and spreading want, every machine of that kind is a curse. If it is true we are making too much, and therefore getting no price for our productions, it would be wise to offer a premium on laziness and inflict a punishment on industry.

Mr. Speaker, the great trouble on this line of thought does not lie in overproductions. There can not be an overproduction that will injure the people as a whole; it lies in the fact that the means to procure the articles needed is destroyed and underconsumption follows. Let me illustrate this with one fact. When wheat was $1.25 per bushel and we had approximately a full circulating medium, each inhabitant of this country consumed about 5 bushels of wheat. When you got to your sound-money idea, with wheat at 60 cents per bushel, consumption per capita fell to about 3 bushels per capita. The farmer sold to his neighbor $6.25 worth of wheat, on a good free circulating medium, and when the gold power took control he sold $1.80 worth. I repeat, you have destroyed the means to obtain, therefore can not consume.

Our tramps can not consume in amounts as much as when employed. Unemployed labor has no choice as to its wants; it has to take what it can get, and with the decline in prices, every man, farmer, mechanic, or anyone with moderate means, in the last four years, I have no doubt, has reduced his consumption of articles he had to purchase at least one-third.

It is also asserted by the advocates of the gold standard that our laborers receive more pay and in money of more purchasing power than any laborers on earth. If it were true that the labor of the country was better paid, and that our labor was employed, then there could be no such conditions of adversity as now surround us. Prosperity always follows industry and employment where just compensation is received for labor. No nation can be in peril from internal causes when everyone has plenty to do and is fairly paid for it. That is prosperity itself. But the position assumed leaves out of sight the unemployed. It does not take into consideration that laboring days are shortened by law, so as to divide the labor. It does not consider the organizations for the benefit of labor that are continually fighting against conditions for its own protection. I repeat that if labor could all be employed and properly paid, no greater blessing could be bestowed on a nation.

I have as hurriedly as possible passed over these matters, and have given my sincere conviction on the same, leaving out many points to save time. But one more point of the single-standard devotees do I desire to advert to. They assume the very ambiguous name of sound-money men, and are all full of what they term good faith in business and sound morals in contracts. They assume to say that if a contract is discharged in silver after free coinage is established that it is in the nature of repudiation.

You are again in a dilemma. Are not the contracts of our citizens dischargeable in silver? Is not a silver dollar a perfect legal tender? Does not the debtor have the full right to pay in silver, gold, or greenbacks? Certainly. How is it with the Government, the great debtor of all the people? No liberty is given it to select its money in which to pay. By law you lock up its mints to silver; by law you make greenbacks a legal tender between citizens. But the Government stands dumb before all its creditors and submissively yields to their demands and pays in borrowed gold. Will any "sound-money" man tell me why a silver dollar is good enough for all purposes between man and man in business and is not equally good between the Government and its creditors? If you answer it is, then tell me why you object to coining 56,000,000 silver dollars lying dead in bullion belonging to the Government and use it in paying expenses in place of increasing taxation or borrowing.

Let us put this question of good faith and honesty, so-called by gold men, to pay our debts in gold so every man can understand it. There is not a note or bond of the Government that provides on its face or in its promise to pay gold. Every promise is to pay in coin, with no guaranty in any law that one dollar of these obligations should be paid in anything but coin. Congress by an overwhelming vote refused the power to the President or Treasurer to issue a gold bond. Why, then, by construction, in open opposition to the will of the people, expressed through their representatives, make them gold bonds? Do you expect to preserve a parity between the metals by a nonuser of one? There can be no parity with but one standard. Parity is between two or more, not with one. Yet by construction the contracts are changed against the people, and the difficulty in paying is doubled. Is this good morals? Does not the very highest public faith exist in the servants of the people being loyal to them? Do you think you have brought about a great blessing to this country in doubling their liability and doubling their taxes? Is it true that high morals demand that a debtor, to be honest, shall pay twice as much as he promised?

Then truly is taxation a blessing and confiscation a paradise. But it is insisted that the now-existing debts were contracted on a gold basis. One moment's reflection dispels this. Every dollar of the debt of Tennessee was contracted to be paid in gold or silver. Untold millions of debts are the growth of debts contracted on that basis, and by this most oppressive and unjust system the labor to discharge these debts is doubled. Does that not take away one-half of labor for the creditor, with no compensation to him? Does not that deprive labor of half its value and cut it off from the privileges of making life more comfortable and stimulating industries? Is this what you mean by high morals and public good faith?

Mr. Speaker, let me inquire if expenses of Government have been reduced in proportion to the high value of the money? Have regular incomes and interest been reduced? Has business been stimulated? These questions are answered in one word, no, and no man can deny it.

In conclusion, let me say with this system of finance the Government has left the constitutional requirements. In doing so it has transferred to the money power of the world one of its greatest

functions of government. It surrenders its great power, in fact, of coining money and regulating the value thereof to the gold gamblers to regulate its value. They demand the greatest amount of labor for their gold, and the Government is powerless to arrest their avarice. They demand gold from the Government at will, and this great country of ours, ready for war on any proper cause, willing to contend with the world for the right, when approached by these shylocks, bows its head and with humility says, "Thy will I will obey."

Democratic friends, look at our condition. Just a short time ago the people said to us, "We will try you"; and they filled this House to overflowing with professed Democrats. We met here, wrangled, and adjourned. We appealed for support again, and it was like talking to stones. We had substantially left them where we found them. They answered back no. We try something else, and we hardly have enough to call a quorum. The same is true of the Republican party. You think now you have an unlimited lease of power. Let me say to you you have had our experience. You are walking on thin ice. You will do nothing this session. The ball of taxation will roll on. Bond after bond will be issued, and the gold hoarders of the world will eat out our subsistence. These convulsions in politics show as much against one party as the other. Discontent, stagnation in business, fear of investments, premiums on the only standard money, broken pledges, and fear will again bring about their results.

The Democratic party was invincible until it destroyed itself. It has not been your Republican legislation and statesmanship that have brought you here in such great ascendency. It is because of our departure from our immortal principles. The Constitution has been violated, our policy of over a half century abandoned, and in this we have abandoned our great and impregnable fortress. Our friends once were the farmer in the field, the mechanic at his bench, the hired labor in all the pursuits of life. These were our friends. We carefully watched and fostered their prosperity. This being done, the merchant, the banker, and carrier received reasonable compensation for their efforts. No tramps infested the country, and such a scene of prosperity and success was never seen on earth. Now it is the rich gold holders we are running—rather they are running us. Even foreign gold lenders are consulted. They are provided with opportunities to make more wealth. The taxing power of the Government is mortgaged to them.

Gold, the unconstitutional and undemocratic standard, is doubled in value, and the old friends and champions of Democracy are left to do the best they can under such oppression. We left our friends and they are not to blame. Let us again return to the doctrine of our fathers. Let us make industry and labor the great objects of our creed, and stay with that unselfish, honest, plain, industrious people, and our party will again be invincible. [Applause.]

Cuba.

REMARKS
OF
HON. JAMES R. HOWE.
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Monday, March 2, 1896.

The House having under consideration the following resolution:

"*Resolved by the House of Representatives (the Senate concurring)*, That, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of our citizens, by intervention if necessary"—

Mr. HOWE said:

Mr. SPEAKER: Subjugation or annihilation is the decree that has gone forth from Spain to Cuba. The spirit of liberty is to be strangled in the interest of tyranny, and the question for us to consider is, Shall this decree of slavery or annihilation prevail? The heroic Cubans await our answer. Let us reply with emphasis, that it shall not be while the spirit of the men who founded this Government continues.

Mr. Speaker, war at all times is to be lamented, and the way to put an end to this struggle is to accord belligerent rights to the Cubans. The century now closing has been spattered with blood and full of heroic struggles for justice in Cuba. Once we recognize and accord them the rights of belligerents, we will have accomplished at a single stroke that which they have been unable to obtain through three hundred years of slavery. Statistics show that $26,000,000 is exacted in a single year as sweat money on the part of Spain from Cuba, 75 per cent of which has gone to sustain purple royalty.

Mr. Speaker, had I a thousand votes, I would cast them all in favor of this struggling people. I would be untrue to the promptings of my nature did I do less, for theirs is the same spirit that animated and nerved the men of the Revolution, from whose giant strokes went forth a spark that has set the world aglow with the light of human liberty, and its radiance has encompassed Cuba with a burning flame that will not be extinct until tyranny lies strangled at its feet and the Gem of the Antilles shines forth brilliant and glorious in freedom's light.

Mr. Speaker, we may well look upon the Cuban struggle with anxiety and fear lest the iron heel of tyranny crush to the death the spirit that animated them and postpone to some distant day the time when Cuba shall be free.

Mr. Speaker, we are making history to-day. Shall it be on the lines of progress, on the lines of the elevation of mankind and in the spirit of liberty, or shall we go back to the dark-lantern methods of the Middle Ages? Ah, no; it can not be, for it would be contrary to the spirit of the age in which we live. A nation that has liberated 4,000,000 slaves from bondage must not, will not, take the side of the despot by inactivity, nor stand idly by and witness this inhuman and barbarous warfare.

Mr. Speaker, we would not interfere with the sovereign rights of Spain; but, sir, this is not a riot, it is a revolution on the part of a long-suffering and brave people, a people whose wrongs are of the same character as were those of the men of 1776. Shall they be subjugated or annihilated and America fail to exercise a lively interest in their behalf? We are unworthy of the privileges which we enjoy if we fail to heed the cry that comes to us from the Island of Cuba. Captain-General Weyler would reenact in Cuba the barbarous and fiendish atrocities that have been committed by the Turks in Armenia. Is it not our duty to put a quietus on this inhuman butchery at once? It can not be possible that 70,000,000 freemen will allow these struggling patriots to be slaughtered, as have been the Armenians, without giving them recognition. This beautiful island, Nature's paradise, should not longer be blighted by the despotic hand of tyranny.

Shall chains and scourge and strangler's noose,
Rapine and outrage grim, await
Their bloody and accustomed use
For those given o'er to Spain by fate?
Nay: by the bones of James Monroe,
And by a million freemen slain,
Speak out, and let the whole world know
Columbia guards the Western main.

Let us give notice to Spain that from this day belligerent rights are accorded to these heroic defenders of the God-given right to govern themselves, and as sure as the sun rises on the coming morrow Cuba will be free.

Against the Recognition of Belligerent Rights in Cuba under Present Conditions.

SPEECH
OF
HON. WILLIAM F. DRAPER.
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Monday, March 9, 1896.

The House having under consideration the following resolutions:

"*Resolved by the House of Representatives (the Senate concurring)*, That, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of Americans, by intervention if necessary"—

Mr. DRAPER said:

Mr. SPEAKER: I know that only a small minority of the Foreign Affairs Committee agree with my views, and I presume that the same is true of the House to-day. There is, therefore, a greater necessity than usual why I should state the reasons which have caused me to differ with my colleagues of the committee.

This is a question of serious import and not simply an oppor-

tunity to make sympathetic or spread-eagle speeches without responsibility. It seems to me that we are in danger of yielding to a popular clamor that will not be sustained by the sober second thought of this nation.

In considering these resolutions we should remember that we are officials of the United States Government, bound by our oaths of office to consider American interests, and that no mere desire for the success of the one party or the other in Cuba should lead us to disregard them.

We may subdivide our national interests in this matter into the general interest and the personal interests of American citizens in Cuba.

Taking up the general interest as the most important, we have the statement of Senator MORGAN, of the Senate Foreign Relations Committee, who, in introducing similar resolutions a few days since, said that he believed their adoption meant war with Spain.

He said (I quote from page 2231 of the CONGRESSIONAL RECORD of February 20, 1896):

When the petitions had to be considered and had to be reported adversely, with a request that we might be discharged from their further consideration, or else we had to take the other side of the question and find that we could and should pass a resolution in some form recognizing belligerency in Cuba, I said to the Committee on Foreign Relations, "I contemplate war at the end of any resolution that we pass in that direction." * * * I therefore accepted the situation whenever I took a step in that direction—it made no difference how long or how short it was—that it would ultimately result in war.

He also said (page 2232):

Therefore I hope the Senator from Maine will understand that in all I have done about this Cuban imbroglio I have acted with great reluctance. I have acted with the reluctance of a man who, with his associates, is compelled to take a very important position, what under ordinary circumstances might be called a very hazardous position, in the contemplation of actual war, without giving any just cause of offense to Spain. I have acted in full view of the fact that at the beginning of this controversy it was our business to discount the future, and to draw our sword and lay it upon the table and say to Spain, "If you want to take it, take it up."

Now, we may not agree with the distinguished Senator in full, but there is no doubt that these resolutions carry with them the danger of war, and no doubt that the gentlemen who have brought the special pressure upon us to take this step sincerely hope that it will be the first step toward our taking active part against Spain in Cuba and elsewhere.

Already we begin to hear from the organs and sympathizers of the Cuban Junta complaints that our Government is enforcing its own laws in interfering with the fitting out within our territory of hostile expeditions against a friendly power. They will not be satisfied with neutrality, which is what a declaration of belligerent rights is supposed to mean. They want us to intervene in favor of the Cuban insurgents, who have little chance of success without our intervention.

Are we ready for this? Do we want war, or the chance of war, for any such object?

No one avows the intention of conquering Cuba and annexing it to the United States, so I will not discuss that proposition; but outside of that possibility have we not everything to lose and nothing to gain by the proposed action?

If war comes we should doubtless succeed as we did in Mexico, as we are stronger than Spain; but are we ready to increase our debt, to disturb or derange our finances, now on none too secure a basis, and to slaughter thousands or tens of thousands of our own citizens for any interest that we have in this controversy? I am not, for one, and I believe that the sound sense of the American people is with me.

Here I will digress a little from my general line of thought to call the attention of our sound-money men to the danger of our action.

We spend months of time and fill the CONGRESSIONAL RECORD with speeches detailing the troubles which a depreciated currency would bring upon us, and yet we rush through without debate—as my friend MCCALL says, with the speed of a lynching party—resolutions which, in the view of eminent men like Senator MORGAN, would bring these troubles upon us.

Does anyone doubt that in case of war with Spain gold would go to a premium at once? We are borrowing largely in time of peace. Our revenue is less than our expenditure. We have a powerful body of Senators who will not agree to an increase of revenue without adding to it the free coinage of silver.

The financial road is difficult enough at the best. What will be the result if we impose upon ourselves the burden of hundreds of millions of dollars in addition for military operations and coast defense?

This seems to me a time for considering these practical questions, rather than for being carried away by sentiment, and by sentiment, too, largely manufactured for the occasion.

Returning to my argument: On the second point, American citizens own nearly or quite $30,000,000 worth of property in Cuba—mostly in sugar plantations and mines. Some of this has already been destroyed by the insurgents (none by the Spaniards), and all the rest is only preserved from destruction by the presence of Spanish guards. Under present circumstances it is for the interest of Spain to protect this property, as she is responsible to the owners and the United States for payment if damage is done. Acknowledge belligerency and under international law this responsibility ceases, and with the guards removed it is easy to foresee the results. If we are to move at all, instead of thus abandoning our countrymen we ought to take some additional measures to protect them.

Coming, now, to the reasons urged for action, I notice that not one is based on American interests; all are on grounds of sympathy for a struggling people who are alleged to be endeavoring to establish a republic. Without saying (what I believe) that the success of the insurgents would mean anarchy rather than republican government, what real good will these resolutions do the revolutionists? You may reply that they want them adopted; but many people want what is not good for them.

To grant belligerency gives no assistance. Strict neutrality goes with it, and the American Government will be just as much bound to enforce neutrality with these resolutions passed as it is now. More than this, an acknowledgment of belligerency by us gives to Spain the right to search our vessels for articles contraband of war, a right that she does not now possess, and that would operate directly against the insurgents' interest as well as make great opportunities for irritation between Spain and the United States. As stated before, this latter point is probably the real reason why the Cuban Junta and their active sympathizers desire us to take this action.

They hope for some occasion of trouble between Spain and ourselves on account of the exercise of this right of search, and that thus we may become active participants in the hostilities, as I have before stated.

It is said that we ought to interfere in this contest because of the cruel manner in which the war has been carried on on the part of the Spaniards. Now, war is cruel, but so far as I can learn from the official correspondence submitted to us there is more evidence of cruelty and destruction of property on the part of the insurgents than by the Spanish forces.

Witness the case of the planter Iglesias, who was taken from his bed by an insurgent band and hanged because he was grinding cane on his plantation.

Witness the letter of Gomez on page 30 of the official correspondence, where he says:

With respect to myself as director of the war, I consider that the first thing to do is to root out every hindrance, however small it may appear, to the progress of the revolution, without heeding either much or little the judgment that may be formed of such measures by those who live in ease and repose under the shade of the Government we combat, for such can not be considered as our friends, and neither by the state of their spirits can they be competent to judge our acts.

To not let provisions enter that city (Puerto Principe); because the persons, families, rich or poor, may suffer is no fault of the revolutionists, it is the fault of Spain, who deprives the Cuban of his rights. * * *

Men who face death on the battlefield can not occupy themselves about the scarcity of milk and fuel in that city.

The orders are given, and I, who signed them with the pen, will make them effective with the sword. Tell that and much more, Doctor, to your friends, who must also be mine.

Yours, M. GOMEZ.

Witness the general conduct of the so-called war, which seems to consist on the part of the revolutionists in destroying the property of noncombatants and showing their backs when any considerable detachment of Spanish troops appears. When they take a town they first plunder the stores; then burn the houses; and meantime they amuse themselves by destroying the resources of the island—the sugar plantations and tobacco factories—when they are not under Spanish guard.

This is not the kind of warfare that, if successful, will lead to order under liberty; and it is not worth our while to interfere to make Cuba a second San Domingo.

I am well aware that our action is not final—that the President has full power in this matter whatever resolutions we may pass. I hope that he may be more conservative than we seem to be, but whether he acts on our recommendation or not, it is our duty to act with a full sense of responsibility.

One point more and I will close. It is said that belligerency is a matter of fact to be recognized when it exists, and not before. Now, while there is undoubtedly fighting in Cuba, the insurgents have not established themselves so as to warrant recognition under the ordinary rules. They fight, destroy property, and plunder, but they have not an established government in any proper sense. They have no courts, no seat of government except in the saddle, no seaports, no regular system of taxation, no protection of life and property; but the reverse.

A quotation from the message of President Grant, considering this same question with relation to the Cuban insurrection of 1869, is most pertinent to-day. He said:

During the whole contest the remarkable exhibition has been made of large numbers of Cubans escaping from the island and avoiding the risks of war, congregating in this country at a safe distance from the scene of danger, and endeavoring to make war from our shores, to urge our people into the fight which they avoid, and to embroil this Government in complications and possible hostilities with Spain. It can scarce be doubted that this last result is the real object of these parties, although carefully covered under the deceptive and apparently plausible demand for a mere recognition of belligerency. * * *

The question of belligerency is one of fact not to be decided by sympathies

for or prejudices against either party. The relations between the parent state and the insurgents must amount, in fact, to war in the sense of international law. Fighting, though fierce and protracted, does not alone constitute war. There must be military forces acting in accordance with the rules and customs of war, flags of truce, cartels, exchange of prisoners, etc.; and to justify a recognition of belligerency there must be, above all, a de facto political organization of the insurgents sufficient in character and resources to constitute it if left to itself a state among nations capable of discharging the duties of a state, and of meeting the just responsibilities it may incur as such toward other powers in the discharge of its national duties.

Applying the best information which I have been enabled to gather, whether from official or unofficial sources, including the very exaggerated statements which each party gives to all that may prejudice the opposite or give credit to its own side of the question, I am unable to see in the present condition of the contest in Cuba those elements which are requisite to constitute war in the sense of international law.

The insurgents hold no town or city; have no established seat of government; they have no prize courts; no organization for the receiving and collecting of revenue; no seaport to which a prize may be carried or through which access can be had by a foreign power to the limited interior territory and mountain fastnesses which they occupy. The existence of a legislature representing any popular constituency is more than doubtful.

In the uncertainty that hangs around the entire insurrection there is no palpable evidence of an election, of any delegated authority, or of any government outside the limits of the camps occupied from day to day by the roving companies of insurgent troops. There is no commerce; no trade, either internal or foreign; no manufactures.

As a conseqence of these facts, he declined to accord the insurgents belligerent rights.

The same statements and the same arguments apply to-day.

The insurrection of to-day stands in the same position as that of 1869, with the exception that the property-owning classes largely favored that movement, while they oppose this one.

No other nations have given them this recognition, and nothing but our national sympathy for anything called freedom, and the active pressure of certain gentlemen who, while calling themselves American citizens, are stirring up this trouble in the territory of a friendly power, is behind this strong movement in our Congress.

I may not be able to influence the action of the House, but I am so certain that I am right that I desire to be placed on record as opposing these resolutions.

Against Unrestricted Coinage of Silver.

SPEECH

OF

HON. JAMES T. McCLEARY,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1896.

The House having under consideration the Senate amendment to the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. McCLEARY of Minnesota said:

Mr. CHAIRMAN: It is no derogation of the ability and no disrespect to the personality of any of the very able and eloquent gentlemen who have spoken on the "free-silver" side of this controversy to say that high-water mark was reached on that side of the discussion last Saturday by my distinguished friend and colleague [Mr. TOWNE]. This has been conceded on all sides. Some have even gone so far as to say that his speech is the greatest, not only of this session but of any session, that has been made on that side of the question. As a friend of the speaker, I rejoice with him in the honors thus bestowed upon him; and as a citizen of the great North Star State, I am proud of the fact that he is a son of hers of whom these things have been said.

This speech of my colleague has made a profound impression on this floor, arousing with its clarion tones the drooping spirits of the free silver cohorts, and causing many a sound money man to pause in doubt. It will be printed in immense quantities and scattered broadcast over the land. And therefore, Mr. Chairman, as a lover of truth and of my country, I deem it to be my duty to expose the fallacies and refute the conclusions of my colleague's argument.

PERSONAL.

It is proper to say at the outset, Mr. Chairman, that my personal concern in the result of this discussion is simply that of any other citizen of the Republic; we are all greatly interested in securing an early, righteous, and final decision of this question. Nor are my personal fortunes in any special way at hazard. Through two campaigns this has been the leading question in my district; all the arguments now advanced by my colleague have twice been soberly weighed by the good people whom I have the honor to represent. Before my colleague had begun seriously to think on this question the citizens of the Second Minnesota district had, with their characteristic foresight and intelligence, given it full, frank, and thorough consideration, and had twice, I am proud to say, rendered their verdict by increasing majorities in favor of a sound and stable currency.

It is but fair to myself, Mr. Chairman, to say that, in view of the facts just stated, it had been my purpose to address the House briefly on another and more advanced phase of the money question. But complying with the urgent requests of some of my friends in the House, who are familiar with the fact that we have thought this question out pretty thoroughly in the Second Minnesota district, I have concluded (although the time for preparation has been very short) to make the speech of my colleague the basis of part of my remarks.

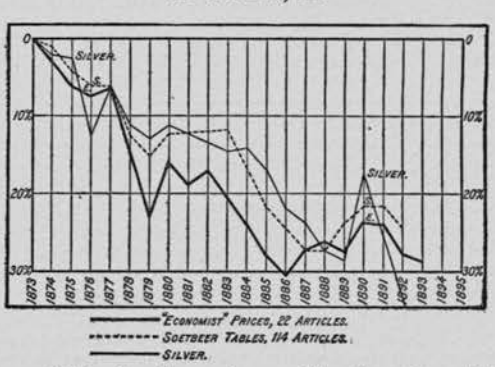
THE BLIND MEN OF INDOSTAN.

In this connection, Mr. Chairman, I am reminded of the poem of that wittiest and wisest, that keenest and kindest of men, John G. Saxe, a poem that we all read in our boyhood, entitled "The Six Blind Men of Indostan," who "went to see the elephant, though all of them were blind." Their curiosity had been aroused in relation to the famous animal, and each was anxious to learn what it was "like." In groping around, one grasped its tail and thought the elephant "like a rope"; the next embraced its giant leg, and thought it "like a tree"; another seized its writhing trunk, and thought it "like a snake"; and each of the others happening to come in touch with a different part of the elephant's anatomy, had a different idea of the animal's appearance. And over those differences, the poet tells us,

> They argued loud and long;
> Each being partly in the right,
> Though all of them were wrong.

To us who are blessed with eyesight their petty contentions seem almost pitiable. It is easy for us to see where their differences arose. No doubt each was sincere in his opinion and each was in possession of a portion of the truth. Had each been modest enough to realize his own narrowness of information and earnest enough to push his investigations as far as possible before venturing an opinion, the contention would have been less and the conception of truth on the part of each would have been much greater.

Had one of these blind men examined not only the tail, but also one or more of the other parts of the elephant, no one will deny that his opinion as to the appearance of the animal would have been more nearly correct than that of any of the others. And similarly in this discussion, the value of a man's opinion depends upon the breadth of his view and his ability to see things in their proper relations and proportions.



If I were called upon to characterize in a sentence the speech of my colleague, I should say that it lacks comprehensive grasp of the several topics considered. It offers a superficial view of many things, but does not indicate thorough study of any. We are given a little (and sometimes *very* little) of the truth on many points, but not enough of the truth on any of them to warrant one in drawing important conclusions. To carry out the figure of the poet, we are asked to judge of the appearance of an elephant by grasping its tail; to form our conception of a camel by seizing its leg; and so on through the menagerie. And in lieu of further information on any point, we are regaled by having a flower of rhetoric held beneath our nose, under the soothing influence of whose fragrance we temporarily forget that we are long on fancy and short on fact.

By the courtesy of my colleague, I am permitted to use this afternoon some of the charts used by him in his speech last Saturday. And I shall show that his fundamental positions are based on half-truths, which everyone knows are more dangerous and misleading than utter falsehoods.

SILVER AND PRICES.

I now ask the attention of the committee to my colleague's chart which shows the relation in price between silver and other commodities.

TOWNE'S, A.

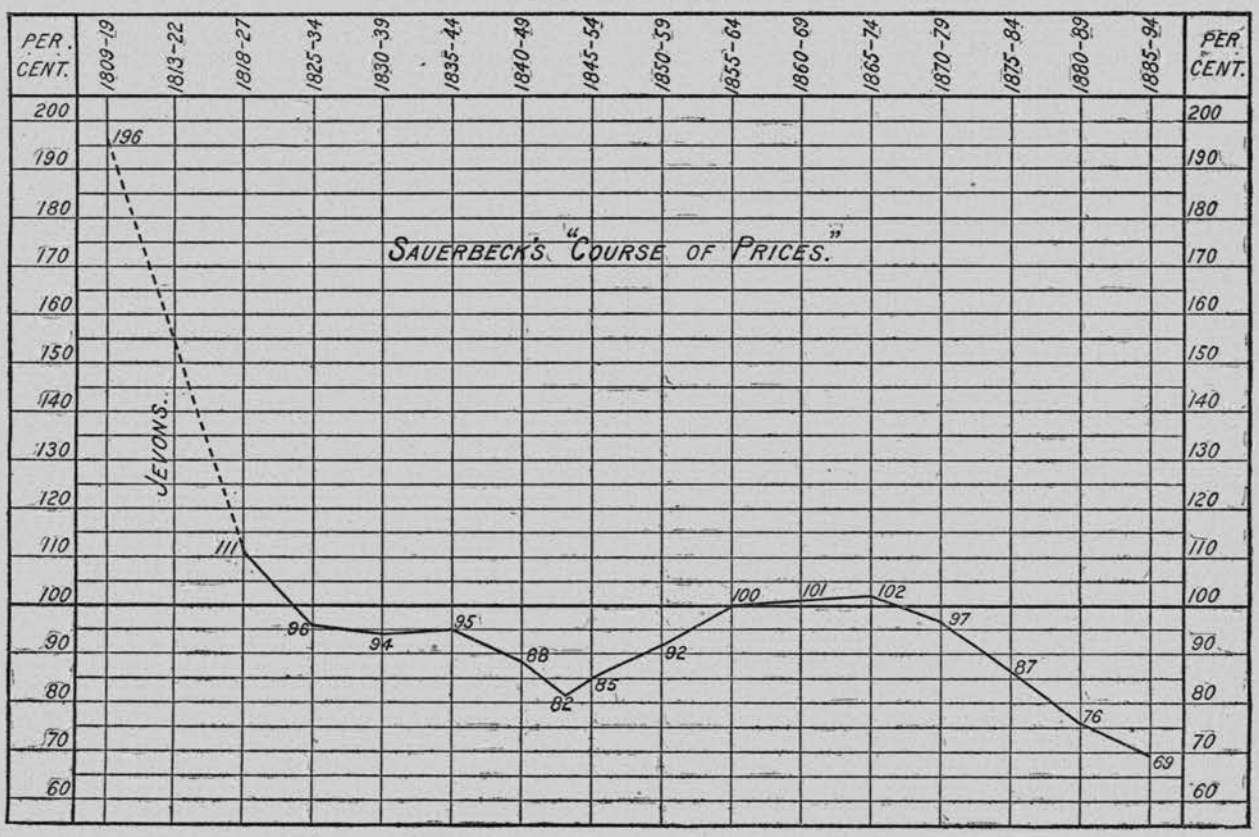
By means of this chart he endeavored to show three things:

1. That, beginning with 1873, there has been an "unexampled and ruinous fall" in the prices of commodities.

2. That there has been during the same years a practically parallel fall in the price of silver; and that silver is, therefore, an almost ideal measure of value.

3. That this "fall in prices" has been the result of the so-called

"demonetization" of silver; and, by inference, that "remonetization" of silver would "restore prices" to their former level, or thereabouts.



As we look upon the chart, our first impulse is to say that, unless its allegations are untrue, the inferences of my colleague are fully established. But when we look farther into the matter, we shall find that such a conclusion is wholly unwarranted. We may admit that there has been within the last twenty years a fall in the *average* price of commodities (the extent of which is, however, exaggerated to the eye by the method of drawing the chart); and we could admit that there has been during the same period a fall in the price of silver *roughly* parallel thereto. Indeed, I do admit (with an exception to be noted later) the substantial correctness of these two allegations; for my colleague would not knowingly make any statement of fact without having what he conceived to be good ground for doing so. The errors of my friend all arise from the fact that he is drawing important conclusions from premises that are too meager; he is trying to get an idea of the elephant by examining its tail only.

The trouble with my colleague is one that is common to the whole tribe of free-silver men: *the year 1873* is to them what the year of the hegira is to the Mohammedan, it is the point of time from which everything is reckoned. But no legitimate inference can be drawn in relation to these matters without examining also the course of events *before* 1873, and making a fair comparison of the two series of facts. If upon making such examination we find that there was never during the period of so-called "bimetallism" a marked fall in prices, and if we find also that the price of silver kept even pace with the average price of commodities before as well as after 1873, then indeed would candor compel the admission that the gentleman's inferences are well founded. But if, on the other hand, such investigation reveals a fall in prices during the so-called "bimetallic" period as great as that since 1873; and if the rough parallelism between the price of silver and that of commodities in general did not exist before 1873, then will frankness force my colleague to confess that his inferences are not tenable, and that in common honesty they must be abandoned.

LET US APPLY THE TEST.

The chart to which I now invite the attention of the committee is one that I drew since the speech of my colleague was delivered. It shows the course of average prices by ten-year periods from 1818–27 to 1885–94, inclusive. The table from which it was drawn was prepared by Augustus Sauerbeck, one of the authorities quoted by my friend in another part of his speech. Indeed, in the first rehearsal of this speech, as delivered by him in Duluth last August, and afterwards in other places, the gentleman printed this table. But by a singular oversight *he did not put it into chart form*. This was a very unfortunate omission. For had my friend appreciated the great importance of those figures; had he given them enough study to become impressed with their real significance, and had he then put them into chart form and placed the chart in juxtaposition with the one considered by us a moment ago, he would have saved himself and his readers from grievous error.

McCLEARY'S, A.

Mr. Sauerbeck's standard of comparison, or 100 per cent line (represented on the chart by the horizontal line A—A), is "the average prices in London of forty-five principal commodities for the period 1867–77"; that is, for a ten-year period having 1873 as its middle point.

THE GREAT FALL IN PRICES FROM 1809 TO 1849.

Even the most casual examination of the chart will reveal three facts which are exceedingly important in this discussion, namely:

1. That in the period extending from 1818–27 to 1843–52, twenty-five years, *the fall in average prices was practically the same* as that which has taken place since 1873. And had the table extended back ten years further the former fall would be seen to have been *much the greater*, for prices ranged much higher for some years before 1818 than in that year. A glance at the chart will substantiate this statement, for the price line in 1818 shows that it marks, not the beginning of a fall, but one which had been for some time in progress.

In further substantiation of the foregoing statement, and as my authority for the course of prices before 1818 (as shown by the dotted line), I quote one of the most scientific and impartial writers on money, one whose authority on matters of fact is unquestioned, the late Walter Stanley Jevons, author of Money and the Mechanism of Exchange. Discussing the varying value of money as related to goods, he says:

Between 1789 and 1809 it fell in the ratio of 100 to 54, or 46 per cent—

That is, Mr. Chairman, the average prices of commodities *rose* enormously during those years. The committee will kindly note this fact, as I shall revert to it in another connection. But for the present I desire special attention to the succeeding statement of Mr. Jevons:

From 1809 to 1849 it [the value of money] rose again in the extraordinary ratio of 100 to 240, or by 140 per cent.

That is, Mr. Chairman, there was an "*extraordinary*" *fall in*

prices—a fall at the ratio of 240 to 100—a fall which in extent and duration far exceeds that since 1873.

Thus we see, Mr. Chairman, that our recent fall in prices is by no means "unexampled" in either scope or duration. It was greatly exceeded by the fall in prices near the beginning of the century, during the so-called "bimetallic" period. And thus disappears the chief foundation of my colleague's entire argument and of the whole free silver contention.

THE IMPOTENCE OF SILVER TO AFFECT PRICES.

2. The chart is equally severe on another very touching argument of the free silverites. Silver and its advocates are very sympathetic, very anxious to ameliorate the sad condition of men; silver is claimed to be able and willing to "restore prices." But it is well worthy of note, Mr. Chairman, that during the long period from 1809 to 1865, a period marked first by a tremendous fall and then by a great rise in prices of commodities, *the price of silver varied but slightly.* Though silver advocates frequently boast of this uniformity in the price of silver they *never put it in connection with this other fact.* Thus, it is never revealed by them that during this long period, when silver had "free access to the mints," it held itself aloof from other commodities, impotent alike to prevent their fall or to promote their rise. It seemed in its palmy days to have none of the spirit of sympathy and helpfulness ascribed to it now by the advocates of free coinage.

Mr. Chairman, "we know of no way to judge the future but by the past"; and judging by that past I ask gentlemen what there is in the record of silver when it had "free access to the mint" that gives basis for the hope, so often expressed by gentlemen on the other side of this contention, that silver would under free coinage not only rise in value itself, but that in doing so it would "help the friends of its lowly days." Judging it by its past, even if free coinage could perform a miracle and restore silver to its ancient lofty state (on which point I shall speak later), are we not warranted in saying that it would then, as in days gone by, separate itself in proud disdain from the commodities whose company it now professes to keep, and prove itself incompetent if not unwilling, in the future as in the past, to affect in the slightest degree the prices of other commodities? Are not its present humility and willingness to promise "all manner of good things" aptly characterized by Shakespeare in the lines:

> Lowliness is young ambition's ladder,
> Whereto the climber upward turns his face;
> But when he once attains the upmost round,
> He then unto the ladder turns his back.

THE RECENT FALL IN PRICES DID NOT BEGIN IN 1873.

3. We note, in the third place, that the recent fall in prices *did not begin in 1873* but in 1865.

When (for reasons varying with the persons from the purest patriotism to the most dangerous demagogy) those who are trying to foist upon this country the unlimited coinage of silver as a panacea for all our ills, real and imaginary, seek to establish their position by statistics of average prices and by giving the prices of certain great commodities like wheat and cotton, why, in the name of candor, do they not go back at least a few years further and show that, in relation to some of the most important items quoted, the fall in prices between 1865 and 1873 double discounted anything in the way of a fall that has taken place since 1873; that it was greater in those eight years than in *all* the years since? Why, for example, don't they remind the cotton planter that the price of middling cotton fell (Statistical Abstract for 1894, page 408) from $1.015 a pound in 1864 to less than 17 cents in 1871? Do they not possess adequate information on vital points? Or are they willfully suppressing a portion of the truth, having a lively appreciation of the fact that this simple statement would be sufficient to overturn their entire contention?

And now, Mr. Chairman, having shown by my colleague's own figures that the fall in prices about which he and other free-silverites say so much is not the only one or even the great one of this century; that it did not begin in 1873, and hence is not due to the cause to which they ascribe it; and that "free silver," having demonstrated in the past its incompetency to affect prices (even if that had been shown to be desirable), can not reasonably be expected to affect them in the future—these things having been proved, Mr. Chairman, our side could fairly rest our case and demand the judgment of all candid men.

But, Mr. Chairman, men are often misled by nonessentials. If the other alleged "arguments" of my colleague were to be passed by, the reason for silence might be misunderstood. Moreover, they constitute a part of the ground of my colleague's faith. And, sir, I have so high a regard for my friend personally, so much admiration for his native ability, and so bright a hope for the future that is before him if he renounces what he himself is reported to have called in the last campaign "this free-silver lunacy," that I shall, with the indulgence of the committee, proceed now to examine the other items of my colleague's speech.

THE FALLACY OF THE METHOD OR ARGUMENT BY "AVERAGES."

A favorite device of the gentlemen on the other side of this controversy is to draw conclusions from tables of "*average* prices." Most of the rank and file do this in entire good faith, never dreaming of the fallacies that lie unrevealed by the very nature of the method itself. But the leaders (who have the time, and are presumed to have the talent, to investigate all important phases of the question to a finality) owe it to the confidence which their followers repose in them to seek earnestly and report honestly the *whole* truth, so far as human ken is able to discover it.

The real-estate boomers of a certain State (*not* Minnesota) used to announce in their circulars to prospective immigrants that the "average annual rainfall" was so many inches—a normal fall. The settler who went there on the strength of that statement found that, while it was literally true, it was totally misleading. The "*average* annual rainfall" was indeed as stated; but the rain all came in a deluge within the period of a few weeks, and during the rest of the year the country was so dry that the crops parched and perished, and not even a warranty deed would hold the land itself.

The very idea of an average implies *differences*, while at the same time it hides their nature and extent.

In order to get at some of the facts concealed by the so frequently quoted tables of average prices, I invite attention now to a few charts showing graphically the prices year by year of a number of individual articles. Even an analysis into *groups* of articles will enable us to avoid some of the errors incident to a general average table.

These charts have been carefully prepared under my own supervision from the famous tables of Dr. Adolph Soetbeer, the great German statistician, than whom there is no higher authority. By the way, I wonder how many of the free-silver men who so often and so glibly quote statements alleged to be founded on the Soetbeer tables ever even saw those tables. Probably not one in ten thousand! Here are the famous tables themselves [holding up a book]. They are given in the Consular Report for December, 1887. I feel abundantly repaid for the solid month that I spent last summer in careful and painstaking study of them.

WHAT SOETBEER'S TABLES SHOW AS TO CERTAIN IMPORTANT ARTICLES.

These tables are based on the prices of 100 principal articles at Hamburg, and 14 leading articles of British manufacture, and cover the time from 1851 to 1885. The prices are taken from the official records of the city of Hamburg, which Dr. Soetbeer declares to be "material which is complete and trustworthy to a higher degree than any known to us."

The method is by index numbers, taking the average prices of the several articles from 1847 to 1850, as the base or 100 per cent.

Mr. BRUMM. Was not 1847 a year of great financial depression?

Mr. McCLEARY of Minnesota. No, sir. My friend is probably thinking of 1837 or of 1857. Dr. Soetbeer, whose preeminence as a statistician my friend will not question, and whose tables he has no doubt quoted, chose the years aforesaid as the very best available for the purpose.

The attention of the committee is now invited to my Chart B (see page 3604), showing the prices of wheat and rye, the great food grains of Europe. The average price of all grains is given also.

The standard price, explained above, is represented on this and the succeeding chart by the heavy horizontal line A—A.

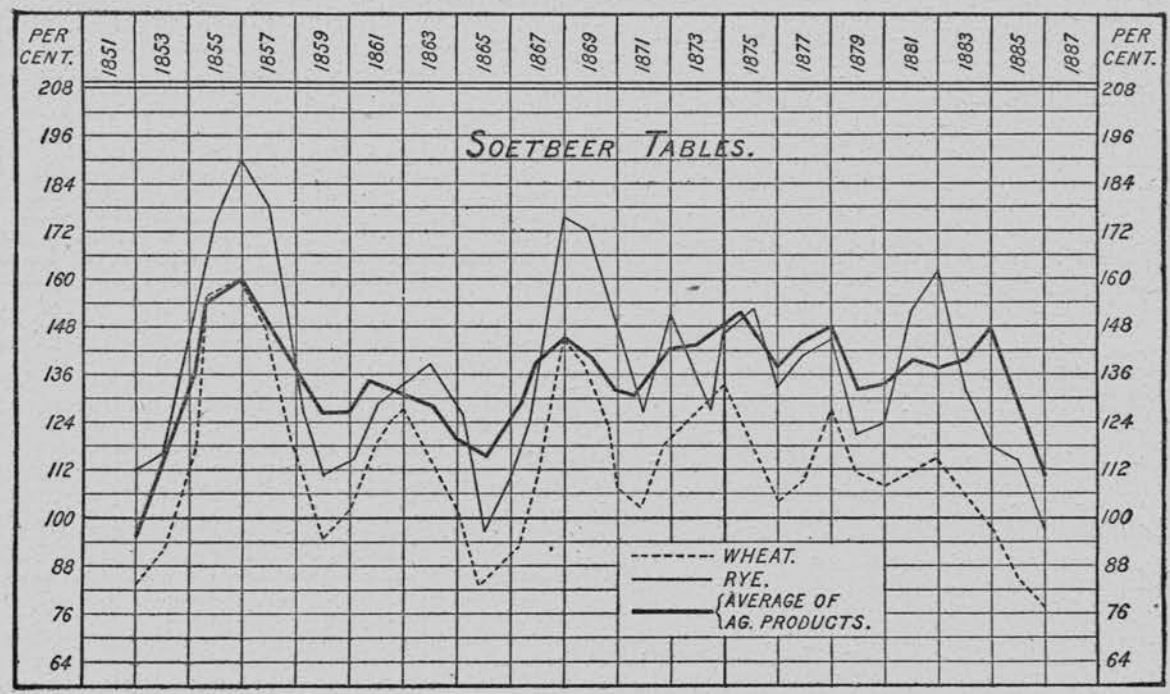
The two special points to which the committee's attention is invited in this connection are:

1. The fact that the average price of grain after 1873 (which year is indicated, for the sake of prominence, by the heavy vertical line B—B) *never fell as low* as the average in the "bimetallic" days of 1847–1850.

2. The fact that the price of silver (which was, as has been said, quite uniform up to 1873) had very plainly no relation to the prices of grain. Any man who in the fifties had insisted that there was any such relation would have been barred from standing among sane and sober-minded people.

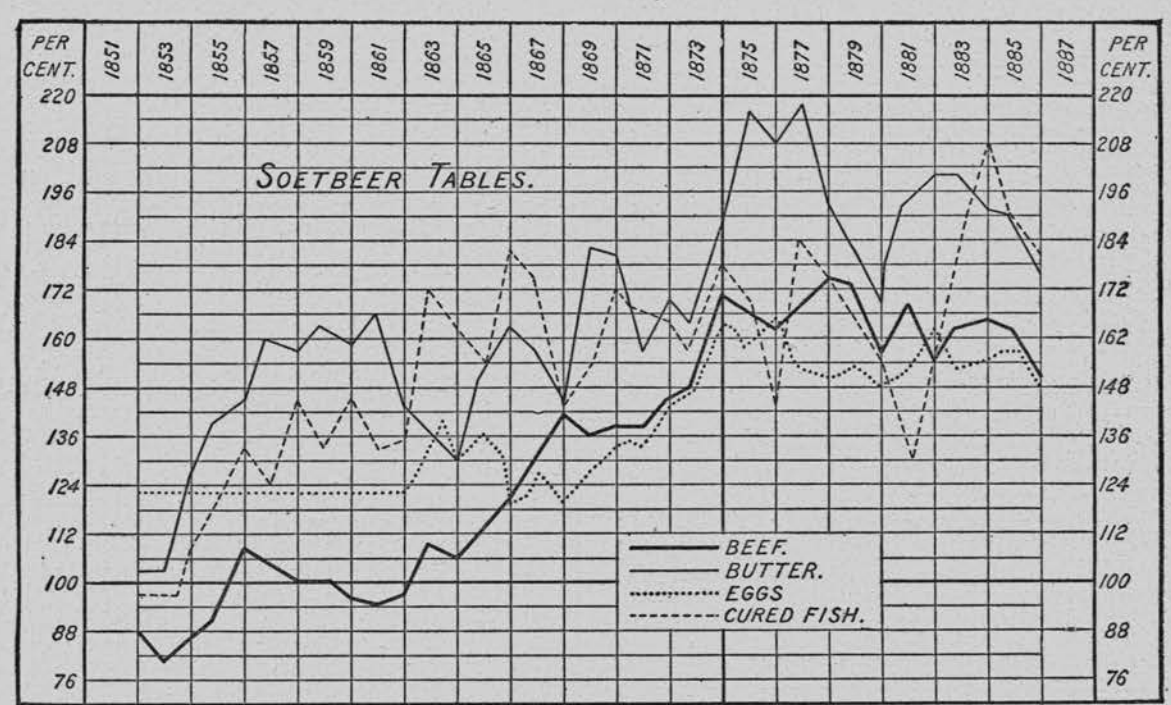
Leaving grains, your attention is next invited to the course of

PRICES OF ANIMAL FOODS.



[See McCleary's Chart C, page 229.]

These charts (which exhibit the Soetbeer figures for the chief animal food products individually) show that the price of each fluctuated sharply throughout all these years, each according to the circumstances peculiar to itself; but that *never since 1873* did the price of a single one of them fall as low as in the so-called "bimetallic" days at the close of the first half of this century. And it is probably true, as my friend from Iowa whispers, that the butter and egg business of the country outweighs in importance its silver industry.



A MEMBER. Did Mr. TOWNE use these charts?

Mr. McCLEARY of Minnesota. No; these reveal a portion of

McCLEARY'S, B.

McCLEARY'S, C.

the elephant which, so far as the record shows, my colleague never saw. [Laughter.]

As I said when I began to discuss this section of my colleague's speech, I take exception to one portion of his Silver-and-Prices chart. The chart gives Soetbeer as authority for prices down to 1892. But the Soetbeer tables *end with 1885*, and no one has any authority to extend them. Nor do I believe that my colleague intended to do so. As a matter of fact, my colleague's chart is almost an exact facsimile of one used in a speech two years ago by the Senator from Nevada [Mr. STEWART]. It was afterwards published in the appendix to the last edition of the Coinage Laws, and it was probably there that my colleague found it. He is not the first young man, Mr. Chairman, who has been led into error by following blindly the patriarchal-looking Senator from the State of deserted mining camps. [Laughter.]

WHAT CAUSED THE TWO GREAT FALLS IN AVERAGE PRICES.

Taking the century as the period for investigation, and reverting again to my Chart A for the course of prices, let us try to discover the reasons for those mighty changes in the level of prices.

We note first of all that there have been in this century *two* periods of very high prices and *two* periods of gradual fall in prices. Can any principle or law be discovered in accordance with which these changes in price levels took place? If so, it is very pertinent to this discussion.

Let us see if the two periods of high prices have anything in common. The first of these periods extended from 1789 to 1814, with its highest point at 1809. It is very important to remember that *these were the years of the* NAPOLEONIC WARS, which cost Europe so much in blood and treasure. It is noteworthy, also, that the second period of very high prices covers the *years of* GREAT

WARS: the Crimean in the early 50's, our own mighty conflict in the early 60's, followed in the later 60's by the war between Prussia and Austria, and in '70 by Franco-Prussian war.

Now, war is a great destroyer of property, while at the same time it takes from the productive industries vast numbers of their best workmen. It is a time of abnormal demand coincident with abnormally restricted supply, hence a period marked by great wars is *always a period of abnormally high prices.*

Mr. SHAFROTH. Was not the rise in prices in the fifties due chiefly to increased gold production?

Mr. McCLEARY of Minnesota. No, sir. That statement has often been made, but it is clearly not true. The increased gold production may possibly have had some small influence. But that it was very small may be seen when we remember the following facts:

1. The rise in prices began *before* the great output of gold began, as will be seen by referring to the Sauerbeck chart above. The prices were influenced no doubt by the insurrectionary disturbances in Europe and by our war with Mexico.

2. There was a marked *fall* in prices in 1857–1860, as we all know, *when the gold production of the fifties was greatest.*

And corroborative of my conclusion from the foregoing I note:

3. During the great rise in prices from 1789 to 1809, above mentioned, the production of silver was practically uniform, while the production of gold *fell off more than 50 per cent.* And furthermore—

4. The production of gold for the last three years has *increased far beyond anything ever known before in history,* yet prices have fallen.

To continue my argument. As I had just said when my friend interrupted me with his very pertinent question, a period of war is a period of abnormally high prices. What, on the other hand, is the natural and legitimate effect on prices produced by a long period of peace?

Every person within the sound of my voice has as one of his proper ambitions the acquirement of a competency for his old age. Now, Mr. Chairman, what is the rational basis of such a hope? In its ultimate analysis it is this: That each month and each year the person entertaining such a hope shall *produce more than he consumes.* This is the basis of increase in wealth, personal and national.

Now, price depends chiefly on two things: 1, the relation between demand and supply; and, 2, cost of production. It therefore follows that in a long period of peace, when production naturally exceeds consumption and when the wit of man is free to exercise its ingenuity in devising new and better methods of production, *prices naturally fall.* Thus it has been through all the ages, and thus will it ever be. Following the Napoleonic wars at the beginning of the century, and following the Franco-Prussian war of 1870, came long periods of peace, accompanied by the usual fall in average prices.

If peace conditions are normal, three incidental results should appear:

1. There should be improvement in the standard of living. This implies

2. That a given amount of labor should bring larger returns in the comforts of life; and

3. The demand for more and better things to eat should show itself in sustained prices for those better foods whose production can not be increased indefinitely.

WHAT SOETBEER'S SUMMARY SHOWS.

Pushing this investigation a little further, let us find out what articles have been most affected by the fall in prices.

And as we have been following Soetbeer, let us look at what his tables show when considered, as he himself sums them up, by *groups.* The numbers in the following table are his index numbers, with 1847–1850 prices as a base or 100 per cent.

Group.	1866–1870.	1881–1885.
Products of agriculture, etc	137.74	130.77
Animal and fish products	136.35	150.65
Southern products, etc	121.54	134.41
Tropical products	118.32	119.91
Minerals and metals	95.47	81.55
Textile materials	129.17	96.65
Miscellaneous	105.90	91.11
Fourteen British manufactured articles	123.57	103.28

The Soetbeer tables evidently do not warrant the statement so often made, with them as alleged authority, that "There has been a *general* fall in prices," if by that expression is meant that *all* articles or groups of articles have fallen largely, and in a measure equally.

Dividing the above table into two equal parts, we observe that the prices of the first four (which are chiefly food products) were marvelously sustained; while the prices of the second four (in the production of which labor-saving machinery could largely be used) show a marked fall.

SOME PRICES THAT DO NOT NEED "RESTORING."

The United States Statistical Abstract deservedly ranks high as an authority. Opening the latest edition (1894) at page 417, I find the export price of mess beef quoted at 7 cents in 1872, at 8.9 cents in 1882, and 5.7 cents in 1892. Butter in 1872 is given at 19.4 cents, in 1882 at 18.6 cents, and in 1892 at 19 cents. Prices of eggs for the same dates are 20.3 cents in 1872, 20.9 cents in 1882, and 23.2 cents in 1892. Other great staples, like corn, pork, and lard, show equal firmness. The prices of these articles don't seem to need any "restoring."

But perhaps the free-silver men would like to apply their "restorer" to the price of refined sugar, which cost 12.6 cents a pound in 1872 and only 4.6 cents in 1892. Or perhaps they would like to relieve the poor, suffering oil magnates, whose product was quoted at 23.5 cents a gallon in 1872 and had "fallen" to 5.9 cents in 1892. It may be that their tender sympathies go out to the manufacturers of bar iron, whose product (Abstract, page 412) commanded $97.63 a ton in 1872 and only $29.96 in 1894.

Perhaps they don't want poor men to be squandering their substance in building homes, and to that end would "restore the price" of nails, whose Philadelphia price fell from $5.46 a keg in 1872 to $1.08 in 1894; and of window glass, which fell from $3.40 a box in 1873 to $1.70 in 1891. And possibly their philosophic souls rebel at the idea of a poor man having a carpet on his floor, so they would remove temptation by "restoring the price" from 48 cents a yard in 1890 to $1.14, as it was in 1873. Then, if the poor fellow in whose interest they are working is not completely happy, they might restore the price of his wife's calico dress from 6 cents a yard in 1892 to 12 cents, as it was in 1873.

And while they are in the restoring business they might come to the rescue of the poor manufacturer of steel rails, whose product began to be made here in commercial quantities in 1867, at which time it commanded $166 a ton, but in 1894 had fallen to $24 a ton. This would enable the railway companies to find some justification for restoring their freight rates from .92 of *one cent* per ton per mile in 1891 (the lowest rate in the world) to 2 cents per ton per mile, the "good old rates" that prevailed in 1873. Nor would these restorers of prices overlook the steamboat men who, though they now haul wheat by lake and canal from Chicago to New York at a profit for 4.44 cents per bushel, were in the habit of receiving 24.47 cents per bushel in 1873.

Here is revealed, Mr. Chairman, the delusiveness of an argument founded on "averages"; it fails to discriminate the individual facts that go to make up the average. [Applause.]

THE INCREASE IN WAGES.

There is another serious omission in my colleague's allegations of fact. There is one commodity which stands out by itself so preeminent that even his disdain of details should not have ignored it, a commodity which is the truest and best measure of value ever discovered, surpassing in this respect wheat or cotton, iron or copper, silver or gold, and that is a *given unit of human labor.* And my colleague was somehow blind to the fact, though it is exhibited in one of the tables to which he referred, that the wages of labor have been on the average largely increased in the last third of a century, the increase from the old "bimetallic" wages of 1860 to those of 1890 being *58 per cent in money and 72 per cent in purchasing power.*

In 1892 a day's work of skilled labor would buy more of any staple commodity of human desire, more and better food, more and better clothing, more and better transportation, more and better tools and machinery, more and better heat and light, more comforts and luxuries of every kind, more silver *and more gold* than at any time before 1873 in the history of the world. [Applause.] More than that, there never was a time in the history of the world when a man who really wanted work could more easily find it than in 1891 and 1892. [Applause.] One evidence of this is the high wages paid, as above shown. And during the fall of 1892 I examined, day by day, the want columns of the St. Paul Pioneer Press and the Minneapolis Journal, two representative dailies of the Great Northwest, and I found on the average four times as many places seeking persons to fill them as there were persons seeking employment. [Applause.]

Mr. HUTCHESON. Why, then, did the people condemn the Republican party in the November elections of that year?

Mr. McCLEARY of Minnesota. My friend forgets the aphorism of the poet:

> In order to appreciate Heaven well,
> One must have had about fifteen minutes of—

well, the other place. [Applause.]

I have tried in this discussion, Mr. Chairman, to preserve my judicial-mindedness. I have studiously refrained from all appeals to prejudice or passion. I have not allowed myself to use the occasion for partisan advantage. But, since my friend from Texas has insisted that I shall for a moment speak as a partisan,

let me remind him that the real flood-tide of defeat for the Republican party was *in 1890*, when there was only a corporal's guard left on this side of the House. In 1892 the number of Republicans on this floor was more than doubled. In 1894 the people of the country did all that they could to return power to the Republican party by giving it the magnificent majority in this House which now greets the eye of my Democratic friend. And if my friend will abide in patience the next election he will have opportunity to see what, viewed in the light of comparative *experience*, the people think of the principles and the practices, the men and the measures of the Republican party. [Applause.] And he will have the comforting assurance that not in a generation, not until a new crop of voters grow up who can not *remember*, will the Democratic party be again called upon to assume any responsibility in the administration of the affairs of this Government. [Loud applause.]

As I was proceeding to say, Mr. Chairman, when my friend diverted my attention [laughter], any honest and intelligent man who has the time to study in detail any reliable table of prices covering the last forty years will find that the prices of those things in the production of which anything like the same amount of labor must be expended have held their own or have increased; while things, and these are very numerous, in the making of which labor-saving inventions and machinery have been introduced have greatly fallen in price. This accounts for the fall in "*average* prices," about which so much has been said.

Mr. HOPKINS. Your argument, then, is that the things which ought to have been reduced in price since 1873 have been reduced, while the things that ought to have increased in price have increased.

Mr. McCLEARY of Minnesota. My friend from Illinois has with his usual clearness stated the case tersely and well.

Fifty years ago the average New England mill hand, with the machinery then in use, and working fourteen hours a day, produced 9,607 yards of cotton cloth. In 1892, with improved machinery and working only ten hours a day, the average mill hand produced 30,000 yards. "Working five-sevenths the time, and under vastly improved sanitary conditions, the wages are more than doubled, while the product has been greatly cheapened."

And while we are on this subject, here is something new and fresh in the same line. An article in a recent number of the Iron Age gives the statistics of one of the copper mines, the Quincy mine, in the Lake Superior district. These show that the production commencing with 2,498,574 pounds in 1864, had increased to 15,484,014 in 1894—the yield per fathom and the average richness being about the same. But the cost of production had decreased from 26.71 cents per pound in 1864 to 5.68 cents in 1894. So that the production in thirty years had increased almost sevenfold, while the cost of production is but one-fifth of what it was in 1864. Meanwhile the *monthly wages of the miners have increased from $38.76 in 1864 to $50.70 in 1894*. "The lowering of cost," says the Iron Age, "is of course due to the multiplicity of improvements in every department." It mentions some of them. High explosives, machine drilling, modern stamps for crushing the rock, more economical engines for hoisting and pumping, improved means of transportation, cheaper supplies, and more economical processes generally.

These are two illustrations of what has been going on in every department of industry and field of production. The lower prices result from the reduced cost of production. There is not the slightest evidence that the so-called "demonetization" of silver had anything to do with it. And the sure proof is that in this, as in nearly all other cases, the reduction of cost of production has been accompanied by an increase in the wages of the producer.

THE CAUSE AND RESULT OF LOWER PRICES.

The great staples of the world are cheaper because it takes *less human labor to produce them*. "Every new railroad and steamboat, every labor-saving machine and improved process of manufacture, increases the grasp which labor holds on the desirable things of the world."

And thus we see, Mr. Chairman, that the great fall in prices of manufactured articles during the last third of a century has been in the main perfectly legitimate, and that its ultimate result will be most beneficent. Taken in connection with the rise in wages, it *measures man's vastly increased command over the forces of nature*. Through it the world is helped in its grand march onward and upward, being blessed with increased abundance of the good things that minister to human comfort. The workingman of 1892 enjoyed comforts and luxuries which only nabobs could afford forty years ago. A larger proportion of our people in 1892 had a carpet on the floor and a musical instrument in the parlor, silver and fine linen on the table and springs on their beds, good clothes to wear and good food to eat, a carriage to ride in, and papers, magazines, and books to read than ever before in any age or country in the world. [Applause.]

These wonderful results have come as the beneficent fruitage of man's inventive genius in devising labor-saving machinery, of the marvelous new forces which men are harnessing for the service of the human family, of the remarkable improvement in modern facilities for transportation, and of the stoppage of the tremendous and cruel waste of war.

What will a day's work produce? This is the true test of progress. As prices decline compared with the reward of human labor the condition of the people is elevated. This is a process of natural law and a phase of evolution. Men struggle against it only because they do not understand it. Like all movements onward, it brings temporary hardship to individuals here and there. But for the vast mass of humanity it is bringing emancipation from want and the promise of that golden future when a minimum of time will be required to provide for the necessities that are simply physical and temporal, thus leaving time and opportunity for the cultivation of those elements in our nature that are spiritual and eternal. [Loud applause.]

A MEMBER. I thought Republicans believed in high prices.

Mr. McCLEARY of Minnesota. The gentleman is evidently not a Republican and has little conception of Republican doctrine. Republicans believe in high wages for labor and low prices for manufactured articles. But Republicans do not believe that any prices are low that leave American resources undeveloped and American workmen unemployed. [Applause.] Republicans point with pardonable pride, sir, to two undeniable facts, namely, that under Republican rule the prices of manufactured goods have greatly fallen, while on the other hand the wages of workmen have greatly risen. [Applause.]

Mr. PICKLER. How about wheat?

Mr. McCLEARY of Minnesota. My talented friend from North Dakota [Mr. JOHNSON] answered that question so ably last week that it seems unnecessary for anyone else to discuss that subject again this session. But there are a few points related to the subject which I had planned to consider in another connection. This matter is important, and in the hurry I might forget it. So, as my friend from South Dakota [Mr. PICKLER] has brought the matter up, and as it has a certain relevancy here, I shall ask attention to it now.

CHANGES IN WHEAT PRODUCTION.

I have here Senate Ex. Doc. 91, of the second session of the Fifty-third Congress, prepared by the Treasury Department, showing the imports and exports of certain countries by years for the last quarter of a century.

This report shows that the quantity of wheat exported from Russia in 1873 (and thus coming into competition with our wheat) was 6,957,164 chetverts; while in 1891 her export of wheat had risen to 16,206,000 chetverts, or considerably *more than double*.

The wheat exported by India in 1873 was 394,010 hundredweight; while in 1892 it had risen to 30,306,700 hundredweight, or *almost eighty times* as much.

But the report from the Argentine Republic is even more startling. In 1873 she exported not a bushel of wheat. She began to compete with us in 1876, in which year she exported 20,868 kilos. But by 1892, Mr. Chairman, her export of wheat had risen to 470,109,617 kilos, or more than *twenty-two thousand times* as much as in 1876!

Moreover, Mr. Chairman, the production of wheat in this country has grown enormously and its methods have been revolutionized.

Taking the States by groups, we find that the annual wheat crop of Maryland, New York, and Pennsylvania increased from 22,272,000 bushels in 1872 to 39,604,000 bushels in 1891, or about 80 per cent.

The production of the second group, comprising the States of Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky, and Tennessee, increased during the same time from 116,690,000 bushels to 201,418,000 bushels, or over 70 per cent.

Taking as the third group California, Oregon, and Washington, we find that the production of this group has increased from 28,006,000 bushels in 1872 to 61,960,000 bushels in 1891, or about 120 per cent.

And in the fourth group, comprising Minnesota, the Dakotas, Iowa, Nebraska, Kansas, Missouri, and Texas, the increase during the same time is from 58,067,000 bushels to 269,851,000 bushels, the enormous increase of more than 210,000,000 bushels, or *nearly 400 per cent!*

And in these years have come mighty changes in the methods of producing and handling wheat. My colleague may make light of these changes; he simply shows thereby how little he knows from actual experience what these changes have really been. His statements would provoke a smile from anyone who has had actual experience in wheat farming during the last quarter of a century.

He speaks of the threshing machine as having been "brought to perfection in 1853." I am charitable enough to believe, Mr. Chairman, that my colleague really read that statement somewhere. But every man who has been around threshing machines very long

knows that even as late as the seventies they had as a rule 28-inch cylinders, were driven by horse power, and had a capacity of about 500 bushels of wheat per day, if the horse power did not bother too much. Now, the thresher is driven by steam, works untiringly, has a 40-inch cylinder or larger, and a capacity of 1,600 to 2,000 bushels of wheat per day.

It is true that the fundamental idea of the reaper had been invented before the war, but the reaper itself had not come into general use even in 1870. A large part of the wheat was then "cradled," another large part was cut by the old "hand-rake" reaper, and the rest by the "wonderful self-rake" reaper, then beginning to come into use. *All the binding was then done by hand.* Even after the self-rake reaper came into use, in the later seventies, it took four horses and five men to cut and bind as many acres as three horses and one boy can now cut cleaner, bind more firmly, and leave in better shape for shocking.

By the use of labor-saving machinery wheat raising has almost ceased to be farming and has become in large measure manufacturing.

The wonder is not that the price of wheat has fallen somewhat (though the actual farm price has not fallen so much as we are sometimes led to believe); the wonder is that the price has not fallen much farther. That it did not, up to 1891, is evidence that the standard of living had been rising. More people were eating wheat bread than formerly, and they ate it in larger quantities.

(I may be pardoned for remarking in this connection, that the chief cause for the lower prices during the last three years is that people have been eating less and poorer food.)

THE NET RESULTS OF 1871 AND THOSE OF 1891.

And now, Mr. Chairman, let us compare the actual net results of wheat raising in 1871 (the last year whose crop was marketed before the act of 1873) with those of 1891 (the last year whose crop was marketed under Republican rule).

The average export price of wheat in 1871, as shown by the reports of the New York Produce Exchange, was $1.367. (It had been only $1.142 in 1869 and $1.126 in 1870.) The average export price in 1891 was $1.094. This is the kind of statement that the average free-silverite likes to make, and *then stop*, leaving the impression that it marks the difference in net proceeds to the wheat raiser. But it is very far from doing so.

In the first place, as shown by the Statistical Abstract, page 360, it cost from 14 to 16 cents a bushel less in the latter year for freight between Chicago and New York. And, as shown on the same page, it cost only three-fifths as much for handling (elevators, insurance, etc.) between the same points. Taking the freight rates of the several years (Abstract, page 362), the reduction in rates from St. Paul or from Omaha to Chicago was at least 9 cents a bushel, or a reduction in cost of marketing between St. Paul or Omaha and New York of at least 25 cents. Subtracting this from $1.36 we have left $1.11. And this allows nothing for the difference in expense in getting the grain to St. Paul or Omaha. So that when the difference between the kinds of money has been allowed for (gold prices being taken in both cases), it is seen that the selling price in 1871 was practically the same in 1891 In fact, when reckoned in the same kind of money, the Chicago price of wheat in 1889 and 1890 was higher than in 1869 and 1870. We are sometimes deceived as to this by recalling to mind the *greenback* prices, and forgetting that greenbacks were then at a large discount.

But, Mr. Chairman, when we consider how much less it now costs to raise wheat than it did then; how a man and a boy can now harvest 120 acres as quickly and well as five men could then, thus saving entirely on an ordinary farm the "harvest wages" then paid; how the rate for threshing is only about half or less what it then was, we can see that even from a money standpoint it was just as profitable to raise wheat in 1891 as in 1871.

But when we consider how much more of the necessaries and comforts of life a bushel of wheat will buy now than then, it is easily seen that wheat raising was much more profitable in 1891 than in 1871.

THE SITUATION OF FARMERS IN 1873.

So much has been said by free-silver orators to mislead farmers into the idea that everything was prosperous with them before 1873 and nothing has been since, that I submit now a paragraph that I have copied from the Report of the Iowa State Agricultural Society for 1873. It is from an address delivered by C. H. Rogers at the Harrison County fair, and gives a faithful picture of the situation at that time in that mighty State:

> Proud of these aspects and of her progress in practical agriculture, still the condition of the laboring man and farmer is far from what is desirable. They have worked, watched, and waited for an adequate reward until weariness has well nigh turned to hopelessness. Farming has been a financial failure for the past three years. Hard toil has opened up fine farms and brought to the bins the products of unexampled harvests, but the sales have hardly paid expenses and bought cheap clothing until the coming harvest. There is no surplus to improve buildings, purchase thoroughbred stock, and furnish the home with any of the luxuries of art and literature.

As shown by my eloquent friend from Iowa [Mr. DOLLIVER], the Annual Report of the Iowa State Agricultural Society for 1873 gives the price of corn at the capital of Iowa in December, 1870, at 25 cents; in December, 1871, at 21 cents; in December, 1872, at 16 cents.

The price of all our staple products for every month in the year 1873 is preserved in the same report (the *greenback* prices, be it remembered) as follows:

Month.	Wheat.	Rye.	Barley.	Corn.	Oats.	Hay.
January	$0.95	$0.35	$0.40	$0.16	$0.20	$6.00
February	1.10	.35	.45	.17	.20	6.00
March	1.00	.35	.45	.17	.20	6.00
April	1.00	.35	.45	.18	.20	6.00
May	1.10	.45	.45	.22	.22	6.00
June	1.10	.35	.40	.23	.23	6.00
July	.85	.35	.....	.20	.20	6.00
August	.85	.35	.50	.22	.20	5.00
September	.75	.45	.60	.22	.27	5.00
October	.75	.45	.70	.22	.27	5.00
November	.75	.40	.70	.22	.20	5.00
December	.85	.40	.70	.22	.23	5.00

The average price of pork in Iowa for the season of 1871–72 was $3.74, and for the season of 1872–73, $3.52.

Let any man turn to the files of his local paper during the Administration of President Harrison and see how actual farm prices compared with the above.

The famous Senate report of 1893 on wages, transportation, and prices, which covers more items (223) than were ever before covered by such an investigation, shows that from 1873 to 1891 food products as a class had fallen less than 10 per cent, while clothing had fallen 32 per cent, building materials about 20 per cent, house furnishings 27 per cent, and implements 35 per cent. (And as compared with those of 1860, it appeared from this investigation that the price of food products as a whole had advanced 18 per cent.)

I am thoroughly of the opinion, Mr. Chairman, that if Omnipotence would vouchsafe to turn us back for just one month to the conditions of 1873 it would be an experience as fruitful in sound financial instruction as have been the experiences of the last three years in economic doctrine. [Applause.]

PROGRESS OF INVENTION.

Before leaving this branch of the subject, I desire to put into the RECORD, in answer to the remarkable statement of my colleague that "the inventions of the last quarter of a century have not been relatively so numerous or important as those from 1850 to 1873," the table from page 402 of the Abstract, showing the number of patents issued in the United States on inventions (every one of which must be for something "new and useful"), by years, from 1842:

Period before 1873.		Period after 1873.	
1842	517	1873	12,864
1843	519	1874	13,599
1844	497	1875	14,837
1845	503	1876	15,595
1846	638	1877	14,187
1847	569	1878	13,444
1848	653	1879	13,213
1849	1,077	1880	13,947
1850	993	1881	16,584
1851	872	1882	19,267
1852	1,019	1883	22,383
1853	961	1884	20,413
1854	1,844	1885	24,233
1855	2,013	1886	22,508
1856	2,505	1887	21,477
1857	2,896	1888	20,506
1858	3,695	1889	24,158
1859	4,504	1890	26,282
1860	4,778	1891	23,244
1861	3,329	1892	23,539
1862	3,552	1893	23,769
1863	4,184	1894	20,867
1864	5,025	1895	22,057
1865	6,616		
1866	9,458		
1867	13,026		
1868	13,410		
1869	13,997		
1870	13,333		
1871	13,056		
1872	13,613		

That is, Mr. Chairman, the inventions of the last six years alone exceed in number those of the period to which my colleague refers. And even to our minds, accustomed though they are to the wonderful march of invention, the character of recent discoveries is actually startling.

And the progress of invention in other lands has been relatively almost as great.

SOME OF THE FRUITS OF TWENTY YEARS.

And now, sir, let us take a glimpse at some of the mighty accomplishments of the years 1872 to 1892.

Turning to the Abstract before cited, pages 6 and 7, we find that the public debt was reduced from $1,814,794,100 in 1872 to $585,029,330 in 1892, or to less than one-third; while the annual interest charge was reduced from $103,988,463 to $22,893,883.20, or to about one-fifth what it had been twenty years before. Putting this statement into the "per capita" form, which is so much affected by some of our friends, the public debt was reduced from $52.96 per capita in 1872 to $12.86 in 1892; while the per capita interest charge was reduced from $2.56 to 35 cents. Such a tremendous reduction in public debt, sir, was never before accomplished in history. It is an achievement in which every American may justly take pride. [Applause].

Turning to page 43 of the Abstract, we find that the deposits in national banks rose from $673,400,000 in 1873 to $1,118,600,000 in 1882, and to $2,022,500,000 in 1892. And turning to page 46 of the Abstract, we find that in the *ten* years, 1883 to 1892, or half the time above considered (I have no data for the other ten years, but the increase was no doubt equally great), the increase in savings banks was the enormous sum of almost $800,000,000. That is, sir, in addition to building better homes and furnishing them better, wearing better clothes and spending more money in living, the actual increase in money saved and deposited in savings and national banks alone, without considering the increased deposits in State and private banks and in the stock of building and loan associations—the increase in actual money savings of our people was almost $2,000,000,000 in the *ten* years ending in 1892.

Turning now to page 379 of the Abstract, we find that the assessed valuation of the land has increased from $9,914,780,825 in 1870 to $18,956,556,675 in 1890, or almost double. And although the amount of local and State taxes increased from $280,591,521 in 1870 to $471,365,140 in 1890, the *rate* of taxation fell from $1.98 on the $100 in 1870 to $1.85 on the $100 in 1890.

And so we might go on, Mr. Chairman. These facts are simply typical of numberless others that might be instanced to show the mighty achievements of the twenty years ending in 1892, achievements which have challenged the wonder and admiration of the world. [Applause.] And in another connection, in seeking to show that this country could alone undertake the task of "restoring silver," my colleague himself bore eloquent tribute to these same accomplishments.

It is very plain that those were not years of "ruin."

A MEMBER. How about increase in private indebtedness?

Mr. McCLEARY of Minnesota. Ah, Mr. Chairman, if the gentleman will take the trouble to investigate, he will find that it was not the act of 1873 but the *boom* in city lots in 1883 and in farm lands in 1891 that caused most of the private indebtedness under which so many are now struggling. It is the evidence of the debtor's faith in the future; a faith, sir, which that future will abundantly justify. [Applause.]

And, while we are on this point, let me give the committee the facts revealed by the investigations of the labor commissioner of the State from which my colleague and I both hail.

The report for 1893 shows that the total farm debt of Minnesota was in round numbers $39,000,000, an *increase* in ten years of $4,000,000. But, sir, during those ten years there was an increase in the value of—

Farm machinery	$3,826,000
Live stock	26,860,000
The land	146,000,000
Total increase in farm wealth	176,686,000
Increase in debt	4,000,000
Net increase in farm wealth	172,686,000

Moreover, Mr. Chairman, the mortgage foreclosures in our State in 1892 and 1893, as compared with those of 1880 and 1881, show a *decrease* of 12.5 per cent in acreage, 33.1 per cent in number, and 34.4 per cent in amount. [Applause.] The people of Minnesota know that her farm lands are constantly and rapidly increasing in value, and so they have bought and still continue to buy more than they can now pay for, in the full faith that the future will reward them for the self-denial and risk of the present. And those who have not gone in too far will find ten years from now that they have done wisely and well. What they need especially to be warned against is the counsel of men who would influence them through their present necessities rather than their permanent advantage. On this point I shall speak later, if time permits.

THEORETICAL BIMETALLISM.

And now, Mr. Chairman, having shown that the years from 1872 to 1892, so far from being years of disaster, have, by my colleague's own testimony, been years of mighty achievement, we have reached a point in this discussion where confessedly it is not a condition but a theory that confronts us, the theory which my colleague cherishes under the delusive name of "bimetallism"; a recently conceived theory, born of recent needs and hopes and fears; a theory which never came into existence as such until time was ripe for its utter refutation; a theory so new that even the name of it can not be found in the latest edition of Webster's Unabridged Dictionary, except in the supplement; a theory which is "almost the only instance in history of a theory growing not out of practice, but the failure of practice; resting not on data verified, but on data falsified and censure-marked."

The theory is this: A country, by opening its mints to the unlimited coinage of gold and silver at a fixed ratio and making the coins of both full legal tender, will secure thereby the *concurrent circulation* of both as money. This is the essential part of the theory, though it has, as stated by its different advocates, numerous minor addenda. One class of so-called "bimetallists" claim that "the open mint absolutely fixes the parity of the two metals at the legal ratio"; while another class of them claim no more than that it "*tends* to do so," and then they add the gratuitous statement that "thus the two metals become one mass for money purposes," whatever that may mean. To the man who is interested in silver production, the view that free coinage would "enhance the price of silver" is held up, and much is made of alleged "rights" of silver, forgetting that neither silver nor gold has any rights, being simply instruments to be used by man in such ways as shall best serve his purposes. With the man whom they believe to be desirous of repudiating his just obligations under cover of law, they take the opposite tack, claiming that free coinage would lower the unit of value, thus giving a fictitious enhancement of prices and thus enabling debts to be paid more easily.

I propose to show, Mr. Chairman, that free coinage of both metals would not result in their concurrent circulation; and that so far as debtors are concerned it is true here as elsewhere that honesty is indeed the best policy. I propose to show that the thing dubbed by them "bimetallism" is in fact monometallism of the worst kind; and that, so far from giving us more money for the transaction of business, it would give us less money and poorer money.

HOW "FREE COINAGE" REALLY WORKS.—THE GRESHAM LAW.

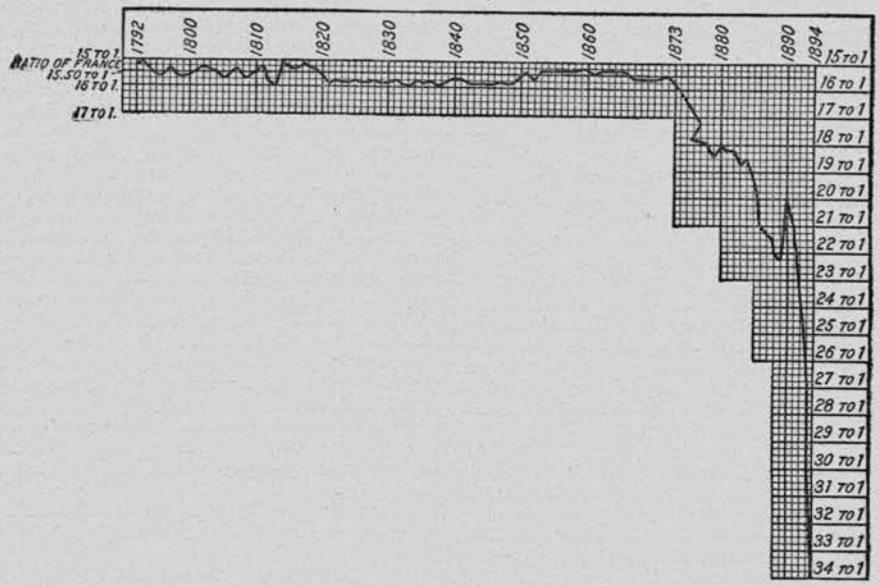
It seems very natural to expect that if both metals *may* be coined, both metals *will* be coined; and that if both are coined, both will circulate as money. This view is so natural that it is not to be wondered at that persons having little time to devote to the careful study of the subject should believe it to be correct. A little investigation and study, however, will reveal the utter fallacy of the claim.

There is a Lawmaker higher even than Congress—One whose decrees, like Himself, are unchangeable. One of His laws—written in the fibers of every human soul; one which no act of Congress can abrogate or change—is that which prompts every human being to do in a business way that which he deems to be for his own best interest. If a farmer who is equally near to two markets finds that he can get for his barley or his wheat, his eggs or his wool, a better price in one market than in the other, he will, other things being equal, take his product to the place where he is offered the better price, even though the difference per unit be quite small. This holds good also with the producer of gold and silver.

I need not explain to the committee what is meant by coining at the ratio of, say, 15 to 1. It means, of course, that at the mint 15 ounces of silver are treated as equal to 1 ounce of gold.

But silver and gold are both used in the arts, and the goldsmiths and silversmiths get their gold and silver by buying it. This fact gives rise to what is known as the market ratio between the metals as distinguished from their mint ratio. Now, if gold or silver is worth more as bullion than as money, if the market price of either is at any time greater than the mint valuation, it is clear that the metal thus undervalued at the mint will be disposed of in the market as bullion and will cease to circulate as money.

The famous law of money, that "with unlimited coinage of both metals at a fixed ratio, the metal that is overvalued at the mint will go to the mint and will circulate as money, while the metal that is undervalued at the mint will retire from circulation," was first discovered by Oresme, of France, councillor of Charles the Wise, who was having trouble with his money in consequence of having unlimited coinage of both metals. The same conclusions were reached 160 years later by the independent investigation of Copernicus, the eminent astronomer, when he was called upon by Sigismund, King of Poland, to formulate a plan for the reform of the intolerably disordered money system of that ancient monarchy. And in the latter part of the 17th century it was again discovered and formulated by Sir Thomas Gresham, adviser of Queen Elizabeth of England, in honor of whom it has been called the Gresham law. This fundamental principle or law of coinage has been found true in all ages and countries, whenever and wherever the experiment has been tried.



THE EXPERIENCE OF FRANCE.

My colleague, as is common with men who desire to sustain the wisdom of this theoretical "bimetallism," has appealed to the experience of France for justification. Let us see what the experience of France really was.

The points which my colleague seeks to establish by the chart, to which I now invite your attention, are:

1. That France by establishing, in 1803, her mint ratio at 15½ to 1 "sustained for 70 years single-handed and alone her legal ratio as the commercial ratio of the world."

TOWNE'S, B.

2. That during these years France had real bimetallism; that is, that she enjoyed the concurrent circulation of both metals.

3. That the fall in the price of silver is solely due to unfriendly legislation on the part of many nations. But, nevertheless,

4. That the United States can now fix the ratio where we please, and maintain it there regardless of the action of other nations.

Reverting now to my colleague's first claim as stated above, I would say that, as usual, his chart exhibits *too little* of the truth. Had he carried his exhibit back far enough, he could have shown that *the ratio was just as steady for nearly 120 years before the French act of 1803 as during the 70 years following its passage*, as will be seen by the following table of average ratios taken from the latest report of the Director of the Mint, page 239:

Commercial ratio of silver to gold for each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from the tables of Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1878 to 1892 from daily cablegrams from London to the Bureau of the Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1729	14.92	1771	14.66	1813	16.25	1854	15.33
1688	14.94	1730	14.81	1772	14.52	1814	15.04	1855	15.38
1689	15.02	1731	14.94	1773	14.62	1815	15.26	1856	15.38

1693	14.83	1735	15.41	1777	14.54	1819	15.33	1860	15.29
1694	14.87	1736	15.18	1778	14.68	1820	15.62	1861	15.50
1695	15.02	1737	15.02	1779	14.80	1821	15.95	1862	15.35
1696	15.00	1738	14.91	1780	14.72	1822	15.80	1863	15.37
1697	15.20	1739	14.91	1781	14.78	1823	15.84	1864	15.37
1698	15.07	1740	14.94	1782	14.42	1824	15.82	1865	15.44
1699	14.94	1741	14.92	1783	14.48	1825	15.70	1866	15.43
1700	14.81	1742	14.85	1784	14.70	1826	15.76	1867	15.57
1701	15.07	1743	14.85	1785	14.92	1827	15.74	1868	15.59
1702	15.52	1744	14.87	1786	14.96	1828	15.78	1869	15.50
1703	15.17	1745	14.98	1787	14.92	1829	15.78	1870	15.57
1704	15.22	1746	15.13	1788	14.65	1830	15.82	1871	15.57
1705	15.11	1747	15.26	1789	14.75	1831	15.72	1872	15.63
1706	15.27	1748	15.11	1790	15.04	1832	15.73	1873	15.92
1707	15.44	1749	14.80	1791	15.05	1833	15.93	1874	16.17
1708	15.41	1750	14.55	1792	15.17	1834	15.73	1875	16.59
1709	15.31	1751	14.39	1793	15.00	1835	15.80	1876	17.88
1710	15.22	1752	14.54	1794	15.37	1836	15.72	1877	17.22
1711	15.29	1753	14.54	1795	15.55	1837	15.83	1878	17.94
1712	15.31	1754	14.48	1796	15.65	1838	15.85	1879	18.40
1713	15.24	1755	14.68	1797	15.41	1839	15.62	1880	18.05
1714	15.13	1756	14.94	1798	15.59	1840	15.62	1881	18.16
1715	15.11	1757	14.87	1799	15.74	1841	15.70	1882	18.19
1716	15.09	1758	14.85	1800	15.68	1842	15.87	1883	18.64
1717	15.13	1759	14.15	1801	15.48	1843	15.93	1884	18.57
1718	15.11	1760	14.14	1802	15.26	1844	15.85	1885	19.41
1719	15.09	1761	14.54	**1803**	**15.41**	1845	15.92	1886	20.78
1720	15.04	1762	15.27	1804	15.41	1846	15.90	1887	21.13
1721	15.05	1763	14.99	1805	15.79	1847	15.80	1888	21.99
1722	15.17	1764	14.70	1806	15.52	1848	15.85	1889	22.09
1723	15.20	1765	14.83	1807	15.43	1849	15.78	1890	19.75
1724	15.11	1766	14.80	1808	16.08	1850	15.70	1891	20.92
1725	15.11	1767	14.85	1809	15.96	1851	15.46	1892	23.72
1726	15.15	1768	14.80	1810	15.77	1852	15.59	1893	26.49
1727	15.24	1769	14.72	1811	15.53	1853	15.33	1894	32.50
1728	15.11	1770	14.62	1812	16.11				

Not even the boldest free-silver man will claim that the famous Napoleonic law could have acted *by anticipation* for more than a century. As that law did not affect the years before it was passed, yet the ratio was just as steady then as after it was enacted, the burden of proof rests upon the free-silver advocates to show that the law referred to had anything to do with the steadiness of ratio after it was passed.

FRANCE DID NOT HAVE CONCURRENT CIRCULATION.

Now let us examine the second claim, namely, that during this period France enjoyed the concurrent circulation of both metals. This is the supreme test of their philosophy.

It will be seen on a close examination of my colleague's chart that the waving line (representing the commercial ratio) is part of the time above and part of the time below the straight line representing the legal ratio, *but that it never remained*, even for a single year, *coincident* with it; nay, they can not show that for *a single month* during all those seventy years did the legal ratio control the commercial ratio and keep the two coincident. And now let us consider the consequences of this.

Looking carefully at the chart, we note that during the thirty years from 1820 to 1850 the commercial ratio remained persistently below the legal ratio, and that during the next fifteen years the commercial ratio continued almost as steadily above the legal ratio. In plain English, what does that mean? It means that from 1820 to 1850 silver was *worth more* at the mint than in the market, or, in other words, it was worth more as coin than as bullion, while the opposite was true of gold. What might we expect as the natural result? Why, of course, that each metal would go where it was most profitable to take it; that is, the silver to the mint, to be coined and used as money, and the gold to vaults for hoarding, to other countries, or to the melting pot of the goldsmith. And during the following fifteen years, from 1850 to 1865, we should naturally expect the reverse process, namely, that gold (being overvalued at the mint) would be coined for use as money, while silver (being undervalued at the mint) would go to the melting pot or be exported. And that this was precisely what did take place can be shown by abundant and unimpeachable testimony.

My first authority is Henry Dunning MacLeod, who, on pages 14 and 15 of his book entitled "Bimetallism," says:

> The period between 1803 and 1873 is cited by bimetallists as the golden age of bimetallism. But if they imagine that there was during that period a general circulation of gold and silver coin in unlimited quantities, they are under a woeful delusion. The French Government pillaged all the sanctuaries in France of their vast masses of silver plate, and the French liberating armies pillaged all the treasuries and sanctuaries of the countries they came to liberate.
>
> Immense quantities of silver plate were sent to the mint to be coined. The consequence was that, while the legal ratio of silver to gold was 15½ to 1, the market ratio became 17 to 1. *No gold coin, therefore, got into general circulation.* During the period from 1803 to 1820 there was for eleven years a premium on gold, sometimes as much as 3 per cent, which, of course, prevented gold coming into general circulation. But after 1820 the premium on gold rose very considerably, and between 1820 and 1847 it was usually an average of 10 francs per mille, but in many years 18, 19, 20, and 21 francs, which, of course, utterly precluded any gold getting into circulation.

I myself can testify that in 1839 there was not to be seen a gold coin in France in common use.

But in 1851 a great change took place. The gold discoveries in California and Australia caused floods of gold to be imported into Europe, and in 1851 silver rose to a premium. Then the money in common use *changed from silver to gold.* I was residing in a seaport town in 1857, and every steamer which came in was loaded with casks of Scotch whisky going to be transmuted into French brandy, and every steamer that went out had its decks piled with 5-franc [silver] pieces. The same was true at every other seaport. Silver departed from France in floods; every steamer and every diligence that left France carried away loads of these 5-franc pieces.

At last the scarcity of silver became so great that it became necessary to coin those pestilent 5-franc pieces in gold.

And, not to weary the committee with needless repetition of statements all showing the same thing, I now cite the statement of the French Monetary Commission of 1867 itself, made six years before 1873:

It is well known by all that this ratio (of 1803), by the simple reason of its being fixed, could not remain correct. There was quickly a premium on gold, and silver remained almost alone in circulation until near 1850. The discovery of the mines of California and Australia suddenly changed this situation by throwing into the European market a very considerable quantity of gold. There was a premium on silver to the extent of 8 per mille, and it disappeared almost completely from circulation, yielding place to gold.

And thus we see, Mr. Chairman, that the French legal ratio never succeeded in holding the commercial ratio coincident with it, and that France during those much-vaunted years did *not* enjoy the concurrent use of both metals.

FRENCH COINAGE TABLES.

And even the tables of French coinage introduced by my colleague to prove concurrent coinage and circulation will, upon careful examination, help to repudiate his claim and overturn his theory. Here is his table:

Coinage of France.	Gold (average per annum).	Silver (average per annum).
1806–1810	£1,201,136	£1,184,737
1811–1815	3,299,503	5,208,029
1816–1820	1,951,604	993,111
1821–1825	465,748	3,526,432
1826–1830	293,976	5,032,004
1831–1835	826,149	6,576,120
1836–1840	589,857	3,048,189
1841–1845	159,326	3,033,286
1846–1850	1,294,337	4,311,276
1851–1855	12,669,263	1,431,755
1856–1860	21,605,465	666,651
1861–1865	7,667,357	175,008
1866–1870	9,546,561	3,402,020
1871–1875	2,475,213	2,742,776
Total coined	322,993,410	217,640,234

The committee will note how very small was the coinage of gold from 1820 to 1845 (the table should show that it continued very small until 1849) and how large the coinage of silver during these same years. Then, on the other hand, notice how enormous the gold coinage was from 1850 to 1870 (amounting to over $250,000,000) and how insignificant was the silver coinage from 1850 to 1865. And remembering our own experience from 1861 to 1879, when we coined vast quantities of both metals, but had neither in circulation, we can easily understand that the coinage of gold from 1820 to 1849 was almost entirely for purposes of hoarding or sale, as shown by the statements of MacLeod and the French Commission, quoted above. And similarly we can understand that even the small coinage of silver from 1850 to 1865 was not for purposes of circulation.

THE LATIN UNION.

All the countries having the French system (France, Belgium, Switzerland, and Italy) had this same experience. Silver for change became so scarce there in the later fifties and the early sixties as to embarrass business. In a year or two this condition became unbearable, and in 1865 these countries formed what is known as the Latin Union. The object of the Union was *not to maintain* the "bimetallic" system (as is so often stated), but to *provide a defense against it.* We are told that at the preliminary conference of delegates, "Belgium proposed the single gold standard—the silver pieces, including the 5-franc pieces, to be lowered by an agio, and made divisional money. Italy and Switzerland were of the same opinion, but their scheme failed before the opposition of France." But by the convention of December 23, 1865, which instituted the Latin Union, "the hitherto full-valued silver coinage from 2 francs down was *changed into token money,*" and the coinage and tender of these coins was *limited.* This was clearly, as I said before, not the maintenance of the "bimetallic" system, but a defense against its operation; that is, it was a measure to prevent the loss of the small silver needed for "change." In order to put this fact beyond all controversy, I quote the French Monetary Commission of 1867, which, in speaking of the intention in forming the Union, says:

This convention places in the front rank gold money and reduces the pieces of silver of two francs and less to the rôle of *token money.* It therefore definitely determines the ascendency of the gold francs, and *solves practical difficulties arising from the double standard.*

But the 5-franc silver piece was left undisturbed, with "free coinage" and unlimited tender. The folly of this was not long in making itself apparent. By 1867 the production of silver had greatly increased, and its commercial ratio had fallen below its ratio at the mints of the Latin Union; that is, it had by that time again become more profitable to coin silver and dispose of it as money than to sell it as bullion, while the opposite was true of gold. The result is plainly shown in the coinage table of my colleague, quoted above. The committee will note that in the five-year period ending 1870 the coinage of silver increased enormously over that of the preceding five years; and, on the other hand, beginning with 1870 (it really began in 1868) the coinage of gold fell off very greatly. This was the result of continuing the "free coinage" of the silver 5-franc piece. Seeing that, in consequence of the fall in silver, which had then begun, they were in danger of losing their gold coin if their mints were continued open to the "free coinage" of the silver 5-franc pieces, the Union first limited their coinage of them; and then, the menace still continuing, closed their mints entirely to coinage of silver on individual account. Thus it appears, Mr. Chairman, that silver did not fall because of the closing of those mints; but *the mints were closed to silver because of its fall.*

Mr. Leon Say, then the French minister of finance, in giving the "motifs" of the act of 1876 (which suspended entirely the coinage of these 5-franc silver pieces), said:

The theory of the double standard, on which our monetary law of the year XI (1803) reposes, has been called in question ever since its origin.

It is, to our conception, *less a theory than the result of primitive inability* of the legislators to combine together the two precious metals otherwise than by way of an unlimited concurrence—metals, both of which are destined to enter into the monetary system, but which recent legislators have learned to coordinate by leaving the unlimited function to gold alone and reducing silver to the rôle of divisional money. *From 1857* the French Government has studied the question, and it may be stated that since that date the principle of the gold standard has won increasing favor through our several administrations.

From this we see that the action of France and the Latin Union (and indeed of nearly all civilized nations) in discontinuing the effort to maintain so-called "bimetallism" was not a notion suddenly conceived in the early 70's, but a course of action whose wisdom had continually grown upon their financial leaders for many years; emphasized by the loss of their silver money in the 50's, and then about 1870 again emphasized by the threatened loss of their gold money, this alternate loss of one or the other money metal having by that time become recognized as a necessary and legitimate consequence of having unlimited coinage and tender of both metals. And the tremendous increase in gold production had made it plainly practicable to apply the remedy.

Summing up, we have seen that the existence of the French legal ratio did not even for a single month hold the commercial ratio coincident with it; that, as a consequence, France had at first silver monometallism for a long period, then gold monometallism, and then the danger of a return to silver monometallism, which she prevented by abandoning her so-called "bimetallic" law; that the Latin Union was formed not to perpetuate that kind of "bimetallism," but as a defense against its action; and that the closing of their mints to silver was not the cause but the consequence of the fall in silver. [Applause.]

THE QUESTION OF RATIOS.

By inference we are led to believe that this recent fall in the price of silver has no counterpart in history. Some free-silver advocates speak as if the relation of 16 to 1 was something fixed by divine decree, and which until 1873 had existed through all the ages. Indeed, the great leader of the Populists in Minnesota, a man of wonderful eloquence but scant information on these subjects, speaking in his paper of the length of time during which silver has been used as money, referred to Abraham's purchase of the field of Ephron for 400 shekels of silver, and then added, "Yes, my friends, and even in those days *the ratio was 16 to 1.*" [Laughter.] He evidently had not recently been reading the Book from which he drew his illustration. For had he turned to Genesis xxiii, 16, where this famous transaction is recorded, he would have read: "And Abraham *weighed* to Ephron four hundred shekels of silver, * * * current money with the merchant." The shekel there referred to was a Jewish *weight*, not a Jewish coin. There is no mention of gold as money at that time, and no mention of coining. Silver was money by weight, just as gold was in the early days of California. And no one can tell what the ratio of the metals was then and there, if any.

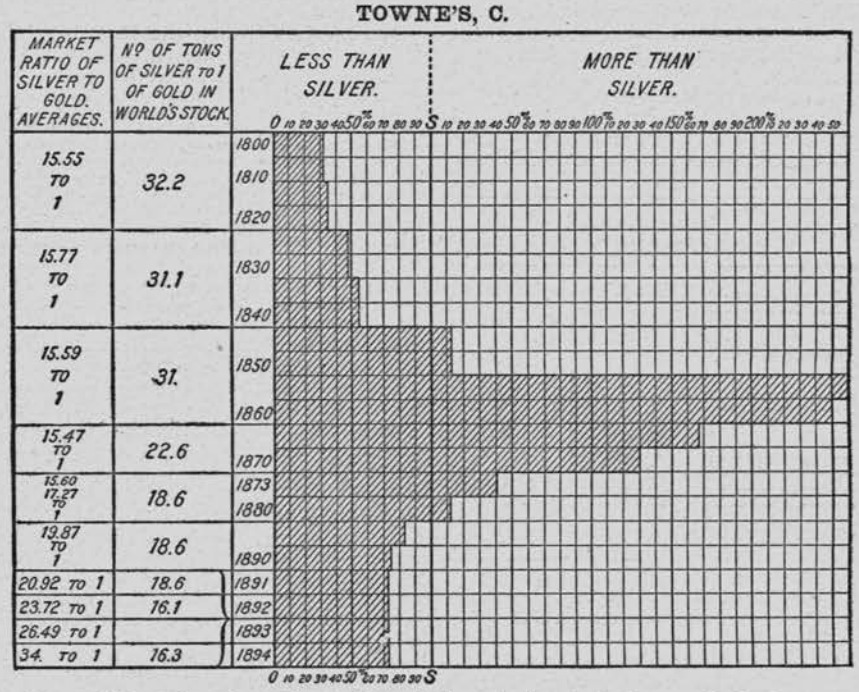
But Alexander Del Mar, whom free-silverites so often quote as authority, tells us in his History of Monetary Systems that in the Archaic Period the ratio was 1 to 1, that is, silver was esteemed as highly as gold. By the Vedic Period the ratio had, for some reason, fallen to 2 to 1, that is, silver had fallen 50 per cent in relation to gold. *Then* was taken the momentous step; gold and silver separated then, never again to be united. After that it was simply a question of degree. In the Brahminical Period the ratio had fallen to 5 to 1, a further fall of 60 per cent in the price of silver. In the Buddhic Period the ratio was 6½ to 1. Through the Middle Ages, according to Marco Polo, the ratio varied from 4 to 1 in some countries to 10 to 1 in others.

About 1150 the average ratio of Europe was 8 to 1; and according to Munch's History of Norway this was the ratio in that country a century later. At the time of the discovery of America the average ratio was 10¾ to 1. But by 1600, according to Soetbeer, the ratio had fallen to 12½ to 1. And between 1620 and 1650, according to the same authority, the ratio had fallen to 15 to 1. This remarkable fall of nearly 25 per cent in about as many years, Soetbeer explains as being caused by the vast increase in the production of silver, "the great influx of silver that took place after 1545 from Peru, Potosi, and Mexico," and by the increased demand for gold, "due to continuous wars," and later to a "great growth in international trade," for which, as he says, "gold was a better medium than silver." But the statement of Soetbeer in this connection to which I desire the special attention of the committee is this:

Nor can we believe, after repeated examination, *that the rise* in the value of gold *is to be ascribed chiefly to mint regulations.* On the contrary, these regulations are generally *based on changes in the price of gold that had already taken place in the open market.*

And a few pages farther on Soetbeer uses this language:

Beginning with 1873, the ratio changed still further in favor of gold. This is the event, *analogous to the phenomena of the years 1620–1650*, which has attracted so much attention from governments, economists, and business men.



Regarding the former change in ratio, Soetbeer said that it was "not to be ascribed chiefly to mint regulations." And this later change he declares to be "analogous," or similar, to the former—that is, according to Soetbeer, the fall in silver since 1873 is "not to be ascribed chiefly to mint regulations." On this point Dr. Soetbeer, the most eminent statistician of Germany and one of the foremost students of this century, is so unfortunate as not to agree with my colleague; but I have an idea that the sober business sense of the country will indorse the view of the former, even though it is set forth without any effort at rhetorical display, but with the single purpose of historical accuracy.

THE "COMPARATIVE BULK" PROPOSITION.

And now we have reached what my colleague virtually announced to be the citadel of his strength, the exhibit which he vauntingly declares to be "absolutely unanswerable."

This "thing wonderful," this last reliance of my colleague's cause, is exhibited to the eye in the following chart:

TOWNE'S, C.

One's first impulse on looking at it is to inquire, What is it, and what does it mean? After a little study, the former question can be answered pretty definitely. But in declaring its "meaning" and the conclusions to be drawn from it my colleague becomes sadly mixed and contradictory.

The *fact* which the chart is intended to exhibit is, in plain terms, this: At the beginning of the century there were 32.2 times as many tons of silver in the world as there were tons of gold, but at that time the value of a ton of gold was only 15.55 times the value of a ton of silver. In other words, when the bulk ratio was 32.2 to 1 the value ratio was 15.55 to 1. After 70 years had passed by the bulk ratio had fallen to 22.6 to 1, yet the value ratio had remained almost unchanged, being then 15.47 to 1. But by 1894, when the bulk ratio had fallen to 16.3 (that is, when there were only 16.3 times as many tons of silver in the world as there were tons of gold) the value ratio had fallen to 34 to 1 (that is, a ton of gold is worth as much in the market as 34 tons of silver).

My colleague gives high authority for these estimates, and we shall accept them as true (though the method of drawing the chart is misleading, as I shall show later). Then arises the question, *What of it?* Here my colleague's confusion begins. It is very difficult to discover what inferences he does really draw. The statements of his speech are not at all clear on this matter. But as nearly as I can make out, he wishes us to infer two things; namely:

1. That, since in the first seventy years of the century the bulk ratio of the metals changed greatly, yet the value ratio changed very little, both metals having during all that time "free coinage," their relative value depends *not upon their relative quantity but upon mint regulations.*

2. That, since the bulk ratio is now about 16 to 1, the mints should be opened to the "free coinage" of both at that ratio.

No other statement of my colleague's speech, Mr. Chairman, has been received with such hilarious joy by the free-silverites as this last. They have been groping around for some time trying to find some reasonable way to justify the special ratio 16 to 1. They have been trying to find some kind of an answer to the question, "If 16 to 1 is good and can be maintained by simple legislative enactment regardless of the commercial value of silver, why would not 8 to 1 be better, and 4 to 1 better still? And while we are at it and can do it just as well as not, why not make the ratio straight 1 to 1, giving silver precisely the same treatment as gold?" These very reasonable questions have perplexed our free-silver brethren very greatly. They saw plainly that, reasoning from their premises, the conclusion of 1 to 1 was inevitable. Nor could they see any way to avoid the further conclusion that, on this ground, copper at 1 to 1 was also inevitable. And from that to absolutely fiat money is but a step. Their good sense told them that this last conclusion could not be defended; nor the one before that, providing for copper coinage; nor the one for coining gold and silver on absolutely equal terms—1 to 1. Yet these absurd conclusions were logically inevitable unless they could find some seemingly *natural* reason for choosing the ratio of 16 to 1, regardless of the commercial ratio. Hence their hilarity when my colleague assured them that this is to-day almost the exact bulk ratio of the two metals.

"Drowning men will clutch at straws," and the inherent weakness of the free-silver argument is clearly seen in the feverish eagerness with which its advocates, even the most prominent of them, grasp at this *temporary* coincidence of the bulk ratio with their proposed *permanent* mint ratio. In their hilarity they forget that my colleague, just before showing this courage-inspiring coincidence, had demonstrated by his chart that the relative value of the two metals *does not depend on their relative bulk.* And when in this connection my colleague intimates that the relative value therefore depends on mint regulations, he evidently forgets that he himself in another part of this same speech declares:

The Government stamp can not create value. Whether a coin when stamped shall be effectual to pass at the value it claims to represent will depend upon the use it can command.

WHAT IS THE TRUTH IN REGARD TO THE RATIO?

When my colleague shows that the relative value of the two

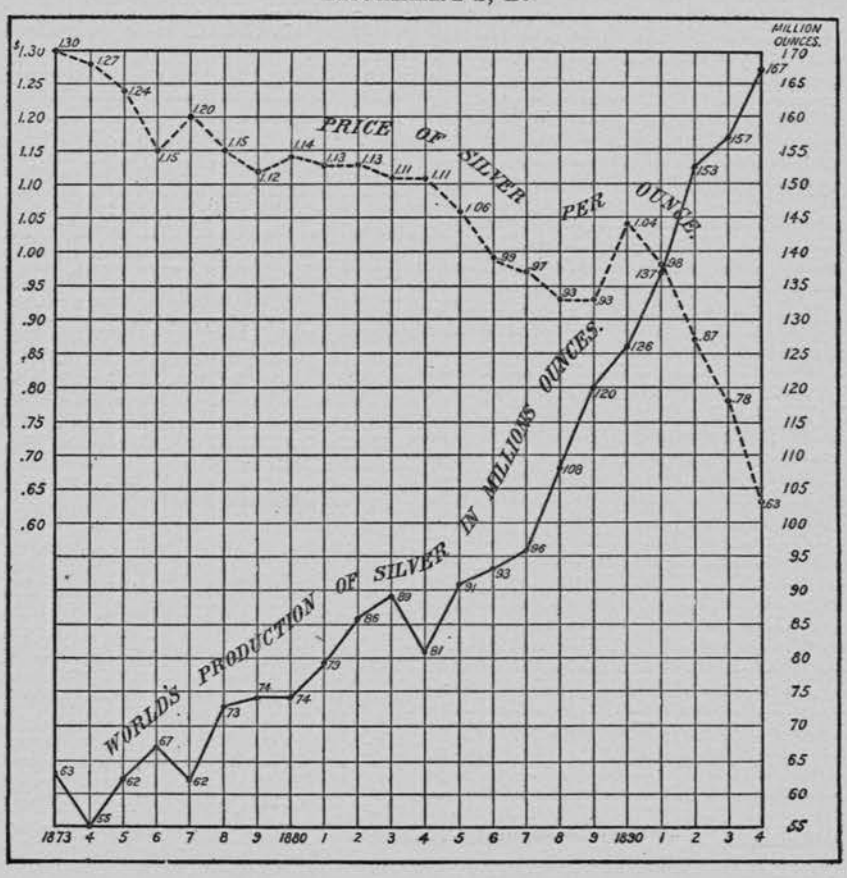
metals is not determined by their relative bulk, he wastes time in proving what every well-informed student of the subject already knows: he is simply "striking a man of straw." What he shows is, however, as usual, only a part of the truth. And in drawing his conclusions, he becomes, as we have seen, strangely mixed and contradictory. Let us try to discover and state the whole truth in this matter, both as to facts and conclusions.

The value of wheat does not depend on the value of oats. The value of each depends on conditions of its own, on the size of the crop, the demand for it, and the cost of production. Wheat and oats may both be high at the same time; they may both be low at the same time, or one may be high when the other is low—their relative value is not determined by their relative bulk. The value of each having been determined *independently*, as suggested, their relative value or ratio may then easily be computed. And so it is with silver and gold; the value of each depends upon conditions peculiar to itself—the value of silver upon the supply of and the demand for silver, taken in connection with the cost of its production; and the value of gold being similarly determined. The value of each having thus been independently determined, their relative value or ratio becomes a mere matter of arithmetic.

THE WORLD'S PRODUCTION AND USE OF SILVER.

My colleague's chart, probably without any such intention on his part, is very misleading on two points of vital importance, in that it represents the production or average bulk of *silver as constant* and that of *gold as having greatly diminished* since 1870. How very misleading this is will be seen by the following table, taken from the latest report of the Director of the Mint, pages 248–9:

Production of gold and silver in the world since the discovery of America.



[From 1493 to 1885 is from a table of averages compiled by Dr. Adolph Soetbeer. For the years 1886 to 1894 the production is the annual estimate of the Bureau of the Mint.]

Period.	GOLD. Annual average for period.		SILVER. Annual average for period.	
	Ounces, fine.	Value.	Ounces, fine.	Coining value.
1493–1520	186,470	$3,855,000	1,511,050	$1,954,000
1521–1544	230,194	4,759,000	2,899,930	3,749,000
1545–1560	273,596	5,656,000	10,017,940	12,952,000
1561–1580	219,906	4,546,000	9,628,925	12,450,000
1581–1600	237,267	4,905,000	13,467,635	17,413,000
1601–1620	273,918	5,662,000	13,596,235	17,579,000
1621–1640	266,845	5,516,000	12,654,240	16,361,000
1641–1660	281,955	5,828,000	11,776,545	15,226,000
1661–1680	297,709	6,154,000	10,834,550	14,008,000
1681–1700	346,095	$7,154,000	10,992,085	$14,212,000
1701–1720	412,163	8,520,000	11,432,540	14,781,000
1721–1740	613,422	12,681,000	13,863,080	17,924,000
1741–1760	791,211	16,356,000	17,140,612	22,162,000
1761–1780	665,666	13,761,000	20,985,591	27,133,000
1781–1800	571,948	11,823,000	28,261,779	36,540,000
1801–1810	571,563	11,815,000	28,746,922	37,168,000
1811–1820	367,957	7,606,000	17,385,755	22,479,000
1821–1830	457,044	9,448,000	14,807,004	19,144,000
1831–1840	652,291	13,484,000	19,175,867	24,793,000
1841–1850	1,760,502	36,393,000	25,090,342	32,440,000
1851–1855	6,410,324	132,513,000	28,488,597	36,824,000
1856–1860	6,486,202	134,083,000	29,095,428	37,618,000
1861–1865	5,949,582	122,989,000	35,401,972	45,772,000
1866–1870	6,270,086	129,614,000	43,051,583	55,663,000
1871–1875	5,591,014	115,577,000	63,317,014	81,864,000
1876–1880	5,543,110	114,586,000	78,775,602	101,851,000
1881–1885	4,794,755	99,116,000	92,003,944	118,955,000
1886	5,125,679	105,963,900	93,297,290	120,626,800
1887	5,116,851	105,774,900	96,123,586	124,281,000
1888	5,330,775	110,195,900	108,827,606	140,706,400
1889	5,973,790	123,489,200	120,213,611	155,427,700
1890	5,749,306	118,848,700	126,095,042	163,032,000
1891	6,320,194	130,650,000	137,170,919	177,352,300
1892	7,102,180	146,815,100	153,151,762	198,014,400
1893	7,009,242	157,297,000	165,165,876	213,547,800
1894	8,705,836	179,965,600	166,601,995	215,404,600

From the foregoing table it will be seen that the production of silver in the whole world never but twice reached $30,000,000 a year before 1841; that by 1866–70 the annual production of silver had become almost double that amount; that by 1876–80 it had passed the $100,000,000 mark; and that now the annual production of silver is more than *seven times* what it was half a century ago. During that time the population of the world has not quite doubled. That is, sir, while the world's population has increased at the rate of about 2 per cent a year, the annual production of silver has increased by 600 per cent! In other words, to use a favorite method of theirs, the "per capita" of silver has increased enormously; so we would naturally expect an enormous fall in its price.

The following chart, prepared by my good friend from North Dakota [Mr. JOHNSON], exhibits to the eye the increase in its production and the decrease in its price since 1873:

McCLEARY'S, D.

From this (remembering also that the cost of production has greatly decreased) we see that the fall in the price of silver has not been as great as we would naturally expect. How is this accounted for? This wonderfully sustained price of silver can be accounted for in only one way, namely, by an *enormous increase* in the *use* of silver. This has taken place in two directions:

1. *In the arts.* It is a matter of common information that in conditions of life where plated silverware was a luxury twenty-five years ago, solid silver is now common; and excellent plated silverware is now used in conditions of life where such a thing as silverware of any kind was not dreamed of then. The use of silver in the arts has increased in the last quarter of a century several hundred per cent; which is, by the way, another evidence of a higher standard of living among the people.

2. *As money.* In this connection I invite attention to the following letter from the Director of the Mint:

TREASURY DEPARTMENT, BUREAU OF THE MINT,
Washington, D. C., February 11, 1896.

SIR: Replying to your verbal inquiry of to-day, I would make the following statement:

The value of all silver coins used as money in the world in 1873 I estimate to have been $1,816,565,657, and in 1894 about $4,000,000,000.

The amount of gold coin in the world in 1873 was estimated to have been $3,044,547,800, and in 1894 about $4,250,000,000.

Respectfully, yours,

R. E. PRESTON,
Director of the Mint.

Hon. J. T. MCCLEARY,
House of Representatives, Washington, D. C.

And, as the latest report of the Director of the Mint shows (page 41), of this vast amount of silver now used in the world as money $3,439,300,000 has *full legal tender!*

That is, Mr. Chairman, there has been added to the *full-tender* silver money of the world in the last 22 years *an amount equal to the accumulations of all the ages up to that time!*

In view of these facts, it is simply trifling with words to say that silver has been "demonetized"; and to say that "half our money has been struck down" is, plainly, to tell an unmitigated falsehood.

PRODUCTION AND COINAGE OF SILVER IN THIS COUNTRY.

On page 242 of the report above cited will be found the production of gold and silver in the United States by years since 1834, the production for the forty-two years before then being bulked. For the forty-two years from 1792 to 1834, our production of silver is given as "insignificant." Up to 1860 it aggregated $1,650,000, or about $61,000 a year! Think of it! The total production of silver in the United States through all our history as a nation up to 1860 was less than $2,000,000! We produce now *three times as much silver every month* as we produced *altogether* in all the years before the war, and yet there are those who "sit and grieve and wonder" at the fall in the price of silver! Our annual production of silver is now and has been for years more than *a thousand times* as great as it was before the war, and yet there are leaders among the silverites who find it necessary to malign human nature and attack the memory of good men in order to explain why an ounce of silver is not worth as much now as then! Oh, Mr. Chairman, it is pitiful, that men should be robbed of that which more than anything else brightens and sweetens life, faith in our fellow-man, in order to afford the free-silver cause even the slightest reason for existence!

And now let us see what the United States has done in the way of using silver as money. The total coinage of silver in our mints from 1792 to 1834 was $43,009,000 (or about $1,000,000 a year), about one-third of which remained in the country in 1834. In the next thirty-eight years, up to 1873, our silver coinage was $103,570,000, or about $2,600,000 a year. Up to 1853 scarcely any of the silver that was coined remained in circulation in this country, because the coins could be disposed of to better advantage elsewhere. And both silver and gold retired from circulation in 1861. During the five years when the act of 1873 was the law we coined silver to the value of $79,120,771. This was at the rate of almost $16,000,000 a year, or more than six times the highest average annual coinage before that time. This was under the much-discussed act of 1873, mind you! Our total coinage of silver since 1873, up to and including 1894, has been (above cited report, page 49) $538,444,467. This is an average of almost $25,000,000 a year, or *ten times* the highest average annual coinage before 1873! And of this coinage, the vast sum of $431,320,457 is in the form of dollars, *every one of which is full legal tender.* Such an enormous coinage of silver was never dreamed of in the world before.

And yet the producers of silver are not satisfied; but to-day, with an arrogance that even they themselves must despise us for enduring, they declare that no important legislation shall be enacted unless the nation's representatives bow down before them and obey their behests. Claiming to possess superior patriotism, they are using their best endeavors to destroy the nation's credit, which is the breath of its nostrils; and they boldly declare that until they get what they want the country shall be denied the income demanded by its daily needs. Realizing the utter weakness of their alleged arguments, knowing that their opportunity for mischief will soon be gone forever, they are revealing by their acts, sir, the extent of their desperation. [Applause.] If I had not determined, Mr. Chairman, to preserve throughout this presentation a judicial frame of mind, I would like to characterize in fitting terms this flagrant abuse of a sacred trust.

Why, sir, if we were not accustomed to such exhibitions of their recklessness and selfishness, our people would rise and demand that these representatives of a wealthy and insolent private interest be relegated to the positions of obscurity and impotence which they have so amply earned. [Applause.] And, sir, if the issue shall be squarely made at this coming election (as I trust that it will be) the free-silver cause will meet its Waterloo, and will no longer embarrass our onward march in prosperity and peace. [Applause.] Perhaps they fancy, sir, that they can force another "compromise," by which the Government, at their dictation, shall undertake to furnish a market for their entire product, as was attempted by the silver act of 1890. But, sir, the day of such folly has gone forever. [Applause.] But if the principle that the Government may properly engage in the warehouse business and undertake to furnish a market for the product of any class of people is again to be recognized, I shall insist, sir, that the miners now stand aside and let the farmers have whatever benefit there may be in such enactments. [Applause.] But, sir, the farmers are too intelligent and independent to ask for such legislation, and the miners must get along without it, as other people do.

THE GREAT INCREASE IN GOLD PRODUCTION, AND WHAT IT MEANS.

But some one might properly ask in this connection, "Has not the output of gold increased also?" The answer is, "Yes, enormously." Let us see how great the increase has been, and what conclusions are to be drawn therefrom.

By reference to the table showing the production of gold and silver in the world since 1492, given above, it will be observed that the production of gold was very small up almost to the close of the first half of this century. Up to 1848 the world's annual production of gold never but once reached $14,000,000; while in this last half century it never but once fell below $100,000,000. *The world now produces more gold every month than formerly in a year!* In other words, sir, the world's production of gold in these last fifty years exceeds by far its entire production for the preceding four hundred years! This is the fact hinted at in my colleague's chart, but not clearly brought out. And the annual production of gold alone is now more than four times as great as was the production of *both* gold and silver up to 1840! This is the fact, sir, which has sounded the death knell of the free coinage of silver. This is the mighty fact partially brought forward by my colleague as his final reliance in this controversy, but which will be to his cause, sir, like the mighty sword carried into battle by Goliath, the foreordained instrument of its destruction.

In order that this may be thoroughly established, it will be necessary for us to turn aside for a few minutes and consider one or two related matters.

"MONEY OF FINAL REDEMPTION."

The advocates of silver free coinage have a great deal to say about "primary money," "ultimate money," and "money of final redemption," by all of which terms they mean the same thing. Let us briefly consider these expressions. In a monetary sense, *redemption is final when the man in possession of the money, or about to receive it, has or gets the kind of money that he prefers.* To illustrate: If you have five cents coming to you in change, and can have it in gold, silver, or nickel, which will you take? Gold in such a case is out of the question; the piece would be so small as to be hardly visible, and it would require too much care to prevent losing it. And so, in a less degree, with silver. Your choice and mine and everyone's would be nickel. Up to five cents, then, nickel is money of final redemption. How about twenty-five cents? If you were offered five nickels in change, would you accept them without protest? Probably so. But we are plainly reaching the sum where, if compelled by necessity to accept nickels, you would avail yourself of the first good opportunity to convert them into a more convenient form of money. To review: Up to five cents nickel is *the* money of final redemption; that is, no desire is felt to exchange it for (or have it "redeemed" in) any other form of money. But at twenty-five cents, it is simply *a* money of final redemption; one will accept it willingly and hold it until used to buy something. And beyond that sum we soon reach a point where nickel will not be willingly accepted, and if accepted from necessity it will at the first opportunity be changed into (be "redeemed" by) a more convenient form of money.

Following a similar investigation as to silver, we shall find that it is *the* preferred money in sums ranging from about twenty-five cents up to, say, five dollars. Within these limits *we prefer it* to any other form of metallic money; that is, within these limits we make no effort to exchange it for (have it "redeemed" in) any other money. In other words, sir, up to five dollars silver is pri-

mary money both in law and in fact. Suppose, however, that you had a hundred dollars coming to you, say at a bank in payment of a check, would you like to have one hundred silver dollars counted out to you? The most ardent free silverite would resent an attempt of the bank to make such a payment. *The law of the land authorizes* it, for silver dollars are legal tender to any amount; but the higher law of human preference and business courtesy forbids the banker to avail himself of his legal right. What I desire to emphasize, Mr. Chairman, is this: If silver is not "money of final redemption" beyond five dollars, it is not any fault of the law, for in law silver dollars have unlimited legal tender. It is due to that principle in human nature which makes people prefer something more convenient. And this preference, sir, is something beyond Congressional control. The banker above referred to, because he desires to retain your custom, makes it a point to furnish you the kind of money which will best suit your convenience. Because of this natural preference for the most convenient money, for these purely business reasons, the coin used in all large payments requiring the use of metallic money is gold, because it is much more convenient than silver to count and to carry. We *need both* silver money and gold money, each to perform the work for which by its nature it is best fitted. That is what we on this side are contending for.

THEORETICAL VERSUS PRACTICAL BIMETALLISM.

This brings us to the consideration of a matter on which my colleague lavished a good deal of valuable time. He tried to establish a definition of bimetallism that would give his case some standing in court. And then in a brave tone of voice he declared that "a large majority" of the "common people" (whatever is meant by that expression) favor "bimetallism." As usual, he fails to tell the whole truth, namely, that every person favors bimetallism; that is, everyone desires to have both gold money and silver money in circulation, each performing its natural and proper function. We differ only as to the means or method of attaining the desired end. The advocates of the unlimited coinage of silver say, "Open the mints to the free coinage of both metals, then they will both be coined, and both will circulate as money." But though every country in Europe and America has tried this experiment, though some are still trying it, the advocates of this method can not point to a single instance in which their method has ever succeeded. As we have already seen, France had, with her mints open to both metals, first a circulation of silver up to about 1850, and then a reversal to gold only. Our own experience here in the United States has been the same. Our coinage ratio of 15 to 1, from 1792 to 1834, overvalued silver and undervalued gold, so during those years, at least the last twenty of them, our circulation consisted of silver and no gold. The change of ratio in 1834 and 1837 to 15.98 to 1 (commonly spoken of as "16 to 1") overvalued gold and undervalued silver, and silver gradually retired from circulation as money. No one would part with 371.25 grains of silver (the amount of pure silver in a dollar) for 100 cents as money when he could sell it for 103 cents as bullion.

And this has been the experience of every nation that has ever tried the experiment. A double standard is, therefore, an alternating standard. It is not bi-metallism, but one-at-a-time-metallism.

OUR COINAGE ACT OF 1853.

In the later forties and early fifties this country was so stripped of its silver coin that there was serious embarrassment in business from the lack of "change." Trying to supply this lack of change, Congress in 1849 authorized the coinage of gold dollars; but the pieces were too small for practical use. So great was this embarrassment that farmers, merchants, and all classes of business men petitioned Congress to devise some way to secure the concurrent circulation of both gold and silver coin, for that is what the people want. After much discussion of the subject Congress succeeded in 1853 in framing a law which gave for the first time in our history the circulation of both metals side by side. The method was this—the only method ever devised by the wit of man that has succeeded:

1. That one of the metals (gold) should have unlimited coinage and tender. Gold was chosen for the simple reason that, as before indicated, it is the coin in which people prefer to make all large payments.

2. That the coins for fractions of a dollar (halves, quarters, etc.) should be reduced in size (so that there would be no temptation to melt them down or sell them for bullion), their coinage to be on Government account only, and their legal-tender quality limited to five dollars.

It may be noted, parenthetically, that nothing was done with the silver dollar. It was not mentioned in this bill. It was out of use, and no one seemed to care anything about it.

This gave us the concurrent circulation of both metals up to the breaking out of the war, when both gold and silver retired from circulation.

What the people want is the *use* of both metals, each in the way that will best serve their purposes. They want the *actual circulation* of both, not simply the promise of it. You free silverites offer them a method that has always failed, and in the nature of things always will. We offer a method that has never failed, and that is why it has been adopted by all the leading nations of the world. You offer a law *permitting* both to be coined, hoping that both will be. We offer a plan whereby the desired result is secured with certainty. Yours is the bimetallism of the statute book. Ours is the bimetallism of the countingroom. Yours is theoretical bimetallism. Ours is practical bimetallism. [Applause.]

AN ILLUSTRATION AND ITS APPLICATION.

To illustrate in another way: We all want the navigation of *both* Lake Erie and Lake Ontario. You can get from Erie to Ontario by either of two courses—by the Niagara River or by the Welland Canal. One of these routes is "free," natural, ever flowing. It has beautiful scenery, and the motion is swift and exhilarating. The other was dug out laboriously by the hand of man, guided by experience. It is plain, simple, commonplace. There is no poetry about it. *But it is safe.* It may be claimed that the sailing is just as good below the falls, but what craft could survive the trip? And if it should, how could it get back to Lake Erie? By the "free," "open" route, where the water flows without let or hindrance, it may be possible, though exceedingly hazardous, to get from Erie to Ontario. But it is only by the second route, by the "artificial" canal, where the water is confined and controlled, that we can go in either direction at will and in safety.

The illustration is apt. In no country where there is an "open" mint, "free and unlimited" coinage of both metals, is there any gold in circulation. These countries have silver money only, with all the attendant inconvenience and disadvantages. On the other hand, in every country where there is unlimited coinage of gold and limited coinage of silver, both gold coins and silver coins circulate, each performing the service for which it is by nature best fitted.

And it is a singular fact, worthy of notice in this connection, that in countries where the coinage of silver is limited by law silver is used more largely in proportion to population than in those countries where its coinage is by law unlimited. The former countries not only have and use *more money*, they have and use *more silver* money than the latter countries. And, moreover, they have and use more money of both kinds than they themselves did when they had their mints open to the unlimited coinage of both metals. In other words, sir, the plan now practiced by all enlightened nations gives the use of more money and better money than the old, discarded method of unlimited coinage of both metals, based, as Leon Say stated, on "primitive inability" to devise a better way.

THE ESSENTIAL FACTS ABOUT THE ACT OF 1873.

This brings us to a subject about which there has been a great deal of misunderstanding, one on which unscrupulous men have endeavored to stir up the passions of the people. I am glad to note that my colleague held himself above such action. Indeed, no well-informed, self-respecting man now casts aspersions on the methods or motives of the men who passed the act of 1873. But the leader of the Populist party in Minnesota, thereby confessing that he is out of arguments, has recently begun again the effort to stir up the people's passions on this subject. So I shall now give the essential facts, facts which no one fully conversant with the subject denies, in relation to the nature and passage of the much-discussed act of February 12, 1873.

The original bill was prepared in the Treasury Department by John Jay Knox, then deputy comptroller of the currency, under the general direction of George S. Boutwell, then Secretary of the Treasury. The laws relating to the mint had not been revised for more than a generation, and much confusion existed. This bill was largely a codification of existing law, with such improvements as experience suggested. It was introduced in the Senate April 25, 1870, accompanied by a report giving the reasons for the bill, the method of its preparation, and an explanation of every section in it. Here in my hand I hold a volume of the Executive Documents, second session Forty-first Congress; and here, in Mis. Doc. No. 132, is the original bill and the report accompanying it.

The bill, though not very long, covered the whole subject of mints and mintage. There has never been any controversy over any but two or three of the sections. To these I now invite attention.

Section 14. This section of the bill specifies the weight and fineness of the gold coins, and begins with these words:

SEC. 14. That the gold coins of the United States shall be a one-dollar piece, which, at the standard weight of twenty-five and eight-tenths grains, shall be the unit of value, etc.

Sections 15 and 18 were as follows:

SEC. 15. *And be it further enacted*, That of the silver coin, the weight of the half dollar, or piece of 50 cents, shall be 192 grains; and that of the quarter dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half dollar. That the silver coin issued in conformity with the above

section shall be a legal tender in any one payment of debts for all sums less than $1.

* * * * * * *

SEC. 18. *And be it further enacted*, That no coins, either gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth.

The report accompanying the bill discusses these sections fully, saying, among other things (page 11):

SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD.

The coinage of the silver-dollar piece, the history of which is here given, is discontinued in the proposed bill. * * * The present gold-dollar piece is made the dollar unit in the proposed bill, and the silver-dollar piece is discontinued.

And the discontinuance of the silver dollar is specifically pointed out in three other places in the report.

Throughout all the discussions of the bill, and in every form of the bill, these two provisions (that making the gold dollar the unit of value and that omitting from coinage the silver dollar of 412½ grains) remained unchanged. Sections 14 and 18 of the original bill remained absolutely unchanged, and were in the bill as finally passed exactly as they appeared in the original bill. Section 15 of the original bill was changed from time to time, as follows:

In the original bill, S. 859, introduced April 25, 1870, and favorably reported at the following session, December 19, 1870, it was as given above. The bill in this form passed the Senate by a vote of 36 to 14, on January 10, 1871. And the records show that Senator SHERMAN voted against the bill, while Senator STEWART voted for it. It did not, through lack of time at the close of the Congress, pass the House at that session. But the bill was amended in the House February 25, 1871, in several ways, among which was an amendment to section 15 raising the legal tender of silver coins to *five dollars*, as under the act of 1853.

In the first session of the Forty-second Congress, on March 9, 1871, Mr. Kelley reported the bill as H. R. 5. Section 15 of that bill was as follows:

SEC. 15. *And be it further enacted*, That of the silver coins the weight of the half dollar, or piece of 50 cents, shall be 192 grains; and the quarter dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half dollar; which coins shall be a legal tender, at their denominational value, for any amount not exceeding $5 in any one payment.

This is an exact reproduction of sections 1 and 2 of the act of February 21, 1853, except that it omits the silver 5-cent piece. On January 9, 1872, this bill was brought up in the House for discussion. Then it was found that some members wanted a dollar piece, though all agreed that it should be simply the equal of two half dollars, *with limited coinage and tender*. And so, when the bill as a whole had been thoroughly discussed and various amendments suggested, it was referred back to the committee January 10, 1872.

When on February 13, 1872, the bill was reported back to the House by Mr. Hooper as H. R. 1427, it contained the following provision:

SEC. 16. That the silver coins of the United States shall be a dollar, a half dollar or fifty-cent piece, a quarter dollar or twenty-five-cent piece, and a dime or ten-cent piece; and the weight of the dollar shall be 384 grains; the half dollar, quarter dollar, and the dime shall be, respectively, one-half, one-quarter, and one-tenth of the weight of said dollar; which coins shall be a legal tender at their denominational value for any amount not exceeding $5 in any one payment.

The bill containing this provision passed the House May 27, 1872. It will be noted that the dollar introduced into the bill, as just shown, contained *only 384 grains*, exactly the weight of two half dollars, and like the half dollars it had only *limited coinage and tender*. *It was not the old standard dollar of 412 1-2 grains*, and did not have "free coinage" or full tender. This is the dollar which was afterwards dropped out of the bill, and in place of which the trade dollar of 420 grains, with *unlimited coinage* but limited tender, was substituted.

The fourth and final form of the bill, which passed the Senate January 17, 1873, and the House February 7, 1873, and was signed by the presiding officers of the two Houses February 12, 1873, contained the following provision:

That the silver coins of the United States shall be a trade dollar, a half dollar or fifty-cent piece, a quarter dollar or twenty-five-cent piece, a dime or ten-cent piece; and the weight of the trade dollar shall be 420 grains troy; the weight of the half dollar shall be 12½ grams; the quarter dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

THE OLD STANDARD DOLLAR WAS NEVER IN THE BILL.

Ask the first twenty free silverites that you meet, "Did the act of 1873 ever contain the old standard silver dollar of 412½ grains"? and nineteen of them, if not all, will promptly answer, "Why, certainly, and it was *surreptitiously* dropped out just before the passage of the bill." Many a good man has had his righteous indignation aroused by being told this tale. And very frequently it has been told by men who sincerely believed that such was the case. The free silver leaders are responsible for this erroneous impression. They have, with a few honorable exceptions, scattered this impression broadcast, for the purpose of stirring up the resentment which would be natural if the story were true. But, as we have seen, the story is not true. *The 412½-grain dollar was never in the bill from first to last!* Its omission was carefully pointed out in the report accompanying the original bill, and the reasons for the omission were plainly given. The dollar for which the trade dollar was finally substituted was a 384-grain dollar, of limited coinage and tender; and the change was made for the benefit of the silver producers, to enable them to find a market for their silver in the East.

DISCUSSIONS SHOWING WHY IT WAS OMITTED.

That the matter was fully discussed in Congress may be seen by the following extracts from the debates.

On January 9, 1872, in reporting H. R. 5, which (like the original bill S. 859) contained *no silver dollar of any kind*, Mr. Kelley, chairman of the committee in charge of the bill, said:

The Senate took up the bill and acted upon it during the last Congress and sent it to the House; it was referred to the Committee on Coinage, Weights, and Measures, and received as careful attention as I have ever known a committee to bestow on any measure.

* * * * * * *

We proceeded with great deliberation to go over the bill, not only section by section, but line by line, and word by word; the bill has not received the same elaborate consideration from the Committee on Coinage of this House, but the attention of each member was brought to it at the earliest day of this session; each member procured a copy of the bill, and there has been a thorough examination of the bill again.—*Congressional Globe*, volume 100, page 322.

For reasons not particularly related to the question of silver coinage (one of the points of contention being the substitution of the nickel for the old silver half dime, which experience had shown to be too small a coin), H. R. 5 was recommitted to the committee. On February 13 it was rereported by the committee as H. R. 1427, and contained a silver dollar of 384 grains, as shown above. On April 9, 1872, this bill came up in the House for consideration. Mr. Hooper, in a carefully prepared speech of ten columns, explained the bill, section by section. The speech may be found on pages 2306–8, volume 102, of the Congressional Globe. Discussing the silver coins, he said:

Section 16 reenacts the provisions of the existing laws defining the silver coins and their weights, respectively, *except in relation to the silver dollar*, which is reduced in weight from 412½ to 384 grains, thus making it a *subsidiary coin* in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion or intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware. It does not circulate now in commercial transactions with any country, and the convenience of these manufacturers in this respect can better be met by supplying small stamped bars of the same standard, avoiding the useless expense of coining the dollar for that purpose.

On the same day Mr. Stoughton made a speech of seven columns, in which he said (same volume, page 2308):

The silver coins provided for are the dollar, 384 grains troy, the half dollar, quarter dollar, and dime, of the value and weight of one-half, one-quarter, and one-tenth of the dollar, respectively; and they are made a legal tender for all sums not exceeding $5 at any one payment. The silver dollar, as now issued, is worth for bullion 3½ cents more than the gold dollar, and 7½ cents more than two half dollars; having a greater intrinsic and nominal value, it is certain to be withdrawn from circulation whenever we return to specie payment, and to be used for only manufacture and exportation as bullion.

Mr. Potter, in discussing this part of the bill, said:

Mr. Speaker, this is a bill of importance. When it was before the House in the early part of this session I took some objections to it which I am inclined now to think, in view of all the circumstances, were not entirely well founded, but after further reflection I am still convinced that it is a measure which it is hardly worth while for us to adopt at this time. * * * This bill provides for the making of changes in the legal-tender coin of the country and for substituting as legal-tender coin of only one metal instead as heretofore of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of *gold alone;* but why should we legislate on this now when we are not using either of those metals as a circulating medium?

The bill provides also for a change in respect of the weight and value of the silver dollar, which I think is a subject which, when we come to require legislation about it at all, will demand at our hands very serious consideration, and which, as we are not using such coins for circulation now, seems at this time to be an unnecessary subject about which to legislate. (Page 2310, volume 102.)

And Mr. Kelley (who is reported as having said afterwards that he "did not know that the bill omitted the standard silver dollar") said on this same day (Globe, volume 102, page 2316):

I wish to ask the gentleman who has just spoken [Mr. Potter] if he knows of any government in the world which makes its subsidiary coinage of full value? The silver coin of England is 10 per cent below the value of gold coin, and, acting under the advice of the experts of this country and of England and France, Japan has made her silver coinage within the last year 12 per cent below the value of her gold coin, and for this reason: *It is impossible to retain the double standard.* The values of gold and silver continually fluctuate. You can not determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now.

Hence all experience has shown that you must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal tender for a limited amount and be redeemable at its face value by your Government. But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar and worth 7 cents more than two half dollars, and that so long as those provisions remain you can not keep silver coin in the country.

In another place in the same speech Mr. Kelley said:

Every coin that is not gold is subsidiary. I repeat it, sir. Every coin that is not gold is subsidiary.

Speaking on another subject a few months afterwards, Mr. STEWART, then as now a Senator from Nevada, said (page 1392, volume 2, part 2, CONGRESSIONAL RECORD):

I want the standard gold, and no paper money not redeemable in gold.

And about two weeks later, on February 20, 1874, the same gentleman said (same volume, page 1677):

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

These are the words of Senator STEWART before he became simply the representative of a special interest. [Applause.]

[Here the hammer fell.]

Mr. BAILEY. I ask unanimous consent that the gentleman from Minnesota [Mr. MCCLEARY] be permitted to conclude his remarks.

There was no objection.

Mr. MCCLEARY of Minnesota. As it is now the usual time for adjournment, I assure the committee that I appreciate very highly this exceptional action in granting at such an hour unlimited extension of time. I shall try, as heretofore, not to waste words.

SOME EXPERT OPINIONS.

The bill was submitted to the leading experts in this country and to some in Europe. Their answers are given in Ex. Doc. H. R. No. 307, second session Forty-first Congress, a copy of which I hold in my hand. Not to weary the committee, I will give only one or two of the opinions. The document from which I take them was transmitted to the House as a supplementary report on the bill.

Mr. J. Ross Snowden, formerly superintendent of the mint at Philadelphia, opposed the proposition to reduce the size of the silver dollar, saying:

THE PRESENT SILVER DOLLAR SHOULD NOT BE DISCONTINUED.

I see it is proposed to demonetize the silver dollar. This I think inadvisable. * * * It is quite true that the silver dollar, being more valuable than two half dollars or four quarter dollars, will not be used as a circulating medium, but only for cabinets, and perhaps to supply some occasional or local demand; yet I think there is no necessity for so considerable a piece as the dollar to be struck from the metal which is only worth 94 cents.

Dr. Linderman, formerly Director of the Mint, discussing the provision for the 384-grain dollar (which was in the preliminary draft of the original bill presented to him), said:

Section 11 reduces the weight of the silver dollar from 412½ to 384 grains. I can see no good reason for the proposed reduction in the weight of this coin. It would be better, in my opinion, to discontinue its issue altogether.

The gold dollar is really the legal unit and measure of value. Having a higher value as bullion than its nominal value, the silver dollar long ago ceased to be a coin of circulation, and, being of no practical use whatever, its issue should be discontinued.

The judgment of nearly all the experts being against the useless coinage of silver dollars "only for cabinets" of curious coins, it was omitted from the bill sent to Congress, as before shown.

THE TRUTH ABOUT THE ACT OF 1873.

From the foregoing, all of which is substantiated by the contemporary records, it is clear that the bill was before Congress for about three years; that it was printed eleven times separately and twice in reports of the Comptroller of the Currency; that it was considered at length by the Finance Committee of the Senate and by the Coinage Committee of the House during five different sessions; that it was carefully debated in both Houses, the debates in the Senate occupying 66 columns, and those in the House occupying 78 columns of the Congressional Globe; and it finally passed substantially as it was originally introduced. Every feature of the bill was thoroughly explained in the original report accompanying the bill, and repeatedly afterwards in the debates on the bill itself. There doubtless were persons in both Houses who did not pay attention to either the report or the discussions, for at that time such subjects were regarded as of interest only to experts, but it certainly can not be truthfully said that they did not have full opportunity to know all about it.

So far as concerns the coinage of gold and silver, there were just two important provisions in the act of 1873, namely, the unlimited coinage of gold and the limited coinage of silver. Both of these provisions have endured and will endure; because, as I have shown already, this is the only way in which we can have the use of both metals as money at the same time. And though some very excellent gentlemen in Congress in 1878, when the wave of "free silver" threatened to overwhelm everyone opposed to it, may have said some foolish things about the act of 1873, it is a significant fact, Mr. Chairman, that *not a single Republican* of those quoted as saying these things, unless he lives in a silver-producing State, *has ever voted to repeal the essential provisions* of the act of 1873 above cited. Except as to the trade dollar (which was inserted as a special concession to the silver producers), the act of 1873, based upon the experience of centuries, framed by men pre-eminent for ability and integrity, discussed in all its phases during the three years when it was before Congress, will be recorded in history as one of the wisest and best pieces of legislation ever enacted by the Congress of the United States. Its details may be changed, but its fundamental principles will endure. [Applause.]

WHY DIDN'T THE NEWSPAPERS SAY MORE?

Occasionally we hear a man ask, "Why didn't the newspapers say more about the act at the time of its passage?" The answer is plain. It was because of their being *news*-papers, not ancient histories. There was nothing new in principle or practice in the bill. It was largely a reenactment of existing law, properly codified. Why did the bill give gold unlimited coinage and tender? Because all mint laws in existence did so. Why did it restrict the coinage of subsidiary silver and limit its tender to five dollars? Because these were the provisions of the act of February 21, 1853. Why did it omit from coinage the old standard silver dollar? Because that had been the intent of the act of 1853. In 1853 the dollar was entirely out of circulation, and no attempt was made to bring it back into circulation. Why did it make the gold dollar the unit of value? Because it had really been the metallic unit since 1834. And this was the avowed intention of the act of 1853, as is shown by the following extracts from the Congressional Globe, selected from many that might be given.

In discussing the act of 1853, when it was before Congress, twenty years before the act of 1873 was passed, Mr. Skelton, of New Jersey, said, among other things:

Gold is the only standard of value by which all property is now measured; it is virtually the only currency of the country.—*Congressional Globe*, volume XXVI, second session, Thirty-second Congress, page 190.

And on the same point, Mr. Dunham, who had the measure in charge in the House, said (volume and page above cited):

Another objection urged against this proposed change is that it gives us a standard of gold only. * * * What advantage is to be obtained by a standard of the two metals, which is not as well, if not much better, attained by a single standard, I am unable to perceive; while there are very great disadvantages resulting from it, as the experience of every nation which has attempted to maintain it has proved. * * * Indeed, it is utterly impossible that you should long at a time maintain a double standard. * * * Gentlemen talk about a double standard of gold and silver as a thing that exists and that we propose to change. We have had but a single standard for the last three or four years. (Gold had really been the standard since 1834, but the fact was emphasized about 1850 by the sudden and enormous increase in gold production.) That has been, and now is, gold. *We propose to let it remain so, and to adapt silver to it, to regulate it by it.*

These remarks on the act of 1853, at the time of its consideration in Congress, show that the principles of the act of 1873 had been enunciated and enacted into law twenty years before. And the remarks of Mr. Kelley in the House in 1872 ("We can not maintain the double standard," etc.) and those of Senator STEWART in 1874 ("I want the standard gold," etc.) show that at that time, before the tremendous output of silver turned men's heads, there was practically undivided opinion on the subject. The bill had been before Congress three years, it had been repeatedly discussed, there was nothing new or startling in it, and hence there was no call for any extended notice of its passage. Why, sir, the very fact that the papers made no extended report of its passage is the very best evidence, if any more were wanted, that the act was neither novel nor vicious. The Reporters' Gallery has always included men representing all shades of opinion, men nowhere surpassed for intelligence, honesty, and alertness. Had there been anything wrong in either the matter of the bill or the method of its passage, these things would surely have been discovered and reported by some of these gentlemen. No, no, Mr. Chairman; the bill was passed openly and honestly. It embodies the principles of sound mintage, and it undoubtedly saved us from going to a silver basis on the resumption of specie payments. And, therefore, sir, the men who framed it and those who passed it deserve and will receive the grateful thanks of ourselves and our posterity.

A SHORT HISTORY OF COINAGE.

In the evolution of money the metals gradually superseded all other commodities as the medium of exchange. Iron and copper came to be produced in such quantities that they ceased to be "precious metals," and gave way to silver. In the course of time, as civilization and the demands of trade required it, gold was introduced into one country after another. In this evolution a nation's needs and progress can be pretty accurately determined by noting the kind of money used by it.

At first the metals passed by weight. To save the trouble of carrying scales and the danger of being cheated by means of alloys, the custom gradually grew up of having the ruling prince cut the metals into pieces of convenient size and shape, and stamp on one side of the piece its weight and fineness (and later on its worth), and on the other side the features of the prince as the author of the stamp. This was the origin of coinage.

But princes were sometimes tempted by their greed or their need to put into the coins less of the metal than they should. Then, in order to compel people to accept these debased coins in payment

of obligations, the princes decreed that the coins *must* be accepted. This was the origin of what is known as "legal-tender" laws.

For hundreds of years the money of Rome was copper. We have a memento of that time in our English word "estimate." The Latin for copper is "aes," and to *estimate* literally means to *give the value in copper*. About 300 B. C. copper was dethroned and silver became the standard money. About 150 B. C. gold began to be used in Rome as money. With the fall of Rome, Europe was for about five centuries almost entirely without gold money, the currencies of mediæval Europe being of silver and copper. The reintroduction of gold coinage began at Florence, Italy, in 1252, with the coinage of the florin. As a result of the Crusades, the commerce of Florence, Genoa, Venice, and other states lying along the Mediterranean had so increased as to demand the use of a more convenient money than silver. Gradually other nations, as their commerce became great enough, introduced the use of gold money with silver money. The Crusades not only enlarged trade along the Mediterranean, but they also opened up to Europe the then only gold-yielding districts—the Crimea—so that the demand for gold money and the source of supply came together. The use of gold was thereby both necessitated and made possible.

Then began the coinage of both metals. Then began, too, as a consequence, the monetary troubles with which the history of the next five centuries abounds: the alternation of silver money and gold money, the frequent changes in the ratio in the vain attempt to keep both, the edicts against shipping out either kind of coin, the execution of prominent merchants for seeking gain by exporting the metal undervalued in the mints of one country and overvalued in the mints of another. These "open mints for both metals" were not in consequence of any theory of "bimetallism," but of what Leon Say, quoted before, so aptly characterized as "the primitive inability of the legislators to combine together the two precious metals otherwise." Oresme, Copernicus, Gresham, and others had at different times and in different countries pointed out the source of the trouble, but the "primitive inability of the legislators" left the countries without a remedy. And the supply of gold and silver was so small (as will be seen by reference to the table showing their annual production) that the nations kept on, hoping against hope (as we are apt to do when we see no alternative) that *somehow* the open mint for both metals would give the circulation of both. But, as we have seen, these hopes were indulged only to be disappointed. England cut the Gordian knot in 1816, and was freed from the financial embarrassments on this score that had afflicted her. But other nations kept on in their old way, with the old results of alternating standards, losing at one time their gold and at another time their silver.

The flood of gold at the middle of this century opened the way for relief. Our own country, as might be expected from the enterprise and intelligence of our people, was the first to act. As we have seen, Congress as early as 1853 passed an act limiting the coinage and tender of subsidiary silver. France began to move in 1857, and in 1865 the countries composing the Latin Union adopted the principle of limited coinage and tender of silver. Germany followed in 1871–1873. And the principle has now been adopted by nearly all the civilized nations of the world.

BIRTH OF THE THEORY OF "BIMETALLISM."

By reference to the table showing the production of gold and silver, it will be seen that shortly after 1870 the production of silver began to increase enormously, leaping from an average of $55,663,000 in the period of 1865–70, to an average of $81,864,000 in the period of 1870–75. It was at this time that the theory of so-called "bimetallism" was born. As I said before, it came into being "born of recent needs and hopes and fears." The production of silver was becoming so large that it was becoming hard to find a market for the product. This was the reason for the insertion of the "trade dollar" in the final edition of the act of 1873. The necessities of the silver producers were not yet so great that they had the audacity to propose what they did afterwards. About 1876 they began to talk about "bimetallism" and its beauties.

My friend wants a definition. Let us take the Century Dictionary, than which there is no higher authority on the meaning and history of words:

Bimetallic.—This word and its derivatives are of recent origin, M. Cernuschi having been the first to use "bimetallique" in 1869 and "bimetallic" in 1876. Of or pertaining to two metals; specifically, pertaining to the use of a double metallic standard in currency.

Bimetallism.—Bimetallism pertains to the use of two metals as money at relative values set by legislative enactment; the union of two metals in circulation as money at a fixed rate. Specifically, that system of coinage which recognizes both coins of silver and coins of gold as legal tender to any amount, or the concurrent use of coins of two metals as a circulating medium at a fixed relative value.

By the first paragraph above it will be seen that the theory and the name for it were first hinted in 1869 in France, and that it did not become current as a name until 1876, when, as I said earlier, "time was ripe for its utter refutation." The definition of bimetallism given by the dictionary shows its essence to be "the concurrent *use* of two metals as a circulating medium at a fixed relative value." This is the kind of bimetallism for which we contend, that method which gives the actual "concurrent use" of both metals. This is the kind that we have and which we shall keep, notwithstanding the threats or the promises of those who would have us return to an experiment that has been tried and found wanting.

It is worthy of note that the silver miners who are behind this movement do not stop with the request for the opportunity to have their product converted "free of charge" into the form of money. They go further and demand (for "demand" is the word of the only party that has allowed itself to be used for the accomplishment of this scheme)—they demand that the silver coins shall have full legal tender. In plain language, they want us to arrange legislation that will permit the producer of silver to take fifty cents' worth of silver to the mint, have it labeled "one dollar," and then enable him to *force* his creditors to accept it as one dollar. These silver barons have now grown so bold as to want us to so legislate that they can "out-Herod" the petty princes of bygone days in debasing the currency and then forcing the people to accept it as of full value. Shall we allow ourselves to be flattered, or cajoled, or bullied into becoming their humble instruments in this nefarious scheme?

Silver dollars are now full legal tender, but they are coined on Government account only. The Government thus gets whatever profit there may be in the coinage, and in return undertakes to keep the two kinds of coin at a parity.

THE "OPEN MINT" WOULD CREATE NO DEMAND.

One of the favorite claims of a certain class of free silverites is this: "The open mint would create an unlimited demand for silver, and that would restore it to its price before 1873 and hold it there. This would restore the parity of the metals, and that would result in their concurrent circulation." There are three very direct answers to these claims:

1. There is no such thing as unlimited demand for anything in the world, and no way to create such a demand. Even the fabled King Midas, who seemed to have an insatiable desire for gold, and who was granted the power of turning everything he touched into the yellow metal, soon satiated himself and prayed to have the magic power removed from him. It must be remembered, too, in this connection, that mere *desire* for a thing is not "demand" for it in a business sense. I see things every day that I would very much like to have; but, as I can not afford to buy them, my desire for them does not constitute a business "demand" for them.

And furthermore, inasmuch as there is only a limited supply of anything, if an unlimited demand for it could in any way be created, the price of the thing would soon be "out of sight" and the thing itself would be out of reach. This talk of an "unlimited demand" is simply childish.

2. Even if silver could, by opening the mint to its unrestricted coinage on private account, be "restored to its price before 1873," that would benefit no one but the producers of silver. As we all know, for more than a quarter of a century before 1873 standard silver money was not coined for purposes of circulation.

3. But the fundamental fallacy on this point, sir (and it seems to be entertained even by some who do not believe in the independent free coinage of silver), consists in taking it for granted that free coinage would create some demand for silver. It can easily be shown that it would not create any demand whatever. Let us examine the matter.

What does "free coinage," as it is called, mean? It does not mean that the Government would *buy* any of the silver, not an ounce. The Government would simply receive the silver from its owner, stamp it, and hand it back to him. Does that create any demand for the silver?

Buckwheat flour is now used to a limited extent for food. The demand for buckwheat flour is entirely due to this fact. Would opening a new buckwheat flour mill create any demand for buckwheat flour? Certainly not, any more than the reaping and threshing did. These are all simply *steps in preparing the supply*. The market must still be found in competition with other kinds of flour.

And similarly the "open mint" would create no demand whatever for silver any more than the smelting or the mining does; these are all simply steps in preparing the supply. The demand is in the need of money of various kinds with which to make exchanges. The owner of the coin would still have to go forth and find a market for this kind of money in competition with other forms of money. The minting would, therefore, not create any demand for the silver, but would simply put it into shape to meet whatever real demand there might be for silver coin in the channels of trade *in competition with other forms of money*.

And, sir, because of the bulkiness of silver in proportion to its value, the demand for silver *coin* in actual business is very limited. As a matter of fact there is more silver coin in this country to-day

than can be used *as coin*. Experience has shown that the business of the country needs about $125,000,000 in silver coin of all kinds, including minor coins. But we already have a stock of silver coin amounting to over $500,000,000. So there is absolutely no trade demand for more silver coinage for some time to come.

And this the producers of silver well understand. Indeed, the men who framed this free-coinage amendment have embodied in it their admission of this fact. The very first paragraph of the amendment contains the following clause:

> And whenever the said coins herein provided for shall be received into the Treasury, certificates may be issued therefor in the manner now provided by law.

What does this clause show? Why, sir, a moment's thought will reveal its meaning. It is an open confession, sir, on the part of these most rampant advocates of free coinage of silver that they fully understand that no demand exists in the channels of commerce for more silver coin than we now have, and that if more silver were coined it would soon be returned to the Treasury to be stored at public expense. This clause stultifies their whole contention. [Applause.]

THE IMPORTANCE OF MAINTAINING THE PARITY.

What I have just said about silver coin coming into "competition with other forms of money" suggests the need of saying a few words about the great importance of preserving the parity or equality of our various forms of money, to which my colleague referred in such sneering terms.

The Gresham law, so often referred to, is, of course, not a law enacted by any person or legislative body. It is simply the observed result of a principle of human nature. For wise reasons our Creator has endowed each of us with the instinct of self-preservation. This is the basis of the Gresham law. A short way of stating the law is this: "Poor money drives out good money." Why is this true? To illustrate, let us suppose a case: You owe me $10. You also owe $10 to a man in Chicago. In your pocket you have two ten-dollar bills. Let us suppose that one of these bills is good only locally; that is, it will be received without discount only in the neighborhood where you and I live; the other bill we will suppose to be good anywhere. Under these circumstances which of the bills would you naturally give to me? You would naturally give me the one having only a local value; the other bill you would reserve to send away to Chicago. Of these two bills, in other words, you would naturally send away the good one. So would I. So would anyone. And in consequence our community would send away its good money, "good anywhere," and have left only the poorer money, "good locally." This illustrates what is meant by the Gresham law.

But it is time, Mr. Chairman, for some one to embody in terse, lucid language another law of money, covering another ground. As no one else, so far as I know, has stated it, I shall offer a tentative statement, to wit: *With all forms of money at a parity all will be used, each for the purpose which it will best serve.*

The law just stated, like the Gresham law, rests on a principle of human nature. Since "self-preservation is the first law of nature," a little child is by nature blindly selfish. Training and experience, however, gradually teach it that due consideration of the rights and desires of others is the surest way of securing its own rights and having its own desires gratified. Even if prompted by no higher motive, it will gradually reach the plane of "enlightened selfishness." One of the forms of this is business courtesy. By reason of this courtesy, if all forms of money are kept equal in value, "at a parity," each person doing business will make it a point to pay out the kind of money which will be most acceptable to the person receiving it.

And therefore, Mr. Chairman, because we believe that each kind of money—silver, gold, and paper—has a function to perform in our business life which it can perform better than either of the others can, we on this side of the question are determined to keep them all in use. This is why we attach so much importance to maintaining the parity of all our forms of money. And because this gives us the safest, the most convenient, and the most economical means of accomplishing our exchanges, we feel that we have a right to designate it "sound money."

THE SILVER LOBBY IN WASHINGTON.

The silver barons maintain here, as is well known, a large and well-organized lobby. It is under the direction of "Gen." A. J. Warner, who devotes his whole time to and receives a large salary for publishing pamphlets, addresses, circulars, etc., to advance their interests.

I know little or nothing of their methods, Mr. Chairman, aside from the fact that vast sums of money are being furnished from some source to pay for printing and publishing the literature that is poured in upon us all and distributed broadcast over the country. But I think that as a rule it is safe not to trust a man who lacks faith in others. A reasonable prudence in dealing with strangers is, of course, perfectly proper. But the men who are constantly casting aspersions upon other people are, as a rule, pretty good folks to look out for. "Doubt the doubter" is an old and wise proverb. And the amount of vilification indulged in by these men, in words and in pictures, leads one to question the uprightness of their purposes and the character of their methods.

Knowing that they can not hope for success unless they can secure the cooperation of two great classes of people, the farmers and the workingmen, they have prepared a lot of special circulars for distribution among these two classes of people. They are also trying to make out that there is a "debtor class" among us, and are sending out circulars to try to convince men that it is all right for them to repudiate their obligations, provided they can do so under cover of law. They are insidiously trying to undermine the sense of honor that prevails in men's hearts and consciences. By deliberate falsehoods and misleading half truths about men and measures they are seeking to convey the impression that a wrong was perpetrated some quarter of a century ago, and are trying thereby to justify men to themselves for desiring to commit a wrong now. Still the majority of men will agree with the late lamented Bill Nye in the opinion that "The promise of a good man may be written in snow, but no ironclad agreement engraved on brass can avail against the intangible soul of a nimble liar." [Applause.]

Let us now examine briefly a few of their *argumenta ad homines*.

THE INTEREST OF WORKINGMEN.

Everyone will admit that, so far as legislation can affect the matter, that system is best under which those who earn their daily bread by their daily toil receive the best returns for their services.

The gentleman from Texas [Mr. BAILEY], who has just spoken, points to Mexico as "prosperous" in consequence of having the free coinage of silver. He quotes from an article in a recent number of the North American Review, written by the Mexican minister, Mr. Romero. This distinguished representative is naturally loyal to his own country and desirous of making as strong a statement as possible as to her prosperity. He claims that manufacturers are making large profits. But what does he find to say about the wages of workingmen in Mexico? Listen:

> Although our wages are low, there has been in recent years a marked tendency to their increase.

Their wages are "low," even in silver. What about increase in wages? The most that he can claim is that there has been a "tendency" in that direction; no real increase worth mentioning specifically. Workingmen will do well to "ponder on these things."

The following statement appears in Bulletin No. 9, 1891, of the Bureau of the American Republics:

> One of the greatest evils (referring to Mexico) at the present time is the existence of a scale of wages which defies all power of reduction; which robs the laborers of all sense of dignity or feeling of association with the rest of their fellow-citizens; and having reduced them to a condition of abject abasement, deteriorates to a like extent their productive power and the measure of their ability. They are content to regard themselves as a plant or machinery which moves by extraneous aids only, and has no power of volition, and no desire to exercise it if it had.

And yet Mr. Romero finds it impossible to claim more than that there has been "a tendency" to improvement in wages.

We have before us, Mr. Chairman, a special message from the President asking us to make an appropriation to pay certain railroads for carrying certain people from the Mexican line to various parts of the United States. What is the story behind this? Simply this, sir. Some of our workingmen, having been told how fearfully they were being abused under our system, and being assured that things were "booming" in Mexico, became the victims of their misplaced confidence in free-silver orators and *went to Mexico*. Then they learned the truth, finally coming home at public expense. How many more of our workingmen will allow themselves to be made victims of similar tales?

WHAT ABOUT JAPAN?

The awakening of Japan during these last thirty years from her sleep of ages is one of the noteworthy events of the century. She has reformed her Government, changing it from the most stringent autocracy to a constitutional monarchy, with a legislature chosen in part by the people. She has inaugurated a system of public education. China will bear prompt though not cheerful witness to the fact that she has made great advances in the art of war. Would it not be rather singular, sir, if she did not also make advancement in the line of manufacturing? For years she has had companies of her brightest young men studying in this country and in Europe the most advanced ideas in all lines of knowledge and art. She has already adopted many of our inventions, and may become a serious competitor of ours. Therefore what, Mr. Chairman?

Before answering, let me direct attention to two facts that the advocates of free coinage never tell when they are discussing the growth of Japan:

1. *Japan does not have free coinage of silver.* There is no coinage of silver in Japan except on Government account. (See Muhleman's Monetary Systems of the World, page 93.) Why, then, do the advocates of free coinage of silver in this country refer to Japan as an illustration of their proposed plan? Do they not know the facts in the case?

2. But Japan had an "open mint for both metals" long enough

so that she is now *really on the silver basis.* Her workingmen receive their pay in silver. Her employers of labor are said to be prospering, to be declaring "very large dividends." But what about the wages of her working people? Let us see.

I have here the January Bulletin of the Department of Labor, which shows the condition of labor in Japan. Here are the wages paid, translated into our standard:

Daily rates of wages, Japan.

Occupation.	Highest.	Lowest.	Average.
Blacksmiths	$0.60	$0.18	$0.30
Bricklayers	.88	.20	.33
Cabinetmakers (furniture)	.53	.17	.30
Carpenters	.50	.20	.30
Carpenters and joiners (screen making)	.55	.17	.30
Compositors	.83	.10	.29
Coolies or general laborers	.33	.14	.22
Cotton beaters	.45	.13	.23
Dyers	.60	.05	.25
Farm hands (men)	.30	.16	.19
Farm hands (women)	.28	.06	.19
Lacquer makers	.58	.15	.29
Matting makers	.50	.20	.30
Oil pressers	.34	.16	.25
Paper hangers	.60	.20	.31
Paper screen, lantern, etc., makers	.55	.20	.31
Porcelain makers	.50	.13	.29
Pressmen, printing	.70	.11	.26
Roofers	.60	.20	.29
Sauce and preserve makers	.40	.10	.24
Silkworm breeders (men)	.50	.10	.22
Silkworm breeders (women)	.25	.05	.17
Stonecutters	.69	.22	.36
Tailors, foreign clothing	1.00	.25	.49
Tailors, Japanese clothing	.56	.15	.28
Tea makers (men)	.80	.15	.31
Tobacco makers	.50	.11	.26
Weavers	.40	.07	.15
Wine and sake makers	.50	.15	.29
Wood sawyers	.50	.13	.30

Here are the monthly wages paid in certain lines:

Farm hands (men)	$1.44
Farm hands (women)	1.20
Silkworm breeders (men)	1.92
Silkworm breeders (women)	.96
Weavers (women)	.96

And the report tells us further:

Factory labor is paid even less than these prices. Middleton & Co., one of the most prominent tea-shipping houses in Japan, employ in their establishment a large number of persons, men and women, who work from 5 o'clock in the morning until 6 o'clock at night, with three intervals, at 8, 12, and 3 o'clock, respectively, when they eat their rice and what other refreshments they bring with them and rest for twenty minutes or a half hour. The highest wages paid by the Messrs. Middleton are 42 sen a day, which is equivalent to 21 cents in United States currency. This is received by men who are experts in handling tea and have acquired their proficiency by natural ability and long years of experience.

The lowest wages are paid to young boys and girls who pick over the tea leaves to remove the stems and other foreign substances. They receive 13 sen (6½ cents) a day for about twelve hours' work, not including their resting spells.

Of the entire force in the establishment, 20 are paid 21 cents (United States currency) a day, 90 are paid 18 cents, 50 are paid 15 cents, 335 are paid 12 cents, 278 are paid 10 cents, 5 are paid 9 cents, and 30 are paid 6½ cents—and they board themselves.

Mr. E. J. Smithers, our consul at Hiogo, says, in the Consular Report for June, 1894, that the insuperable obstacle to the introduction of American flour is that the great mass of the Japanese are *too poor to buy it.* This reveals their situation. And this is what free-silver advocates "point to with pride" as the fruit of their system. This is the feast to which they invite American workingmen.

HOW ABOUT AMERICAN WORKINGMEN?

And now let us see how the situation of workingmen in this country compared in 1890 with that during the so-called "bimetallic times."

From the famous Senate report on Wholesale Prices, Transportation, and Wages, before referred to, I take the facts for the following table of wages in leading occupations every tenth year for some time before the war, when we had our mint "open to the free coinage of both metals," in comparison with wages in 1890, a sixth of a century after we finally adopted our present system of unlimited coinage of gold and limited coinage of silver:

Occupation (per diem).	1840.	1850.	1860.	1890.
Plasterers	$1.50	$1.75	$1.75	$3.50
Blacksmiths	1.50	1.50	1.50	3.00
Blacksmiths' helpers	.83⅓	.83⅓	.83⅓	1.75
Painters	1.25	1.25	1.25	2.50
Wheelwrights	1.25	1.25	1.25	2.50
Carpenters	1.29	1.41	1.52	1.94
Engineers	2.00	2.25	3.00	4.25
Firemen	1.25	1.37	1.44	1.65
Laborers	.81	1.04	.99	1.25
Machinists	1.45	1.55	1.76	2.19
Watchmen	1.10	1.06	1.00	1.55
Railroads (per diem).	1840.	1850.	1860.	1890.
Baggagemen	$1.53	$1.53	$1.91	$2.11
Brakemen, freight	1.00	1.00	1.16	1.85
Brakemen, passenger	1.15	1.15	1.25	2.00
Carpenters	1.22	1.33	1.30	2.00
Conductors, freight	1.66	1.68	1.61	2.57
Conductors, passenger	2.11	2.30	3.19	3.84
Engineers, locomotive	2.14	2.15	2.30	3.79
Firemen, locomotive	1.06	1.15	2.00	2.00
Foremen, masons	2.50	2.50	2.50	4.10
Painters	1.50	1.43	1.32	2.17
Average, according to importance, for all occupations, 1860 being reckoned as 100	87.7	92.7	100	168.6

There are in almost every community men who worked by the day before the war. Any young workingman who is at all taken by the glowing promises of the free silverites would do well to ask one of these old gentlemen how much he really was paid in those "bimetallic" days, and how much he could buy with his daily pay in the way of necessaries and comforts.

WILL THE AMERICAN WORKMAN ALLOW HIMSELF TO BE DECEIVED?

We have seen that the condition of American workingmen has vastly improved since the days when we had free coinage of silver. It has been shown, also, that opening our mint to coinage of silver on private account would at once send us to a silver basis. How would this affect wages and the men who earn them? Every man who earns his daily bread by his daily toil owes it to himself and those whom he holds dear to think this over carefully.

Any man who will examine daily quotations of prices as reported in the newspapers will soon discover that they change from day to day, and sometimes change very greatly in the course of a month. But every man who earns wages is familiar with the fact that they change slowly, an increase of 10 per cent in a year being quite a gain.

Now, let us grant what the advocates of free silver claim—that going to the silver basis would "double the prices of commodities." Does any workingman believe that wages would be doubled, too? Even if they should be, how much would the wage earner profit by the change? But no intelligent workingman believes for a minute that his wages would be increased by more than a small per cent—that is, while his wages might be *nominally* increased somewhat, the prices of the things he has to buy would be increased very much more. So the real purchasing power of a day's work would be greatly diminished. Any wage earner who now finds it hard to save a little money would find it much harder if we should go to a silver basis.

All experience shows that any debasement in the money system of a country raises prices faster and farther than it does wages. This might influence employers to consider the propriety of debasing our currency, but it is precisely the reason why workingmen should oppose it.

Let us consider for a moment why certain manufacturers are lending an ear to the silver-tongued orators.

Sir Henry Meysey Thompson is one of the leading free-silver advocates of England. He offered a large prize for the best essay on why Japan, India, and certain other silver-standard countries are pushing England so hard in her sales of manufactured goods in the East. The prize was won by Mr. Jamieson, the British consul at Shanghai, China. Here is a copy of that prize essay. Let me read a few sentences, which contain the pith of it: "Wages in the gold-using countries have, through the appreciation of gold, become 100 per cent dearer than they were relatively to silver wages, and the manufacturer in the silver-standard countries *can obtain his labor at half the cost which he formerly paid.*" And it is, therefore, seriously proposed by Sir Henry and his ilk to go to the silver standard *in order that labor may be obtained cheaper*, the idea being that if the workmen receive the same nominal wages, or perhaps a small increase, they will not discover what has happened. Certain manufacturers in this country have had this same little scheme whispered into their ears. There are evidences, too, that some of them are thinking seriously of adopting the idea.

So far as workingmen are concerned, the whole silver question is to be summed up in one query: Do you want your wages cut down? If so, vote for the free coinage of silver.

England has no defense, sir, no choice, except to cut down the wages of her workmen. I see no other way, unless she abandons her present fiscal system, for her even to prevent her Japanese and Indian rivals from invading England itself and competing with the manufacturers of Manchester right in the streets of their own city.

But we have the best market in the world, Mr. Chairman; and, sir, we know how to keep it. [Applause.] It is the plain duty of every wage earner in the United States, his duty to himself, to his family, and to his country, to resolve firmly on two propositions: First, to sustain the protective tariff; and second, to oppose with all his power the free coinage of silver. "Protection and sound money"—this should be our watchword. [Loud applause.]

THE INTEREST OF FARMERS.

Except the natural desire of every American to see all of our industries prosper, and our natural anxiety to do everything reasonable and proper to bring about that result, what possible interest can farmers have in this move of the silver miners for their own special benefit? Our broad acres yield no silver, and we have no personal interest in the problem of finding a market for it. And when in 1890 we were driven to a compromise with these men (who then as now controlled the Senate), whereby we undertook as a nation to do what we never have done for any other industry, namely, furnish a market for the *whole product* and more, what was the result?

These same men assured us then that the act of 1890 would "restore the price of silver and sustain it." By that act this nation obligated itself to *buy* every month 4,500,000 ounces of silver, or 54,000,000 ounces each year. This exceeded by far the entire product of the country; so that we really undertook to furnish a market not only for what was then being produced, but also for all that they believed the country *capable of producing*. Such supreme audacity was never before exhibited, though it is equaled by what we have seen them do this session as exhibited in the action which brought to us the pending amendment.

What was the result of the act of 1890? There were two:

1. After a short-lived increase in price, due to speculation based on the *hope* that silver would advance, the price of silver (as is shown by my colleague's own chart) *fell faster and farther than ever before in history*. Why was this? Simply because our production of silver, which had averaged annually 34,000,000 ounces for the ten years just preceding the passage of the act, leaped to 54,000,000 in 1891 and to 62,000,000 in 1892, and seemed capable of almost indefinite expansion.

2. The second and immensely greater result was the financial panic of the spring and summer of 1893. The repeal of the purchase clause of the act in August, 1893, ended the *panic*, though other causes have continued with us the *industrial depression*. In the spring and summer of 1893 it was almost impossible to borrow money on any kind of security. After the repeal of the purchase clause men with good security could borrow all the money that they wanted. No one now desires to borrow for the purpose of investment, or to invest even when they do not need to borrow therefor. As I said, the panic subsided, but the business depression still continues. There is plenty of money for investment, but no one dares to risk it.

These were the deplorable results of yielding to the dictation of the silver barons in 1890. And similar in kind, but far worse in degree, would be the result of yielding to their present demands.

To come back to my question, What possible interest can farmers have in this problem which the silver miners are trying to solve, namely, of finding a market for their silver? What inducements do the silver producers hold out to the farmers to get them to cooperate in this scheme? They promise the farmers *higher prices* for their products. The sensible question which every thoughtful farmer will naturally ask is, Could they and would they keep their promise? Let us see what the chances are.

They claim that "silver would increase in value, and would carry with it the prices of farm products."

To say that there is any relation between the price of a metal dug out of our Western hills (depending for its value upon conditions peculiar to itself) and the price of any of the vegetable products of our fields (each of which depends for its value upon a set of conditions peculiar to itself)—to tell men that there is any relation between the prices of things so different in their nature and uses, is to insult the intelligence of those who are addressed.

But looking at it from another standpoint, let us see what the probabilities are that the promise could be kept.

One would think to hear these gentlemen talk that silver production is one of the overshadowing industries of this country. Let us make a few comparisons.

The total value of the silver product of the United States in 1892, even when reckoned at the price before 1873, was $82,101,000, and this was the greatest yield in the history of our silver production (Mint Report, page 242).

According to the Statistical Abstract, page 267, the *farm* value of the cotton crop of this country in 1891 was $350,000,000; that of the wheat crop was, in round numbers, $400,000,000, and that of the corn crop was over $800,000,000. The value of our *corn crop alone* was *ten times* the value of the silver crop of this country, and *four* times the value of *all the silver produced in the whole world* that year. Why, sir, the clucking hens of our farms produce more wealth every year than these silver miners, who so patronizingly tell the farmers what they will do for them. [Applause.]

Now, let us look at some actual results. Take, for example, cotton, about which these gentlemen have so much to say. Let us compare the prices of that staple under conditions as fair as possible. To compare prices that had been inflated by a period of war (as those in the early 70's were) with those at the end of a long period of peace, is not a method by which the truth can be established. Let us compare the prices for some years at the end of a long period of peace, when we had "free silver" with those during a similar period now. Let us compare the prices from 1841–1849 with those from 1885–1894.

The following table is made from data furnished by the Agricultural Department. Material for further study of the subject may be had by applying to the Department for its pamphlet on Production and Prices of Cotton for 100 Years.

Production and prices of cotton in 1841–1849.

Year.	Prices in New York.			
	Crops.	Lowest.	Highest.	Average.
	Bales.	*Cents.*	*Cents.*	*Cents.*
1841	1,634,954	7	11¼	9.50
1842	1,683,574	5	10½	7.85
1843	2,378,875	6½	8¼	7.25
1844	2,030,409	5¼	9¼	7.73
1845	2,394,503	5	6¼	5.63
1846	2,100,537	7	9½	7.87
1847	1,778,651	8¼	13½	11.21
1848	2,439,786	6	13	8.03
1849	2,866,938	5¾	10¼	7.55

Production and prices of cotton in 1885–1894.

1885	5,706,165	9.7	10.7	10.54
1886	6,575,691	9½	10	9.44
1887	6,505,087	9½	11⅛	10.25
1888	7,046,833	9½	11	10.27
1889	6,938,290	9 1/16	11½	10.71
1890	7,311,322	10½	12⅛	11.53
1891	8,652,597	7 5/16	10⅛	9.03
1892	9,035,379	6 1/16	8⅛	7.64
1893	6,700,365	7 7/16	10	8.24
1894	7,549,817	6⅝	8 9/16	7.67

Even a very brief examination of the above figures will reveal several significant facts. Though the size of the crop was immensely greater each year of the second period than in the first, the price in the latter period never fell so low as in the former, while the average prices in the second period were much higher than in the first. These are New York prices; and, as it cost less for the planter to get his cotton to New York in the second period, the farm price was thereby increased still further. Cotton, therefore, commands a better price to-day than when we had similar conditions under free coinage.

Farmer friends of mine in Minnesota have told me that before the war they have hauled wheat 50 miles to market with an ox team, occupying days in each trip, and got 45 cents a bushel for it in wild-cat money, which was in danger of being worthless when they got home. Yet in those days the mint was open to the "free and unlimited coinage of silver." [Applause.]

And so I might go on, if there were time, showing the utter fallacy of the patronizing pretensions of these gentlemen.

There is but one way in which the free coinage of silver could possibly affect prices, and that is by lessening the value of the dollar. This could be accomplished in exactly the same way by calling half-dollars dollars. (If a man will feel any better over it, there is nothing to prevent him now from doing his computing in half-dollars.) This would plainly not benefit anyone, because it would affect the prices of things that farmers and others have to buy, as well as the prices of what they have to sell.

We have already seen that free coinage of silver would put the workingmen of this country at a great disadvantage. And farmers have learned in the last three years, if not before, that they can not sell if the workingmen can not buy. So that farmers as well as workingmen owe it to themselves to sustain the protective system and oppose free coinage of silver. [Applause.]

THE INTEREST OF MEN WHO ARE IN DEBT.

"But," says someone, "would not this cheaper dollar be of advantage to men who are in debt?"

Probably every man within the sound of my voice knows from experience what it means to be in debt. It is quite probable that most of us know exactly what it means to struggle on for years and then lose valuable property in consequence of debts. Every one of us has no doubt often wished that we never had borrowed a dollar or bought a thing that we could not pay spot cash for. But when one can buy to-day, on the faith that men have in him, something that he believes will surely be much more valuable in the future (say farm lands in Minnesota or real estate in Duluth), he is apt to yield to the temptation, and buy more than he should. This is the chief reason why so many men are in debt in this great and growing country. Most of us have discounted the future. What is the manly thing to do under these circumstances? Shall we try to defraud the men who trusted us, if we can devise some way to do it legally? The instinct of honesty in every man's soul shouts back the answer, No.

But someone may ask, "Have not the burdens of debt been made greater by legislation?" The answer is most emphatically, No. The treatment of debtors has grown constantly kinder, especially in the last half century. In days gone by the debtor became the slave to the creditor. The State stepped in later and said that slavery of that kind should end, and as a substitute it put the debtor in prison. But in no part of this country can anyone now be imprisoned for debt, unless the goods were obtained by fraud. (In this case the man is being punished for committing the fraud, not for being unable to pay his debts.) Some States are now so lenient to debtors as to almost make the law itself a temptation to repudiate one's just obligations. The property exempt from execution is so large as to enable a person to retain quite a snug estate and yet snap his fingers at his creditors. This fact is well known to almost everyone, yet it is not always thought of in this connection.

THE SO-CALLED "APPRECIATION OF GOLD."

"Well," some one says, "but hasn't there been an appreciation of gold, due to the legislation of 1873?" This is the favorite claim with free silverites, and it is probably the statement which more than any other has given their cause the recognition which it has received among men who intend to be absolutely just in all things. Let us examine this claim, therefore, fairly and squarely.

There are three phases of it:

1. That the act of 1873 was passed without due discussion, and that the discontinuance of the coinage of the silver dollar was done "surreptitiously"—that it was dropped out of the bill during its passage through Congress. The utter falsehood of this allegation I have already shown. The act of 1873, let me repeat, *never contained* a provision for the coinage of the standard silver dollar, and this fact and the reasons for it were fully pointed out. I am glad to note that no man in either House, so far as I can learn, has in this debate allowed himself to refer to this story. It is repudiated by every one who has ever really investigated the matter.

2. That silver has been "demonetized," driven out of use as money. This statement sometimes takes the form of "Half our money was struck down, and this doubled the purchasing power of the other half."

It seems strange, sir, that men will believe a story that is refuted by daily observation.

The coinage of subsidiary silver never was suspended; and the reports of the Director of the Mint show that more silver was coined into *dimes alone* in the *five* years from 1873 to 1878 than had been coined into standard dollars in *all* the years of our history before 1873. The coinage of standard silver dollars was resumed in 1878, and has continued from that day to this. Moreover, every one of those dollars (over 400,000,000 of them) is full legal tender, *precisely as they would be if we had "free coinage,"* unless the debtor voluntarily waives his right to pay in that form of money. So this phase of the free silverites' story has no substantial foundation, and has been dropped by all those whose statements are entitled to respect.

3. The third phase of the statement is the only one that is really worthy of serious consideration. "Has there not been an appreciation of gold, and is not this the cause of the recent fall in prices?"

Even if the answer were yes, that would siginfy nothing for the advocates of free silver, for as I have already shown there was a much greater fall in prices, from 1809 to 1849, when we had the "free and unlimited coinage" of silver. So-called "bimetallism" was impotent to affect the matter then, and would be now. But what is the whole truth in this matter?

Briefly stated, it is this: The price of each commodity depends upon *conditions peculiar to itself*, subject very slightly to modification by the price of some closely allied product. For example, the price of oats depends primarily and almost exclusively on the supply of and demand for oats, and the cost of raising them. But the demand for oats may be influenced somewhat by a very large or a very small crop of corn.

Anyone who will take an extended table of prices, showing the prices of many articles for a long period, month by month or even year by year, will discover the truth of what I have said. The charts used by me here this afternoon, though limited both in number of articles and extent of time, illustrate what I mean. A glance at them will show that the lines indicating the prices of different articles cross and recross each other, showing that there was no common influence governing them all, except the one pointed out by me, namely, that in times of war average prices go up while in peace the general tendency is down.

Now to the question. Since some things have fallen in price, while others have just about held their own, and the great one of all (labor) has advanced, it can not be truthfully claimed as a general proposition that there has been an appreciation in gold. Speaking of things whose prices have fallen, it may be proper (though somewhat confusing) to say that money has risen. This would be just as true with silver money as with gold money. But it is *absolute error* to say that the rise in the value of money is the *cause* of the fall in price. It is simply the *result*. This view is confirmed by that of the eminent German economist, Dr. Helferich (quoted as high authority by Soetbeer), who says:

> In earlier times, when there was no other medium of exchange than that which was also the measure of value, when insecurity of property and scanty development of trade prevented the use of credit, then changes in the only existing medium of exchange, a medium which stood by itself because no other commodity was in universal demand, necessarily exercised a great effect on prices. The situation is *essentially different* at the present time. * * * The greater the range of commercial transactions, the less is the influence exercised in the movement of prices by gold as a medium of exchange, and the more independent is the movement of prices. * * * The prices of commodities are fixed only by causes inherent to themselves (nach deren eigener Wertbestimmung) and gold is called cheap or dear according as the level of prices is high or low. Variations in the value of money are *consequences* of changes in the value of commodities, and *not their cause*.

WHAT WOULD CREDITORS NATURALLY DO?

There are some men now struggling with debt who have felt themselves tempted to support the free coinage of silver just because it would debase our currency, or, as they say, would give us a cheaper dollar and enable those who are in debt to pay more easily. In answer to the chidings of conscience they have said: "The dollar has been raised in value by legislation, now let it be lowered for a while in the same way." If the first part of their statement were true there would be both justice and reason in their demand; but as the premises are false the conclusion is unwarranted. There is only one way for an honest man to do, and that is, exactly as he agreed to do. His moral obligation is discharged only when he returns the kind of money that he borrowed.

But if there is any debtor who fancies that the election of a free-silver President and Congress would be of advantage to him, let him not be deceived.

The men chosen this fall will not take their seats until the 4th of March next, four months afterwards. Unless convened in extra session, the Fifty-fifth Congress will not assemble until nine months later still.

Let us suppose that the advocates of free silver sweep everything before them, capturing the Presidency and the House, and continuing to control the Senate. What would be the natural thing to expect? What would you do if some one owed you and you were not protected by a gold clause in the contract? You would demand what was coming to you. Every man having an obligation coming due would, in self-defense, demand all that might be coming to him while he could still get paid in money of full value. Debtors would be compelled to pay up at once or give new and better security, with a promise to pay in money of the present standard. On the maturing of their obligation they would certainly have to pay an enormous premium for the kind of money required. They would not escape making payment in money of the present standard, and would have to take their chances of getting enough more for their products to enable them to make the payment without actual loss. They certainly would not gain anything, and would take all the risk of losing—losing not only the premium which they would surely have to pay, but depending upon the forbearance of their creditors not to lose all they possess.

And what is the probability of the creditor being able and willing to grant concessions? Depositors in banks would withdraw their deposits. This would compel the banks to call in their loans. The four months between election and inauguration would be strewn with the wrecks of business houses now giving employment to millions of people. Gaunt ruin would stalk through the land, visiting every city, every village, every neighborhood, carrying down to destruction the bravest and best of the captains of industry. Panic, unreasoning panic, would seize the people. We know what even the possibility of going to the silver basis did in 1893; who can compute the effect that would be produced by the absolute certainty of its early arrival? The financial storm that swept over this country in 1893 would be a gentle zephyr compared with the cyclone which would then overtake us.

Creditors, as a rule, would therefore be unable, no matter how well disposed, to grant concessions to those who were owing them. Ninety-nine per cent of those who are in debt would be swept away. We who are in debt, sir, are the ones most vitally interested in the defeat, the overwhelming defeat, of every proposal for the free coinage of silver.

QUALITY OF MONEY MORE IMPORTANT THAN QUANTITY.

The plan of the free silverites, as all experience shows, would subtract from our volume of money a very large and exceedingly valuable part of it. It would diminish our money by the amount of our gold and its representatives, say $600,000,000. Its disappearance would be immediate. What could we get in its place? The total capacity of our mints is less than $90,000,000 a year. But we coined in 1894 about $30,000,000 of gold alone. For the last quarter of a century our gold coinage has averaged over $40,000,000 a year. At this rate it would take us a dozen years to catch up to our present volume of money, without allowing anything for growth. If there were nothing else to consider, sir, would not this strike any reasonable man as a foolish waste of time and energy?

Moreover, sir, we would have poorer money. The silver money

would be bulkier and less convenient than what we have now. And it would lack in stability. And, while "money makes the mare go," we should not forget, sir, that it must be *stable* money. [Laughter.] Silver has become so abundant that its value can not be depended on, as we have seen especially from 1890 to 1895.

So we would have less money and poorer money. And I now propose to show that the loss in quality would be the greater evil.

AN ILLUSTRATION AND THE INFERENCE FROM IT.

When I was a small boy I saw something that I shall never forget. It was at a circus. The clowns and some other employees arranged themselves in a circle. Let us say that there were twenty of them in all. Number 1 said to number 2, "I owe you two dollars; I'll pay up as soon as I can." Number 2 made this statement to number 3, number 3 to number 4, and so on around the circle, number 20 saying it to number 1. Number 1 shoved his hands into his pockets, and with a look of pleased surprise pulled out a dollar. Turning to number 2, he said, "I didn't know that I had that dollar; here's so much on account." Number 2 took the dollar, and with similar language passed it on to number 3, and so it went around the ring. Number 20 passed it to number 1, who received it with a smile and started to put it into his pocket, but instead he turned to number 2 and said, "I didn't expect to be able to pay you the balance so soon, but here it is." And so it went around the ring, finally coming back to number 1, who with a satisfied smile put it into his pocket.

To the little boy who looked, as I did thirty-odd years ago, this was simply the funny work of clowns, to be laughed at and forgotten. It was not forgotten, however; and to the man older grown and charged with the serious consideration of the affairs of a great nation it illustrates the profoundest truth in finance. What is that truth? It is this: *Under proper conditions, the working power of a dollar is beyond all human computation.*

I was very much surprised to hear this afternoon a man so prominent as my friend from Tennessee [Mr. McMILLIN] speak as if money paid for taxes was lost to circulation. I have often heard men speak as if there must be as many dollars in existence as there are dollars' worth of business to be transacted. What would a farmer say to an agent for bushel baskets who should attempt to convince him that he needed as many baskets as he expected to raise bushels of crop. The farmer would feel that his intelligence had been insulted, and justly so. He knows that he can use the same basket over and over again, and the quantity measured in a given time will depend on the speed with which the one handling it works. And then, if properly used, it is ready to do as much more.

So with the yardstick, the pound weight, and the dollar; each can do an almost infinite amount of work if properly used. What are the conditions of highest efficiency in money—under what conditions can a given amount of money do the most work? Let us examine our illustration.

The dollar in the circus ring did the work of forty dollars in five minutes, and was just as capable of accomplishing as much more in the succeeding five minutes. Why was this? Simply because *it moved promptly.*

Now, let us examine the matter a little more closely. *Why* did it move so? Why was each one so prompt to pass the dollar on? Because he felt good; that is, he felt honest. He felt that when he owed money and had it in his pocket the only proper thing for him to do was to pay up. Moreover, *each had confidence in the other.* There was a feeling of respect and good will among the men in that ring. This is one of the conditions under which money does its work most effectively.

What is the other condition? Why was each man willing to *accept* the dollar in payment of what was coming to him? Because he knew that it was a *good* dollar. He knew that whenever he wanted to use it, whether it might be that day or not for ten years, it would be *just as good as when he accepted it.*

Suppose, on the other hand, that each of the men had a dollar in his pocket, but that they distrusted each other, each fearing that if he let go of the dollar that he had he might not soon get another, although money was due him; and suppose that each was afraid to accept the money of the other, fearing that it might not be good when he wanted to use it; that it would depreciate on his hands—what would be the result? Why, of course, each would keep in his pocket what money he had and each would continue to owe the other; that is, the money would accomplish nothing.

In other words, sir, with good money and mutual trust one dollar did the work of forty, while with questionable money and distrust twenty dollars could accomplish nothing. In other words, sir, *the quality of money is immensely more important than its quantity.*

And, sir, a set of men who make it part of their plan to malign human nature and then offer us a debased currency would not only deprive us of part of the money that we now have, but they would paralyze the working power of what remained. [Applause.] They are not only morally wrong, but financially unwise. They and their policy are alike condemned. They offer poor money and distrust; we offer abundant money of the best quality and well-founded confidence. Is there any doubt as to which the American people will approve? [Applause.]

To employ a figure of speech, we contend that our body politic needs in its circulation *both* kinds of corpuscles, and that it needs them both *all of the time.* The best that is promised by the gentlemen on the other side is that their plan will furnish them alternately; one at a time, first one and then the other. That is, sir, they offer us a sort of chills-and-fever system, which would produce distress in life and would result in early death to business enterprise. Our plan secures to our circulation all the elements needed for the health of the system, including both kinds of corpuscles, all of the time, and in the proportions demanded by the most vigorous life. And behind this good financial blood, to prevent stagnation, to propel it in life-giving circulation, we place the great heart, *confidence*—confidence in our system and in each other, confidence in our system based on approved experience, confidence in each other based on the knowledge that, after all, men would rather do right than wrong. [Applause.]

THE DUTY OF THE HOUR.

I am profoundly grateful to the committee for its undivided and long-continued attention. Encouraged by your kindness, I have gone far beyond the scope of my original plan.

And now, in conclusion, I desire to emphasize the gravity of the situation and the necessity for plain speech. There is a kind of shrewdness, allied to cunning, which sensible and right-minded people have neither sympathy with nor respect for. It inspires in them only distrust and aversion. "What will Congress do?" is being asked all over this country and even beyond its confines. It is our evident duty to the people and to ourselves, to answer that question so plainly that no one need misunderstand our meaning.

Stripped of all the sophistries by which many good men have been misled into supporting it, this project of "free and unrestricted coinage of silver on private account" is simply a bold and reckless attempt to promote a private interest at the expense of the financial peace and business prosperity of the country at large. Let us show by our vote that we fully understand this and as heartily condemn it.

And then [turning to the Republican side] next summer, in our national convention assembled, let us speak the word of truth so clearly as to show that our great party, born of noble purposes and glorified by great names and mighty achievements, is worthy now as in the past to control the destiny of the country so dear to us all. [Long-continued applause.]

Cuba.

REMARKS

OF

HON. GEORGE H. NOONAN,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

The House having under consideration the following resolutions:

"*Resolved by the House of Representatives (the Senate concurring)*, That, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of our citizens, by intervention if necessary"—

Mr. NOONAN said:

Mr. SPEAKER: I wish to state as briefly as possible my reasons for supporting the resolutions of the Committee on Foreign Affairs.

Spain is justly tenacious of her colonial rights, and she has proudly referred to Cuba as the "ever-faithful isle."

On the other hand, the citizens of Cuba have of late years become restless and dissatisfied with their political status; so much so that they do not disguise the fact that the present struggle is to sever their fealty to the parent country and to become an independent state.

It is true the movement was at first considered merely an insurrection—only one of those political eruptions that have hitherto

become chronic in Latin America. This contest, however, can no longer be considered in that category. The vast multitude of news-reading people of this country, in view of the facts published during the past year, are unanimous in their conclusion that real war exists upon the island; that it has acquired such proportions as to resist with armed forces the movements of the troops sent to subdue them, and those troops have been frequently defeated.

The people of this country are appalled at the bloody, cruel deeds daily committed in the cities and towns of that once prosperous and peaceable country. Now, while no one will question the right of Spain to force submission to her rule, I contend that we as Americans have the right to protest against all kinds of savagery invoked to accomplish that purpose. When we are satisfied from all of the facts connected with this revolt that the people of Cuba have repudiated Spanish rule and have established for themselves a government, such a condition of affairs ought to be considered a revolution, and should warrant the assumption by the Government of the United States that the revolutionists are entitled to all of the rights and privileges accorded to belligerents. Such a course adopted by the United States is due to the people of any country similarly situated. It is simply the recognition of a fundamental rule respecting combatants that brought our nation into existence. It should be acquiesced in by Spain without equivocation or reservation, and can not be deemed an unfriendly act. We have no grievance with Spain, and would not be a party to any injustice or to the exercise of any doubtful authority with respect to her colonies.

The history of the acquisition of this and adjacent territory is our heritage, and the incident related by early writers of that grand drama where the generous Isabella assists the great navigator of the New World is cherished by every American as one of the noblest acts of royalty. On this question we are not called upon to decide the vital issue between the Government and its people. We see the inhabitants of that country, speaking the same language and professing the same religion, have announced their intention to repudiate the rule of the Cortes on account of wrongs and misrule inflicted upon them, and they claim that their contest is for the exercise of self-government, and all that they ask from us is to have conferred upon them the same privileges that were conceded to us in our struggle with Great Britain. It is useless to multiply words on this topic; the whole world is familiar with the tragic events of the past year, and it has been clearly demonstrated to every candid person that the Cubans are entitled to all of the rights of belligerents.

Coin Redemption Money vs. Irredeemable Paper Money—Practical Bimetallism vs. Silver Monometallism.

SPEECH

OF

HON. WILLIAM E. ANDREWS.

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. ANDREWS said:

Mr. CHAIRMAN: I am in favor of the coinage of the silver product of the mines of the United States into standard money side by side with gold, upon such conditions as will firmly maintain the parity of values between gold and silver dollar with dollar. If a clear and distinct proposition looking toward this result were before us, I would most gladly cast my vote in favor of its passage. But the measure that is before us now, in the form of the Senate substitute and the amendments proposed thereto, would, in my judgment, fail to accomplish the result to which I have referred. If the coinage could be limited to the product of our own mines and then the amendment offered by the gentleman from Pennsylvania [Mr. BRUMM] could be made to apply thereto, and the other portions of the Senate substitute should be stricken out, I could cheerfully accord my support to that kind of a bill when properly drawn and presented to the House. But the Senate substitute, in my judgment would, render the result to which I have referred absolutely impossible.

The title of this Senate amendment may be appropriately and correctly expressed in these words: "An act to increase the wealth of the silver speculators of the world and compel the plain, common people of the United States of America to pay the bill." [Laughter.] If the logical title to this Senate amendment should be expressed in words, it would read as follows: "An act to establish silver monometallism, to retire gold from use as money, to reduce all of our silver money to its commodity value, to depreciate all forms of our paper money almost 50 per cent on the dollar, to contract the volume of our money more than $1,000,000,000, and to introduce a reign of financial ruin at the ratio of 16 grains of adversity to 1 of prosperity." [Laughter and applause.] Hence, Mr. Chairman, believing it to be my duty to vote for what is in keeping with the welfare of the American people, I am compelled to record my vote against this Senate amendment.

But let us review the circumstances which brought this amendment before us in its present form.

On the 20th of last December the President called upon Congress for speedy relief in behalf of the National Treasury.

This House responded to that appeal on the 26th and 28th of the same month by the passage of two emergency measures which were designed to furnish the necessary relief.

The first bill was entitled—

An act to temporarily increase revenue to meet the expenses of the Government and to provide against a deficiency.

The second was entitled—

An act to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

The first is still in the dissecting room at the other end of the Capitol, but the second has escaped with barely life enough to return to the House for treatment.

The original House bill and the Senate substitute therefor involve the consideration of two important provisions of our national Constitution—

First. Congress shall have power to borrow money on the credit of the United States.

Second. Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

Acting under the authority delegated by the first provision, Congress has frequently authorized the borrowing of money to meet emergency demands and to strengthen and protect the credit of the Government. Accordingly, in 1875 an act was passed providing for the resumption of specie payments.

Through the operation of that law the nation made its peaceful transition from the shadows of depreciated paper money to the clear light of financial triumph, restored national credit, and commercial prosperity. Shall we perpetuate the policy of specie payments or shall we return to the basis of credit money from which we departed in 1879? If we answer in favor of a specie basis, the protection of the coin reserve becomes an imperative necessity to the safety and value of all forms of existing credit money. If we should answer in favor of a paper-money basis, we must prepare ourselves to accept all the penalties of an irredeemable paper money. Believing as I do that the interests of the American people will be best served by a financial system based upon metallic money, I cheerfully give my support to such measures as contribute wisely and necessarily to that result. That law has been the foundation upon which we have preserved the equal purchasing and debt-paying power of all forms of our money from 1879 to the present time. The country moved onward from 1879 to 1893 so prosperously and peacefully that the people had almost forgotten that the law of 1875 was still in force. During those years there was no occasion to invoke its operations, because the wise management of public affairs by the Republican party rendered the issuance of bonds unnecessary.

In this connection I desire to call attention to the fact that the financial statistics of the United States show that the coin value of our paper money in 1867 was about 71 cents on the dollar, and that our national debt, less cash in the Treasury, was then $69.26 per capita, and the interest paid annually thereon was $3.84 per capita. In 1873 this country was still on a paper basis, with its money at a discount of nearly 14 per cent. We were not then on a coin basis, although the silver monometallists frequently assume that we were. Please note the conditions of 1892, when our national debt, less cash in the Treasury, was only $12.86 per capita, and our annual interest payment was only 35 cents per capita, and every dollar of our paper money was worth 100 cents on the dollar throughout the commercial world. Please note the additional facts that in 1861, when the Republican party came into power, we had a volume of money amounting to $452,000,000, with nothing but a ruined national credit and a bankrupt Treasury behind it, and that in 1892, when the Republican party was voted out of power in both the legislative and executive branches of the Government, we had a volume of money amounting to $2,300,000,000, and every dollar, whether coin or paper, was worth 100 cents on the dollar—an average annual increase of nearly $60,000,000 from 1861 to 1892.

We had a population of 32,000,000 in 1861, and 65,000,000 in 1892. Thus it appears that, while our population had increased twofold, our volume of money had increased fivefold. Twice as many people in 1892 as in 1861, but five times as much money in 1892 as in 1861. These and similar facts of our financial history prove

conclusively that the Republican policy has always been, even under the most embarrassing circumstances, a debt-paying, credit-restoring, and money-producing policy.

It is very evident that the people see the grave mistake that was made in 1892 and will correct it at the earliest opportunity. It is firmly believed that the sale of bonds would have been unnecessary during the past three years if the Republican party had been continued in power. But the Republican party, although not responsible for that mistake and its consequent misfortunes, is called upon to undertake the task of repairing the damage wrought thereby.

The revenue measure passed by this House on the 26th of last December was intended to increase receipts to an equality with the current expenditures of the Government. The House bill for which this Senate substitute is offered was designed to supplement the law of 1875 and the revenue laws to be amended by the proposed revenue bill. If there had been a Republican majority in the Senate and a Republican President in the White House, there would have been no necessity for the introduction of these emergency measures. Under such circumstances we could have swept the Gormanized Wilson law from the statute books by the enactment of a genuine Republican tariff measure which would furnish revenues adequate to the current expenses of the Government. Thus the way would have been wisely prepared for proper currency and coinage legislation. But with the Senate under the control of a majority composed of Democrats and Populists and a Democratic President in the White House it was manifestly impossible to enact Republican measures. Hence the Republicans of the House waived party measures and came promptly to the relief of the National Treasury and the national credit by introducing emergency measures on nonpartisan grounds. The expenses were exceeding the receipts by nearly $43,000,000 per year, and when that distress message was sent to the House Congress and the country knew that the Secretary of the Treasury was bound to issue more bonds, whatever action Congress might or might not take. But nobody knew whether they would be sold publicly to the people of this country or secretly to a foreign syndicate. The proposed revenue bill would, if enacted into law, prevent a deficit and thus help to avoid the necessity of issuing bonds. But the Populists and Democrats who voted against that bill went upon record in favor of the continuance of the deficit and the issuance of more bonds to pay current expenses, while the Republicans who voted for that bill went upon record in favor of wiping out that deficit by an increase of tariff duties and also in favor of discontinuing the policy of issuing bonds to secure funds to pay current expenses. As bonds were bound to be issued, it was considered wise to amend the law of 1875 so that the Government could take advantage of the improvement made in its credit during the past twenty years. Accordingly, on the 28th of last December this House passed a bill to protect and maintain the coin redemption fund. That bill, for which this Senate substitute is offered, made the following provisions:

First. It simply authorizes the issue of bonds whenever it becomes an absolute necessity to protect the credit of the Government, but it does not order the sale of a single dollar of bonds.

Second. It would have enabled the Government to use short-time, low-rate bonds instead of long-time, high-rate bonds, if it should ever become necessary to issue bonds.

Third. It proposes to place our bonds with our own people instead of foreigners.

Fourth. It prevents the sale of bonds under the resumption law to pay current expenses.

Fifth. It guards against the retirement of the greenbacks.

Sixth. It strictly prohibits the secret sale of bonds to foreign syndicates or anybody else.

Seventh. It provides for the issue of certificates of indebtedness to meet any temporary deficiency of revenues.

Nevertheless, the Populists and others who oppose these bills have gone upon record—

First. In favor of continuing the deficit which their votes in the Fifty-third Congress helped to create.

Second. In favor of continued sales of bonds to pay current expenses.

Third. In favor of long-time, high-rate bonds instead of short-time, low-rate bonds, even when the sale of bonds becomes necessary to protect the credit of the Government.

Fourth. In favor of borrowing money under the resumption law to pay current expenses.

Fifth. They went upon record in favor of indorsing and permitting the continuance of secret sales of bonds to foreign syndicates.

The central purpose of the House bill and the law of 1875 is to authorize the Secretary to preserve in the Treasury "coin redemption money" sufficient to protect and maintain all forms of our paper money at par with coin. The defeat of that purpose would lead directly to a policy of "irredeemable paper money," whatever our system of coinage might be. Unless the Secretary has the necessary coin at hand to redeem the credit money of the Government, how long would such money remain at par? Our mints might be coining millions per day for the owners of gold and silver bullion, but that would not help the Government in any way to protect its credit money. Whenever the expenses of the Government exceed its income, a depleted coin redemption fund can be replenished only by borrowing money. Fortunately, from June 30, 1865, to June 30, 1893, a period of twenty-eight years, the revenues exceeded the expenditures every year and enabled the Government to reduce the public debt within those years nearly $2,000,000,000, an average reduction of about $70,000,000 per year. That was Republican administration.

But the deficit from June 30, 1893, to June 30, 1894, was $69,803,260.58, and the deficit for the next fiscal year was $42,805,223.18. The deficit from July 1, 1895, to February 13, 1896, amounts to $23,102,845.48. Thus it appears that the expenditures have exceeded the receipts since June 30, 1893, $135,711,329.24. During that same period the interest-bearing debt has been increased by the sale of bonds amounting to $262,315,400. This is Democratic administration.

Although the pending amendment is not germane to the House bill for which it has been substituted by the Senate, let us briefly consider it upon its merits in the light of the financial history of this country.

Acting under the second constitutional provision mentioned, Congress formulated a monetary system and established the Government mint. In the evolution of that system, the dollar was made the unit of value or measure. That unit was to contain 100 cents of actual commercial value. Up to that point it was immaterial whether that unit should be represented by metal or some other valuable substance. But, when the act of 1792 was drafted, it became necessary to select the substance or substances that should represent that unit of value. Quite naturally gold and silver were selected as the money metals, because and solely because of their inherent qualities and practical utility for such purposes. At this point, let us observe that those metals came into use as money in this country by statutory selection and not by constitutional mandate. After it had been decided that this unit, the dollar, should be composed of either silver or gold, two important questions arose, to wit:

How much silver must be put into the silver dollar? How much gold must be put into the gold dollar? These questions were answered by putting 100 cents' worth of uncoined silver into the silver dollar, and 100 cents' worth of uncoined gold into the gold dollar. Thus the gold dollar did not control the silver dollar, neither did the silver dollar control the gold dollar, as to the quantity of pure metal that each should contain. That matter was determined by the commercial and financial forces which made 1 grain of gold equal in value to 15 grains of silver, and 1 ounce of gold equal in value to 15 ounces of silver. From these facts it is evident that the commercial ratio determined the coinage ratio of 15 to 1, adopted by the coinage act of 1792. It is assumed here and elsewhere by the silver monometallists that the coinage ratio controls the market ratio. Alexander Hamilton spoke plainly on this point after he had carefully reviewed its national and international bearings. He said:

> There can hardly be a better rule in any country for the legal than the market proportion, if this can be supposed to have been produced by the free and steady course of commercial principles. The presumption in such case is that each metal finds its true level, according to its intrinsic utility, in the general system of money operation.

That rule is founded upon solid truth and can not be violated with impunity. It meant that the Government should receive a dollar of commercial value every time it coined a gold dollar or silver dollar for whose monetary value it thus became responsible. Then we had international bimetallism; now we do not.

But, whatever our system of coinage may be, we should faithfully observe this principle which was embodied in the act of 1792, and has been reaffirmed in all of our subsequent coinage legislation. A correct understanding of this important principle will avoid serious misfortune and correct many false notions concerning this question of coinage. The eloquent gentleman from Iowa [Mr. DOLLIVER] expressed this principle tersely and correctly when he said he was willing to stake this controversy upon two great principles:

> First. Every coin manufactured under free coinage will, in the long run, have the exact value of the metal out of which it is made.
> Second. When a nation creates two coins of the same denomination, differing in value, it stands to lose instantly the circulation of the one which is undervalued.

Turn upon this subject the light of history and philosophy, and you will have a demonstration of the correctness of his statement that these "two propositions express the uninterrupted experience of mankind and are confirmed by the testimony and authority of every great writer upon economical questions in every language of the earth." We may adopt convention resolutions and enact statutes, but they will vanish like the dew before the noonday heat of a July sun unless they are drawn in harmony with the natural

forces of the commercial world. A few facts cited from the financial history of our own country will illustrate this principle. Section 11 of the act of 1792 says:

That the proportional value of gold to silver in all coins which shall by law be current as money within the United States shall be as 15 to 1, according to quantity in weight of pure gold or pure silver; that is to say, every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion as to any greater or less quantities of the respective metals.

The meaning of this section is so plain that it can be easily understood.

Thus all coins, whether domestic or foreign, were to be recognized according to the principle that 1 grain of gold was equal in commercial value to 15 grains of silver, that 1 ounce of gold was equal in commercial value to 15 ounces of silver, and that 1 pound of gold was equal in commercial value to 15 pounds of silver. But notwithstanding the care with which Hamilton and his associates determined this coinage ratio of 15 to 1, it was soon discovered that both metals did not seek the mint readily, especially after 1805. About that time the divergence of the market from the mint ratio brought Gresham's law (the overvalued money metal always drives out the undervalued money metal) into operation, and before 1820 it had virtually driven gold out of use as a medium of exchange in this country. Then many began an agitation against the so-called "silver bugs" and the great conspiracy against gold, although our mints were then open to the free coinage of both metals at a fixed ratio. "What should be done?" "What could be done?" These were the burning questions of that day. Why had gold left our mints? The answer was soon found in the fact that gold could secure a better price in the open market and at the mints of other countries than it could secure at our mint. A careful examination disclosed the fact that even with international bimetallic coinage the commercial ratio had become almost 16 to 1, and that the ratio of 15 to 1 undervalued gold at our mints. Accordingly the act of 1834 was passed, making the coinage ratio approximately 16 to 1 by reducing the weight of the gold dollar from 24.75 to 23.2 grains of pure gold and from 27 to 25.8 grains of standard gold.

1834–1853.

At this point we meet a very important question, a question which underlies this whole problem. If, when we had international bimetallic coinage, the comparatively slight difference of less than 1 grain between the coin and market ratios drove gold away from our mints and out of circulation as a medium of exchange in this country, what would be the result if, in the absence of international bimetallic coinage, this Government alone should open its mints, as proposed by this Senate substitute, to the free, unlimited coinage of gold and silver at the ratio of 16 to 1, when the difference between the coin and market ratios is approximately 16 grains instead of 1 (slightly less) grain? If a difference of less than 1 grain between the coin and market ratios produced a "silver period" prior to 1834, what would a difference of 16 grains produce now? The history, the philosophy, and experience of the world answer with a unity of testimony, "Irresistible silver monometallism." Hence a vote in favor of this Senate amendment is a vote for silver monometallism, and those who favor its passage are silver monometallists and not bimetallists. Believing that the interests of the people of this country will be best served by the concurrent use of both gold and silver, with equal purchasing and debt-paying power, dollar with dollar, I am compelled to cast my vote against this Senate amendment, which would, if enacted into law, result in irresistible silver monometallism. But this act of 1834 did not settle the question permanently.

Within this period of forty-two years preceding 1834 our mints had coined $11,900,000 of gold and $36,400,000 of silver, three times as much silver as gold, but the gold had gone out of circulation because of its former undervaluation at the coinage ratio of 15 to 1. Now note the effect produced during the next twenty years by the coinage ratio of 16 to 1. From 1834 to 1853, inclusive, the coinage was $264,000,000 of gold and $52,000,000 of silver, five times as much gold as silver. Silver found a better price in the open markets and at the mints of other countries, and hence did not readily seek our mints for coinage.

1853–1873.

In 1853 Congress passed a measure containing the following provision:

That from and after the 1st day of June, 1853, the weight of the half dollar or piece of 50 cents shall be 192 grains, and the quarter dollar, dime, and half dime shall be respectively one-half, one-fifth, and one-tenth of the weight of said half dollar.

Under this law two half dollars contained 345.6 instead of 371.25 grains of pure silver, the ratio for this subsidiary coin thus becoming 14.9 to 1, while the ratio for the coinage of the silver dollar remained at 16 to 1. This change gave a profit to the coinage of silver bullion into subsidiary coin and consequently brought silver to the mint and returned such coins to the circulation of the country. The coinage during the next twenty years was as follows:

Gold	$575,900,000
Silver dollars	5,400,000
Subsidiary silver coins	53,600,000

Total silver coinage during this period, $59,000,000. The ratio (14.9 to 1) for the subsidiary coinage was about 1.1 grains less than the ratio (16 to 1) required for the coinage of the silver dollar. But note the vast difference between the amounts, $48,200,000. This change of ratio was the chief cause of that difference. If a difference of 1.1 grains produced such a difference then with respect to one metal, what would a difference of 16 grains between the market and coin ratios of two metals produce now? Every correct, candid judgment can give but one answer, namely, "Silver monometallism."

1873.

The law of 1873 made the following provisions:

SEC. 15. That the silver coins of the United States shall be a trade dollar, a half dollar or 50-cent piece, a quarter dollar or 25-cent piece, a dime or 10-cent piece; and the weight of the trade dollar shall be 420 grains troy; the weight of the half dollar shall be 12 grams (grammes) and one-half of a gram (gramme); the quarter-dollar and the dime shall be respectively one-half and one-fifth of the weight of said half dollar, and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

SEC. 17. That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth.

These sections are quoted from the coinage act which has played an important part in public discussions during recent years. Those discussions have led many people to believe that the coinage of silver was suspended entirely by that act. But what does the report of the Director of the Mint show on this point?

1874–1878.

From 1874 to 1878, inclusive, the gold coinage amounted to $208,500,000, and the silver coinage amounted to $103,600,000. Thus it appears that the silver coinage during this period of five years immediately succeeding the act of 1873 was almost as much as the total silver coinage of the preceding forty years and nearly three times the total silver coinage of the first forty years. The average annual coinage of silver from 1792 to 1878 was $2,600,000.

The act of 1878 authorizing the coinage of the standard silver dollar and restoring its legal-tender quality contains the following provision:

SECTION 1. That there shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act, which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be a legal tender, at their nominal value, for all debts and dues, public and private, except where otherwise expressly stipulated in the contract. And the Secretary of the Treasury is authorized and directed to purchase from time to time silver bullion at the market price thereof, not less than $2,000,000 worth per month, nor more than $4,000,000 worth per month, and cause the same to be coined monthly, as fast as so purchased, into such dollars; and a sum sufficient to carry out the foregoing provision is hereby appropriated out of any money in the Treasury not otherwise appropriated. And any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage.

This law has not been repealed with respect to the legal-tender quality of the standard silver dollar, and hence all standard silver dollars are still legal tenders as provided in said act. Nevertheless, the silver monometallists continue to ring the changes on the word "demonetization." But what is the meaning of that term? Demonetization means the act of withdrawing from use as money something which has already been made into money. Of course it is evident to every rational mind that it would be impossible to demonetize gold or silver bullion which has never been coined into money, for how can a thing be demonetized which has never been "monetized" or made into money? A correct understanding of the true meaning of that word will show that much of the talk about "demonetization" is an idle waste of time and worse than meaningless folly, because it is deceptive and misleading.

1878–1892.

During a period of fourteen years, 1878 to 1892, the gold coinage amounted to $550,300,000, and the silver coinage was $428,679,000, an average annual silver coinage of $30,600,000, making a net increase of $28,000,000 per year over the average annual coinage of silver for the first eighty-five years. From 1792 to June 30, 1895, our mints had coined $1,755,800,000 of gold and $685,000,000 of silver. The report of the Treasurer of the United States shows that our stock of gold on June 30, 1895, was $636,000,000 and that our stock of silver on the same date was $625,000,000. Thus it appears that we have less silver by $60,000,000 and less gold by $1,119,800,000 than our mints have coined since 1792.

It is also very evident that the forces of the commercial and financial world have drawn upon our gold and silver circulation respectively in the ratio of 18.6 to 1, so that we have lost $18.6 of gold to $1 of silver from 1792 to 1895. These brief references to our financial history suggest some very important lessons:

First. That our paper money will always go to a discount whenever the Secretary of the Treasury does not have at command a coin reserve sufficient to redeem outstanding credit money according to the terms of its issue. Hence it becomes an imperative necessity to maintain and protect the coin redemption fund unless we desire to adopt a financial policy based upon irredeemable paper money.

Second. That a coinage ratio which undervalues one of the metals included in a bimetallic system will ultimately retire the undervalued metal from use as money. If the undervaluation is slight, the retirement may be gradual; if it is great, the retirement will be speedy. When we correctly test this Senate amendment by this universal and inexorable law of bimetallic coinage, we are forced to the conclusion that, under existing circumstances, with a market ratio of 32 to 1 and a coinage ratio of 16 to 1 gold would be immediately driven out of use as money in this country. Hence the passage of this Senate amendment would defeat the will of the people who earnestly desire the concurrent use of both metals as money.

Third. That every coinage law enacted by the American Congress has been based upon the common-sense principle that every coin issued by our mints, whether it be gold or silver, should be, and, in justice to the interests of the people, must be, supported by a commercial value equal to the face value of the coin. Nevertheless, this Senate amendment provides in effect that every silver dollar to be issued by our mints under existing conditions should be supported by a commercial value equal to only one-half of the face value of such coin.

If enacted into law, it would invite the speculators and money brokers of the world to bring to our mints the silver product of 1894, for instance, amounting to 167,752,561 fine ounces, whose market value is quoted at $106,522,900, and compel the common people of this country to pay them $216,892,200 for it. A donation of $110,369,300 for only one year—a premium of more than 100 per cent according to the present value of our money!

Now, where is the justice and the business discretion in demanding that the farmers, the laboring men, the merchants, in short, the common people of this country, shall be compelled by law to pay this premium? It has been stated in this debate that there are about $65,000,000 of seigniorage now in the national Treasury? Where would that seigniorage, $65,000,000, have gone if the advocates of the "free-unlimited-16-to-1" theory could have had their way? They would have put it into the pockets of the mine owners and silver speculators. But, as they have not had their way, it is now a resource to the Government and belongs to all the people of this country and not merely to the few. In this connection, it should be remembered that Congress has no right to coin gold simply because it is gold or to coin silver simply because it is silver. It has a right to coin these metals into money solely because such coinage facilitates business transactions and thus promotes the "general welfare" of all the people.

DOMESTIC SILVER.

While I shall vote against this Senate amendment because it means silver monometallism, I would be glad to vote for a measure providing for the coinage of domestic silver on a plan of practical bimetallism. In my judgment this could be accomplished by the enactment of laws embodying the following provisions:

1. The duties on all imports from countries whose mints are closed to the coinage of silver should be made payable in gold. They demand gold from us and we can well afford to demand the same from them.

2. Upon all foreign silver we should levy a duty at least equal to the difference between the market and coinage ratios of gold and silver at our mints, and make that duty payable in gold. The revenues thus received would strengthen the Government for a larger use of silver. The silver product of foreign mines for 1894 was 118,252,561 fine ounces, whose commercial value was $75,100,900 and whose coinage value at our mints was $152,892,200. Now, if that foreign bullion had come to our mints under such conditions and under the rule which I have just suggested, its owners would have been compelled to pay into our national Treasury a duty in gold amounting to $77,791,300, the difference between its coinage and commercial values for that year; but the "free-unlimited-16-to-1" theory of the silver monometallists would have compelled the common people of this country to donate that difference to the silver speculators of foreign countries.

3. In the coinage of American silver there should be deposited with the Government a seigniorage equal to the difference between the market and coinage ratios of the two metals. Thus the owner of gold or silver bullion would receive the market price of his commodity, a dollar for a dollar, and the Government would receive 100 cents of commercial value for every dollar issued from the mint whose monetary value the Government must sustain. If the market and the mint ratios should become one and the same, no seigniorage would be required, and hence the coinage would be free. Under the operations of this rule, the Government would receive 100 cents in commercial value for 100 cents in coin; but it would receive only 50 cents in commercial value for 100 cents in coin according to the "free-unlimited-16-to-1" theory of the silver monometallists. This rule would have paid virtually from the national Treasury $31,422,000 for 49,500,000 fine ounces of silver, the American product for 1894; but the silver monometallists would have paid, under their "free-unlimited-16-to-1" theory, $64,000,000 for the same silver, or a bonus of $32,578,000 to the bullion owners. Thus it appears conclusive that the essence of the financial reforms proposed by these silver monometallists consists in compelling the common people to pay large premiums to speculators and money brokers.

A financial policy based upon such a great inequality of values would be like the house which was built upon the shifting sands. By a duty on foreign silver and a seigniorage on domestic silver we can protect the Government from financial risk and loss and at the same time realize all the benefits that can be secured from silver coinage. Whenever there is a difference between the coin and market ratios of the two metals that difference should be deposited with the Government, because we should insist at all times that every coin issued from our mints shall be supported by a commercial value equal to the face value of the coin. A financial policy based upon this principle of equal values will stand amidst the storms and tempests of the financial and commercial world like the house that was built upon the solid rock.

With such an import duty upon foreign silver and a seigniorage on domestic silver, I would gladly vote to open our mints to the coinage of the silver product of the mines of the United States at the present legal ratio, as the duty and seigniorage thus required would equalize the market and mint ratios whenever there is a difference between them. Thus we could safely continue the present legal ratio and avoid the confusion and expense incident to a recoinage of existing silver circulation. The people want and need good money sufficient in volume to meet the demands of business. They earnestly desire a gradual increase in the volume of money so that it will wisely keep pace with the increase of population and the increase in the volume of business. These are the things that I shall work for and vote for to the very best of my knowledge and ability, and I will not yield my support to a policy of financial ruin on the one hand or of financial stringency on the other.

Now, to the benefits of an adequate coin reserve and a practical bimetallism add the benefits of a Blaine reciprocity and a genuine protective tariff measure drafted upon the lines of the McKinley law, with its schedules wisely adjusted to present conditions of commerce and business, and prosperity will again return with a glorious emancipation of the financial, commercial, agricultural, and industrial interests of the country. Capital will then forsake its hiding places and labor will flee from its enforced idleness to receive its just rewards in the reopened channels of business and trade. Then hasten the election day of 1896, at which time the voters of this country will surely win this splendid victory by returning the Republican party to full power in both the legislative and executive departments of the Government.

Cuban Belligerency.

REMARKS

OF

HON. LUCIEN J. FENTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

The House having under consideration the following resolutions:

"*Resolved by the House of Representatives (the Senate concurring)*, That in the opinion of Congress a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of Americans by intervention, if necessary"—

Mr. FENTON said:

Mr. SPEAKER: I esteem it a valued privilege to have the opportunity of lifting up my voice and casting my vote in favor of the resolutions now under consideration touching the recognition of the belligerent rights of the struggling Cuban patriots.

Even had any doubt heretofore existed in my mind as to the absolute right of this Government to recognize the new Republic as a belligerent power, the action of the Committee on Foreign Affairs, after careful consideration of the gravity of the subject, would have dispelled such doubts.

I take it from what I can learn from precedents that there will

be no infringement of international law in the adoption of the pending resolutions. But the facts are that so-called international law is largely the product of monarchical governments, and has been formulated chiefly with a view to their interests, and especially with reference to their colonial possessions. There is, however, a higher law—a law of humanity, which appeals to that deep sense of justice innate in the hearts of the masses of civilized men, and which calls loudly for intervention when the "iron heel of tyranny" attempts to crush to earth those who seek only the exercise of those inherent rights and privileges which are the natural and rightful heritage of all races and tribes of the human family.

Whatever may be the subtleties of international law which would seem to legalize the butchery of helpless human beings made slaves by a relentless despotism, there should be no delay in thrusting them aside in order that substantial sympathy may be extended by the greatest Republic of the earth to the heroic and long-suffering people of Cuba.

In the barbarous warfare now being waged by Spain against the Cuban insurgents we, as one of the greatest nations on earth, are confronted with conditions so appalling and so revolting that to withhold our protest against a revival of the modes of warfare practiced in the Dark Ages would either be a confession of weakness on our part or a tacit approval of the war of extermination recently inaugurated by General Weyler and his hordes, without discrimination as to age, sex, or condition.

This Congress will not fail to enter a protest, but will voice the sentiments of 70,000,000 of freemen by sending greeting from the oldest and greatest actual Republic in existence to the newest, the beautiful Queen of the Antilles.

Popular Education and Religious Liberty.

SPEECH

OF

HON. THOMAS C. McRAE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 2, 1896.

The House, in Committee of the Whole, having under consideration the bill (H. R. 7664) making appropriations for the sundry civil expenses of the Government for the fiscal year 1897, and debate being in progress touching an item in the bill for the support of Howard University—

Mr. McRAE said:

Mr. CHAIRMAN: I am opposed to the proposed amendment, and I will briefly state some of my reasons.

I regret very much that some gentlemen have seen fit in the discussion of this question to erroneously charge the Southern States with unfair treatment of the colored people in the matter of educational facilities. I do not intend to be led into a discussion of that matter at this time, but I do want to say that I heartily join the gentleman from Texas [Mr. SAYERS] in denying these misrepresentations of our tax-ridden people. The negroes have been fairly treated in the State of Arkansas, and I believe they have been in the other Southern States; but if they have not been it is no reason why we should make this appropriation of $32,000 to a private denominational colored university located in this District, when we all know that they have the same opportunities to attend public free schools here as the whites have.

To my mind there is no theory consistent with our institutions upon which this appropriation from the general revenues of the Government, collected by taxation from all the people, can be justified. That the colored people need education in the South can not be denied; but it does not follow that Congress should take the money from the people of the States, black and white, and give it to a private university located in this city. I make no war on the Howard University. There is evidently a necessity for it, or it would not exist. I have nothing but words of praise and encouragement for its promoters and supporters; but I insist that Congress should not aid any educational institution except those which offer to the youth of our country an opportunity for a common-school education free of cost. If we have the power to aid the cause of education, we should help the public and normal schools in the States and Territories and not subsidize private universities, however deserving and philanthropic they may be. One of the great mistakes of the past in this and other countries has been that the aid to colleges and universities has been out of proportion to that extended to the public schools. The result has been that knowledge, that great agent, so powerful and dignifying to human nature, has been and is confined to a few master spirits, who, constituting the repositories of moral and mental power, have given laws, literature, and religion to the world and shaped the destinies of mankind.

> For just experience tells in every soil,
> That those who think must govern those who toil;
> And all that freedom's highest aims can reach,
> Is but to lay proportioned loads on each.

In the most remarkable period in the history of learning, when all that was beautiful and grand in conception, all that was sublime and powerful in thought or chaste in imagery, we find ignorance is the basis for human usurpation. This has always been and always will be the case. The mind is the ruling and controlling power of the intelligent few, to whose patient labor and systematic study the world is indebted for the thousand improvements and successful discoveries which are the pride and ornament of the nineteenth century.

This mind, which, when cultivated, adds so much to the dignity and happiness of the human family, dwells not alone with the favored few who are able to purchase for their children admittance in the great universities, but with the mass of mankind. This being true, there should be a wider dissemination of knowledge, that its rays should penetrate and expand the minds of the multitude.

Popular education is important in the sense that it tends to inculcate the principles which guarantee to everyone the noble and unconditional inheritance of freedom. The love of this freedom is implanted in man by divine hand, but the history of the human race in every age and in every condition of existence shows that it can not be propagated where ignorance is permitted to rule.

Just in proportion to the enlightenment of the mass of the people of any country will they be free—free to think, to expand, to grow and develop their powers and usefulness. Many illiterate freedmen believe that freedom consists alone in the right of franchise. The avaricious plutocrats who have grown rich by the favoritism of the Government think it consists in the rights of property. This is physical freedom—freedom of body—but not freedom of the mind. Real freedom embraces other principles—rights to the esteem and regard of society. It is the privilege of pursuing happiness in the path of light. What is this worth to one who has no power of mind to comprehend the nature of freedom? The splendor of the noonday sun, the gorgeous blazonry of the firmament is starless and rayless to the blind. Again, it is not out of place to consider this question with reference to our institutions. Our Government recognizes but one class—the people; and has but one legitimate aim—the interest and advancement of the people. Its protection rests in the hands of the people, and is the counterpart of themselves; and it must rise or fall according as the character of the people is elevated or debased. Its theory is equality—equality of power; and that implies an equality of knowledge. Then, should not the whole people be educated, so as to have a proper sense of their rights, to discern their true interests, and to know the important functions of our complex government and their duties under it? Popular education is the best security for popular liberty, in the neglect of which the knowledge accumulated by the few favored wealthy classes will sooner or later perish "like dry grass in the fire of popular fury."

If, then, Mr. Chairman, we are to remain a great and powerful nation, whose influence will be felt and whose intellectual preeminence will be acknowledged, the great body of people must be educated. That is the great mission of the public free schools in the States, and it is for the poor struggling States, where 50 per cent of the people can not read and write the language they speak, that I raise my voice as against Federal aid to colleges and universities in the great centers of wealth designed to prepare men and women for the professions. It is only through the aid of the public-school system that we can throw the light of civilization and intelligence into the hovels of the poor and give them exalted ideas of nature, man, and government.

I shall not take up the time of the committee to prove that the university in question is sectarian, for the amendment admits this by providing that no part of the money "shall be paid to any teacher or professor of theology or religion, or to any chaplain in said university." If you aid any department, you help the entire institution.

Mr. Chairman, I do not wish to be understood as opposing church schools and colleges, nor should I underestimate their great benefit to the cause of education and civilization. I affiliate with a Protestant denomination which believes in and advocates the highest education for its ministers, and its institutions of learning stand in the front rank of sectarian schools. It maintains an institution for the education of colored ministers in the State of Alabama, but, sir, it does this by private and voluntary contributions, and it will deserve to die when it asks Congress to aid it. The various churches in the South are doing as much for the cause of higher education as any other agency. I take pride and pleasure in saying that all of the religious denominations in the State which I in part represent are bending all their energies to arouse the aspirations of the people and to bring them to a realization of the dangers that threaten our institutions by the great mass of ignorance that surrounds them. They are lighting up the minds of the people with the torch of knowledge. In their own hopeful, faithful way and under their own independent con-

trol they are accomplishing what was not dreamed of thirty years ago. They have had many hardships and disappointments to encounter and overcome, but they have never thought of asking aid of the Government. May God speed them in the great work they have undertaken!

As a believer in the Christian religion and not opposed to sectarian education, and for the good of the churches themselves, I stand here to warn them as well as my countrymen of the danger of Government aid to any school, college, or university under church or private control. I say this in the interest of that pure Christianity which I believe exists in the hearts and homes of the great body of the people of this country, as well as for the regard I have for that charter of our liberties which provides that no religious test shall be prescribed for office. Let us keep the state and church forever separate and independent of each other. Let us keep the wall between the two, which was so wisely erected by the fathers of this Republic, so high and so strong that intolerance and fanaticism will never be able to overleap it. No church that has a proper regard for the holy work committed to its care would accept aid from a State or the Government.

Mr. Chairman, I think this a fit occasion to refer to some of the utterances of that great lawyer, statesman, jurist. and champion of the Christian religion, the late lamented Judge Black, of Pennsylvania, upon the question of religious liberty. I shall now ask the attention of the House to some of the thoughts suggested by him in 1856, because the principles are stated more forcibly and more strongly than I can possibly hope to state them. I wish I could burn the great truths he has so eloquently expressed in the minds and hearts of the members of this House and the people of our great country.

"We habitually use certain words and phrases, imported from the other side of the water, which are calculated to mislead us. One of these is the word 'toleration' as applied to matters of faith. It implies that we derive whatever religious freedom we have from the concessions of the Government; that the king in a monarchy and a majority of the people in a republic permit those who differ from them to live unmolested. This notion is wholly untrue. It is not a political privilege, but a natural and indefeasible right, which human government may protect but can not either give or withhold. If we are permitted to enjoy it, our thanks are due, not to any popular majority, but to Him who gave us being.

"Deus nobis haec iria fecit.

"Again, we hear it continually said by the wisest men among us that Christianity is part of our common law. No one has ever attempted to explain how this is to be understood. The law and the gospel are, in fact, wholly dissimilar in nature and essence, in origin, operation, and object; as different as the purity of the one must necessarily be from the coarse and vulgar machinery of the other; so different that they never can be mingled together without corrupting both. Christianity, they tell us, is a part of our law; that is, we have adopted the rules of the Divine Lawgiver to regulate our civil conduct, but, finding them very defective, we have made certain valuable additions. The Connecticut settlers resolved that they would live according to the laws of God until they had time to make better. So we profess to have taken a system formed in the councils of Omniscience, which came from the hands of its Author round and perfect like a star, filled with all forms of moral beauty and radiant with miracles of light, and we boast that we have adopted this system with such amendments as our superior wisdom has found it necessary to make. The proposition is blasphemous, and every Christian man should frown upon it.

* * * * * * *

"The manifest object of the men who framed the institutions of this country was to have a state without religion and a church without politics—that is to say, they meant that one should never be used as an engine for any purpose of the other, and that no man's rights in one should be tested by his opinions about the other. As the church takes no note of men's political differences, so the state looks with equal eye on all the modes of religious faith. The church may give her preferment to a Tory, and the state may be served by a heretic. Our fathers seem to have been perfectly sincere in their belief that the members of the church would be more patriotic and the citizens of the state more religious by keeping their respective functions entirely separate. For that reason they built up a wall of complete and perfect partition between the two.

"Their theory was one of absolute and unlimited freedom—a freedom 'as broad and general as the casing air.' It was their aim to take away every possible pretense which could be made by any human being to erect himself into a tribunal for the purpose of deciding matters supposed to be at issue between his fellow-creatures and their God. They thought they had succeeded in guarding the rights of conscience so that no majority would ever invade them. They gave to bigotry no possible chance for thrusting herself into civil affairs without doing so in flat rebellion to the Constitution.

"This liberty to think and do what they please extends to all manner of wrong-headed people, so long as they do not interfere with the rights of others. The widest departure from the faith of the majority is permitted as fully as the most trifling difference of opinion. The Baptist may safely confess his belief in immersion, and the Quaker, with equal impunity, may disregard all outward forms. The Catholic may celebrate the mass, the Jew may eat the passover, and even the Mohammedan may turn his face toward Mecca when he prays. Some very good men are disgusted at a liberality so excessive that it stands neutral between the purest truth and the grossest error. Their righteous souls are vexed from day to day by the fact that their Government is such a Gallio as to 'care for none of these things.' If it be wrong it can not now be mended. For those who are not content with it there is no help, except in emigrating to some place where persecution is not forbidden; and even then their comfort may depend very much on whether they are permitted to inflict the persecution or compelled to suffer it. A British officer, just returned from India, was asked what he thought of lion hunting. 'The sport,' said he, 'is excellent as long as you are hunting the lion; but it gets rather disagreeable when the lion begins to hunt you.'

"Heterodox people in this country are protected not only from burning, hanging, maiming, and imprisonment, but it is provided that even political disabilities shall not be imposed on them for their erroneous faith. One sect shall have no advantage whatever over another. You shall not reward the true believers by giving them all the public employments and punish heretics by a total exclusion. There shall be no religious test as a qualification for office. Make what other test you please. Exclude a man, if you like, for his political sentiments, or his moral conduct, for his wealth or his poverty, for his youth or his age; make war on him for the color of his hair, the length of his legs, or the shape of his nose; but let him alone about his religion; that is consecrated ground; that is a point on which the Constitution has refused to trust you with one particle of power; and wisely, too, for mortal men are not fit to be trusted with such power. They have never had it without abusing it grossly.

* * * * * * *

"The man who would enforce religious truth by penalties of any kind is not only cruel and inhuman but he is 'a fool as gross as ever ignorance made drunk.' He descends from his vantage ground, disgraces his cause as well as himself, and makes his adversaries hug their errors with more affection than ever. The logic of blood is just as powerful for the wrong as it is for the right, and Truth, in such a contest, is disarmed of her intrinsic and natural power. By a thousand arguments you can show that Christ was God and Mohammed an impostor; but the rack will prove as much for one as the other. It is possible to convert the most obstinate misbeliever by an appeal to his reason, but what progress will you make by burning his church?

"The experiment has been thoroughly tried both ways, with what success you know very well. When the church had no sword but the sword of the Spirit, when her disciples knew nothing of persecution except what they suffered, her influence was irresistible. But on the evil day when she joined herself to political power her 'invincible locks' were shorn away and she was compassed round with danger and darkness. Christianity, like the oak, will thrive only in open air. It grows and flourishes, and strikes its roots deep into the earth, and stretches its branches to the skies, and spreads them over the plain, while the free winds are permitted to play among its leaves and the sunshine of heaven to settle on its head. But it never was meant for a hot-house plant. It withers and dies when placed under the forcing glass and exposed to the stimulus of an artificial heat.

"The author of the Christian system has lent no sanction to any deed of hatred or violence which has been done in his name. When the prophet Elijah came out from the cave and stood on the mountain there passed in succession an earthquake, a fire, and a mighty wind, but the Lord was not in either. After these had gone by there came a still, small voice, and Elijah knew that the Lord was there. In the history of the Christian world we have seen the earthquake produced by the encounter of nation with nation, the fire of legal persecution, and windy storm of political disputation. It needs no inspired prophet to tell us that in none of these was there any sign of His presence who rules in justice and mercy. If He is not heard in the still, small voice that speaks to the reason and the conscience, then are we without God in the world, and consequently without hope.

"Let us not be self-complacent enough to suppose that we are in no danger of being tempted to repeat what others have done before us. This age is wiser than former times. We know more; but I am not sure that we feel any better. American, Republican, Democratic nature is still human nature, and has its full share of old Adam. Everywhere and at all times the spirit of persecution is the most insidious as well as the most deadly foe to public tranquillity, safety, and peace. It may steal imperceptibly over the popular heart at any moment, for its approaches are always noiseless and rapid. There is nothing less alarming in infancy, nor nothing more terrible in maturity. Its first whisperings are as

gentle and soft as the summer breeze; but its murmurs grow louder and stronger and wilder, until you have it in the crash and roar of the tempest. The whole heavens may be darkened to-morrow by a cloud which to-day is not bigger than a man's hand.

"*Facilis descensus averni.* If our judgments could once be obscured by a strong feeling of hatred and contempt for those who profess a false faith, how easy might it be to convince us that there is nothing either legally or morally wrong in using our numerical power to strip them of their share in the civil Government! We do that, and then come slander and insult of the injured party by way of excuse for the injury. Resistance—perhaps retaliation in some form or another—would almost certainly follow; and this would be an excuse for still further inflictions. The combat deepens every hour; our hatred grows stronger and more intense at every stage of the contest, until we are completely blinded by it; and—

> "Masterless passion sways us to the mood
> Of what it likes or loathes.

"The final issue would be the enactment of inhuman laws to suppress the religion of the minority, or else inhuman riot, bloodshed, incendiarism, perpetrated in defiance of law. 'You begin,' said Roger Williams to his opponents at Boston, 'you begin by reviling your erring brethren; you will end by taking their lives, for you are on a path where there is no hiding place.' He knew the philosophy of the subject exactly. It is idle folly to let loose the war dogs of religious bigotry, hiss them on their victims, and then expect them to be content with barking. It is their nature to tear the flesh and mangle the limbs and lap the lifeblood, and if you desire them not to do so, keep them chained up."

"Besides this natural tendency of the passions, the reason of the thing is altogether opposed to stopping after you begin. There is an argument in favor of killing heretics which you can never answer, except by totally denying all power to molest them. If it be our mission to propagate religious truth, as we understand it, by punishing those who refuse to accept it, why do we trifle with the great work intrusted to our hands? If we are responsible for the faith of others as well as our own, how dare we allow the God of the universe to be mocked and insulted by a false worship? We know very well that such errors are not to be eradicated except by destroying all who believe them. Nothing but the most thorough work will crush them out. If such be the service that God requires of us, let us perform it as men who know that we are working under our great Taskmaster's eye. Subdue the sentiment that might make you revolt against duty. Gird every man his sword upon his thigh; go through the camp and slay every man his brother and his friend. Feed the eagles with the flesh of all who dare to misbelieve; give their roofs to the flames, and let not one stone of their churches remain upon another. This reasoning is perfectly sound, if you concede the premises. Once let go your hold upon the true doctrine of perfect equality, and logic, as well as passion, will carry you irresistibly to the other extreme.

"The tendency of bigotry to run into wild extravagance is partly accounted for by its singular gullibility. Its capacity for swallowing falsehood is absolutely unlimited.

* * * * * * *

"This evil spirit of persecution is indeed very far from confining itself to the ignorant and depraved. It has often brutalized the kindliest natures, and under its influence the man of genius drivels like an idiot. I think no one can read the writings of St. Francis Xavier without being touched by the deep tone of his personal piety, yet he was the author of that diabolical invention, the Spanish Inquisition. That Calvin was the profoundest thinker of his age everybody admits; to deny the sincerity of his devotion would be simply absurd; but his name is inseparably linked with one of the foulest murders that ever blackened the face of the sky. Even the matchless intellect of Milton was subdued to the service of the same demon. When all his faculties were roused in defense of free conscience, there was one class of his opponents that he gave up without hesitation to the sword and the fagot. The great heart which conceived all the glories of the Paradise Lost had no drop of pity in it for the sufferings of the Irish. The loftiest hymn of his praise was sung to the man who carried the 'curse of Cromwell' through that devoted island.

"It not only nourishes those violent passions which lead to bloodshed and tyranny; it is almost equally objectionable for its meaner vices of treachery and fraud. It seldom approaches you in fair hostility, with its weapon drawn and its visor up; it hides its hideous face under some plausible disguise, and surrounds itself with all the machinery of false pretenses. It takes its adversary by the beard and affectionately inquires, 'Art thou in health, my brother?' while it stabs him under the fifth rib. Charles IX invited the leading Protestants of his Kingdom to a royal wedding, and took such order for their entertainment during the night that their mangled and lifeless bodies were scattered next morning through all the streets of Paris. This and other outrages were committed on the absurd allegation that Protestants were not, and could not be, faithful subjects or sound in their private morals. The statesmen of England, meanwhile, with a disregard of truth equally base, made the same accusation against Catholics, and on that hypocritical pretense compelled them, for more than a century, to groan under oppression compared to which the bondage of Egypt was mild and merciful.

"It engenders dissimulation of another kind. It pays an enormous premium for hypocrisy and crushes out all independence and truth from the hearts of the people. Sincerity, even when it clings to an erroneous faith, is the first of virtues. But the brave, true men, who would rather suffer than belie their honest convictions, are hunted down and sent to the stake, or at least are banished in disgrace from the public councils, while the knave or the coward, who is willing to profess whatever creed is safe or profitable, is rewarded for his baseness with influence, power, and place. Bigotry applies an infallible test to the merits of men. With unerring certainty she divides the chaff from the wheat, but the wheat she condemns to the unquenchable fire of her hatred, while the chaff is carefully stored away in her garner. Therefore it is that, when bigotry reigns, the public service is always crowded with the worst men. Hostility against an unpopular religion is easily simulated. When you make that a virtue, the infidel and the ribald scorner can be as virtuous as anybody. When that becomes a passport to the sovereign's favor, the state will be served, not by religious men, but by 'hireling wolves, whose gospel is their maw.'

"It is useless to describe any further the features of this monstrous demon. It is the Moloch of the earth, who sits on his shrine up to the ears in blood and compels the children of men 'to pass through fire to his grim idol.' It corrupts the morals, it pollutes the religion, it endangers the safety of any people who permit it to gain a foothold among them.

"But we may safely felicitate ourselves upon one thing. Our establishment of perfect religious liberty and equality has not only given happiness and peace to ourselves, but it has revolutionized the sentiments of the Christian world. We have led the grandest reform that has ever been seen since the days of the Apostles. England, under the admitted influence of our example, has in a great measure knocked away the shackles from the minds of her people. She has removed one political disability after another, until at last she welcomes men of every creed to her service. A Jew is sheriff of London, Catholics sit in her Parliament, and a Presbyterian was, not long ago, at the head of her cabinet.

"France has made a progress still greater. No one there thinks of excluding a man from office on account of his religion. For many years the prime minister, who mainly wielded the power and patronage of the kingdom, was the zealous defender of a creed which the king and four-fifths of the people rejected. Even the fund raised by taxation for purposes of religious instruction is distributed to preachers of the Protestant as well as the Catholic faith. In those parts of Germany where the religious wars were conducted with the greatest ferocity the Catholic and the Protestant sit side by side at the same council board and even worship alternately in the same churches. The inquisition has been abolished in Spain and autos-da-fé are heard of no longer in Portugal. Each Government in Europe still supports what it chooses to call the national faith, but offenses against the religion of the State are nowhere visited with those cruel and sanguinary punishments which used to disgrace the Christian name. The great light of religious freedom, which was seen at first only from the mountain ranges of the intellectual world, has already illumined the hillsides and promises soon to expel the deep darkness from the lowest valleys. May the time be speeded when the whole earth shall be bathed in its radiance!

"That America should now give up the proud position she occupies in the front of the world's great march, and skulk back like a recreant into the rear, is a thought which can not enter an American mind without causing a blush of insupportable shame. She stands pledged to this principle in the face of the world; she has solemnly devoted herself to its championship; she has deliberately promised it—not only to her own people, but to all others who should fly to her for protection—and, if she breaks her faith, it will be such perfidy as never blackened the brow of any power before.

"To avert a calamity so grievous, and to prevent a disgrace so indelible the country looks to her educated men. The unbroken and uncorrupted heart of the people will be always with you on the right side. But you are the bodyguard of freedom, and it is your special duty to carry her oriflamb in the van of every battle. Perhaps no dangerous service will be needed soon. You may safely sit still while your enemies merely talk against the equal rights of all the people. But if at any time hereafter, during the long lives which I hope you will all enjoy, some great combination should arise to stir up the bitter waters of sectarian strife, and to marshal ignorance, prejudice, and selfishness into a body compact enough to endanger the bulwarks of the Constitution, then let your flag stream out upon the wind."

> * * * Then stand you up,
> Shielded, and helmed, and weaponed with the truth,
> And drive before you into uttermost shame
> Those recreant caitiffs.

Retirement of the Treasury Notes and the Free Coinage of Silver.

SPEECH

OF

HON. CLAUDE A. SWANSON,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. SWANSON said:

Mr. CHAIRMAN: There are two propositions pending before us for acceptance or rejection. The first proposition is the one passed by this Republican House last December, authorizing the Secretary of the Treasury to sell $500,000,000 of 3 per cent bonds, with which to redeem all the outstanding Treasury notes, impound them in the Treasury, and thus contract the currency of this country to that extent.

When this proposal was first before the House I earnestly opposed it in a speech, and did my utmost to defeat it. I then pointed out that if this bill should ever become law, and the currency should be contracted to the extent designed, the actual money in circulation among the people would be less than half the annual taxes collected from them, less than half the annual interest paid, and would not be one-fortieth of the aggregate indebtedness of this country; yet this House, with its immense Republican majority, by a large majority vote passed this bill to destroy this vast amount of money that had been preserved to the people by a Democratic House of Representatives.

This bill went to the Senate and there the Democratic Senators, led by Senator JONES of Arkansas, aided by a few Republican and Populist Senators, defeated that iniquitous measure and substituted in its place a free-coinage bill, which that sterling Democrat from Georgia, Judge CRISP, now proposes that this House shall adopt instead of the bill it formerly passed.

Thus these two measures embody clearly and distinctly the two ideas struggling for supremacy in our financial system.

The proposal to sell bonds and to retire the Treasury notes, or greenbacks, is the only relief offered by the gold monometallist to remedy the present distressed situation, I am unalterably opposed to this. In the last Democratic House, when the friends of the present Administration sought to have a bill similar to this passed and the vast amount of paper money destroyed, I earnestly spoke and voted against it. I am glad to say that the bill practically similar to this was defeated in the Democratic House by a large majority.

This bill, indorsed nearly unanimously by the tremendous Republican majority in this House, commits this party in the future, without doubt and without question, to the maintenance of the gold standard in this country.

The Republican majority in this House exceeds 100, and the proposal for free coinage will be defeated by a vote equal to that majority.

The Republican party during the last canvass denounced the present Administration for selling bonds, and yet its first advent to power is marked by passing in this House, and insisting upon its enactment into law, a proposition to sell $500,000,000 of bonds and the retirement from circulation of that amount of money. The Republican policy, as here disclosed, shows a complete alliance with the gold monometallists of this country. It shows that the Republican party still adheres to the financial teachings of Senator JOHN SHERMAN, who in 1873 demonetized silver without cause, without excuse, and when it was at a premium over gold of 3 per cent. It shows that this party's policy is a contraction and not an expansion of the currency. It proves to the country what I have always known, that the party that wantonly destroyed silver will never consent to its rehabilitation.

In the future no one need be deceived. If he believes in and desires the remonetization of silver, he must vote for and form alliances with a party different from the Republican party.

I shall not go over the ground that I did in my former speeches and point out the great disasters that must and will inevitably follow if this Republican measure becomes law and one-third of the legal-tender money of our country be destroyed without substituting anything in its place. In them I have pointed out how this would be followed by further stagnation in business and by a further fall in the prices of all products and property.

These two measures, as I have said, present clearly the two methods existing for the settling of our financial troubles. One is the solution offered by the single-standard gold man, and the other is the solution offered by those who believe in bimetallism. The solution of the gold man, clearly stated, is: We have a currency of about $500,000,000 of Treasury notes, about $210,000,000 of national-bank notes, and about 425,000,000 of standard silver dollars, with only about $600,000,000 of gold. They claim that all this currency is kept in circulation and at par by being practically redeemed in gold. They claim that there is a "want of confidence" in our ability to redeem this in gold, and that "to restore this confidence" we should destroy or retire all of our Treasury notes. To retire these Treasury notes they propose to sell bonds either for them or for gold with which to redeem them. When redeemed they propose that the Treasury notes shall be either destroyed or locked up in the Treasury and kept out of circulation.

That this is their solution is shown by the recent sale of bonds and by the present proposition. When the Treasury notes have been destroyed, they propose to destroy the 425,000,000 of standard silver dollars in circulation. They claim that this is only fiat money, and that all fiat money should be retired. Their determination to destroy this large amount in silver dollars is clearly shown by the veto of the bill directing the coinage of the silver bullion in the Treasury, and the refusal of this single gold standard Republican House to permit us ever to vote on that proposition.

They are opposed to repealing the tax on State banks and giving us a local currency to supplement our national currency. This was disclosed when the vote was taken upon this question in the last Congress, when every single gold standard member, whether Democrat or Republican, voted against it.

Their determination is to destroy all the legal-tender money in the country except gold and national-bank notes redeemable in gold. They claim that when this is done, while the currency will be greatly contracted, yet confidence and credit will be restored. This is the entire relief offered by them to remove the present difficulties and bring back to the country the general diffusion of wealth and of prosperity.

I believe these remedies will but intensify and make greater the evils and distress which overshadow us to-day.

The "want of confidence" in our country to-day is not a want of confidence in our currency, but a want of confidence in the solvency and ability of the producing classes to meet their obligations.

I have yet to see a person who, when he refused another credit, debated in his mind whether the person would pay him in silver, gold, or greenbacks. The question in his mind is whether the person will be able to pay him at all. The want of confidence, if it exists, is because he is afraid the person could not pay in any kind of currency.

This want of confidence in the ability of the debtor to pay will be greatly increased if the single gold standard men should succeed in reducing by more than half what can be used in payments. Activity in business, credit, confidence, and prosperity can not be revived until the value of all products and property is restored. People will not trade nor buy on a declining market. A person will not buy goods on Monday when he expects they will be lower on Friday. A man will not purchase a lot, house, or farm this year when he sees them declining in value, as he expects to be able to do so for less the next year. Thus a declining market means losses, stagnation in business, and a paralysis of all activity.

Falling prices also create distrust among creditors, and hence a collection of their debts. A creditor will not extend time to a debtor when he perceives the property upon which he depends for payment each year lessening in value. Thus falling prices necessarily create a liquidation of all debts.

The aggregate minimum indebtedness of this country in 1890 amounted to $20,227,170,546. The collection of this vast indebtedness is proceeding not from any want of confidence in our currency, but from a want of confidence in the security and value of the property pledged for its payment. The truth of this is witnessed each day.

A bank loans money to a man of large business and great property. At the time of the loan the value of the property was far in excess of the amount loaned. The bank, seeing the great depreciation in property, refuses to extend the loan, forces collection, sells the property at a greatly reduced price, and the man who was rich finds himself bankrupt in the shrinkage of values.

Let us trace business in its actual ramifications and see if the sources of the present troubles do not arise from the low price of all products and property.

A bank in New York loans money to a country bank. That bank, at a greater rate of interest, loans it to merchants and business men. These buy or manufacture goods which they sell to farmers or the producing classes. The wheat, corn, oats, tobacco, hay, horses, and cattle raised by them sell so low that they are unable to pay the merchant or manufacturer. The merchants and manufacturers, not being paid, are unable to pay the bank from which they borrowed. This bank, not having its outstanding notes paid, is unable to meet its own notes with the New York bank. The bank in New York, knowing the conditions, becomes

uneasy. It forces the country bank to settle. This in turn forces the merchants and manufacturers to settle, who in turn force the farmer. The farmer, having disposed of his crop for less than cost of production, is compelled to have his farm and other property sold to pay his indebtedness. The value of his crops having been greatly reduced, his land and property engaged in the business are correspondingly reduced. Thus the sale, when made, fails to pay the merchant; the merchant, being unpaid, can not pay the home bank, and this bank can not pay its depositors or the New York bank. Thus we have a bankrupt farmer, a failed merchant, a broken manufacturer, unemployed laborers, and a suspended bank, with all its evils and losses. Hundreds of cases like this have occurred and continue to occur.

The single gold standard man is blind enough to tell you that all this arises from a lack of confidence in our currency, resulting from the greenbacks in circulation. His remedy is to contract the currency, and further lower the prices of all products and property. This remedy is as stupid as the old blood-letting process in medicine, which, when a patient was dying for want of blood, the ignorant doctors would bleed him. It is said that George Washington was killed by this remedy. It seems a strange fate that the country of which he was the father should now suffer from the same pernicious mistake.

It is evident to any thoughtful and reasoning mind that these deplorable conditions arise from the great, unnatural fall in the prices of all products, and that if the prices of them continue to decline these evils will be greatly increased. Relief from these ruinous conditions will not come until we witness an advance in the prices of products and of property.

David Hume, the noted philosopher and historian, long ago said:

> If prices rise everything takes a new face; labor and industry gain life; the merchant becomes more enterprising, the manufacturer more diligent and skillful, and even the farmer follows his plow with greater alacrity and attention. If prices fall the poverty, begging, and sloth that must ensue are easily foreseen.

What occasioned this present great fall in prices was the cause of our existing troubles. Whatever will restore these prices will remove debt, will revive credit and confidence, give employment to labor, bring back business activity and enterprise, and bless the land with plenty and prosperity.

We who advocate bimetallism—that is, the free and unlimited coinage of both gold and silver at the mints at a fixed ratio—believe that the great fall in prices results from the demonetization of silver and the adoption of gold alone as the standard of value. We believe that, this being the cause, prices will be enhanced or restored when we remonetize silver and let our standard of value rest, as formerly, upon both gold and silver. We claim that the value of everything is regulated by the great law of supply and demand. That this great and universal law of supply and demand regulates the value of money when exchanged for commodities.

We claim that as society has progressed, wealth increased, commerce enlarged, and tremendous new enterprises been undertaken, taxes, interest, and all fixed charges been augmented, the demand for money has become greater; that while the demand for money has greatly increased, yet the supply of it has been reduced half since 1873, when silver was demonetized and gold made the standard of value or money of final payment; that the demand for money of final payment having increased and the supply lessened by half, the value of things exchanged for it, or measured by it, must necessarily be reduced correspondingly.

Thus the natural result of destroying half of the money of the world would be to greatly appreciate the value of the remaining half and reduce to that extent the value of all products and property exhanged for or measured by it.

John Locke, the greatest of all English thinkers, many years ago said:

> For the value of money, in general, is the quantity of all the money in the world in proportion to all the trade.

This is a profound truth and but emphasizes what I here insist upon, that as our trade has wonderfully increased since 1873 and as one-half of our primary money was then destroyed, the result has been to double the price of gold, and hence reduce by half the value of everything sold for gold.

John Stuart Mill, the great thinker and writer upon this question, has well said:

> That an increase in the quantity of money raises prices and a diminution lowers them, is the most elementary proposition in the theory of coinage, and without it we should have no key to any of the others.

This self-evident truth must show that the destruction of half of the money of the world must result in an equal reduction in the price of all commodities.

This vital truth was recognized by the fathers of this Republic when our Government was organized.

Alexander Hamilton, in his famous report of 1791, said:

> To annul the use of either metal as money is to abridge the quantity of circulating medium and is liable to all the objections which arise from a comparison of the benefits of a full with a scanty circulation.

The immortal Jefferson, who had the interest of the people at heart more than any American leader and who was the father of the Democratic party, in February, 1792, in a letter to Hamilton, said:

> I concur with you that the unit must stand on both metals.

I stand here to-day as a Democrat, receiving my inspiration from Jefferson and not from the latter-day saints of the party, and repeat that "the unit of value must stand on both metals." That is Democracy. That is bimetallism.

In 1852 R. M. T. Hunter, one of the most talented and distinguished sons of Virginia, in a report made to the Senate as chairman of the Committee on Finance, said:

> But the mischief would be great, indeed, if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than half, and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race. We require, then, for this reason, the double standard of gold and silver, but above all do we require both to counteract the tendency of the specie standard to contract under the vast increase of the value of the property of the world.

Thus forty-two years ago, when we had the double standard and were blessed with unexampled prosperity and progress, this wise statesman and sage of Virginia prophesied the great mischief and evils which would inevitably follow if we should ever adopt but one metal as our standard of value. The Republican party in 1873 did just what this wise Democrat had over twenty years before warned them against. The debt, the misery, the failures, the stagnation in business, the unemployed labor, the low price of all products and property, and the scarcity of money bear evidence to-day of the complete fulfillment of this prediction. Thus we can trace back, clearly and distinctly, our present distress to the existence of the gold standard. Relief can not and will not come until we abandon this and again put our standard of value upon both gold and silver. But I will not stop the investigation of this question here.

I have proven that the present ruinous conditions result from the prevalence of this great fall in the price of everything and that relief will only come from a rise in prices.

I will now investigate the history of the rise and fall in the price of commodities, so that we can also ascertain the cause of the present low prices by historical data.

The London Economist, a paper of world-wide fame for ability and statistical knowledge, has compiled the average prices of 22 leading commodities on the 1st of January of each year from the year 1845, which is very instructive and significant. This compilation shows that the price of these 22 leading commodities increased in value from 1845 to 1873 and that from 1873 to the 1st of January, 1892, they had fallen about 33 per cent.

Augustus Sauerbeck, of the London Statistical Society, a man of eminence and ability, has investigated the prices of 45 leading and representative commodities on the London market, with the same astounding results, that the average price of these gradually increased until 1873, when the increase ceased and a decline commenced, which amounted, with the 45 commodities, to about 34 per cent in 1892.

Dr. Soetbeer, statistician for Hamburg, Germany, and a famous economic authority, compiled the prices of 100 leading articles on the Hamburg market and 14 of British exports with the same astounding result, that commencing with 1873 the average price of these had gradually declined, until in 1891 their decline amounted to 22 per cent.

In 1891 a committee of the United States Senate investigated the prices in this country of 223 articles, and in a report to Congress shows that since 1873 the average price of these has declined 28 per cent.

In 1872 the price of wheat was $1.24 per bushel; in 1894 it was 49 cents per bushel. In 1873 the price of cotton was 20.14 cents per pound; in 1894 it was 6.94 cents per pound.

Statistics will exhibit the same great fall in the price of tobacco, corn, oats, cattle, and horses, as well as in other commodities. These statistics are undisputed even by the gold monometallists. They are gathered from sources so reliable, presented by men of such reputation and authority, so in accord with our own knowledge and experience, that they can not and will not be denied. They all agree in one thing—that, commencing with the year 1873, the world over, prices have fearfully declined. Consequently it is evident that at that time something must have occurred to occasion a condition so world-wide.

We examine and we find that in 1872 Norway and Sweden substituted the gold standard for the silver standard. We find that in 1873 the United States abandoned the double standard of gold and silver and adopted the single gold standard. We find that the same year Germany went from the silver standard to the single gold standard. We find that in a very short time after Germany does this France and the Latin Union suspend the free coinage of silver and substitute the gold standard. Thus about this time occurred a convulsion in the financial world surpassing any which ever transpired in the physical world. The great com-

mercial nations of the world at this time went from the double standard of value to the single gold standard.

It is impossible to point out anything else that happened at this time to precipitate a fall in prices.

Why should prices be on an ascending plane until 1873 and then suddenly take a declining plane, which becomes greater each year? There were no great inventions in that year to cheapen production and hence to reduce prices. That year marked no overproduction so as to account for the sudden change.

Any thoughtful mind, bent upon the ascertainment of the truth, must be convinced beyond doubt that the low prices the world over, commencing with the demonetization of silver, must have been caused by that and nothing else.

I have proven that all the accepted authorities upon financial questions agree that when you lessen the amount of primary money you lower the price of everything exchanged for money. I have shown that the wisest of statesmen and thinkers years before prophesied that if the world should ever discard either of the two money metals and adopt only one lower prices would result and the very disastrous conditions that now confront us would inevitably come. I have traced from facts and statistics, undisputed by anyone, that the fall in prices commenced, as foretold, precisely at the time that the world destroyed silver as one of the money metals. Can arguments or facts be more conclusive? I have shown that this fall in prices commenced in 1873, and resulted from demonetizing silver and destroying its monetary functions. Thus the proper relief from the present distress is plain and unmistakable.

The relief which will restore prices, revive business, encourage industries, inspire confidence, give employment to labor, and pay debts is the restoration of silver as one of the money metals, as it existed prior to 1873.

We must right the crime of that year. We must leave the darkness in which we are now groping and return to the light and sunshine we then left.

We do not know where this new departure on the gold standard will take us. We do not even know that prices have touched the bottom. We have no experience behind us to tell us what will be the ultimate effect of the gold standard. The world never tried the gold standard prior to 1873. Since its adoption, in falling prices, in the vast accumulation of debt, in the numerous and immense failures, in the frequent and great panics, in paralyzed business, in the mistrust and wretchedness which overshadow the country, we witness its ruinous effects.

I am no alarmist, but thought and reflection teach me that if the gold standard is to be permanently maintained and the policies and designs of its advocates, as here disclosed, to be carried out that we will witness a yet greater fall in the prices of all commodities, and a further shrinkage in all values, with their attendant evils. It is inevitable.

We have just completed a reassessment of the land in my home county, Pittsylvania, and in the city of Danville, situated therein. The lessons taught by it are significant. It presents how frightfully the gold standard is shrinking the value of lands. In 1890 the real estate in Pittsylvania County was assessed at $4,012,464. In 1895 the assessment amounted to only $3,115,938, being $846,526 less in 1895 than in 1890. With all the buildings and improvements put upon the lands their value was reduced in five years over 20 per cent. The supply of land did not increase during the five years, while the demand did on account of increased population. Thus, under natural conditions, we should have expected an increase instead of a decrease in its value from 1890 to 1895. The lands there will now scarcely bring half as much as they would prior to the demonetization of silver.

The assessment for the city of Danville presents the same remarkable conditions. In 1890 the real estate assessed in Danville amounted to $5,170,928. In 1895 it amounted to only $4,650,406, being a reduction of $520,522. Here is a city with great improvements and buildings during this time, with increased population, yet, including all these, a reduction in five years of over half a million of dollars in real estate values.

When we ponder these startling figures, we can readily understand how farmers and business men who were formerly prosperous and rich find themselves bankrupt and impoverished. They have been ruined not by any fault of their own, but by the shrinkage in the value of their property. This shrinkage continues under this single gold standard, and no one knows when it will cease.

The world's supply of gold is too small to give value to its immense amount of property. Each year witnesses a greater struggle for its possession, and hence a greater sacrifice of property to obtain it.

The only way to remove the present evils and prevent the greater ones which await us is to again give silver the right of free and unlimited coinage at the mints.

This is the relief proposed by us in opposition to the Republican measure to sell five hundred millions of bonds and retire that amount of paper money. We are prepared to appeal to the country upon the two methods of relief here presented.

The gold monometallist can not deceive the people by a pretended friendship for silver in advocating an international agreement. There is not the remotest chance of an international agreement. The last hopes of one have disappeared. We were told to wait only until Lord Salisbury and the Tory party of England should come into power and soon an agreement would be reached. They have attained power by an immense majority and have distinctly stated that England has no intention of changing her present gold standard or entering into any international agreement for the coinage of silver. France and Germany have distinctly stated that they would be parties to no agreement without England. Thus there is no hope for any international agreement. It is useless to discuss an international agreement which will never come. The people who advocate delaying action upon the silver question until an international agreement can be reached are not friendly to silver and only indulge in it to delay action by creating hopes which will never be realized. The people of the United States must continue the present gold standard or must alone adopt the double standard of gold and silver. This is plain and clear. It is an issue which must be met, and which politicians may try but they can not dodge nor deceive the people upon.

If one favors the gold standard then he must approve the recent sales of bonds, the present Republican measure to sell $500,000,000 worth of bonds to retire that amount of paper money, and finally to destroy all the standard silver dollars. If the gold standard is to be maintained all of this will inevitably follow. It can not and will not be prevented. If one is opposed to all this and believes that it will bring disaster and not relief, then he should advocate that the United States should again reopen its mints to the free and unlimited coinage of silver and again make silver money of primary payment.

I believe this. I am opposed to any sale of bonds. I am opposed to retiring the greenbacks and contracting the currency. I believe that the coin notes should be redeemed in either gold or silver, at the option of the Government and not of the holder. I believe that a continuance of the gold standard will precipitate a continued and a frightful fall in the prices of all commodities. I believe that it has more than doubled all debts, taxes, interest, and fixed charges. I believe that when our mints are opened to silver prices will advance and the present troubles will disappear.

Being convinced that there is no chance for an international agreement, I am prepared to vote for this country at once to resume the free and unlimited coinage of silver.

No evils which the distorted imaginations of those who oppose this have presented can equal those which I am convinced will come if we continue the single gold standard.

I am convinced that the United States is able to do this and maintain all the silver coined at a parity with gold. I believe that when this is done silver bullion will rise in value until it is worth the coinage value. Every silver dollar coined to-day is at par with gold. It is only the uncoined silver that is not at par. All that will be coined at our mints and be made a legal tender will circulate at par with gold. We have experience in the past that should convince us that the United States is able to do this.

France, from 1803 to 1873, by having her mints open to the free coinage of both gold and silver at the ratio of 15½ to 1, maintained that parity between them the world over. She was able to do this despite the great disparity existing during that time in the production and quantity of gold and silver. We to-day are more prepared to do this than was France when she maintained it.

Statistics in 1870 show that France had about 10 per cent of the imports and exports of the world. In 1889 the United States had nearly 10 per cent of the imports and exports of the world. Mulhall, the world's greatest statistician, shows that the productive power of the United States is three times as great as was that of France in 1870 in proportion to the rest of the world. In 1870 France furnished less than 12 per cent of the world's great agricultural products, while to-day we furnish about 20 per cent of the world's supply. France in 1870 produced about 13 per cent of the world's manufactures, and the United States to-day furnishes almost 31 per cent of the world's entire product. In 1870 France had about 7¼ per cent of the world's railway mileage, while the United States now has about 44 per cent of the world's entire mileage. In 1870 France's banking power in comparison with that of the world was 4 per cent, and the United States to-day has 32 per cent of that of the world. In internal commerce and business we greatly exceed the proportion that was then possessed by France. Our wealth to-day in comparison with that of the world far exceeds what France's was in comparison with that of the world in 1870. Thus, by whatever test measured, the United States is able to do more than France did at that time. Yet from 1803 to 1873 France was able to maintain the parity between gold and silver the world over at the ratio of 15½ to 1. She did this despite the fact that at that time the average number of ounces of silver in the world was thirty times as great as the

average number of ounces of gold. To-day the number of ounces of silver in the world is about sixteen times as great as the number of ounces of gold—the ratio at which we propose to resume coinage. Thus to resume coinage as proposed the United States, with all its greater ability and power, would only have to do half as much as France accomplished for seventy years. There should be no question that we can do this. We are safe in making the venture. Success will crown our efforts. All we need is the courage and the resolution to establish our own financial system, suited to our wants and needs. I am convinced by thought and study that the United States is amply able to resume the coinage of silver and maintain its parity. I am convinced that when this is done prices will be restored and general prosperity and progress will return. I am convinced that the paths that the single gold standard men are trying to entice us into will but carry us further into the night of darkness and plunge us deeper into the abyss of sorrow and distress.

Mr. Chairman, this great issue is now before the American people and they are stirred upon it as they were never stirred before. They recognize the vast importance and the far-reaching consequences which will result from the proper settlement of this vital question.

The coming great conflict, which will be fought to the finish, is the battle of the standards. The people have become tired of the miserable makeshifts and the temporary policies which the politicians have devised to avoid the settlement of this great question. The people can be no longer deceived.

The great masses of the people are convinced that the continuance of the gold standard only benefits the capitalists and money lenders and is destructive of the interests of the laborer, farmer, merchant, and the business man. Politicians may try, but they can not create false issues. Issues exist in the condition and in the minds of the people, and they must be met. This great problem can not be brushed aside. Each year it rises into more and more importance.

The intense struggle of the people for this reform is but a supreme effort on their part to release themselves from the greed, avarice, and domination of the moneyed classes.

The boast of the Democracy in all the years of its history has been that it is the party of the common people; that it is the champion of the rights of the toiling laboring masses. It has never espoused the cause of classes seeking to enrich themselves by depredation upon the masses. It is too late for it to do so now. It can not climb upon the gold-standard platform without trespassing upon ground long since occupied by and belonging to the Republican party.

The issue is clear. The duty of Democracy is plain. It should make common cause with the people, remain true to its traditions and history, and carry the country back to that system and to those principles which our fathers founded and which gave us great prosperity and wealth, and the departure from which has brought us to our present woes and distresses. [Applause.]

War in Cuba.

SPEECH

OF

HON. WM. C. ARNOLD.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

The House having under consideration the following resolutions:

"*Resolved by the House of Representatives (the Senate concurring)*, That in the opinion of Congress a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

"*Resolved*, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

"*Resolved*, That the United States has not intervened in struggles between any European Governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba in consequence of its proximity and the extent of the commerce between the two peoples the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of Americans by intervention, if necessary"—

Mr. ARNOLD of Pennsylvania said:

Mr. SPEAKER: Being in hearty sympathy with the spirit of the resolutions which have been submitted to the House by the chairman of the Committee on Foreign Affairs, Mr. HITT, as a substitute for the concurrent resolutions of the Senate, with reference to a recognition of belligerent rights by the Government of the United States to the people of Cuba, who have maintained for the past year and who are at the present moment engaged in a manly struggle to throw the yoke of Spain from off their necks and enjoy the blessings of a free and liberty-loving people, I gladly avail myself of the privilege accorded members of this House to submit a few remarks as to why, in my opinion, the subject-matter as contained in this substitute should become the expressed sentiment of the people of our Republic.

Mr. Speaker, while it might be urged on the part of well-meaning members of this House that a policy of nonintervention between the contending forces on the part of the Government of the United States is the safest policy to pursue, yet there are certain circumstances in connection with this warfare between Cuba and Spain that would make it seem almost criminal to keep silent when liberty is being assassinated at our very doors. History furnishes abundant precedents for this step, and we only need refer to the act of Spain itself, which was swift to recognize the late Southern Confederacy. But, Mr. Speaker, I would not favor the adoption of this substitute in a narrow spirit of retaliation, but upon the high, broad, and sacred ground of humanity.

Gentlemen may say that by provision of international law we can not recognize the belligerency of the Cuban patriots. I deny it; and not having the time to refer to "case law," or precedents, I will content myself with the proposition that any so-called law which does not rest on the broad foundation of right, justice, and humanity has not and can not have the force of law. The Cubans for a long time have been surprisingly successful against the combined naval and military forces of Spain. They have in the field to-day a larger force of men than had the American colonies when recognized by foreign powers, and they are to-day engaged in the same kind of a struggle for their rights and liberties. They are absolute masters of a very large, if not the greater, part of the island, and have organized a government—provisional, it is true, but necessarily so—and have appointed ministers with authority to treat with foreign nations. What more will we ask? Shall we wait until the soldiers of Spain are exterminated or driven into the sea?

Again, the allegation of Spain that the insurgents are only a few bandits or guerrillas, and that a vast majority of the inhabitants of Cuba are loyal to the Spanish Government, can not be true, else why should Spain send thousands and tens of thousands of troops to the island?

But, Mr. Speaker, what does our neglect and failure to recognize as belligerents mean? It means that Spain can purchase of us any and all munitions of war, but Cuba can not have a musket or a cartridge; it means that if Cuba should obtain armed vessels and send them out on the high seas to attack the Spanish marines they would be adjudged pirates, and would have no protection or right of asylum in our ports; it means that every Cuban insurgent captured in battle will not be treated as a "prisoner of war," but will be killed by the edict of a Spanish court-martial; it means that the recall of that humane Spanish general, Campos, and the appointment in his stead of one Weyler, is to be followed by savagery and murder, as certainly indicated by Weyler's orders already published; and it means that the bright pages of the history of civilization of the nineteenth century shall be blackened by deeds dark as any that have ever disgraced the history of human government. And for this accomplishment the Spanish Government is most competent and eager. The gross illiteracy and dense ignorance and brutish savagery of a very large majority of her people make her indeed the Turkey of Western Europe, and Spain is the only country on the globe claiming civilization whose morals, habits, and aspirations have remained unchanged throughout the instructive years of many centuries. But, it may be asked, have we in our keeping the rights and liberties of the Cubans? Ah, Mr. Speaker, thousands of years ago the question was asked by Cain, "Am I my brother's keeper?" and from that day down to this very hour every lover of right and justice and liberty has with eager lips responded, "I am my brother's keeper," and by tradition, history, and principle the United States, in a certain degree, is the protector and keeper of their brethren, and this nation is to-day—let Spain and England know it—the natural guardian of the rights and liberties of every nation and every people on this continent.

Cuba should be and will be free; she will not always submit to the gross injustice and tyranny of Spain. Though terrible the travail, liberty will be the offspring of tyranny. It will not be the policy of the United States to make war on Spain to capture Cuba. England (which now strongly advises us and other nations to refuse recognition), with its usual greed, captured Habana in 1762, together with about $4,000,000, and only surrendered it in exchange for Florida. But, as I have said, this is not our policy, though the manifest destiny of the "Pearl of the Antilles" is a place in our crown.

From the days of the "Black Eagle," in 1829, down to this time, not twenty-five, not twenty, years have elapsed in which an effort has not been made by the Cubans for freedom. The torch of liberty, once lighted, never ceases to burn, and Cuba will yet be free.

In conclusion, shall we give them some hope by this action, or shall we follow the suggestion of our Attorney-General [Mr. Harmon], who said: "It behooves all American citizens who have respect for the laws or obligations of their country to be neutral in word as well as in deed." Let us decide it now. Let us say now, authoritatively, by the adoption of this measure, what I believe 90 per cent of the American people have already said. For struggling Cuba scattering words of pity have but little value. Let us now, in Congress assembled, show to the Cuban patriots and to the world that we still worship at the shrine of liberty and that freedom will not call on us in vain.

Shall tongues be mute when deeds are wrought
Which well might shame extremest hell?
Shall freemen lock the indignant thought?
Shall Pity's bosom cease to swell?
No; guided by our country's laws
For truth, and right, and suffering man,
Be ours to strive in Freedom's cause,
As Christians may, as freemen can,
Still pouring on unwilling ears
That truth oppression only fears.

"The fatherhood of God and the brotherhood of man" move us to delayed duty; common humanity demands action. Let it be flashed around the world that the United States of America hears and heeds the cry of liberty—Cuba must be free.

Cuba.

REMARKS

OF

HON. JONATHAN S. WILLIS,

OF DELAWARE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1896.

Mr. WILLIS. I ask that the Clerk read the pending resolutions.

The Clerk read as follows:

Resolved by the House of Representatives (the Senate concurring), That in the opinion of Congress a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and the United States should observe a strict neutrality between the belligerents.

Resolved, That Congress deplores the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interest of Spain, the people of Cuba, and other nations, would be in the establishment of a government by the choice of the people of Cuba, it is the sense of Congress that the Government of the United States should use its good offices and friendly influence to that end.

Resolved, That the United States has not intervened in struggles between any European governments and their colonies on this continent; but from the very close relations between the people of the United States and those of Cuba, in consequence of its proximity and the extent of the commerce between the two peoples, the present war is entailing such losses upon the people of the United States that Congress is of opinion that the Government of the United States should be prepared to protect the legitimate interests of Americans by intervention, if necessary.

Mr. WILLIS said:

Mr. SPEAKER: We are confronted with the alternative of interfering in the affairs of a friendly nation, so called, or seeing unchecked tyranny despoil one of our neighbors whose struggles and sacrifices for liberty have for generations challenged the admiration of the world. The question is, How far and how long can we be justified in bartering human rights and human life through international treaty for the good will and smiles of enthroned despotism?

How long is it our duty to stand by the highway and see the heart crushed out of the helpless by the foot of superior power for the sake of having it said that we have not broken our truce? If a strong man stops before your gate to rob and murder a feeble wayfarer how are you bound to tolerate the tragedy because of a former contract with the oppressor? How long shall we at our very doors permit the evening of the nineteenth century to be cursed with the horrors of the sixteenth?

How long ought the United States, the land of Washington and Jefferson, of Madison and Adams, of Monroe and Lincoln, which has put before the world the embodied formula that "All men are created equal"—which has sacrificed millions of lives and billions of treasure for the vindication of that principle—which has set itself in the forefront of the right wing of national progress—which has looked back on the laggard nations and beckoned them up with the right hand of fraternity; this land where there is no throne but the ballot box, and no king but the voter; the land of the free home, and the free press, and the free school, and the free Bible, and the gray eagle and the starry flag—the oriflamme of liberty—America! How long must she stand idly by and witness the cold and studied cruelties of half-civilized tyranny inflicted on an enslaved people within 150 miles of her coast?

We were shut out of Armenia by the Monroe doctrine, and there are those who would exclude us from the consideration of Cuban affairs by the cry of "treaty rights" and "neutrality." But, sir, is it neutrality? Sir, the neutrality asked of us is but an alternation between the salaams of organized atrocity and the wailing appeals of human agony. It requires a guaranty of the bloody domination of the one and a merciless denial of relief to the other; an indifference to the strokes of the murderer and an insensibility to the cries of the victim. Sir, there are times when exigent right rises above the realm of politics, and even of statesmanship, and reaches the realm of philanthropy; and this is one of those times.

There is enough in the Cuban problem to warrant our interference from the standpoint of commercial interest and national self-protection.

If the case of Cuba were transferred from America to Europe, we should soon see the military power of all the leading nations of that continent drawn up in battle line at the frontier of contention, and their squadrons of gunboats lying at the nearest offing waiting to be assured that no detriment came to their trade relations nor peril threatened their dominion. We have as much at stake—yea, more than Europe could have in such a contest. To say nothing of the destruction of our Cuban commerce and the material loss in that direction, we are imperiled by the possible issues of the conflict unless they be directed toward Cuban independence. That is the only sane, as it is the only merciful, solution of the problem. Spain must lose Cuba. That is inevitable. She has already exerted her utmost power, and exerted it in vain. Her army drafts have reached their possible practical limit. Her treasury is bankrupt, and her credit impaired almost to exhaustion. And yet the insurgent bands still have possession of five-sixths of the island, and hang daily on the flanks of the Spanish forces. The best general of the Kingdom has given up the cause as lost and gone home, and in his place Spain has sent over a military monstrosity; a half-demon representative of the times of Cortez, and Pizarro, and Torquemada, a being with a devil's head and a tiger's heart, that, like a sea monster struck by the lancers, she may make her death flurry her greatest jubilee.

Spain must lose Cuba. But into whose hands shall Cuba fall? Suppose Spain, realizing the impossibility of holding her, should bargain for her transfer to some foreign power in order to replenish her bankrupt treasury. The United States would not submit to that, and a war would be the result—probably a great and devastating war. This country would be blind and mad to permit any other foreign power to hold the key to the trade of Central and South America by way of the Caribbean Sea and Gulf of Mexico and the Mississippi. This country would be blind and mad to allow any great foreign power to set up a vast naval emporium within 200 miles of her coast, especially in addition to Jamaica, Bermuda, and Halifax. We are already virtually shut out from the seas. The gates of the Pacific have been practically closed against us. With the exception of Hawaii and Samoa, there is scarcely in that vast ocean a volcanic mound as big as a kitchen garden over which has not been raised a foreign flag; and unless we intend to content ourselves with our coastwise trade and interstate commerce, unless we intend to abandon the water and take to the woods, we must preserve our rights against the encroachments of the maritime nations of the world.

I say, sir, there is enough in this Cuban problem on the plane of merely material rights—the filthy lucre of national interests—to warrant our interference. But in a contention like this these are scarcely worth naming. When weighed against a human life, a human soul, all the sordid treasures of avarice are as a dust of the balance. In the providence of God, if there is one thing for which the American Republic above all other things was intended, it is to teach the world the value of a man. With this idea as the central thought, it will be possible at last to mitigate and eliminate the despotisms of earth and lift the multitudes into the light of freedom.

Sir, the resolution under consideration is as kindly as friendship should require, as moderate as statesmanship should ask, as little as truth can demand, and even less than humanity would dictate.

We have no disposition to provoke Spain, and we will not do it needlessly. We want her friendship. Her prosperity would give us pleasure. We should love to see her do honor to her ancient privileges and take her place among the civilizers of modern times. In such a posture we could forgive, if not forget, her old record of the past. If she would learn the lesson that to retain power she must use it prudently; if she would cease to believe that cruelty strengthens the State, that the sacrifice of the helpless can stifle the cries of liberty, that injustice and robbery and torture can create respect for her authority; if she would take counsel of such men as her Castellar and her Campos; if she would disclaim by a new régime the dread misrule and butcheries of four centuries, then we stand ready to go hand in hand with her to make better the condition of the race and to augment the happiness of the world.

Sir, it can not be fairly charged against the United States that

we have an itching palm for conquest. We spurn the idea that we seek territorial extension. We laugh at the thought that our policy is based on commercial greed. It is a libel. Every decade of our existence disproves it. Our whole history gives it the lie. Our ideal is that of diligence, intelligence, thrift, and morality. These we promote, and we promote them for the sake of justice, humanity, and happiness. These are the essentials of good government, and beyond these we desire not to go. We rejoice in our attitude; we are proud of our principles. And there is no just nation on the face of the earth which may not live with us in a state of uninterrupted peace. Sir, it is because of these views and this spirit that I give my support to this resolution. In my own heart I feel like taking a step even beyond this. I could vote for the immediate recognition of Cuban independence. I think such a step might be warrantable in the present conditions. But I am willing to stop here and wait for a time the issue of events. And mark my prediction, the independence of Cuba is the inevitable outcome. It will be achieved by the insurgents, sustained by the nations, and in a short time Spain herself will cease to regret it.

In the discussions of this question at the other end of the Capitol extensive quotations have been made from the history of the last Cuban insurrection, when the notorious Valmaceda was governor and commander of the Spanish army and Weyler, the present incumbent, was one of his subordinates. If those accounts are true, then they are enough to "turn the cheek of darkness pale." If those accounts are true, then the devil was holding carnival in the guise of a Spaniard. If those accounts are true, then there is a hell, and it has visited Cuba. But are those accounts true? I trust not. The gentleman from Georgia [Mr. TURNER] has in his remarks in this Chamber denied them—not because he could disprove them, but because his own just and gentle nature instinctively repels their possibility. I trust his noble impressions are a true interpretation of the facts, for it would be an unspeakable calamity to be forced to admit that there are within the bounds of Christendom beings called men so utterly lost and imbruted as to perpetrate deeds too damnable for other men to believe.

But there are about this case some facts well calculated to create doubt. When General Campos was recalled, for the asserted reason that he proposed to conduct the Cuban conflict upon the principles of civilized warfare, the Spanish Government failed to find anyone suited to succeed him save this same Weyler, against whom all these nameless enormities had been charged. And to show the spirit of the case and the policy to be pursued, I introduce two proclamations with which this person has inaugurated his reign:

PROCLAMATION NO. 1.

First. Those who invent or circulate by any means whatever news or information directly or indirectly favorable to the rebellion will be considered guilty of acts against the security of the country, as defined by article 223 of the Military Code, as they thereby facilitate the operations of the enemy.

Second. Those who destroy or damage railroads, telegraphs, or telephones, or interrupt the operations of the same.

Third. Those who are guilty of arson.

Fourth. Those who sell, carry, or deliver arms or ammunition to the enemy, or in any other way facilitate their introduction through the custom-houses. Parties failing to cause the seizure of such arms or ammunition will incur criminal responsibility.

Fifth. Telegraph operators delivering war messages to other persons than the proper officials.

Sixth. Those who by word of mouth, through the medium of the press, or in any other manner shall belittle the prestige of Spain, the army, volunteers, firemen, or any other forces operating with the army.

Seventh. Those who by the same means shall praise the enemy.

Eighth. Those who shall furnish the enemy with horses or other resources of warfare.

Ninth. Those who act as spies will be punished to the fullest extent of the law.

Tenth. Those who shall act as guides to the enemy and fail to surrender themselves immediately and give proof of their loyalty and report the strength of the force employed by the enemy.

Eleventh. Those who shall adulterate the food of the army or alter the prices of provisions.

Twelfth. Those using explosives in violation of the decree of October 17, 1895.

Thirteenth. Those who shall use pigeons, rockets, or signals to convey news to the enemy.

PROCLAMATION NO. 2.

First. All the inhabitants of the country within the jurisdiction of Sancti Spiritus and the provinces of Puerto Principe and Santiago will present themselves at the headquarters of a division, brigade, or column of the army, and provide themselves with a document proving their identity inside of eight days from the publication of this order in their respective townships.

Second. To go into the country within the radius of the columns operating therein, it is now necessary to obtain a pass from the mayor or military commander. Those failing to comply with this requirement will be detained and sent to Habana subject to my orders. In case of doubts as to the genuineness of a pass, or if there are reasons to suppose a party to have sympathy with the rebels, or to aid them in any way, due responsibility for the same will be placed upon the officer issuing the pass.

Third. All stores in the country districts must be vacated at once by their owners. Chiefs of columns must also decide as to the disposition of such property which, while being unproductive to the country, may at the same time serve as the habitation or hiding place for the enemy.

Fourth. All passes issued prior to this date are hereby canceled.

After reading these proclamations is it hard to believe the stories of his performances in the former war? Is he not a type of his illustrious predecessors, who devastated Mexico, ravaged South America, and swept the Netherlands with a tornado of fire and blood and butchery? And what may be said of the treatment of Cuba in the present and during the former insurrection may be said of her treatment from the beginning. The very first governor that set foot upon her soil, Diego Velasquez, met the full measure of the Spanish policy of blood. So unrelenting was his despotism, so terrific his cruelties, that the old aboriginal chief Hatuei said, in the extremity of agony, before he closed his eyes upon his torturers and upon the world, that if there were Spaniards in Heaven he preferred to go to hell.

A Spanish constitution was formed in 1812, intended to apply alike to the home provinces and to the ultramarine as well. It was the product of the remaining spirit of the Aragonian Kings which had not quite died out. But before it materialized Ferdinand VII regained the throne, and at once tore it into shreds and flung it to the winds. It was revived in 1836 by the Cortes, but despotic intrigues prevailed, and it was only applied to the home provinces while denied to those beyond the sea, and Cuba was again left in chains. Her brave people rose in 1868 and waged an earnest war for ten years, and were at last wheedled into submission by promises that were never kept. Once more they have struck for liberty. They have held in check for more than a year a Spanish army of a hundred thousand men. They are in possession of four-fifths of the island. They have organized a government. They have been brave in battle, courageous in suffering, and undismayed in the face of Herculean obstacles. And now they cry to us in the language of a common humanity to recognize them as men, as soldiers, as heroic strugglers for freedom.

To America they cry! the great sister in the family of the world's Republics, the advance guard in the immortal host of liberty. Shall we refuse them? We dare not! Justice would reprehend the refusal, humanity would frown upon it, God would curse it. Let us take warning of our privileges; let us use well our divine charter. We are not our own; we belong to the world. All mankind have property rights in our exaltation. Our national life is the product of impartation, and will only live by the same law. Let us beware. The Hindoo fanatic holds his arm above his head until it stiffens in the air and becomes useless. The pure and purling stream may be dammed up until it rots into a miasmatic and pestilential pool, holding poison in its waters, breathing death from its bosom. Virtue is vital, and action is essential to its life. Philanthropy must make reprisals or it will die, and philanthropy is the soul of liberty. Let America see to it that inanition and corruption come not to her in her high estate as the legacy of a criminal indifference to the agonizing appeals of a neighbor in distress.

Against Filled Cheese.

REMARKS
OF
HON. SAMUEL A. COOK,
OF WISCONSIN.
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, April 15, 1896,

On the bill (H. R. 8008) defining cheese, and also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of "filled cheese."

Mr. COOK of Wisconsin said:

Mr. SPEAKER: Under leave to print given by the House I hereby submit the following as an appendix:

THE FARMERS' TRADE-MARKS—"BUTTER" AND "CHEESE."

[Extract from the speech of Hon. NELSON DINGLEY of Maine.]

This is exceptional legislation. It is an appeal to the taxing power of the General Government for the purpose of accomplishing indirectly an end that is in the nature of the exercise of the police power, which belongs to the States. That, I think, must be conceded. While the measure is constitutional, under the decision of the Supreme Court of the United States, as an exercise of the taxing power of the General Government, yet I am frank to concede that the purpose had in view beyond the raising of revenue involves indirectly the exercise of a police power which, in general, should be exercised by the States.

Now, what are the circumstances which justify, from the point of view I have suggested, such legislation as the oleomargarine law and such legislation as is proposed in this bill? It seems to me that the circumstances to be considered are these: A great and overshadowing interest in this country, the most important interest in the country, has been seriously interfered with illegitimately by the discovery of certain methods of imitating products which have belonged to the farm. In my judgment, the name "butter" and the name "cheese," though not legally trade-marks, are, to all intents and purposes, from the point of equity, trade-marks that belong to the farmers of this and other countries; and any attempt on the part of anyone to palm off on the community imitations of these products and to sell them as the genuine products is contrary to the public interest, and so contrary to the public interest that if this illegitimate interference can not be reached efficiently and effectively by the States there is a justification in an appeal to the General Government to exercise its taxing power for the purpose of saving to the farmers of this nation the rights which properly and equitably belong to them in the trade-marks "butter" and "cheese."

Now, if it were possible for State legislation to accomplish all the ends proposed to be accomplished by this legislation, then this subject should be left to State legislation. But experience has shown that it is not possible for legislation by the States to reach the evil which is complained of; and it is an evil of gigantic importance, affecting the most important interests in this country.

RESOLUTIONS OF THE NEW YORK PRODUCE EXCHANGE.

NEW YORK, *January 30, 1896.*

SIR: I have the honor to transmit to you the following resolutions, which were unanimously adopted at a meeting of the members of the cheese trade of the New York Produce Exchange held yesterday, namely:

"Whereas the Hon. S. A. COOK, member of Congress from Wisconsin, has introduced in Congress a bill known as House bill No. 3010, providing for the regulating of the manufacture and sale of an article called 'filled cheese'; and

"Whereas the members of the New York Produce Exchange engaged in the cheese business recognize the great harm inflicted on the manufacturers of and dealers in pure full cream cheese, as well as the consumers of the same throughout the entire country, by the manufacture and sale of an article made of skimmed milk and filled with lard oil and other fats to imitate the pure full cream cheese, and to deceive the consumers of the same: Therefore,

"*Be it resolved*, That the members of the New York Produce Exchange heartily indorse the bill offered by the Hon. S. A. COOK, of Wisconsin, and earnestly urge the prompt action of the members of the House of Representatives and the Senate of the United States on this measure and its speedy passage, that the manufacturers and consumers of pure full cream cheese throughout the country may be protected against the injury inflicted on them by the rapidly increasing manufacture and sale of an article which has the semblance of the pure full cream cheese, but which is a mixture and compound of skimmed milk, lard oil, and other fats to imitate the genuine goods, thus deceiving the intending purchaser of full cream cheese, to the detriment of the manufacturer of the pure product of the dairy."

Respectfully,

FRED'K H. ANDREWS, *Secretary.*

Hon. S. A. COOK,
House of Representatives, Washington, D. C.

NOTE.—The foregoing resolutions were also passed by the New York Mercantile Exchange on January 29, 1896.

NEW YORK, *January 7, 1896.*

SIR: We have read with much satisfaction the bill (H. R. 3010) relative to "filled cheese," introduced by you in the House, and we are sure we express the unanimous feeling of the merchants in our city who are engaged in the butter and cheese business when we say that the provisions of this bill meet with their views in every way, and we would all be pleased to see it passed and become a law without any delay.

The adulteration of cheese has assumed enormous proportions in the last few years, and through its agency we can see our principal markets for pure goods being closed against us. The exports of cheese from our city from May 1, 1894, to January 1, 1895, were 45,479,000 pounds; from May 1, 1895, to January 1, 1896, 22,897,875 pounds, showing a loss this year as compared with last of 22,581,125 pounds. While we are not prepared to state that all of this loss of exports is occasioned by the prejudice which exists in England against our cheese by reason of the adulteration of the article, we have no hesitancy in saying that a very large percentage of the loss can be ascribed to the want of confidence on the part of English buyers in the purity of our product.

With the assurance of our hearty appreciation of your efforts, we are,

Yours, truly,

GEORGE B. DOUGLAS & CO.

Hon. S. A. COOK.

—

FORT ATKINSON, WIS., *February 22, 1896.*

DEAR SIR: I have the honor to inclose herewith copies of a memorial and a resolution which were adopted at the recent convention of the Wisconsin State Dairymen's Association held at Chippewa Falls. We had a large and enthusiastic meeting there, with representative men from various parts of the State, and there was no division of sentiment as to the desire to have Congressional legislation along these lines. * * *

I have the honor to be, very respectfully, your obedient servant,

GEO. W. BURCHARDS.

Hon. S. A. COOK,
House of Representatives, Washington, D. C.

MEMORIAL TO CONGRESS.

To the honorable the Congress of the United States:

The memorial of the Wisconsin State Dairymen's Association respectfully represents to the Senate and House of Representatives of the United States that it is assembled in its twenty-fourth annual convention in the city of Chippewa Falls, with dairymen and farmers in attendance literally from all parts of the State; that it is now and for many years past has been the accredited representative and exponent of the dairymen and dairy interests of the State of Wisconsin, and receives from the State treasury by annual appropriation a considerable sum of money to assist it in promoting the objects which are committed to its supervision.

Your memorialist therefore prays that the statements and the petition contained in this appeal may be accepted as though signed in person by the owners of the nearly 1,000,000 cows in the State, and an equally large number of persons who are desirous of securing pure dairy products for use on their own tables and at the tables of the hotels, eating houses, and restaurants where they are obliged to eat when away from home.

Wisconsin has an annual cheese product of over 50,000,000 pounds, all manufactured under the most efficient laws to prevent its adulteration or sophistication, but in the markets of the world, both foreign and domestic, this cheese has to come in competition with an adulterated article made from skim milk and lard and other cheap and unwholesome fats, and so shaped, colored, trimmed, and even marked as not to be distinguished from the genuine product. The result is, not only that every pound of this filled cheese displaces a pound of pure cheese, but its unsavory and unsatisfying quality disgusts the would-be consumer, and he forbears thereafter to purchase cheese of any kind. It results further that the demand for cheese being thus lessened, more and more milk is turned to the production of butter, and the production of this article is thereby abnormally increased.

State legislation has proven itself inadequate to reach and correct these evils, and your memorialist would represent that Congress can at once and with great propriety provide additional revenue, and at the same time subserve the cause of good morals and afford a measure of much-needed protection to the producing dairymen of the country, by laying a moderate tax upon filled cheese and placing its manufacture and sale under the supervision of the Treasury Department of the United States.

Your memorialist therefore respectfully urges early and favorable consideration for bill No. 3010, H. R., known as the Cook bill.

A true copy.

D W. CURTIS,
Secretary Wisconsin Dairymen's Association.

MEMORIAL OF CITIZENS OF NEENAH, WIS., MOBILE, ALA., AND OTHERS, FAVORING PASSAGE OF H. R. 3010.

To the Chairman and Committee of Ways and Means, to whom was referred House bill 3010, to regulate and control the manufacture and sale of the article known to the trade as "filled cheese":

We, the undersigned, feeling the great injury this article is doing to the market for dairy products and the ruinous effect it is having on the great dairy industry of the United States, especially in the manner in which it is placed on the market, branded as "cream cheese," "full cream," etc., do earnestly ask that you will do all in your power that the bill may be enacted into law.

Signed by N. Simons & Co., of Neenah, Wis.; W. F. Abrahams, of Mobile, Ala., together with names of 478 citizens of the cities of Mobile, Ala., Neenah, Menasha, and the towns of Clayton, Manchester, Winneconne, and Vinland, Wis., consisting of merchants, manufacturers, cheese makers, farmers, and tradesmen, introduced by Mr. Cook.

FEBRUARY, 1896.

—

VAN DYNE, WIS., *January 30, 1896.*

DEAR SIR: Please find inclosed petitions signed by our milk producers and manufacturers. Every man that I approached on the subject was only too glad to sign it. Owing to the stringent law now in existence in Wisconsin, I believe there is but little, if any, manufactured in this State. The trouble that now exists is this: We are virtually boycotted from the English market on the ground that we are still manufacturing filled cheese, which we have every reason to believe is not a fact.

I remain, as ever, yours, truly,

JAMES B. WATSON.

Hon. S. A. COOK, *Washington, D. C.*

To the Senate and House of Representatives of the United States in Congress assembled:

Your memorialists, engaged in the dairy industry of the United States, believing that this great industry is being ruined by an article that is manufactured from materials other than milk or cream, known to the trade as "filled cheese," but which is sold without brand or register to show the real character of the article, and is placed upon the market as American cream cheese, thereby causing serious damage to legitimate dairying interests:

Therefore, we, the undersigned, do respectfully petition your honorable body that bill (H. R. 3010) relating to the manufacture and sale of "filled cheese" may be enacted into law.

And your memorialists will ever pray, etc.

James B. Watson, general store; Charles Nable, Humphrey L. Williams, Werner Disch, Richard Price, Fred Bladow, Albert Wilke, farmers, and carry milk to cheese factory; E. Hoyt, stock buyer; Gustav Wilke, John McArdle, Chas. Tonk, Herman Schultz, John J. McGowan, H. Bamtrock, Carl Knaik, Hermann Marth, farmers, and carry milk to cheese factory; Tim Bergin, farmer and milk producer; Robert Gralaff, Ferd Freiberg, Henry Rickert, Robert Fox, Charles Finder, David Price, Julius Wachholz, Willie McMonagle, D. R. Watson, farmers and dairymen.

—

NEENAH, WIS., *February 1, 1896.*

DEAR SIR: Yours of the 30th to hand and noted. I see that you are getting support by the New York Produce Exchange, and also other States that are interested in honest dairy products are supporting your bill. I have no doubt but what your bill will go through, but it will be hard work, as is the case with any honest bill that is brought before Congress; but I hope that the committee will give it due consideration and will report favorably upon it, and if they do so they certainly will do a great deal of good to the whole country.

We see that gold is going out of the country, and if we had made honest products we could have had $3,000,000 or $4,000,000 of this gold in this country. As it is we are about this amount of money short on cheese alone, to say nothing about other dairy products. And if this law is passed it will have a great effect upon the dairy products in this country for the coming year, and there is no doubt but what all the foreign nations will be looking this way for a good share of their cheese and will have a great deal more confidence in them than they are having at the present time.

Hoping that you will get the bill through, I remain,

Yours, very truly,

N. SIMON,
Manufacturer and Dealer in Cheese and other Dairy Products.

Hon. S. A. COOK, *Washington, D. C.*

—

FEBRUARY, 1896.

To the Senate and House of Representatives in Congress assembled:

In regard to House bill 3010, to regulate and control the manufacture and sale of the article known to the trade as "filled cheese," we, the undersigned, feeling the great injury this article is doing to the market for dairy products, and the ruinous effect it is having on the great industry of the United States, especially in the manner in which it is placed on the market, branded as "cream cheese," "full cream," etc., do earnestly ask that you will do all in your power that the bill may be enacted into law.

Signed by Otto Funk and 124 others, farmers, cheese makers, and dealers of Calumet County, Wis.

—

BERLIN, GREEN LAKE COUNTY, WIS., *April 10, 1896.*

I and all the neighbors want your antifilled-cheese bill passed.

Dairying is the principal business in this locality.

Yours, very truly,

WM. L. WILLIAMS.

Hon. S. A. COOK, *Washington, D. C.*

—

BRILLION, WIS., *January 27, 1896.*

DEAR SIR: Your letter regarding the bill (H. R. 3010) defining cheese and also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of filled cheese at hand. As I am not able to be present at the hearing of said bill, I will do as you requested, state my opinion on same in writing.

As far as I have learned, the people in this vicinity are heartily in favor of said bill, as I am myself.

Very respectfully,

PETER REUTHER.

Hon. CHARLES H. GROSVENOR, M. C.,
Washington, D. C.

CHILTON, WIS., *January 3, 1896.*

MY DEAR SIR: I write you in regard to the bill (H. R. 3010) "defining cheese," etc. Now, I do hope your committee, to whom the matter is referred, will do all it can to see that the rights of the dairymen of this country are protected against this humbug, "filled cheese," which honest dairymen have had to contend with in the last few years. It has almost ruined our Wisconsin cheese, so much so that the dairymen have become discouraged. This is an important matter, one of vital interest to the country, and I hope that something may be done to protect us against this gigantic fraud.

Yours, very respectfully,

GEO. D. BREED,
President of the Calumet County Dairy Board of Trade.

Hon. JAMES A. TAWNEY, M. C.,
Washington, D. C.

BRILLION, WIS., *January 21, 1896.*

DEAR SIR: Hope the bill to regulate the manufacture and sale of filled cheese will become a law. This is also the feeling around here.

Yours, truly,

W. V. McMULLEN.

S. A. COOK, *Washington, D. C.*

CATO, MANITOWOC COUNTY, WIS., *January 23, 1896.*

Copy of filled-cheese bill, H. R. 3010, received. I consider it a good bill, and every dairyman in Wisconsin will sign a petition favoring it, and they will say the tax and license in your bill is not too high. If you can get the bill through you will have done a great work for the dairymen and farmers of Wisconsin and all other States. The filled-cheese manufacturer is in no wise a dairyman. He is getting rich out of the honest farmer in a dishonest way.

Yours, truly,

C. W. SWEETING.

Hon. S. A. COOK, *Washington, D. C.*

Uniform Law on the Subject of Bankruptcy.

REMARKS
OF
HON. JOSEPH E. WASHINGTON,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 28, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcy throughout the United States.

Mr. WASHINGTON said:

Mr. SPEAKER: It has been said by some who are opposed to bankruptcy legislation that the Torrey bill reported from the Judiciary Committee is unfair to debtors in that it could be made a cruel instrument of oppression in the hands of their creditors. The provisions of the bill contradict this statement.

EFFECT OF A BANKRUPTCY LAW.

Under existing State laws creditors individually have their rights and remedies against their debtors; they will continue to have them just the same even if this bill should pass. Under existing laws debtors must respond so far as they can to all of their legal liabilities to individual creditors; they must continue to do so whether this bill pass or not. The elements added to present conditions by the passage of this bill, broadly stated, are simply these: A debtor may be a defendant at small expense in one suit in which the judgment if rendered against him will be for the financial benefit of his creditors collectively, and he will secure a discharge, if honest, instead of being a defendant at large expense in many suits in which the judgments if rendered against him will be for the selfish financial benefit of only the one, two, or three creditors instituting suit, and without securing a discharge.

"The greatest good to the greatest number" is the principle invoked by this bill.

Usually, under the present State laws, when the lawsuit is over among his creditors, in their individual capacities, the debtor is without property, a considerable part of what he had has been spent in costs, and he owes all of his debts, except such as may have been paid by a sacrifice sale of his property. Pursuant to the proposed bill, both the debtor and his creditors will be in a better condition than under present laws. In the event of dishonesty on the part of a debtor or of his becoming insolvent and unable to prevent protracted defaults upon payments due or a distribution of his estate other than ratably among creditors of the same class, he will be adjudged a bankrupt after a fair and impartial trial. In that event he will receive his exemptions according to the laws of the State in which he lives and be discharged if honest. If dishonest he will not be discharged, and may be punished. Those who contributed at least a part of his estate will collectively receive, promptly and at small cost, a share of it, according to their equities, instead of having it at great cost, divided between only a few of them.

The bill under consideration does not contain any provisions by which business or enterprises will be originated or conducted, but in its general character, so far as it relates to the estate, is approximately to those who buy, to those who sell, and to those who labor what a probate law is to those who die. In its relation to the honest individual it means a bright, hopeful future instead of the never-ending burden of misfortunes which must be continuously borne under present laws.

THE NUMBER WHO BECOME BANKRUPTS.

At the request of the chairman of the Judiciary Committee the Statistician of the Treasury Department has furnished a table of the commercial failures of the last seventeen years, which I will publish as a part of my remarks.

These tables are very interesting, in that they furnish an unerring index to the commercial and industrial importance of the several States; indicate where business and enterprise are on the increase; and point out with unerring aim the States in which the laws are the most effective in preventing the debtors on the one hand from imposing upon their creditors, and on the other hand preventing creditors from taking undue advantage of their debtors and of each other. One of the most interesting facts shown by these tables is that only a little over 1 per cent fail per annum of all the individuals, firms, and corporations engaged in all classes of business and all sorts of enterprises—the little and the big, the old and the young, the experienced and the inexperienced, and the honest and the dishonest in every State and Territory of the United States.

One would think from remarks which have frequently been made by those opposed to bankruptcy legislation that the passage of a bankruptcy law was designed to do great damage to a very large percentage of all the business and industrial concerns in the country; but it is apparent from these figures that they are mistaken.

The number of suits under a bankruptcy law, after the voluntary cases in bankruptcy arising from failures which have occurred prior to the passage of this bill shall have been disposed of, will be very small indeed as compared with the great number of persons, firms, and corporations engaged in commercial and industrial transactions. About ninety-nine out of every one hundred of those engaged in all lines of business and every sort of enterprise in the whole country will have absolutely nothing to do with the bankruptcy law except in so far as they may have claims against the other one of the one hundred who may become a bankrupt. The percentage of those who fail in small places will be very much smaller than the average for the whole country. That the proportion of failures in large places is greater than in small places grows out of the fact that in the smaller places and in the country the surrounding conditions are very much less complex than in the larger places.

These tables show that since the repeal of the last bankruptcy law—that is, during the last seventeen years—171,389 persons, firms, and corporations have failed. These are the known figures as recorded by the mercantile agencies. The probabilities are that a very large number of failures have really occurred which have not been included in this list—failures which for one reason or another were not made public. It seems to me that the demand upon us to give to this great number of people their constitutional rights is imperative.

At all times in the future let us hope that this bill, as it may be wisely amended from time to time, will be upon the statute books to the end that bankruptcy cases may be disposed of as they occur. All of our citizens have their rights under the Constitution; they should be available to them at all times; they ought not to have to wait seventeen years for relief. It is to be hoped that there will never again be such a great accumulation of bankruptcy cases as at present.

THE COMMERCIAL AND INDUSTRIAL FAILURES IN TENNESSEE.

The tables furnished by the Statistician of the Treasury Department as above include one relating to my State, which, being of great local interest, I will print in full, as follows:

Year.	Number of failures.	Number engaged in business.	Per cent of failures.	Liabilities.
1879	152	8,738	1.74	$1,569,671
1880	105	9,865	1.07	1,051,219
1881	187	11,886	1.50	1,393,353
1882	164	12,217	1.34	1,632,864
1883	220	13,143	1.68	974,326
1884	238	14,321	1.06	1,654,851
1885	282	12,414	2.27	1,806,619
1886	154	12,605	1.22	1,679,639
1887	198	12,875	1.53	1,480,664
1888	206	13,553	1.52	1,555,921
1889	219	13,982	1.56	2,080,527
1890	257	14,474	1.78	6,144,020
1891	426	14,874	2.86	6,394,298
1892	299	14,631	2.04	2,241,390
1893	416	14,275	2.91	6,755,640
1894	347	14,108	2.46	3,141,249
1895	273	14,371	1.90	2,646,632
Totals and average	4,143		1.83	44,182,893

I am anxious that so many of the persons and firms as have failed in Tennessee during the last seventeen years and are honest and have not secured a settlement shall be discharged without unnecessary delay. This bill will secure to them that humane privilege.

The percentage of those engaged in conducting business and promoting enterprises who fail annually in Tennessee has been larger during the last seventeen years, I regret to note, than the average for all of the States. Our average for the whole term is 1.83, while for the whole country it is only 1.02. I am at a loss to know why this should be so. It can not be that our people are less honest than in other States; it can not be that our business enterprises are less remunerative than in other States, or that our enterprises are more difficult to conduct. The figures are, without doubt, reliable, and they show conclusively that our people

are at a disadvantage under present laws. I therefore am compelled to conclude that a just law, operating alike in all of the States, must result in removing our disadvantages, from whatever source they may come, and in promoting our general welfare.

In the absence of a bankrupt law every train load of goods which is transported to any State represents not only the cost and a percentage of profit to those who send them, but in addition a percentage as an insurance against wrongdoing under imperfect laws, which seem neither to adequately protect the debtor from the avarice and greed of his creditors nor the creditors from the chicanery and wrongdoing of their debtor. Every draft which is sent from a State to pay for the goods received contains an amount greater than it ought to. This added amount has been collected as a tax upon the honest people of the State for the wrongs of the dishonest and the misfortunes of those who have honestly failed. The same is true of every State in the Union. It is greatly to be regretted that this additional cost of commodities should have to be borne by the honest consumers. This additional percentage is charged by the manufacturers and wholesalers to the retailers; the retailers in turn charge it to the consumer, so that in the end the great mass of honest consumers pay for the wrongs, chicanery, and frauds of the dishonest few and those who are honestly unfortunate.

Let us, then, join in the enactment of a good, safe, humane bankrupt law which will remedy the foregoing evil.

THE FAILURE OF OLD BANKRUPTCY LAWS.

It is true that our bankruptcy laws have not heretofore proven entirely successful; the same is true of other important laws. When other laws have not proven satisfactory they have been amended. What would have been thought of Congress in the early days of the Government if it had repealed all laws which did not give entire satisfaction, instead of amending them from time to time as wisdom and the demands of the people indicated?

The present bill is superior in all respects to the old laws, and its passage is demanded by the whole country. I will print with these remarks some newspaper clippings which voice this demand.

THE STATUS OF THOSE WHO HAVE HERETOFORE FAILED.

This bill embraces both voluntary and involuntary bankruptcy. Those who have suffered failures in the past may go voluntarily into bankruptcy, but can not be proceeded against by their creditors.

The commission of an act of bankruptcy will alone be a ground for the commencement of proceedings by creditors against a debtor. The acts constituting bankruptcy are prescribed in the bill. It follows, therefore, that acts of bankruptcy can not be committed nor proceedings commenced on account thereof until after the bill shall have gone into full force and effect.

THE SCOPE OF THE TORREY BANKRUPTCY BILL.

Ordinarily, when a grant of power is given to a legislative body there is a tendency to strain the grant to the utmost, to the end that all the powers possible may be exercised. It affords me pleasure to say that this bill is not open to this criticism. The language of the Constitution is:

> The Congress shall have power * * * to establish * * * uniform laws on the subject of bankruptcies throughout the United States.

This bill seeks rather to confer upon the United States courts as little, rather than as much, power as possible. In the practice under the last bankruptcy law it was frequently desirable to force a man into or keep him out of bankruptcy, because to make him amenable to such law would change the rule relating to the taking of evidence, or otherwise change his status or vary his rights or those of his creditors. One of the provisions of that bill was that the wife of a bankrupt might be required to testify, and hence it was frequently very desirable to have a debtor adjudged a bankrupt in States where the wife could not be compelled to testify if it was thought she knew anything detrimental to her husband in the management of his property. This bill does not seek to distort given conditions, but simply to furnish an equitable rule for working them out in a way that will not constitute a hardship on the parties in interest.

There was no discussion in the constitutional convention as to the propriety of granting to Congress the right to enact uniform laws on the subject of bankruptcies. None of the States, when considering the Constitution, objected to that provision.

Both the provisional and permanent constitutions of the Confederate States contained a similar provision.

No matter whether we agree that the power to pass a bankruptcy law is a proper provision in the Constitution or not, it is there, and Congress alone can do so, and the Federal courts alone can be compelled to enforce it. It has been repeatedly held that State courts can not be required to enforce a Federal law. If it could be done, and the law were to be enforced entirely in the State courts, there would be such a diversity of constructions that the law in its application would certainly be very far from uniform. If it were possible to have the law enforced partly in the State and partly in the Federal courts, and we should attempt to do so, there would be great danger of unfortunate conflicts between such courts.

When the States surrendered to the United States the right to pass a bankruptcy law *they also surrendered the right to have such a law construed by and enforced in the United States courts.*

Any gentleman who thinks he is wiser than the men who framed the Constitution is welcome, so far as I am concerned, to try to circumvent the Constitution by any kind of a State-National law which his fancy may dictate, but for myself I am unwilling to be a party to any experiments.

I accept the Constitution as I find it and am willing to carry out its provisions in a plain, simple way for the benefit of the people, and therefore I heartily favor this bill.

VOLUNTARY BANKRUPTCY.

I deem it almost unnecessary to state that voluntary bankruptcy means that a man may file his own petition and ask for relief under this bill, and that involuntary bankruptcy means that the creditors of a debtor may in like manner file a petition against him and ask for relief under this bill, and that each kind of bankruptcy after the adjudication is precisely the same; that the bankrupt would retain his exemptions and, if honest, is entitled to a discharge, and the creditors holding valid liens are entitled to have them satisfied, and then the unsecured creditors are entitled to the balance of the estate *pro rata*, and that irrespective of whether the petition was filed by the creditors or by voluntary bankrupts in every case a compromise can be secured expeditiously and at small cost.

This talk about a voluntary law is, I think, largely a legislative theory. It is not demanded by any considerable number of people, so far as I can learn. I do not believe that debtors demand that the laws shall be made unduly favorable to them or unfavorable to the creditors; or, on the other hand, that the creditors wish that the law should be made unduly favorable to them or unfavorable to the debtors. My experience has been that debtors and creditors are always inclined to be fair with each other, and I therefore am convinced that they want a perfectly fair law applicable to and comprehensive of all of their rights. The facts are that our largest debtors are in turn our largest creditors, and *vice versa*.

It has been well said that approximately all debts are voluntarily created except those incident to the exercise of the principle of eminent domain and the commission of torts. It has been pointed out by the report from the committee on this bill that the amount which the debtor owes is in every instance exactly balanced by the claim of the creditor. It therefore follows that if all the debts of all the debtors of the world were added up the grand total would exactly equal the sum of all the claims of all the creditors in the world. We should not, therefore, legislate for either the one class or the other, but for them both alike.

Let us pass a fair law while we have the subject under consideration. If we pass an unfair law, or one not comprehensive of the rights of all parties to transactions on credit, we are likely to be compelled to repeal it in a shorter time than any of the other bankruptcy laws have been repealed heretofore.

The people are fair minded, and they will not tolerate any one-sided, incomplete, voluntary law.

WILL NOT CONCENTRATE LEGAL BUSINESS.

I would be glad, for the purpose of this bill, if there was a United States district court in every community in the country. The greatest inconvenience in connection with this proposed law grows out of the fact that in a comparative sense the United States courts are few in number by comparison with our State courts. These inconveniences have been overcome as far as possible, and to a very large degree by this bill. They will be felt by very few, since only about one in every one hundred of those engaged in business and enterprises fails per annum as shown by the tables of which I have heretofore spoken.

The bill, instead of providing that the bankruptcy court shall exercise jurisdiction to hear and determine all controversies relating to the administration of the bankruptcy estate, provides that the trustee of a bankrupt estate who desires to bring suit concerning the affairs of the estate shall do so in the court in which the bankrupt would have of necessity brought suit had not the bankruptcy proceedings intervened, unless the defendant consents to come into the court of bankruptcy. For example, if two citizens of my State should have a transaction on credit, and one of them should become a bankrupt, his trustee would not be permitted, except by consent, to bring suit in the court of bankruptcy, and thereby require the other citizen to perhaps go a long distance to court, but he would, under the provisions of this bill, bring suit in the State court where the bankrupt would have necessarily gone to institute such suit if misfortune had not overtaken him.

The first meetings of creditors will be held at the county seat of the county in which the bankrupt resides, unless such place would be manifestly inconvenient as a place of meeting for the parties in interest.

Each county is to be at least one district, within which a referee will be appointed. These referees are judicial officers, and will do a large part of the bankruptcy business. They will not have jurisdiction to try the original suit in bankruptcy, unless there is a default and the judge is absent, because a jury might be demanded,

and of course it would not be desirable to intrust referees with a jury trial. It would be manifestly unwise to have them consider the confirmation of a composition or the setting aside of a composition which had been confirmed, or the granting or revoking of a discharge. But in the proof of claims, the hearing of evidence, the sale of property, and other matters connected with the administration of the estate they will have adequate jurisdiction, but always subject to a review by the judge. In order to secure such a review it will not be necessary to give a bond, as is usual in cases of appeal.

Depositories for funds and newspapers in which notices must be published will be designated with particular reference to where the trustees and parties in interest reside.

The foregoing provisions will bring the administration of the law to the homes of the people as nearly as possible.

THE DECREASE OF LITIGATION.

Litigation which is ordinarily a part of the conducting of business and the promotion of enterprises has fallen off greatly in late years. While it has no doubt been affected materially by the general depression which has been felt all over the country, it has been very seriously diminished by the fact that under present laws a debtor usually subjects himself to very great danger by contesting in court even the unjust claims of his creditors, since the institution of a suit against a debtor ordinarily results in the bringing of other suits by frightened creditors, and leads to his being ruined irrespective of his honesty or solvency.

If this bill be enacted into law the conditions of which I have just spoken will be reversed, as there will then be no occasion for creditors to be frightened simply because a debtor has been sued. The result will be that the business of the courts will resume its normal conditions and justice will be meted out to litigants without fear or favor.

THE NECESSITY FOR A BANKRUPT LAW.

If I were to state on this floor that a constituent of mine was in distress beyond his control, and that the State of Tennessee could not relieve him, but that Congress could, that he was a deserving man and wished to be relieved, everyone of you ought to cheerfully and readily assist me in giving him relief and enabling him to continue his pursuit of happiness in accordance with his own inclinations.

Every member here has a number of constituents who are in trouble because of circumstances over which they have no control; they are beneath burdens of debt and suffering all of the tortures which that condition inflicts, and it is impossible for them to be rescued except by the assistance of Congress.

It is not possible to rescue these people by State law, because at the foundation of the Government it was provided in the Constitution, upon motion of a distinguished gentleman from South Carolina, that the power to enact uniform laws upon the subject of bankruptcy should be exercised alone by Congress. The same instrument contains a provision prohibiting the States from impairing the obligation of contracts. It is therefore impossible for the State, now or henceforth, without an amendment to the Federal Constitution, to grant relief to those thus unfortunately situated.

In some of the States it has been provided that a discharge shall be granted to the unfortunate debtor, but such relief can not be granted as against citizens of other States. In Tennessee the legislature has not even gone to this extent, and as a result there is a very great need for this legislation—for a bankrupt law by which my constituents and those of my colleagues may be rescued from their condition of debts and distress and restored to one in which they may be better able to support their families and educate their children.

I know, and all of you know, cases in which honest men who were solvent became frightened by the importunities of creditors, and in an endeavor to provide against "times of need" justified attachments, and as a result have had their property swept away and have been left penniless and hopelessly in debt. If the bill now under consideration had been heretofore the law such men would have been allowed the very liberal exemptions of our State, and upon surrendering their assets above their exemptions their estates would have been ratably divided among their creditors and they would have been discharged and encouraged to begin life with renewed energy.

There are cases known to all of us in which an endeavor to prove rascality, chicanery, and fraud has proven insufficient to satisfy the jury on the subject, and as a result decrees have been entered which were but acts legalizing robbery of the most pernicious sort. If the present bill had been in force then I confidently believe that the result would have been that the beneficiaries under the decrees would have been exposed, their creditors would have received their just part of the estate, and they would have been appropriately punished for the wrongs they perpetrated; such wrongs were not only injurious to those who were financially interested in their affairs, but to competitors in business.

THE ADVISABILITY OF GRANTING DISCHARGES.

There was a time when imprisonment for debt could be exacted under the laws and was supported by the conscience of the people. For the most part it has been abolished by law, so far as actually keeping the debtor in custody is concerned. One of the worst features of that condition is as yet maintained. It was a humane consideration to imprison a debtor and furnish him sufficient heat to drive away the frost of physical discomfort and sufficient food to prevent starvation, as compared with the system of not furnishing to the debtor shelter, not furnishing him heat, not protecting him from, but subjecting him to, all the prosecutions of avaricious creditors.

The condition of the insolvent debtor has been greatly ameliorated by the enactment of the State homestead and exemption laws, and the abolition of actual imprisonment meets comparatively the requirements of their condition. But these exemptions are not at present of a substantive value.

It is true that a man of family may have exempt from the demands of his creditors the furniture necessary to prevent squalid want; he may have the rude utensils with which to pursue his chosen avocation; and under the laws of many of the States he may have a limited supply of provisions for the daily wants of the family.

If he is so fortunate as to possess a limited area of real estate, he may retain it as a place upon which to put these small belongings; but if, as the result of unceasing daily toil, he acquires for the comfort of the woman who shares his lot an additional piece of furniture to that allowed by the merciful exemptions of his State it may be torn from him by the sheriff.

If the soil, in response to his diligent husbandry, shall yield a partial harvest in excess of that which has been allotted to him for the sustenance of his family, it, too, may be seized under execution.

If the homestead happens to lie upon a waterway, and by the ever-changing currents there shall be embanked against his shore earth in addition to the cubic yards of it which are protected by the exemption laws of the State, that, too, may be seized and sold to satisfy a part of his burdens, which are ever increasing by the accumulation of interest.

In other words, while under the humane provisions of the various State exemption laws we have in pursuance of a wise and humane public policy allotted to our several citizens homesteads and exemptions calculated to keep them and their dependents out of the poorhouses, we have not protected them from being surrounded by the gaunt specter of unpaid debts which stands as a menace to enterprise and thrift beyond the narrow confines with which we have inclosed them.

These exemptions are justified, as I have said, by a wise public policy. The same public policy justifies the position that the debtor who has not done wrong, but who has incurred debts in good faith, and who has acted the part of an honest man with regard to them, should not be confronted by the specter of which I have spoken, but should be granted a discharge, absolute and unconditional, and be given an opportunity to make the greatest and best use of the powers which have been given him by his Creator.

The discharge of a debtor is not of necessity in actual practical derogation of the rights of the creditor, because if the debtor thus released uses his opportunities to the best advantage, he may become able to pay his debts; if not inclined to do so under these circumstances, he would not do so in any event, so that the right of discharge will benefit the debtor, and does not necessarily destroy but may promote the interests of the creditor.

The Constitution provides for a bankruptcy law under which an honest bankrupt may procure an honorable discharge under such careful restrictions as shall be just to his creditors. Is it not the duty of Congress to make that right available to honest debtors instead of leaving them to the charity of their creditors?

CORPORATIONS.

Under the provisions of this bill, corporations may be adjudged involuntary bankrupts upon exactly the same terms as individuals and firms. They can not go voluntarily into bankruptcy.

Such corporations as may become bankrupt will not be discharged; it was feared that the granting of a discharge to a corporation might affect the liabilities of stockholders, who, according to the laws under which they exist, might be liable for their debts.

Trust companies may be elected by the creditors to be trustees of estates.

Companies organized for the purpose of giving bonds may be accepted as bondsmen for trustees and referees.

These provisions are thought to be consistent with the objects of the bill, and to do justice to corporations without doing injustice to individuals.

PROCEEDINGS.

The district courts of the United States and the Territories, the supreme court of the District of Columbia, and the United States court of the Indian Territory are courts of bankruptcy, and have original jurisdiction in bankruptcy cases.

Any debtor except a corporation may voluntarily file a petition in bankruptcy and be adjudged a bankrupt.

A suit in bankruptcy may be brought against any debtor who owes over $1,000, and has committed an act of bankruptcy, except a national bank, a person engaged chiefly in farming or the tillage of the soil, or a wage earner.

Acts of bankruptcy by a person shall consist of his having (1) concealed himself, departed or remained away from his place of business, residence, or domicile with intent to avoid the service of civil process and to defeat his creditors, and shall not have returned at least forty-eight hours before the filing of a petition in bankruptcy, and before the rights of creditors shall have been impaired, altered, or interfered with; (2) failed for thirty days and until a petition is filed while insolvent to secure the release of any property levied upon under process of law for $500 or over, or if such property is to be sold within such time under such process then until three days before the time fixed for such sale; (3) made a transfer of any of his property with intent to defeat his creditors and has not regained the ownership and possession of such property before the rights of creditors have been altered, impaired, or changed by reason of such transfer and at least ten days before the commencement of a proceeding in bankruptcy; (4) made an assignment for the benefit of his creditors or filed in court a written statement admitting his inability to pay his debts; (5) made, while insolvent, a transfer of any of his property or suffered any of it to be taken or levied upon by process of law or otherwise for the purpose of giving a preference, and has not regained the ownership of such property or released same from such levy before the rights of creditors shall have been altered, changed, or impaired by reason of such transfer, taking, or levy and at least ten days before the commencement of a proceeding in bankruptcy; (6) procured or suffered a judgment to be entered against himself with intent to defeat his creditors, and suffered same to remain unpaid until ten days before the filing of a petition in bankruptcy, provided that a payment or satisfaction of such a judgment by a sale of any of the debtor's property or from the proceeds of such a sale shall not be deemed a payment of such judgment under the provisions of this section; (7) secreted any of his property to avoid its being levied upon under legal process against himself and to defeat his creditors, and has not surrendered such property to such legal process at least ten days before the filing of a petition in bankruptcy; (8) suffered while insolvent an execution for $500 or over, or a number of executions aggregating such amount, against himself to be returned no property found, unless the amount shown to be due by such executions shall be paid before a petition is filed; or (9) suspended and not resumed for thirty days and until a petition is filed, while insolvent, the payment of his commercial paper for or aggregating $500 or over.

Such suit may be brought within four months after the commission of an act of bankruptcy, or conditionally thereafter when the commission of such an act shall have been concealed.

Since a suit in bankruptcy is filed for the benefit of all of the creditors, it is required that three must join in the petition who have collectively unsecured claims amounting to $500 or over. If all the creditors of such a person are less than twelve in number, one creditor holding an unsecured claim amounting to that sum may file a petition.

Upon the filing of a suit in bankruptcy a copy of the petition, with a writ of subpœna, shall be served upon the defendant in like manner as in a suit of equity, except that the process shall be returnable within fifteen days. The bankrupt or any of his creditors may plead to the petition within ten days after the return day. The time for the service of process and the filing of pleadings may be extended by the court when necessary in the interests of justice.

The defendant may have a jury in the trial if he so desires.

If the judgment is for the defendant the case will be dismissed at the cost of the plaintiff. If it is against the defendant he will be adjudged a bankrupt. If he desires to appeal he may do so.

The defendant in a bankruptcy suit will not be at any greater disadvantage than the defendant in any other suit; that is to say, he will have full possession and control of his property, and can proceed with his business just as any other defendant. If the creditors desire to secure an attachment they may do so by giving bond and filing affidavits sufficient to convince the court that the defendant has committed an act of bankruptcy. If, after an attachment is levied, the defendant wishes to give a forthcoming bond, he may do so and still retain full control of his property.

In cases in which voluntary petitions are filed and in which default is made in answers to petitions in involuntary cases the judge of the United States district court will consider the petitions and either dismiss them or adjudge the defendants bankrupt. If the judge is absent the petitions will be referred to and will be considered and disposed of in the same manner by the referee.

It is immaterial whether a defendant is adjudged a bankrupt upon his own petition or the petition of creditors, so far as his rights as a bankrupt and those of his creditors are concerned.

It is the duty of the bankrupt to attend the first meeting of his creditors if required to do so; to make out schedules of his property and lists of his creditors, and if attempted frauds on the part of creditors come to his knowledge it is his duty to inform his trustee, etc.

An individual or partnership may apply for a discharge subsequent to the expiration of two months and within the next four months after the adjudication. If the application is not made within that time and the court is convinced that it was impossible for the applicant to make it, it may be filed within but not after the expiration of the next six months.

The terms upon which a discharge may be granted are as follows:

A person, not a corporation, may, after the expiration of two months and within the next four months subsequent to being adjudged a bankrupt, file an application for a discharge in the court of bankruptcy in which the proceedings are pending. If it shall be made to appear to the judge that the bankrupt was unavoidably prevented from filing it within such time, it may be filed within but not after the expiration of the next six months.

The judge shall hear the application for a discharge, and such pleas as may be made in opposition thereto by parties in interest, at such time as his convenience will permit and as will give parties in interest a reasonable opportunity to be heard, and discharge the applicant unless he has (1) been convicted of having committed an offense punishable by imprisonment as herein provided; (2) given a preference as herein defined, under an assignment for the benefit of creditors, or otherwise, and within six months prior to the filing of the petition against him, which has not been surrendered to the trustee; (3) obtained property upon credit which has not been paid for or restored at the time the petition is filed against him upon a materially false statement in writing made by him to any person for the purpose of obtaining credit or of being communicated to the trade or to the person from whom he obtained such property on credit; (4) made a transfer of any of his property which any creditor who has proved his debt in the proceedings might, at the time of the bankruptcy, have impeached as fraudulent if he had then been a judgment creditor, unless such property shall have been surrendered to the trustee; or (5), with fraudulent intent and in contemplation of bankruptcy, destroyed or neglected to keep books of account or records from which his true condition might be ascertained.

The confirmation of a composition shall discharge the bankrupt from his debts, other than those agreed to be paid by the terms of the composition and those not affected by a discharge.

A discharge in bankruptcy shall release a bankrupt, not a corporation, from all of his provable debts, except such as (1) are due as a tax levied by the United States, the State, county, district, or municipality in which he resides; (2) are judgments in actions for frauds or willful and malicious injuries to the person or property of another; (3) have not been duly scheduled in time for proof and allowance, with the name of the creditor if known to the bankrupt, unless such creditor had notice or actual knowledge of the proceedings in bankruptcy; or (4) were created by his fraud, embezzlement, or defalcation while acting as an officer or serving in any fiduciary capacity.

A discharge may be revoked upon application made within one year after being granted if it transpires that it was fraudulently procured.

I apprehend that one of the most useful provisions of the bill is the one relating to settlements which debtors may make with their creditors after the petition is filed, and either before or after the suit has been tried.

Under existing laws, if a creditor sees fit to pursue a debtor to final execution and sale, he may do so without let or hindrance; there may be delays in the courts, but the time will surely come when there will be a trial, and if it results in a judgment against the defendant the creditor may persevere until the red flag of the sheriff waves over the property of the defendant, or other property which it may be thought that the defendant has an interest in. An honest debtor may be protected from such extremities under the provisions of the bankruptcy bill, provided the interest of all of the creditors will be served thereby; that is to say, he may secure a settlement as against the wishes of some of his creditors, but nevertheless with all of them. Such a settlement may involve an extension of time within which to pay his debts, or a reduction of them with or without security for the payment of the balance.

An individual creditor may consider it a hardship to be compelled to settle with his debtor upon terms which he does not consider advantageous. Requiring him to do so can be justified only on the ground that the interest of other creditors must be considered quite as well as his, since it is for the best interest of the most of the creditors to make such a settlement.

A settlement can not be offered by a debtor against whom a petition has been filed or who has been adjudged a bankrupt until after he has submitted to an examination in open court or at a meeting of his creditors. This examination is designed to enable the creditors to learn the reasons for the difficulties in which the debtor finds himself and to enable them to judge whether he is or is not a competent, honest man. He must file a schedule of his property and a list of his creditors. An examination of them will enable the creditors to determine the value of their claims.

After these preliminaries he must submit his proposition in writing to his creditors and secure the acceptance of it by at least a majority in number of his creditors, and such majority or number must also represent more than half of his indebtedness. Before this proposition can be filed in court he must deposit, subject to the order of the judge, the money with which to pay the costs of the suit and the preferred claims. He must also file, subject to the order of the court, whatever he is to pay to his creditors in the settlement; that is, if he is to give notes, he must execute them and place them where the court can have them distributed to creditors in the event his settlement is confirmed; if he is to pay part cash and part in notes, he must deposit the cash so that it as well as the notes may be distributed to the creditors. A compliance with these conditions will probably be of great inconvenience to the debtor in many cases, but they are necessary in order to have the settlement confirmed and adjusted without friction or delays and with absolute certainty.

Under the old law frequently the bankrupt trifled with his creditors by offering settlements which he could not make, and later on offering less favorable settlements, the only result being to annoy the creditors.

A composition which has been fraudulently obtained may be set aside upon an application made within six months after it was confirmed.

A debtor who has acted dishonestly can not secure a composition, the reason being that the confirmation of a composition secures to the debtor a discharge from all debt which he does not agree to

pay in the composition, and it is not proposed by this bill to enable any dishonest persons, firms, or corporation to secure any advantage pursuant to its terms.

In cases in which the estate is to be administered the creditors will meet and elect one or three trustees and fix the amount of their bond.

The trustee or trustees will reduce the estate to money under the directions of the court and distribute it in dividends to the creditors.

Creditors have only to make oath to the claims and send them by mail or deliver them in person to the court or referee. They will be allowed as of course, but may be suspended or examined if there is any suspicion that they are fraudulent. The trustee may bring suit to set aside any fraudulent transfer of property which was made by the bankrupt prior to the adjudication.

Liens given for a present consideration in good faith will be upheld. Such liens as are fraudulent will be set aside.

Preferences which have been given within four months prior to the filing of the petition may be recovered by the trustee. Advantages obtained by the institution of suits within four months prior to the filing of the petition can not be made available by the plaintiffs in such proceedings. This provision is simply to prevent an inequitable distribution of the estate of the bankrupt.

Under the old law the compensation of officers was unduly large, and was payable so that they were all interested in prolonging the proceedings. This bill provides for the payment of only a reasonable compensation, and it is to be so computed and paid that every officer is interested in securing prompt and economical administrations. That is to say, the clerk secures a single fee of $10 in each case; he will, therefore, be interested in having the case disposed of as quickly as possible. The referee will receive a ten-dollar filing fee in each case and a commission of 1 per cent on the net result of the estate, and one-half of 1 per cent on amounts paid in composition. The trustee will receive a five-dollar fee in each case and a commission of 5 per cent on the first $5,000 to be paid in dividends, 2 per cent on the second like amount, and 1 per cent on all over $10,000. Neither the filing fees nor the commissions of the referees or trustees will be paid until the estate is closed and the records returned to court.

The expenses of administering the estate will be reported in detail under oath, and will be paid in the event only of their being found to be necessary and reasonable by the court.

Those who may act dishonestly in contemplation of bankruptcy or with reference to the property of bankruptcy estates or commit forbidden acts will be liable to punishment.

The bill contains such additional provisions as are necessary in order to make it a perfectly well-considered and carefully framed bankruptcy code.

When a bill similar to this was under consideration in a former Congress I opposed its enactment. My opposition grew partly out of my want of information as to its true scope and purposes and partly out of the fact that my constituents were prejudiced against any bankruptcy bill because of the unfortunate administration of the old one in the South. Since then great changes and improvements have been made in the bill and my people have felt the want of such a law.

I, therefore, am very glad not only to give this bill my vote but a hearty support.

It is an absolutely fair measure in all of its provisions to both debtors and creditors and is calculated to promote the best interests of all of those whose rights will be affected by it.

I invite your attention to the following:

TABLE OF COMMERCIAL AND INDUSTRIAL FAILURES IN THE UNITED STATES.

The number of failures by those engaged in commercial and industrial pursuits, the total number of those so engaged, the percentage of the former to the latter, and the total amount in dollars of the liabilities of those who have failed from 1879 to 1895, inclusive, are shown by States and Territories, as follows:

Year.	Number of failures.	Number engaged in business.	Per cent of failures.	Liabilities.

THE NEWSPAPER CLIPPINGS referred to by me are as follows:

A BANKRUPTCY LAW.

[From the Nashville (Tenn.) American.]

It is apparent that but little legislation of a general character is to be transacted by Congress except the passage of the appropriation bills. This seems to have been decided upon by the managers of the majority. There is one measure, however, not affecting politics or the political fortunes of any Presidential candidate, which should be acted upon by both Houses. It is the bankruptcy bill—a bill needed in every State, in every city, in every business community. It is a measure of vast moment and importance and has in one form or another been before Congress for several years. It is well understood, its main features have been time and again discussed at length, but in previous sessions its consideration has been postponed until the end of the session, when it was too late to give it the attention it deserved.

The entire business population of the country feels the need of a well-framed bankruptcy law, just in its provisions and easy of administration, a law which in its application will not consume the estate of the debtor, but will equitably divide it among creditors. The subcommittee of the House Judiciary Committee has agreed upon a bill containing the chief features of the proposed Torrey bill, which received the approval of all the chief mercantile and business associations in all the States, and a concerted effort should be made now to induce the committee to have the bill reported and Congress to pass it.

Bradstreet's of last week, referring to the pending bankruptcy bill, says: "There are some measures of a nonpolitical character before Congress which one would think should commend themselves to even the most cautious political managers as affording an opportunity for escaping from the consideration of more exciting and hazardous matter. One of these measures is the bankruptcy bill, which has been under consideration since Congress organized for work. Some progress has been made with the measure, though not much.

"The subcommittee of the House Judiciary Committee has finished the preparation of a bill which in all essentials is understood to be based upon the Torrey bill as amended in recent Congresses, and the measure now goes before the full committee, a report of which will probably not be long delayed. Still, the advocates of a national regulation of bankruptcy may recall the fact that the bill has been progressed so far before only to fail of enactment at the end, and they will do wisely to exert whatever effort they can to make Congress see that in failing to enact the law it is tampering with the best interests of the business community."

—

AN ACCEPTABLE PRESENT TO THE COUNTRY.

[From the Nashville (Tenn.) American.]

We believe that a well-considered, carefully drawn bankruptcy law would be an acceptable present to the country.

The serious defects in the former bankruptcy system will serve as a most valuable experience in enacting bankruptcy legislation. The point of the most vital interest in the new measure will be the insertion of adequate provisions to make it certain that the bankrupt who is guilty of actual fraud can have no relief under the act. The bankruptcy proceedings should be cheap and expeditious, and the terms upon which the honest debtor may be relieved should be very easy and liberal. Where one honestly deems his pecuniary condition so hopeless as to make him willing to take upon himself the obloquy which is by some cast upon those possessing a bankrupt discharge, almost the only requirement imposed should be absolute honesty in the premises. The public welfare requires that men honestly and hopelessly insolvent should have the chance to commence business again unfettered by the blighting incubus of debt. It is to be hoped that the present session of Congress may give us a good system of bankruptcy.

—

PASS THE TORREY BILL.

[From the Chattanooga (Tenn.) Times.]

One of the things Congress ought to do, and do it soon, is to pass the Torrey general bankruptcy bill. It is now much more urgently needed than was ever such a law since our Government was founded.

—

LET CONGRESS DO ITS DUTY.

[From the Nashville (Tenn.) American.]

The condition of the country calls urgently for a good bankruptcy law, and the business interests of the country have been looking confidently to Congress to enact the needed measure, naturally believing that the great record of failures in every branch of business and the accompanying depression of values would adequately impress upon Congress the necessity for a bankruptcy law in the interest of both debtor and creditor, as well as the general welfare of the public.

The best interests of the country imperatively demand it. The vast and varied business of the whole United States, almost all of which is done upon credit, demands a uniform rule extending from the North to the South and from Maine to California, providing for the speedy, inexpensive, and just distribution among creditors of the assets of insolvent debtors. And on the other hand, simple justice as well as the general welfare requires that the honest and unfortunate debtor should be relieved of a burden of debt which it is impossible for him to discharge.

The necessity of Congress possessing the power to regulate this subject is apparent, and that body should feel the responsibility placed upon it in that respect by the organic law. The imperfections of the old bankruptcy law as demonstrated by its practical workings is a valuable experience when considering the provisions of a new measure. Nothing but captiousness can prevent the framing of a bankruptcy law which would be equitable in its operation upon all sections and classes. It is now seventeen years since the old bankruptcy law was repealed, and the condition of the country urgently demands another. Let Congress perform its plain duty in the matter and give the nation a well-considered, speedy, and inexpensive measure.

—

THE TORREY BANKRUPTCY BILL.

[From the Nashville (Tenn.) American.]

The Torrey bankruptcy bill is one of the important measures which failed of passage through the last Congress. The business interests of the country would be subserved by the enactment of a well-considered bankruptcy law, and the general opinion was that the Torrey bill properly met the requirements of the situation.

The Torrey bill has been before Congress for several years. It has received strong indorsements from all sections of the country.

Judge Stone, whose opinion is given herein, was for over a quarter of a century before his death the chief justice of the supreme court of Alabama:

HON. GEORGE W. STONE'S OPINION—THE PROPOSED LEGISLATION, HE THINKS, IS MUCH BETTER THAN THE OLD LAW AND SHOULD BE PASSED.

Hon. George W. Stone, chief justice of the supreme court of Alabama, who is noted by reason of the soundness of his views upon the subject of integrity of commercial transactions, and whose views upon jurisprudence are always interesting and instructive, has been interviewed as to whether he had examined and considered the Torrey bankrupt bill. In reply to the question he said:

"Yes; I have examined the measure, and consider it a very much better act than either of those of 1841 or 1867."

When asked as to the reasons of the unpopularity and consequent repeal of the former bankrupt law, he answered:

"A grave objection to the former statutes was the enormous expense attending their administration, because of imperfect machinery, and because the administration was in a large degree intrusted to incompetent and frequently corrupt officials. My observation was confined chiefly to Alabama and to parts of Louisiana, in which, if the assets were not large, nothing worth computing ever reached the creditors; and if large, the dividend was shamelessly reduced by unjustified charges.

"The pending act is a great improvement on the old statutes; first, in simplifying the machinery and reducing the expense; and, second, in providing that controverted questions—most of them—may be prepared for a hearing before a referee, whose sitting may take place at some point near the home of the bankrupt, and, consequently, to a place which will generally be convenient to creditors."

Speaking as to the provisions of the pending bill, the judge said:

"Viewed from a moral standpoint, I doubt the policy of voluntary bankruptcy, but the principle is probably so rooted in the public mind that to oppose that would defeat all bankrupt legislation.

"A bankrupt system has two aims: To prevent fraudulent preferences by securing to all the creditors of equal rights an equal participation in the bankrupt's assets. It treats all unsecured collectable debts, save those of a public nature, as of equal dignity and binding obligation. This is strict honesty. Its second aim is to restore to honest debtors, who are borne down by their obligations, the power and privilege of employing their energies and business qualifications in acquiring an honest living, and thus adding to the general welfare. This last object is the only justification or excuse for granting the privilege of voluntary bankruptcy. Honestly exercised, it leads to beneficial economic results. Its facile perversion to abuse is the argument against it.

"The great benefit of a bankrupt law is found in its prevention of fraudulent preferences, no matter in what form they may be attempted. And the demand for such prevention against all business or money corporations is, in my experience and observation, just as imperative as when the attempt is made by natural persons. Incorporated capital is frequently perverted to pernicious uses, and the demand for protection against fraud should meet a hearty response from the lawmaking power. Let business corporations be made subject to involuntary, but not voluntary, bankruptcy."

When his attention was called to the proposition to strike out the involuntary provisions of the bill and leave it simply a voluntary measure, he said, in a very earnest manner:

"The enactment of a purely voluntary bill would, in my judgment, make it possible for the perpetration of the grossest frauds. The scandals incident to both of the laws administered while I was a practitioner arose chiefly out of the voluntary provisions of the bill; that is to say, those cases in which proceedings were instituted by creditors resulted in most part in either the defeat of the proceedings or the administration of the estate, while there were many cases in which parties deliberately prepared to go voluntarily into bankruptcy and succeeded in the consummation of their intent in such manner as to engender the belief that the proceedings were fraudulent and that unfair advantage had been obtained by the bankrupt over his creditors."

Continuing, Judge Stone said:

"The best interest of the people would certainly be jeopardized by the enactment of a purely voluntary law."

In summing up the whole subject the Judge said:

"Considered as a whole, I regard the bill as a good one, and hope it will be enacted by the present Congress."—*New Delta*, New Orleans.

—

COMMERCIAL AND INDUSTRIAL ASSOCIATION OF MONTGOMERY.

At a meeting of the Commercial and Industrial Association proceedings were had as follows:

Present: Vice-President Durr and a large number of the members.

Ex-Governor Ligon introduced, and the association considered and unanimously passed, resolutions, as follows:

"*Resolved*, That the Commercial and Industrial Association of Montgomery, Ala., hereby reaffirms its indorsement of the Torrey bankrupt bill and calls upon Congress to enact it at the present session, for reasons as follows:

"(1) Congress alone can pass an adequate law upon that subject.

"(2) The passage of laws, necessarily imperfect, by most of the States constitutes a solemn protest against further inaction by Congress.

"(3) Commercial failures of the whole country are steadily on the increase in numbers, and the amount of the liabilities of those who fail is steadily growing larger.

"(4) The bill in question is the product of the experience of the past and of the business sense and legal wisdom of the present, and its enactment is demanded by the honest, unselfish men of the country.

"(5) Under the provisions of that measure all honest poor debtors who can not pay their debts will, upon a surrender of their property, be permitted

to keep their exemptions and receive a discharge. All honest creditors of the same class will receive a pro rata of the estates of their debtors, without unnecessary delay and at small cost. Valid liens will be enforced and fraudulent ones will be canceled. Honest men will be benefited and dishonest ones punished.

"*Resolved*, That copies hereof be sent by the secretary to members of Congress from this State.

—

THE TORREY BANKRUPTCY BILL NOW PENDING IN CONGRESS—IS INDORSED BY THE INDUSTRIAL AND COMMERCIAL ASSOCIATION—THE REMARKS AND OPINION OF CHIEF JUSTICE STONE—DR. LE GRANDE'S VIEWS—WHAT COLONEL TOMPKINS THINKS.

There was a meeting of the Commercial and Industrial Association, which was attended by the most prominent members. The occasion of the meeting was to consider the Torrey bankruptcy bill now pending in Congress.

In the absence of the president, Vice-President Durr presided. * * *

—

MERITS OF THE TORREY BILL.

Hon. George W. Stone, for many years the chief justice of the supreme court of Alabama, was called upon by motion to speak upon the subject of bankruptcy legislation, and was greeted with applause. He referred to the presence on the statute books of England of a bankruptcy law which had been there for a great many years, and spoke of the English people as wise and conservative.

In speaking of the Torrey bill he complimented its author and referred to it as a measure as nearly perfect as human industry, ingenuity, and wisdom could devise.

Ex-Governor Ligon introduced and the meeting considered and unanimously passed resolutions reindorsing the Torrey bill and calling upon Congress to pass it.

—

OPINION OF CHIEF JUSTICE STONE.

A reporter called upon Judge Stone at the Capitol and found him busily occupied in his room. He kindly consented to be interrupted for a brief interview as to the desirability of bankruptcy legislation by Congress and as to the merits of the Torrey bill.

In reply to an inquiry as to whether he had examined the other bankruptcy bills now pending in Congress, Judge Stone said:

"There have been sent to me all the bankruptcy bills now pending before Congress; after an examination of them I thought that all of them except the Torrey bill were very imperfect and not calculated in any sense to meet the great wants of the country in the matter. None of them approach the Torrey bill either in completeness or as a measure calculated to be beneficial in its provisions."

In further pursuing the subject the eminent jurist stated that "the referee, who corresponds practically to the register of the old law, would be appointed by the bankruptcy court; but he would not be related to any of the judges and would be liable to removal for cause or because his services were not needed.

"The trustee, that is, the person who is to represent the creditors, will be elected and have his bond fixed by them; he will not be paid fees, as under the old law, but will receive a small filing fee and a commission on the amount paid out in dividends to the creditors.

"The clerk of the court will be entitled only to a ten-dollar filing fee upon the institution of proceedings."

Attention was called to the fact that both the method of payment and the amount paid directly tend to secure prompt and inexpensive administration of estates.

When the subject of exemptions was touched upon Judge Stone said: "The law recognizes the exemptions as provided by the laws of the several States, so that each bankrupt will be permitted to withhold from his estate such exemptions as are permitted for the protection of his family by the laws of his domicile."

Remarks were made by the judge upon the provisions of the bill concerning the discharge of the bankrupt, as follows: "A discharge will not be granted to corporations or to dishonest persons. It must be applied for after two and within the next four months after the adjudication. If the applicant was unable to file his application within that time, it may, by permission of the court, be filed within the next six months, but not thereafter. In general terms, a discharge will be granted to such persons as are honest and refused to such as are dishonest. If the discharge proves to have been fraudulently secured it may be set aside upon application made within two years after it was granted."

In making a comparison in brief between the present proposed law and former laws, Judge Stone said: "The present measure is in a truer sense a national enactment than any of its predecessors. For example, the last law contained many provisions relating to the taking of evidence, the validity of liens, the statute of limitations, and other subjects that are omitted from the present measure, which makes it, in my judgment, a much stronger bill and one which is more likely to remain as a permanent law than if it contained additional subjects which I think are more properly left to State control."

In summing up the subject, the Chief Justice said: "I believe that the passage of the bill by the present Congress would tend very largely to prevent frauds in commercial dealings, which are now a reproach upon the country, and that the result of its enactment would be to extend commercial and industrial credit and to benefit every class in the whole country."

—

VIEWS OF DR. LE GRAND.

Dr. M. P. Le Grand, president of the Montgomery Bank and of the Commercial Fire Insurance Company, was called upon at the bank by a reporter. In reply to inquiries he said:

"While I have not examined the particular bill in question, I have no doubt but the passage of a just law would redound to the best interests of the whole country. I would most heartily second a movement designed to bring about the adequate punishment of perpetrators of fraud in all of its forms."

Upon the question of the increase or decrease of failures in this country the Doctor said:

"I have seen a table of commercial failures made up by the Treasury Department at Washington from the annual sheets of the mercantile agency of R. G. Dun & Co., and note from these tables that the percentage of commercial failures in this State is rapidly increasing. The table covers thirteen years past. In 1879 there were only 24 failures for the whole State; there were during the same year, all told, 5,483 persons, firms, and corporations engaged in business; the percentage of those who failed to those who were engaged in business was, therefore, 0.44 of 1 per cent. The total liabilities of those who failed was for that year $202,109. The percentage of failures has varied from year to year, with the seeming inclination to increase, until for last year it transpires that there were 258 failures from among the 10,229 persons firms and corporations engaged in business in this State. A computation of the percentage discloses the fact that it is 2.52 per cent. That is an enormous increase in the percentage. The liabilities of those who failed during the same period has increased from the amount stated above to $3,396,365.

"The result for the whole country for the same period is that the increase in percentage has been from ninety-five hundredths of 1 per cent to 1.07 per cent, while there has been an enormous increase in the liabilities of those who have failed for the whole country from something over $98,000,000 to $189,868,638."

Dr. Le Grand made a comparison of figures for England and this country, as follows:

"An examination of the tendency of failures under the English bankruptcy act indicates not only that they are on the decrease in numbers, but that there is a decrease also in the liabilities of those who have failed. I have examined a comparison of the figures for the years 1888 and 1889 as taken from the United States consular reports from England made to the State Department at Washington, and find that for the years stated the decrease in the number of bankruptcies in England was 464; for this country there was an increase during the same period of 203 cases. In England for that period there was a decrease in the amount of liabilities of those who failed of $4,060,945, while for the same period in this country there was an increase in liabilities of $24,954,264. From which it seems to me that the substitution of a wise national law for the many varying State laws would result in the decrease of the failures in this country.

—

WHAT COLONEL TOMPKINS THINKS.

[From the Montgomery (Ala.) Advertiser.]

Col. H. C. Tompkins, one of the foremost members of the Alabama bar, was seen at the court-house in Montgomery, and although engaged, considerately gave his views, as follows:

"In my opinion the business interests of the country demand that there should be a bankrupt law. The great injustice of the laws, which allow preferences to be made by insolvent debtors, has been attracting the attention of the bar association of this State for many years. On two or three different occasions resolutions have been introduced into the association and passed by practically unanimous vote, urging the legislature of the State to enact a law which would declare not only that all instruments executed for the security of a debt should operate for the benefit of all the creditors of a debtor, but that wherever the debtor sold his property in payment of his debts such sale should also operate for the benefit of all the creditors, and should be declared to be a general assignment where it embraced substantially all of his property; but it has been unable to get the legislature of the State to pass such a law."

The subject of the inadequacy of the State laws was disposed of thus:

"The result of the present system is that frequently insolvent or embarrassed debtors execute conveyances of their property to relatives who are alleged to be their creditors. As the law recognizes the validity of such a conveyance and only allows it to be set aside on proof that the parties to whom it was made were not creditors of the debtor, and as in the very nature of things the nonexistence of that fact is very difficult of proof, and can, as a general thing, only be shown on cross-examination of the parties interested, the result is frequently that insolvent and embarrassed debtors convey property to the members of their own families upon considerations which are wholly simulated."

In relation to the treatment of home and foreign creditors, Colonel Tompkins spoke as follows:

"While in such cases the home creditor is generally, though not always, protected at the expense of the foreign creditor, yet I believe that a large majority of our business people desire that a bankrupt law shall be passed that will distribute the assets of the insolvent equally among all of his creditors of the same class, because they believe that in the long run they will collect a larger percentage of the amounts which may be due them from that class, as they are, of course, frequently themselves left out, and the general average which they receive would not equal what they would get were the law otherwise.

"There is another reason besides that," said the Colonel, continuing. "It is to the interest of the debtor class that such a law should be enacted. I know of many men who have failed in business, through no fault of theirs, who are men of energy and good business ability, but who, because of having a large indebtedness hanging over them, are unable to go into business on their own account. I have no doubt but that many of them would get into business could they be protected against these former debts, which they could be by obtaining their discharge in bankrupty, and would succeed. And I have such confidence in the honesty of my fellow-man as to believe that in many of such instances the parties would pay their creditors, even after a discharge in bankruptcy, more than they can possibly pay under the present condition of affairs."

Concerning the history of bankrupt legislation, he spoke as follows:

"The great objection to a bankrupt law in this country has grown out of the distrust created by the operation of the former law, the great expense attending the administration of the estates, and the small results received by creditors. Those evils, as well as others, in my opinion, are effectually guarded against by the proposed law."

An inquiry as to the comparative results between the present State laws and the proposed bankruptcy law was answered as follows:

"I think the Torrey bankruptcy bill would enable the assets of insolvents to be sold so as to realize for the creditors a much greater amount than is generally realized by forced sale under attachments, which are usually resorted to by the creditors of embarrassed or insolvent debtors."

"What in your opinion would be the result of the passage of the law upon the frequency of failures? Would it increase them?"

"I think it would decrease them. Many solvent men are now ruined simply by fright among creditors, who would not fail under the Torrey law."

"Would it not result in preventing the hurried action taken by creditors, often precipitating failures?"

"Undoubtedly so, because a man would know that he had nothing to gain by forcing his debtor to the wall, and if he had the confidence of his debtor he would be more apt to be willing to extend time, because he would stand more chance of collecting his debt."

"Will you state why it is that we must look to Congress for the enactment of such a law?"

"Because no State has the power to pass any such law that would discharge a debtor, and of course one of the results that is most to be desired in such a law is the discharge of the debtor. Otherwise, this law would be only for the benefit of the creditor class, and would be unequal in its operations."

In summing up the situation the gentleman said:

"I think Congress ought without further delay to pass the Torrey bill."

—

A BANKRUPTCY BILL.

[From the Montgomery (Ala.) Advertiser.]

The proceedings of the Commercial and Industrial Association and interviews with prominent citizens concerning national bankruptcy legislation will be found elsewhere in this issue.

Except for the unfortunate experiences under the old law there would not be any question about the desirability of a national law as provided by the Federal Constitution at the time of its adoption; but in the bitterness of the

recollections of those experiences, it may have been forgotten in some quarters that improvements in all things are possible.

All of the constitutions of the older States have been amended and revised; the various legislatures meet frequently to improve laws which have been found to be imperfect. It seems to us that the same course should be pursued with regard to a bankrupt law.

The Torrey bill has been approved by a great number of national, State, and local bodies—more, in fact, than have ever before approved of any commercial measure. From every part of the country there were sent at the last session of Congress petitions from people in every walk of life. The officers and committeemen of the national body having in charge the agitation are men who are well and favorably known; the list not only includes well-to-do people, but honest bankrupts as well.

This measure, according to an almost unanimous verdict, has been framed with a view to promote the greatest good to the greatest number; it is not in any sense a selfish, sectional, or political measure. It is simply and solely a business measure which has been framed in the interest of business men, and its enactment is demanded by the honest, progressive men in all parts of the country.

An examination of the bill and a consideration of what has been said by the press and in Congress about it leads us to believe that the best interests of the South will be promoted by its enactment, and we therefore call upon the Southern members in Congress to give it their support.

—

THE NEED OF A BANKRUPT LAW.

[From the Montgomery (Ala.) Advertiser.]

There is a bill now pending in Congress that is of very great importance to the commercial interests of this country and that ought by all means to pass. That is the Torrey bankrupt bill. As it stands the bill represents the carefully weighed opinion of the most competent jurists and merchants of the Union.

The only reason that we are aware of that has been urged against the enactment of a bankruptcy law at this time is the fact that the repeal of the last law has left the insolvency field open to be occupied by the various State legislatures, and most of the States have in consequence established more or less complete systems of insolvent laws. With these, however, there is profound discontent. They have all the variety of a tessalated pavement, and such uncertainty attaches to their administration in the different States that commercial enterprise and credit are seriously crippled.

The dissatisfaction with State laws instead of diminishing is sure to increase, and for a sufficient reason. Every new railroad and every new telegraph line enlarges the area of common commercial interests in the United States. The failing debtor has always been an object of interest to the leading commercial centers, and now with the multiplication of cities and towns and the ramification of trade and industry, a failure in any one State may affect creditors in every State in the Union. When a failure comes there is a general scramble for the goods in sight, some of the local creditors are made whole, while others, together with nearly all the outside creditors, are left without a dollar to show for property they have parted with in good faith.

With a general bankruptcy law there can be no cause whatever to complain. The creditor's interest is protected; whatever property and effects the insolvent has are fairly and equally divided, and there is no room for fraud or preferences. On the other hand, the debtor himself has the satisfaction of knowing that his estate is honestly applied to meet his obligations in the proportion that it is equal to the demands, and once this is done he can again take up his business career, and if it is in him to succeed, he can succeed without being weighed upon and hampered by a load of old debts. The law will work to the best interests both of the creditor and the debtor class.

We hope the Alabama delegation will be able to give the measure a cordial support. The general idea of the bill has already received the distinguished support of Chief Justice Stone, and we feel sure that the entire business community will welcome it.

—

MOBILE INDORSES THE TORREY BILL—CONGRESS PETITIONED TO PASS IT BY THE TWO CHAMBERS OF TRADE—A DISCUSSION IN THE CHAMBER OF COMMERCE THAT DISCLOSED SOME POINTS OF THE PENDING MEASURE.

PROCEEDINGS OF THE MOBILE CHAMBER OF COMMERCE.

[From the Mobile (Ala.) Register.]

The board of directors of the Chamber of Commerce held a special meeting to consider the Torrey bankruptcy bill, which will probably be passed by Congress at its present session.

The bill was submitted to the board by the president, Mr. Samuel Brown, accompanied by a brief statement to the effect that it was a measure which had been favorably passed upon by bodies in all of the large cities, except Mobile, and in most of the small places throughout the country. An informal discussion was had and was participated in by Messrs. Jasper S. Knight, T. A. Hamilton, Ferd. Forcheimer, W. G. Little, H. Pillans, John B. Davis, and John E. Michael.

The discussion disclosed the fact that the bill is in every particular radically different from the old law; that the bankruptcy officers will be paid but small amounts for services and in such a manner as to induce them to be prompt in the performance of their duties; that suits in bankruptcy can not be brought except by the concurrence of three creditors, who together have unsecured claims amounting to $500 or over, the proposed restriction being to prevent the institution of malicious suits; that where all of the creditors of a debtor are less than twelve in number, one creditor can institute such a suit, provided his unsecured claim amounts to such sum; that every defendant so desiring can have a trial by jury as to whether the alleged acts of bankruptcy have been committed; that creditors will be notified of every step in the proceedings and at all times have an opportunity to be heard in favor of, or in opposition to, any proposed proceeding; that preferences can not be given or received; that valid liens will be upheld and fraudulent ones will be declared void; that claims against bankrupt estates may be proved upon being sworn to and mailed to the court; that fraudulent bankrupts, embezzling officers, and dishonest creditors may be punished by fine and imprisonment; that litigation concerning property rights in bankruptcy will be had in the appropriate State courts; that compositions between debtors and creditors may be had with great readiness; that controversies may be compromised, arbitrated, or litigated expeditiously and at small cost; that the bankrupts will be entitled to the exemptions provided by the laws of their States; that discharges will be granted to honest bankrupts, under very carefully guarded restrictions, which will prevent the release of dishonest persons; and generally, that the bill will not interfere with the established business customs of honest men, but will in every respect, and to the greatest extent, be an element of strength to the honest in their battle with the dishonest.

Mr. Jasper S. Knight submitted a resolution, which was, after its consideration, adopted, as follows:

"*Resolved*, That this chamber hereby petitions Congress to pass the Torrey bankrupt bill."

The general sentiment of the meeting seemed to be that the measure in question had been wisely drafted, was being urged by the progressive men of the country for an honest purpose, and that it ought to be enacted by Congress at the coming session.

ACTION BY THE MOBILE COTTON EXCHANGE.

The adjourned meeting of the board of directors of the Cotton Exchange convened, with the president, Capt. Charles L. Huger, in the chair.

The Torrey bankruptcy bill, which was considered at the meeting the day before, was again taken up and the various members expressed their views and the conclusions they had reached after a consideration of the measure.

In order to test the sense of the board, resolutions were submitted, seconded, and considered, as follows:

"*Resolved*, That the Mobile Cotton Exchange hereby indorses the Torrey bankrupt bill, and, in the best interests, as it believes, of those engaged in growing and dealing in cotton, calls upon Congress to enact that measure at the present session.

"*Resolved*, That the secretary is hereby instructed to send copies of these resolutions to the Senators and Representatives in Congress from this State and request their advocacy of that measure."

The resolutions were considered at length and adopted unanimously.

The bodies in Alabama which have taken part in the movement to secure to the country an equitable bankrupt law are as follows: Commercial and Industrial Association of Montgomery, Mobile Chamber of Commerce, and Mobile Cotton Exchange.

The gentlemen who are officers and committeemen of the national organization are as follows: Messrs. Hiram G. Bond, Ensley City; Robert C. Brickell, Charles S. Hasley, Milton Hume, Huntsville; Samuel Brown, J. C. Bush, Orville F. Cawthon, Gaylord B. Clark, Edward L. Russell, Gregory L. Smith, Charles L. Huger, Mobile; Nathaniel H. R. Dawson, Selma; John W. Durr, Milton P. Le Grand, Robert F. Ligon, George W. Stone, and Henry C. Tompkins, Montgomery.

—

THE TORREY BANKRUPTCY BILL.

[From the Mobile (Ala.) Register.]

The Cotton Exchange and Chamber of Commerce of this city took favorable action relating to the Torrey bankrupt bill now pending in Congress.

The fact that this bill has been indorsed by commercial and other bodies from one end of the country to the other, and that it has been petitioned for by all classes, is significant in this, that it seems to indicate that the business men of the country can be relied upon to take a hand in legislation relating to commerce.

The word bankrupt has been much abused; it has so often been connected with rascality and has so frequently been used in connection with discredited merchandise that in the popular estimate it signifies either a moral or financial collapse. As used in connection with a national enactment it is designed to have quite another significance.

It is believed by the best minds in the country that the enactment of the Torrey bill will have the effect of diminishing fraud and of exterminating a certain class of fraudulent practices which are now prevalent; that it will beyond question reduce the number of commercial failures; that bankrupt estates will be administered promptly and at small cost; that honest insolvents will be discharged, and that in all respects it will redound to the best moral and financial condition of the great mass of the people.

In civilized communities there are probate laws for the orderly distribution of the estates of deceased persons. Since over 90 per cent of those who do business in whole or in part on credit sooner or later fail, it seems but reasonable that there should be a commercial probate law for the same purpose; the bill in question is such a law. Equity for all time has provided that where a fund was not sufficient to liquidate all claims of the same class against it it should be ratably divided. The Torrey bill is the embodiment of that principle.

As a general proposition, any improvement in the laws which renders the position of debtors more secure and gives additional safeguards for capital invested promotes the interests of debtors and creditors concerning commercial transactions.

We believe the Torrey bill to be an improvement on existing laws, and therefore urge upon Congress the necessity of its prompt enactment.

—

THE BANKRUPTCY BILL.

[From the Mobile (Ala.) Register.]

The Torrey bill, to establish a uniform system of bankruptcy, is again before both Houses of Congress.

Various bills having the same object in view have been presented at previous sessions, but none of these have been so universally commended as has the one now pending.

Few bills have been prepared with the same amount of care and thorough inquiry into the requirement of the interests likely to be affected, and the result has been the preparation of a bill as nearly perfect as the wisdom and foresight of the ablest minds of the country could frame.

The Torrey bill is the joint effort of the representatives of the commercial bodies of the United States, assisted by some of the ablest men engaged in financial and commercial pursuits, and it therefore embodies the features which are believed will accomplish all that can be sought in a universal bankruptcy law, and assures equal and exact justice to both creditor and debtor.

The bill has received the indorsement of nearly all the commercial bodies of the country, as well as that of a large proportion of those actively engaged in important commercial and financial enterprises.

There are doubtless minor points which may not receive entire approval, but it is to be hoped that Congressional action will not be embarrassed by proposed amendments, and that other bodies contemplating an expression on its merits will act on the bill in its entirety.

It is desirable that the bill as it now stands should become a law, and after a fair test of its merits such changes as experience may suggest or changed conditions make necessary can be made hereafter.

The simple purpose of a bankruptcy measure is to secure an equitable distribution among creditors of an insolvent debtor's effects. A bill that will accomplish this with certainty, with the least expense, and with the utmost expedition will prove acceptable to the creditor class.

Whatever will take from the honest but unfortunate debtor the millstone of his past and enable him to face the future with earnest, upright purpose and resolute endeavor will commend itself to the class that owes hopelessly but not dishonestly. Such a measure, properly framed, should do much good. Its principle is just and in the line of wise public policy.

—

INSOLVENT DEBTORS—DISCUSSION OF THE NATIONAL BANKRUPT LAW BY THE MOBILE COTTON EXCHANGE—COMMENDATION BY LAWYERS AND BUSINESS MEN.

[From the Mobile (Ala.) Register.]

* * * * * * *

OPINION OF HON. D. P. BESTOR.

Hon. Daniel P. Bestor, a leading member of the Mobile bar, addressed the board of directors of the Cotton Exchange, for which he is the counsel, and

in effect said: "We have a State law forbidding the giving of preferences, and yet it has been determined by decisions of the supreme court that a failing debtor may sell goods to favored creditors and in effect accomplish the same result. We have had many examples in this city and State of how this condition of the law may be utilized by fraudulent debtors for the perpetration of wrong.

I should think that all creditors would be interested in the passage of a national bankruptcy law, with equitable provisions, as wrongdoers would be thereby greatly deterred from perpetrating fraudulent acts, creditors would be insured against a panic among themselves, and in all respects their financial interests would be advanced.

On the other hand, debtors would be benefited in this, that they would be less likely to be forced into insolvency by frightened creditors, and in the event of financial misfortune would, if honest, be able to secure a release, and be thereby enabled to renew, to the best of their ability, the battle incident to financial success in behalf of their dependents and for the good of the community in which they live.

Incidents of wrongdoing under the old law were cited, and the belief expressed that the provisions of the proposed new law were such as to prevent a repetition of them.

In speaking of the Torrey bankruptcy bill, he said that it was simple in its construction, terse in its expressions, and that he believed that it could be readily and inexpensively enforced.

Attention was called to the fact that Chief Justice Stone, of this State, was an earnest advocate of the passage of the bill, and that he had recently delivered an address at Montgomery, in which he said of it that it was "as nearly perfect as human ingenuity, industry, and wisdom could devise."

VIEWS OF CAPT. CHARLES L. HUGER.

Capt. Charles L. Huger, president of the Mobile Cotton Exchange, was asked for an expression of his views concerning the desirability of a national bankruptcy enactment, and in reply said: "I believe that the passage and administration of the Torrey bill will tend to lessen the perpetration of fraud and promote business morality.

"If it were proposed to give us back the old law I should object; if there was a prospect, or possibility even, of having the measure administered as the last one was I should do all in my power to prevent its enactment; but the facts are that the proposed new law is one that has been very carefully drafted and been improved upon pursuant to the suggestions of large numbers of commercial, industrial, and other bodies in the country until, according to the opinion of everybody, so far as I know, it is an almost, if not absolutely, perfect measure."

With reference to views of other members of the exchange, he remarked that he had heard some apprehension expressed as to whether the passage of the bill would not interfere with established business customs, but expressed the opinion that such would not be the case; but, on the contrary, the bill was designed and in terms provided for the maintenance of legitimate transactions, and the cancellation of fraudulent ones, and that he did not believe that any honest business man had anything to fear from the enactment of the bill, but that, on the other hand, he would find it of value to him in the fight against would-be wrongdoers.

Managers of National Home for Disabled Volunteer Soldiers.

SPEECH

OF

HON. RICHARD W. BLUE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 16, 1896.

The House having under consideration the following resolution, reported from the Committee on Military Affairs—

"*Resolved, etc.*, That William B. Franklin, of Connecticut; Thomas J. Henderson, of Illinois; George L. Beal, of Maine, and GEORGE W. STEELE, of Indiana, be, and the same hereby are, appointed as members of the Board of Managers of the National Home for Disabled Volunteer Soldiers of the United States.

"William B. Franklin to succeed himself, his term of service expiring April 21, 1896. Thomas J. Henderson to succeed John C. Black, his term of service expiring April 21, 1896. George L. Beal to succeed Francis Fessenden, his term of service expiring April 21, 1896. GEORGE W. STEELE to succeed himself, his term of service expiring April 21, 1896. All to take effect April 21, 1896"—

Mr. BLUE said:

Mr. SPEAKER: In the short time left me it is impossible to attempt to reply to many things which have been said here. I simply say here and now that there has been no denial on this floor of the charges of incompetency and mismanagement made by me in the opening of this discussion. The charges of gross mismanagement and gross incompetency of the Board of Managers of the Soldiers' Homes of the nation as shown by the Inspector-General's report stand wholly unanswered.

That this man, W. B. Franklin, is the controlling spirit of this Board of Managers there can be no longer any serious question; that he has a general treasurer who was formerly a clerk in his office and afterwards assistant inspector-general, whose appointment was inspired by Franklin and who controls and manipulates the funds of these various Homes is beyond question or cavil. The truth of it is that the men who are nominally clerks in the general treasurer's office are but clerks to W. B. Franklin. The whole business is a close corporation, governed, dictated, and controlled by this man Franklin. With the exception of, perhaps, W. J. SEWELL and M. T. McMahon, the other members of the Board are largely mere figureheads, who give some attention to their local Homes, but have little or no knowledge of the general business of this luxuriant octopus and soulless corporation which controls the Soldiers' Homes of the nation.

It has not been denied here that regulations of the Treasury as to redeposit of unexpended balances have not been complied with. It has not been questioned that vouchers relating to the post fund are not made in duplicate and are not fully presented for inspection; that in instances these vouchers are six months absent. It has not been denied that this man Franklin keeps in his hands certain funds and holds certain balances which are not deposited with Government depositories. It has not been questioned that the general laws relating to deposit, advances, and withdrawal of public funds have not been complied with. It has not been denied that the records have not been clearly kept and that the statement of accounts is involved and confused. It is conceded that in the shop accounts balances have been forced and that the title of lands and other property pertaining to these Homes is not held in the United States. It is conceded that makeshifts to procure more comfortable sleeping quarters for the old soldiers have been made necessary; that the system of purchasing supplies is not uniform or under general management. It is also conceded that the business methods as practiced by the Board are exceedingly impracticable. It has not been denied that public and private property have been indiscriminately mingled together in these Homes. It is conceded that the surgeon at the Eastern Branch is not qualified by law, and to avoid the requirements of this law he is carried on the rolls as assistant surgeon.

It is admitted that the post fund, at one of the Homes at least, has been used in violation of law to pay men hired by civil authorities for patrol duty in carrying out the civil law and for lawyers' fees to enforce the same.

It is practically conceded that extravagant prices have been paid by the Board of Managers for flags; that stock in the knitting shop has not been accounted for. It can not be denied that under contract with the citizens of the vicinity they were to furnish gas to the Marion Branch, and yet, in violation of the terms and agreement, the Board of Managers have paid rent for gas land to aid in supplying that Home. It is practically conceded that the public funds have been transferred to private banks; that, in violation of the policy of the Government, property belonging to the Government has been insured in companies in which W. B. Franklin was interested. It is conceded that at least one farm belonging to the United States has been occupied by a citizen without rent. It is admitted that a brewing association which furnishes beer to the Western Branch has built and donated a fountain to that Branch; that the governor of said Branch, A. J. Smith, is the custodian of the Keeley fund and the president of the Keeley League; that land has been leased without the authority of law; that permanent improvements have been charged to post funds, and have thereby escaped the scrutiny of inspection; that the effects of deceased members of the Home have in certain instances never been turned over to the treasurer. Many other irregularities, as shown by the Inspector-General's report, are unquestioned and undenied.

Large clothing balances, for some unaccountable reason, are kept on hand. These things are not ex parte testimony. They are a part of the records belonging to this Soldiers' Home management, and can be found full and complete in House Document 288.

It is also conceded that this Board of Managers collects from these poor, indigent, feeble old men in these Homes—the involuntary wards of the nation, who seek the shelter that the Government has furnished by reason of adversity and want—over $400,000 per annum under the guise of a post fund. This post fund is held by this soulless corporation and expended at its own sweet will without rendering any account to the Government of the United States or to any other person. It is practically under the control of this man Franklin and the vultures of speculation and rapine that cluster about him.

In addition to this, the Keeley establishment, which infests every Home by and with the consent of this man Franklin and other members of the Board, is run for the profit there is in it. No account of its collections and expenditures is made to the management of these Homes or to anyone else representing the Government of the United States. No one knows to what extent these feeble old men are robbed by the extortions of this vile and fraudulent institution. From what information I can gather, the soldiers of the Western Branch have had filched from them by the Keeley institute in the neighborhood of $60,000 since its establishment there. The country is given the humiliating and despicable spectacle of a beer hall upon one side of these Homes manufacturing drunkards and the Keeley institute on the other side of the same pretending to cure them.

It is not denied, nor can it be successfully denied, that from 15 to 25 soldiers of the Regular Army were maintained in the Western Branch by the authority of its governor, A. J. Smith, taking the Keeley cure, while feeble, impoverished, wretched old comrades, half clothed, were turned from the gates of that Home in the inclemency of winter.

I am informed and believe that these soldiers of the Regular Army while being maintained at this Home were fed on rations furnished by the Government at a charge to each soldier of $10 per week while they remained in said Home taking the Keeley cure. I have not been able to find any account of said transaction, or that the Government of the United States was reimbursed

by the sums collected from these soldiers who were maintained at Uncle Sam's expense while taking the Keeley cure. Was that sum filched from the Government for the profit of that Keeley institution? It is time that the government of these Homes should look into the management of this Keeley arrangement and ascertain something about the amounts that are extorted from the inmates of the Homes and turned into the Treasury of this speculative institution for the profit of the owners and managers of the same.

I charge that this man A. J. Smith, in reporting relapses in the Keeley cure at from 11 to 13 per cent, knowingly, untruthfully, and perfidiously misstates the facts; and from the best evidence I can get in regard to these relapses they are not less than 60 nor over 90 per cent. That this man A. J. Smith has in several instances made the taking of the Keeley cure a prerequisite to admission to the Leavenworth Home I have no doubt. That he has driven men from that Home because of their refusal to take the cure is beyond question.

I am informed and believe that in a speech he made at the Hampton Home he used substantially the following language when speaking of inmates of the Soldiers' Homes:

If I were Governor Woodfin I would do as I am doing; they would take the Keeley or take the gate, and I have those who will back me up.

I am satisfied that a somewhat similar condition to that in the Leavenworth Home exists in the Home at Togus, Me.

A full, fair investigation of these Homes will show more or less irregularities, speculations, and frauds in every one of them. I do not charge that the governors of all the other Homes are similar to those in the Homes at Leavenworth, Kans., and Togus, Me., but that there is in every one of them more or less speculation and mismanagement.

The records will show that in the Soldiers' Home at Leavenworth the discharges of the comrades are largely in excess of the number in the other Homes of the nation in proportion to the number of inmates. I am informed that the following is a comparative list of discharges of all the Homes:

	1894.	1893.	1892.	1891.
Western Branch	618	589	568	259
Marion Branch	265	272	242	140
Southern Branch	202	260	307	168
Eastern Branch	290	468	470	210
Northwestern Branch	237	247	454	185
Central Branch	248	384	476	285

By this list it will be seen that at the Western Branch, with a membership of only about 2,400, there were 546 more discharged than there were at the Central Branch, with a membership of 5,500; and yet we are told that this is a model Home.

The gentleman from Ohio [Mr. GROSVENOR] was somewhat infelicitous in his reference to General Patrick as an example of the impartiality of General Franklin. Unfortunately, that beautiful little story was spoiled by the family relationship of General Patrick to W. B. Franklin. I am informed and believe that General Patrick was a brother-in-law of Franklin, and that two sons of this same Patrick are now foisted on the Soldiers' Home management on comfortable salaries and in soft places. It seems also exceedingly unfortunate and illogical that gentlemen like the gentleman from Ohio [Mr. GROSVENOR], and General CURTIS, of New York, and Colonel HENDERSON, of Iowa, and General STEELE, of Indiana, can find no better answer to these plain and unquestioned charges than a reference to the military career of W. B. Franklin. No one has questioned that, so far as I recollect; no one seeking to have the irregularities of this Board corrected or the inmates of the Soldiers' Home relieved from oppression has referred in any way to the military career of W. B. Franklin. Why was it dragged into this contest with humid and vaporing sentimentality to answer in the place of argument and defense? Benedict Arnold had a brilliant record for courage and military skill before he proved recreant to his trust and deserted the cause of liberty and humanity; Aaron Burr was a brilliant, forceful, and courageous military leader; but it has never been regarded as logical or patriotic to hold up the early records of these men in defense of their crimes against liberty and humanity.

The gentleman from Ohio [Mr. GROSVENOR], in the intensity of his feeling, so far forgot himself as to use unworthy and undeserved language toward that great, good, and Christian soldier, Gen. O. O. Howard. I have, up to this time, scrupulously abstained from the use of any language that could be construed as a charge against the military history or record of W. B. Franklin; but I now serve notice upon the gentleman from Ohio [Mr. GROSVENOR] that if the insipid sentimentality heretofore practiced in this discussion in the defense of W. B. Franklin is to be continued, and such expressions applied to General Howard, I will take occasion at some future time to claim the indulgence of the House while I lay before it and the country some facts concerning the military history and record of this president of the Board of Managers of the Soldiers' Homes of the nation.

The gentleman from Indiana [Mr. STEELE] has laid before this House some documents signed by business men of Leavenworth City and has read some telegrams from a few others prominent in public affairs in Kansas. Without disparagement to any of the gentlemen who signed these documents and telegrams, it is pertinent to say here and now that they are business men who transact more or less business directly or indirectly with the governor of the Leavenworth Home or parties connected therewith. Gentlemen here all understand how easy it is to procure signatures to such documents and with what facility petitions are secured upon almost any subject. Some of the gentlemen who signed these papers doubtless never were inside the precincts of the Soldiers' Home and have no knowledge of its management or control. Of the Keeleyites who signed the statements in regard to the management of this Home, it need only be said that they are almost without exception reformed drunkards. In fact, it seems that under the management of these Homes throughout the country the reformed drunkard is preferred to a man of sobriety and character by the governors who are in authority there. This is especially so of the Western Branch, located at Leavenworth, Kans. The governor of this Home, himself having for many years been in charge of that Home while a confirmed drunkard, has been kept in power knowingly and purposely by the Board of Managers after his pretended reformation. It must by this time be apparent to this House that the gentleman from Indiana [Mr. STEELE] would not be convinced of the depravity and drunkenness of this man A. J. Smith if one was raised from the dead to testify against him.

I am informed and believe that one chaplain has resigned his place and refused to remain at the Home on account of Smith's drunkenness and brutality. The Catholic chaplain now there has, I understand, been there but a short time and is probably not familiar with the workings of the Home. The Protestant chaplain who testifies about the phenomenal management of the Home was, I am informed, a tippler himself, and whatever may be his character now, he has not always had a very clear discrimination of the line which divides public from private property in the Home.

What must be the character of these Christian ministers who administer to the spiritual wants of the comrades in that Home while a beer hall, run under their immediate observation, realizes a profit of over $13,000 per annum, and a Keeley league plies its vocation unceasingly upon the same ground? How exalted, holy, and upright are the lives of these two ministers I leave this House and the country to determine.

A statement in regard to affairs of the Home at Dayton, Ohio, has recently come into my possession. How much truth there may be in it I will leave the Board of Managers and the gentleman from Ohio [Mr. GROSVENOR] to determine. It is substantially as follows:

"You are right in saying that Mr. Franklin is the Board of Managers. His word is law in everything pertaining to the management of the National Homes. Now that you have the start made, do not yield an inch until you have had a Congressional committee appointed, and of good men, to investigate the management of all the National Homes. You will be surprised when you know of the abuses that are practiced in all the Homes. In the first place, fight day and night for the defeat of Franklin. That part of this Home known as the depot (the tailoring department and stocking shop) is under control of an old lady, Mrs. Miller, who has been here since 1868. A recent examination of her accounts shows a deficiency of over $52,000 which can not be (or has not been) accounted for. Then there is an appropriation of some $23,000 for policing the grounds. There are on this force about eight or nine paid men and one two-horse team. The work is done by soldiers under sentence of Governor Thomas's court. The private secretary of the governor, Mr. Patrick, is carried on the pay rolls as farm superintendent. I don't think he could tell which end of an onion to put in the ground. Mr. Patrick's wife is on the pay rolls at $75 per month as milk inspector. A daughter of Governor Thomas is on the pay rolls as an arranger of music for the Home band.

"Now, all the moneys paid to these people is illegal. The General Government expects the governor to pay his secretary out of his own salary. Thomas has been here since 1868, and has drawn many thousands of dollars from the Treasury. There is a camp inspector at a salary of $125 per month who is one of Thomas's pets. Any old soldier can do his work for $15 per month. The inspector has failed to find the maggots in the meat blocks in the kitchen, or if he did see them he never reported it. There is nearly completed an amusement hall costing $18,000. That amount of money had better have been expended for new bedding. The so-called mattresses are made in a factory owned by General Franklin. A mattress not 1 inch in thickness and one coarse blanket is our under-bed, with a sheet and two blankets for covering.

"The hospital is a den of corruption. The soldiers who have positions there are nearly all morphine or whisky drunkards. The

hospital steward is an ex-convict and is a bad drunkard, but he knows too much and they are afraid of him. The superintendent of the beer hall is also an ex-convict, so you see they are not nice men. The majority of the soldier clerks are drunkards. I do not know a strictly temperate man among them. Push your investigation. The tailoring that is taken outside costs 200 per cent more to make than the same kind of work costs in Dayton.

"When the Board of Managers are here they advertise a day to hear complaints, but there is always a number of the Home officers present, and the men are afraid to tell their wrongs. And a man who makes complaint is either discharged or transferred very soon after the Board leaves.

"General GROSVENOR, of Ohio, would be a good man to have on your searching committee."

I do not vouch for the correctness of the above statements in every particular. I am informed that a man by the name of Patrick is in office in the Dayton Home. As to the character of his employment I am not fully advised. It will be an easy matter, however, for the Board of Managers to determine how near the truth this statement comes. I have one suggestion to make to them as a pointer to assist them in tracing the shortage in the shop account. If I have figured correctly, the following statement gathered from pages 45, 46, and 59 of the Report of the Board of Managers, National Home for Disabled Volunteer Soldiers, for the fiscal year ended June 30, 1895, will show the condition of the tailor-shop account of the Dayton Home to be as follows:

July 1, 1894:		
Stock on hand		$72,731.77
Received		95,628.65
Total		168,360.42
Cost of material used:		
17,479 blouses	$27,931.44	
5,877 dress coats	19,061.46	
501 great coats	1,936.97	
23,012 trousers	35,318.81	
17,330 vests	13,354.49	
		97,603.17
July 30, 1895. Balance		70,757.25
July 30, 1895. Stock on hand		21,082.96
Apparent deficiency		49,674.29

Will the Board of Managers investigate this account and tell Congress and the country what is the matter?

I desire at this time to further state that I am informed and believe that all the steam boilers of the different National Homes are insured by W. B. Franklin in the Hartford Steam Boiler Inspection and Insurance Company, of which company Franklin is an officer. I mention these matters as subjects of investigation for the Board of Managers, and to each and all of them. It has been stated on this floor that the charges made against A. J. Smith have been investigated before. I have already stated, and I reiterate it, that the charge of drunkenness in February last made against A. J. Smith has not been before investigated; neither has the charge of turning old soldiers from the Home while regular soldiers were being treated in the Keeley institute there; neither have the charges of incompetency and negligence, as shown by the inspector-general's report.

I have stated, and I reiterate that statement, that any investigations made at the Leavenworth Home by this Board of Managers, or any one of them, or by its pliant tool, W. W. Averill, was a roaring farce. I further state that any investigation of this Leavenworth Home made while this man A. J. Smith is left in command there will be a fraud and a farce. And I state here and now that I am informed and believe that W. W. Averill was sent to that Home to make an investigation under the direction of and with instructions from this man W. B. Franklin to examine only certain witnesses; and that the said W. W. Averill examined only such witnesses as he was instructed by W. B. Franklin to interrogate; that the said W. W. Averill went to said institution with his whitewash brush and his paint already mixed to adorn and paint over this man A. J. Smith at the command and under the directions of the president of the Board of Managers of the Soldiers' Homes of the nation—W. B. Franklin. That this instrument of General Franklin followed implicitly the instructions and directions of his master, I have no doubt.

Mr. Speaker, there is one other charge made against the management of the Leavenworth Home, and that is that the governor's secretary, E. B. Wheeler, is a United States commissioner, performing the duties of that office at the Home. It is charged that this man Wheeler is the servile instrument of A. J. Smith, issuing processes not only to bring offenders before him, but for the purpose of returning discharged members of the Home for coercion and oppression by the brutal governor thereof. It is alleged that he has not only been guilty of this perversion of the law, but that he is a miniature Jeffrey, and is using the law as an instrument of oppression for the purpose of carrying out the wishes and desires of the governor of that Home. It is also alleged and charged that he (Wheeler) wrote and caused to be published a libelous article concerning Jesse George, an attorney, who was seeking to protect the interests of the inmates of the Soldiers' Home at Leavenworth, and that he was compelled, under the peril of prosecution, to publish a retraction. The following is a copy of said retraction:

NATIONAL MILITARY HOME,
Leavenworth County, Kans., January 14, 1896.

SIR: I have your letter of the 13th instant, and desire to say that I regret the unfortunate use of the word "disreputable" in connection with your name, in a letter recently addressed by me to the Topeka Capital.

I certainly had no reason nor intent to reflect upon your reputation, and desire to make whatever reparation is just.

I have this day addressed a letter to the Topeka Capital explanatory of this matter.

Colonel Smith had no knowledge whatever of the letter written by me, and is in no wise responsible for this reflection upon your character.

Very respectfully,

E. B. WHEELER.

Mr. JESSE GEORGE, *Leavenworth, Kans.*

It has been charged that A. J. Smith inspired this libelous article of his servile secretary. The surroundings and circumstances are significant.

No effort has been made here to deny or refute the charges against this man Wheeler and his connection with A. J. Smith, the governor of the Leavenworth Soldiers' Home. That inmates of this Home have been brutally treated by the authorities there and deprived of their liberty can not be questioned. The records of the court already show that some comrades at least have been taken from the custody of this man Smith by proceedings in habeas corpus.

I have in my possession also records showing that one inmate of the Home at Leavenworth is prosecuting an action against this same man A. J. Smith for $15,000 damages for compelling him to take the Keeley cure three times. I have further evidence going to prove that this brutal governor, after being sued for compelling this man to endure the Keeley cure three times, sought through coercion and oppression of the plaintiff in the action to procure from him a statement adverse to his interest and in favor of the dismissal of the action. Failing in this, this same defendant, A. J. Smith, has procured a removal of the case to the Federal courts on the ground that he is a citizen of the State of New York while the plaintiff is a citizen of the State of Kansas.

I have also additional testimony showing that when Senator Plumb six years ago sought to correct the abuses of this Home this crafty and disreputable governor used his influence to procure a gathering of some of the inmates of the Home in a post meeting for the purpose of denouncing Senator Plumb and approving the course of the managers of the Home.

If I am correctly informed he is even now using his power and influence for the purpose of obliterating and destroying testimony going to prove his evil conduct and his unfitness for the place he has so long disgraced and dishonored.

Mr. Speaker, I desire at this point to emphasize and restate to this House and the country what my colleague from Missouri [Mr. TRACEY] has so ably presented upon the cost of these Homes. He says:

I find, in examining the reports of the Board with reference to the cost of maintenance, some remarkable facts. I call attention to the fact that the efficiency of the management must of necessity have a very close connection with the cost of maintenance. Now, in turning to the record, I find that General Franklin was elected in 1880. In that year, according to the report, the cost of maintenance per capita in the Homes was $118.23. From that time on until 1892 the cost increased. This was under the management of General Franklin. It increased in 1881 to $132; dropped a little in 1882 to $125; increased in 1883 to $137; dropped a little again in 1884 to $132; in 1885 to $138; in 1886, $125; in 1887, $138; in 1888, $132; in 1889, $144; in 1890, $141; in 1891, $139, and in 1892, $143.

This rapid increase in the cost of maintenance called the attention of Congress to the fact that money was being expended extravagantly in the management of the Homes. The Fifty-second Congress took no action, but in the Fifty-third Congress it was provided that an additional inspection of the accounts of the Homes should take place, under the authority of the War Department. Now I call the attention of the House to the rapid decrease in the cost of maintenance that has occurred since the War Department took a hand in the auditing and the examining of the accounts of the Homes.

In 1892, as I said, the cost of the maintenance was $143.75. In 1893 it was $140.95. That small decrease occurred before the inspection by the War Department took place; but in the succeeding year, in 1894, there was an examination of the accounts by the War Department, and the cost of maintenance was reduced to $127.45. In 1895, under the operation of the same system of inspection, the cost of maintenance in the National Homes has been reduced to $115.80. Here, then, we have, from 1880 to 1892, a constant going up hill under the administration of the Board over which General Franklin presided all this time, while within three years after the inspection by the War Department began we have a rapid decrease from $143 down to $115.

This is the showing made by this great, good, and efficient man Franklin. On this record he seeks indorsement and continuance in power.

If this Committee on Military Affairs was so anxious to make a proper report, why did the gentleman from New York (General CURTIS) suppress the letter of Governor Anthony? Why has that gentleman been wandering around the House electioneering this morning? If he had been as solicitous for the welfare of the old soldier as he was to have capital punishment abolished, cheating

the law of its deserving victims, he would have looked into the matter and presented the letter to the Committee on Military Affairs for examination. If I am correctly informed he suppressed it. That has been the method of W. B. Franklin's friends here on this floor.

If the position is to be taken here that we must not elect someone else in W. B. Franklin's place—if the election of anybody in his place is to be regarded as a disparagement of him—we ought so to understand it. He is not in this place at $4,000 a year for his health. He has been there sixteen years. As the late Senator Plumb said, it is time there should be new blood in this Board. And it comes with bad grace that he and his friends should be insisting here upon his reelection at the expiration of sixteen years, asking that he should be granted a lease of power for six years more, and talking about "investigations" at the same time.

The gentleman from New York [Mr. RAY] (he always reminds me of a turkey cock when he stands in his place to speak) speaks of this matter as though it were an asinine proceeding for us to come in here with our propositions supported by affidavits, and suggests that we ought to have gone before the Board of Managers. The gentleman from Iowa [Mr. HEPBURN] has well said that he would be an ass who would file a complaint before a court to try itself. Every investigation that has been attempted by this Board of Managers has been a stupendous farce, and every man who has had any experience with it knows the fact. And I challenge the attention of the gentleman from New York, General CURTIS, to the expression of a near friend of W. B. Franklin—that Colonel Smith was held in place by some mysterious influence which held in bondage General Franklin. Will the gentleman from New York, General CURTIS, state what that is? Will General Franklin's friends state what it is?

Mr. CURTIS of New York. I ask the gentleman whether he referred to me when he spoke just now of "some mysterious influence"?

Mr. BLUE. I asked you to state what it was.

Mr. CURTIS of New York. There is no such influence; there has been none; there is nothing on which that statement could be based.

Mr. BLUE. Governor Anthony says that a near friend of General Franklin says there is such an influence, and it is a matter of common report in that community.

Mr. Speaker, in conclusion I desire to say that it is an easy matter for gentlemen to plead the cause of the wealthy and titled here, but who shall defend the weak and helpless inmates of the Soldiers' Homes in their poverty and distress? The president of the Board of Managers is a graduate of the West Point Military Academy and a titled and wealthy aristocrat. Other members of said Board, without exception, I believe, are ex-army officers of high rank. So far as I am informed, no private soldier has ever been given a position on this autocratic Board or permitted to share in its counsels.

The inspector-general selected by this Board of Managers, W. W. Averill, is a graduate of the United States Military Academy and a retired army officer. The treasurer of the Pacific Branch Home, Capt. T. K. Upham, is a retired army officer. The adjutant of the Western Branch, Moses Harris, is also a retired army officer. Thus it is that the management is hedged about by rank, caste, and autocratic influence.

No member of either branch of Congress should be permitted to hold a place on this Board. In the past the members of this Board have formed a mutual admiration society and with unblushing effrontery have sought to thwart Congress in enacting wholesome laws for the restraint of this Board of Managers. Even now this influence is seeking to ingraft upon an appropriation bill passed by this House, and now in the Senate, an amendment broadening the power of this Board of Managers and relieving it to some extent of the accountability for its conduct.

I challenge the attention of this House and the country to the conduct of the Board of Managers of the Soldiers' Homes, and I appeal to this House and the patriotic people of this nation to stand by the poor, impoverished, and feeble old comrades who inhabit the Homes made cold, inhospitable, and uncomfortable by the brutal and outrageous treatment of the men who control and govern them. How long are these old comrades to be made merchandise for the beer hall and the Keeley League? How long are they to be robbed of their substance by these vile institutions under the shadow of the flag they sought to preserve and run under the protection of the Board of Managers of the Soldiers' Homes?

The enlightened, courageous, and patriotic sentiment of the plain people of this nation when once aroused will drive the oppressors of these men from power and compel the representatives of the people to put in their places humane and just men.

So long as God gives me strength and the people of Kansas return me to my place in this House, I propose to pursue the oppressors of my comrades until the guilty are brought to justice and the wrongs of the defenders of the nation are righted.

Pensions.

REMARKS
OF
HON. JOHN E. McCALL,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 28, 1896,

On the bill (H. R. 8271) relating to pensions.

Mr. McCALL of Tennessee said:

Mr. SPEAKER: For many years subsequent to the war of the rebellion there was a persistent and continued opposition to pensioning the Union soldier. Happily for the honor of the country, as the years rolled by and we became further removed from the bitterness and scars engendered by the war, this opposition grew beautifully less until all parties concede that the principle of pensioning the defenders of the country is a just and proper one.

The custom of pensions had its origin long years before this last experiment at self-government was dreamed of. A beautiful custom it is, partaking somewhat of the doctrine of reciprocity.

In the hours of darkest peril and direst distress a Government must of necessity call upon its citizens to rally to its defense, whether the foe be from without or within. In responding to such a call the citizens lay down their peaceful avocations, bid adieu to home and loved ones, and, becoming soldiers, offer their service, their health, their lives, in defense of their country. A citizen who has passed the heyday of life is not desirable for a soldier, nor is he who is disabled in body or mind. The Government demands the service of the young, vigorous man. Thus it is that the very flower of the country is required to constitute our Army and to defend our flag.

This requirement by the Government of the very best service of its hardiest and strongest citizens, exposed to all the hardships and dangers of war, must in the nature of things carry with it an implied moral obligation on the part of the Government, when the war clouds shall have rolled away and the country again is peaceful and prosperous, that it will aid the soldier who offered his young life, his robust health, his all for its defense whenever that soldier or those dependent upon him shall stand in any need of such assistance.

In my opinion, the government that refuses to provide for its disabled and dependent defenders, whether such disability accrued while in line of duty or is the result of ill health or accident subsequent to the service, or if it is alone attributable to old age, is unworthy a place upon the map of the world.

Mr. Speaker, having stated that all men agree that the principle of the Government pensioning its soldiers was correct, it remains to discuss what law will afford the best system of pensions and what character of administration will best promote the attainment of the object sought.

It is very clear to my mind that either our present pension laws are fatally defective or the present administration of them is vicious. The former proposition I do not believe to be true. While, no doubt, some defects exist in the present pension laws, yet they are sufficient to afford relief to every worthy claimant upon the bounty of the Government if fairly and justly construed and administered.

I do not agree with the gentleman from New York [Mr. McCLELLAN] in his statement made on last Thursday that the Pension Bureau is now "admirably administered." If that were true, then there would be no necessity for passing the pending bill. If by "admirably administered" he means that it is just to the old soldier or right in principle to construe the law against him in every possible case; that it is right to consider every applicant for a pension as wholly unworthy of belief in his statements; that it is right to pursue every applicant with an army of detectives as large as the regular detective force of the Department, augmented by almost every postmaster in the land, then I agree with him. If by "admirably administered" he means that it is right to communicate with such of the applicant's neighbors as are known to the Department to oppose the applicant in his efforts to obtain a pension for such history of the applicant covering his entire life as it suits the informer to render; if it is right to conceal from the applicant this information and its cowardly author, that he might meet the statements and deny, disprove, or explain them; if it is right to decide his claim adversely on this ex parte evidence, that has not enough truthfulness on its face to permit it to see the light of day, then I agree with him. In short, this is an "admirable" administration of the Pension Department if it be admirable to throw every possible obstacle in the way of the applicant's successful prosecution of his claim, and with the patience of Job wade through the many thousand pensions granted to dig up some

questionable ground upon which to discontinue some old soldier's pension or that of his widow and children. It depends largely from what standpoint one views the present administration of the pension law as to whether one concludes that it is admirable or contemptible.

In my judgment it is not the laws as they are written that produce the trouble. It is the construction and administration of them.

Mr. Speaker, the enactment of the pending bill is necessary in order to straighten out the tangled web into which those who now administer the pension laws have woven them in their endeavor to disallow every application possible and to discontinue every pension where there was a shadow of excuse for it—for the purpose, as I allege, of preventing the roll of pensioners from increasing—and as a result of that purpose the roll shows a net increase of only 980 for the fiscal year ended June 30, 1895, although there were 142,540 original applications passed upon.

Mr. Speaker, section 1 of the pending bill is as follows:

That no person otherwise entitled to a pension by virtue of any law of the United States shall be disqualified from receiving the same by reason of any prior service in the Confederate army or navy during the war of the rebellion, nor shall the widow, children, or dependent relatives of such person be deprived of a right to pension by reason of such service: *Provided*, That no pension shall be granted by virtue of this section for disability contracted or incurred while aiding or abetting the late rebellion against the authority of the United States.

In my humble judgment there is no necessity for enacting that section into law, except the unnatural and strained construction placed upon the act of June 27, 1890, by the present Commissioner, and this section tells him in terms so plain that a man, though a fool, can not err in his understanding of what it means and what the Congress and the country desire in regard to the class of soldiers therein referred to.

I have said that this section is necessary because of the unnatural construction by the Commissioner of the act of June 27, 1890. What are the provisions of that act? For this argument I need only quote parts of sections 2 and 3.

Section 2 provides—

That all persons who served ninety days or more in the military or naval service of the United States during the late civil war of the rebellion and who have been honorably discharged therefrom, and who are now or may hereafter be suffering from mental or physical disability of a permanent character, not the result of their own vicious habits, which incapacitates them from the performance of manual labor in such a degree as to render them unable to earn a support, shall, upon making due proof of the fact according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive a pension not exceeding $12 per month and not less than $6 per month, proportioned to the degree of inability to earn a support, and such pension shall commence from the date of the filing of the application in the Pension Office, after the passage of this act, upon proof that the disability then existed, and shall continue during the existence of the same.

Section 3 provides for the widow or minor children under 16 years of age of the soldier granted a pension in section 2 already quoted.

It will be noted that section 2 provides for all persons who served ninety days or more in the military or naval service of the United States. This language is direct and emphatic, and under this act Republican Commissioners of Pensions granted pensions to all persons who brought themselves within its explicit provisions. The result is that on June 30, 1895, there were 365,118 invalid old soldiers, 95,696 widows and minor children of old soldiers, 12,997 navy invalid pensioners, and 5,104 widows and minor children of sailors drawing pensions under this law, aggregating 478,915. By far the greater portion of these were placed on the pension roll prior to the advent of the present Administration.

On June 30, 1895, there were 460,385 pensioners under the general law, so that on that day there were in all 939,300 pensioners chargeable to the war of the rebellion and 31,224 chargeable to previous wars, making a grand total of 970,524 pensioners.

Mr. Speaker, the Revised Statutes of the United States, section 4716, provided that—

No money on account of pension shall be paid to any person, or to the widow, children, or heirs of any deceased person, who in any manner voluntarily engaged in or aided or abetted the late rebellion against the authority of the United States.

By act of Congress passed March 3, 1877, Revised Statutes, section 4716, it is provided that the section last referred to "shall not be construed to apply to such persons as afterwards voluntarily enlisted in the Army of the United States, and who, while in such service, incurred disability from a wound or injury received or disease contracted in the line of duty." In the face of the plain provision of the act of June 27, 1890, providing that "all persons," etc., and contrary to the ruling of its immediate predecessors and in disregard of the act of March 3, 1877, repealing section 4716, Revised Statutes, the present Administration holds that persons who, prior to enlisting in the United States Army, rendered service in the Confederate army, although holding honorable discharges from the Army of the United States, were not entitled to pensions under act of June 27, 1890, alone on account of this Confederate service. I am aware that there has been an effort made to break the force of the just criticism of this unwarranted construction and to hold that only those who rendered voluntary service to the Confederacy are not entitled to pensions, but this dodge will not serve the purpose for which it is intended, since the rule of the Pension Office requiring ex-Confederate soldiers to prove by two witnesses at this late day that their service was not voluntary is so unfair and extreme that it can not be complied with and all alike are dropped from the pension roll with but few exceptions. Why was this ruling made? Evidently to stop the growth of the pension roll.

Mr. Speaker, upon the entering into office of the present Administration there was a scheme entered upon to reduce the number of pensions. At once a review of all the pensions granted under the law of 1890 was undertaken, that being the class of pensions that presented to the mind of the Commissioner the most inviting field to find excuse and trivial reasons for dropping pensioners and to reduce the roll.

An analysis of the figures submitted by the Commissioner in his report for the fiscal year ended June 30, 1895, page 36, will furnish food for thought and tend to prove what I have already stated.

We find that out of 460,385 pensioners under the general law there were dropped for all causes during the fiscal year 1895 16,308. Of this number 12,843 were dropped by reason of death, 655 by remarriage, 542 minors by legal limitation, 1,244 by failure to claim, and 1,024 for other causes. Under the law of June 27, 1890, out of a total of 478,915 pensioners, there were dropped for all causes during the fiscal year 1895 23,672. Of this number 12,973 were dropped by reason of death, 544 by remarriage, 602 minors by legal limitation, 1,069 by failure to claim, and 8,484 for other causes. It will be noted that under the class for which no causes are assigned for dropping the pensioner there were only 1,024 dropped under the general law and 8,484 dropped under the law of June 27, 1890, or nearly 800 per cent more under the law of 1890 than under the general law for which no cause for discontinuing is assigned. This act of 1890 was the field wherein the Commissioner found opportunity to discontinue a large number of pensions without assigning cause. As a result the Administration boasts that the net increase of pensions for 1895 was only 980.

But if he had kindly stated the causes for which these 8,484 pensions were discontinued, I feel safe in saying the report would have shown that a very large per cent were discontinued because the pensioners had rendered service to the Confederate cause, although they afterwards enlisted in the Federal Army, rendered valuable service, and now hold honorable discharges.

Mr. Speaker, it is to cure this evil and protect this class of soldiers that we ask the enactment of the first section of this pending bill. Many of these men were loyal Union men originally and many of them were conscripted into the Confederate service. Many of them entered the Federal Army, were captured, thrown into Andersonville and other prisons, and by a process of starvation, exposure, and inhuman cruelty unsurpassed in the annals of the world—certainly in any civilized country—they were reduced to walking skeletons, covered with putrid sores, and reeking with vermin. While thus standing at death's door they were offered liberty on condition they join the Confederate army. Hating the flag they were asked to follow, detesting the cause for which they were to take up arms as the price of their liberty, they yielded. Who would not risk all to escape such horrible death and fly from the contaminated prison walls, the charnal house of Andersonville, and escape its filth, its stench, its gloom, and bathe again in the pure sunlight of heaven and drink great drafts of fresh, wholesome air? These poor fellows, for months fed on husks and exposed to the pitiless storms of winter and scorching suns of summer, in rags reeking with filth, knew their purpose. Their hearts were yet loyal. It was their purpose to regain liberty by joining the enemy, to desert, and fly to those who fought for the flag they, too, loved, and again take up arms for their country. This they did, and fought for the Union to the close of that awful struggle and were honorably discharged. If they are entitled to pension on other grounds it should not be denied them solely because of such service in the Confederate army.

While there is some discontent on this side of the House with the first section of the bill, by far the most pronounced opposition comes from the Democratic side. I do not think I am wrong when I say that four-fifths of the Democratic members on this floor were either Confederate soldiers or believers in the Confederate cause, or are the sons of one or the other of the classes named. Is this Democratic opposition based upon high patriotic ground or does it emanate from a desire to punish such persons, by discriminating against them in the pension laws, for deserting a cause which the opposers of this section on the other side once loved so well and fought so bravely to maintain? The gentleman from Maryland [Mr. MILES], "the son of a rebel," to use his own language, was particularly severe upon this class of soldiers. His eloquent and bitter denunciations of them as traitors, deserters, and Hessians but served to subject the gentleman to the

grave suspicion that this "son of a rebel" was opposing this section of the bill not from patriotic motives alone, but out of a spirit of revenge. Those on this side of the House who oppose section 1 of the pending bill do so not because the man deserted the Confederate cause but upon the ground that a citizen who once bears arms against the country should never be restored to the same rights and immunities that he enjoyed before this act of disloyalty, however bravely and devotedly he may subsequently follow his country's flag.

Between these two contending forces the class of soldiers sought to be benefited under this first section would have a rocky time. On the one hand he is refused a pension because he dared to take up arms against the Union, and on the other he is refused a pension because he dared lay down his rebellious arms and fight for the Union. One denounces him as a rebel; the other denounces him as a deserter. Whichever way he flies is death.

Mr. Speaker, I do not agree with either of these contentions. If I read history aright, the President of the United States, the Congress, and the commanding generals in the late war received the deserters from the Confederate army with open arms and rejoiced at their coming.

They were clothed in the uniform of the Union soldier. In their hands were placed the best weapons at command. They touched elbows and marched side by side with the other soldiers beneath the Stars and Stripes, to the air of "Rally 'round the flag, boys." They fought, bled, and died for the Union. Who did more? Who dare do more? Many of those who survive hold honorable discharges. These men can not be slighted or lightly brushed aside. There is more involved than dollars and cents—a principle as everlasting as the granite hills and as sacred as our flag.

If these soldiers were worthy to wear our country's uniform and follow our country's flag until honorably discharged, that discharge should be a certificate of loyalty, and there should be no desire or opportunity to go behind it.

Mr. Speaker, while I do not fully agree to all the provisions of the pending bill, containing, as it does, 21 sections, yet I shall give it my support. It does not add any new class of pensioners, but, in my judgment, is only administrative legislation. It bridles a hostile Commissioner and rolls away many of the obstacles that hinder the worthy applicant, and makes his pathway to the Pension Office plain. If a claimant can not bring himself within the provisions of the pension laws by a preponderance of reasonable proof, then he ought not to go upon the pension rolls, but he should not be prohibited from bringing himself within the provisions of the law by a lot of red tape and a failure to comply with unreasonable demands and requirements at the hands of a hostile Administration. This bill will go a great way in correcting the wrongs to which the defenders of the country and their widows are now subjected, and will be hailed with delight by a large class of old soldiers, and, in my judgment, will be approved by all right-thinking men throughout the country.

Pensions.

REMARKS
OF
HON. LUCIEN J. FENTON,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 27, 1896,

On the bill (H. R. 8271) relating to pensions.

Mr. FENTON said:

Mr. SPEAKER: The bill under consideration, so far as it goes, will, in my opinion, meet the hearty approval generally of ex-soldiers and their friends.

It can not be denied that liberal provision has been made by Congress from year to year since the close of the civil war in order that the disabled survivors of the armies of the Union may not suffer on account of the lack of the necessaries of life.

Indeed, it may be truly asserted that the old saying that "republics are ungrateful" has been completely refuted, as evidenced by the liberal pension acts spread upon our national statute books from 1865 to 1896, in response to the peremptory demands of a grateful people, who have realized and continue to realize that this great nation owes its existence to the patriotism of the "boys of '61," who are now so rapidly and so silently passing into the "bivouac of the dead."

But while the nation has attested its gratitude to its defenders by liberal provisions in the aggregate, the truth remains that the ends of justice in thousands of worthy individual cases have been defeated through the cold-blooded, hairsplitting interpretation of the pension laws by the agents of the Government and the servants of the people whose duty it has been to pass upon the claims of maimed, diseased, and poverty-stricken veterans whose very existence has been rendered miserable on account of exposure on the march, in the camp, and on the battlefield, in order that popular government might not be a failure and that this nation might stand united and not be rent into warring sections and thus perpetuate a civil strife before which all civil wars recorded in history would have paled into insignificance. Does it occur to the gentlemen who, in luxurious ease and with comfortable salaries, are sitting in judgment upon the modest claims of aged veterans, of needy orphans, and sorrowing widows, that they owe these conditions of luxury and of power to the sacrifices of the old soldier concerning whose claims, not infrequently, they pass judgment with a cynical air and with such a lack of human sympathy or decency as would do credit to the most exaggerated specimen of the modern shylock in exacting the last atom of flesh? I may be asked to specify and not to deal in generalities. Very well; I shall at least refer to one matter to illustrate my point.

The Pension Office employs a fixed number of special examiners, at a probable annual cost to the Government of a half million dollars. I doubt not that many of these examiners are worthy gentlemen who do their work conscientiously and justly in reference to claimants; but "there are others," so to speak, and of these I wish to treat.

I have in mind a particular case which came under my own observation and which shows the gross injustice sometimes practiced by special examiners.

Ethan Allen Sellman, whom I have known from my early childhood, enlisted in Company E, Fiftieth Ohio Volunteers, August 26, 1862, served faithfully, and was honorably discharged at Salisbury, N. C., June 26, 1865.

He was granted a pension at the rate of $8 per month from the date of his discharge because of disease of the eyes incurred in the line of duty. He continued to draw a pension until some time in the year 1878, when some secret enemy addressed a letter to the Commissioner of Pensions alleging that Sellman had disease of the eyes prior to his army service. A special examiner was forthwith sent out to investigate the charge made by this enemy of old soldiers, and he (the examiner) appears to have taken his bearings from the aforesaid secret enemy of pensioners, since he seems only to have discovered persons from whom to take testimony who were not friendly to Sellman; strangely enough, failing to take the affidavits of others who were without prejudice in the matter. This special examiner made his report based upon ex parte evidence, taken in the dark so far as this old soldier was concerned, and upon this report, accompanied by affidavits, all in the handwriting of this ex parte examiner, the name of Sellman was dropped from the rolls, and, as though his physical afflictions were not enough, he was thus by implication stigmatized as a fraud and a perjurer by the very Government he had fought to save. But this special examiner must make a record for himself as a great detective and a great discoverer of fraud. So on September 4, 1878, the name of Ethan A. Sellman was dropped from a roll of honor, where it belonged, by a star-chamber proceeding and his good name stigmatized without his being permitted to be heard in his own behalf. Borne down by disease, disappointment, feeling deeply the base injustice done him, this poor man has struggled through all these years to the present time hoping against hope that the great wrong done him might be righted before his troubled life shall end.

Before my election to Congress I was familiar with this man's case. Many efforts have been made by his friends to correct the well-known injustice, but all to no purpose. Soon after my arrival in Washington, last December, I visited the Pension Office and asked to see the papers in the Sellman case. On examination I made a most remarkable discovery, namely, that Sellman's pension had been stopped on the evidence of three men, two of whom I knew personally, but as they are now dead, I shall make no comments. Suffice it to say, however, that two of these three men made later affidavits which are on file, retracting statements made in their first affidavits, so that the evidence against Sellman narrows down to that of one man, whose widow now contradicts him, stating that she knew Sellman well for ten years prior to his enlistment, and knows that his eyes were not diseased before his army service. I also found 49 affidavits of responsible citizens of Adams and Brown counties, Ohio, most of whom are known personally to me to be persons of the highest character, testifying that they knew Sellman before the war and knew him to be then free from the alleged disease. I was delighted with this discovery of 49 to 1 in favor of this gallant but deeply wronged old soldier. I hastened to see the honorable Commissioner, thinking all I had to do was to call his attention to this long-standing wrong, but to my surprise he manifested little interest in the matter. I ventured to ask him to give his personal attention to the case, which he finally consented to do, saying he would write me his decision in a few days. Imagine my feelings when that letter

came, the substance of which was that there was nothing in the evidence furnished in the 49 affidavits sufficient to offset the report of the special examiner and the affidavit which said examiner wrote and had the one man to sign as before mentioned. In short, this means that the report of the special examiner outweighs everything else if it be unfavorable to the claimant or pensioner.

There was but one course left, and I have accordingly introduced a bill to restore this man to the rolls, and I fully believe it will appeal successfully to the sense of justice existing among members of both Houses.

I wish to say, Mr. Speaker, that I desire to see a law enacted at an early date pensioning every man who suffered the torments of those earthly hells, whose horrors can never be described by tongue or pen. I refer to rebel prison pens, where our brave comrades who survived those indescribable cruelties suffered as no others have suffered for the land we love. Let us be just and pension them all.

There is one other matter I wish to refer to briefly. It is what, in my mind, is a demand for an amendment to existing laws in the interest of widows, to the end that the discriminations against very many of these patient sufferers may be at least reduced to a minimum. It is a well-known fact that many needy widows of soldiers who served faithfully through the entire war, under existing law, can get but $8 per month. The soldiers whose widows are the victims of these unjust discriminations may have met death from accident or may have died from disease contracted in the service, but they have no hospital record; the record of the surgeon's call knows them not. No matter how valuable their services may have been to the Government or how they may have suffered and struggled against poverty until death relieved them from their sorrows, their widows must be content with the pittance of $8 per month.

I shall not say it is wrong for the widow whose husband enlisted near the close of the war, was paid a large bounty, and spent the greater part of his time about the hospital to receive $12 per month, but I do say that when the Government does this and refuses to pay more than $8 per month to the widow of the veteran of three or four years' faithful service in the field, it does a rank injustice to thousands of deserving widows borne down by toil and weight of years.

Finally, let the representatives of the people see that equal and impartial justice shall be done, so far as may be within the power of the Government, to all who have just claims for recognition, whether it be soldier, widow, or orphan.

Bankruptcy.

REMARKS

OF

HON. WINFIELD S. KERR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 30, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States.

Mr. KERR said:

Mr. SPEAKER: After a careful examination and consideration of the provisions and purposes of this measure I have concluded to support it, and I desire to state some of the reasons which brought me to this conclusion. Two reasons stand out prominently and appeal strongly to any man's judgment who approaches the subject near enough to view it in a clear light and considers it dispassionately and without the bias of prejudgment.

First, creditors should have the protection and the advantages of a fair bankrupt law, and secondly, debtors who honestly give over their property to satisfy the claims of creditors should be discharged from their obligations and thereby given an opportunity to again enter the race of life upon even terms with those who have been more fortunate.

Business men, those engaged in commercial lines, and lawyers appreciate more adequately than most others the pressing need of a bankrupt law by virtue of which an insolvent's estate and effects shall be protected from the dishonest and inequitable raids of preferred creditors. In most of the States it is the rare exception where, under the State insolvent laws, an insolvent estate is divided pro rata among his creditors. The preferring of creditors has grown into a monstrous evil. The preference itself, when done honestly and according to form of law, is inequitable, because the very soul of equity is equality; but when dishonestly done it is simply a disgrace to the jurisprudence under which it is done and which can afford no preventive or relief.

An honest preference, under laws which permit it, is the reward of a diligent creditor, but the form is the instrumentality through which the insolvent's estate and effects are conveyed to friends and relatives and put effectively beyond the reach of honest creditors.

My experience as a lawyer leads me to believe that in the great majority of cases the debtor's wife, brother, uncle, or aunt turns up with the largest claims and a preference, and if the estate can be measured beforehand the claims and preference do not fall much short of equaling it. I do not mean to say this practice is always dishonest, and the claims of relatives and favorite creditors always spurious, but to such an extent in many of the States has this practice of fabricating claims and securing them by preferences gone that it has become a great commercial and business evil, dangerous and crying loudly for relief.

There is no remedy for it save in the enforcement of an equal distribution of an insolvent's estate among creditors. This does no injustice to creditors; it in fact puts into their credit business an element of certainty that of itself is an element of stability. As it is now in most States a foreign creditor has no reliance except upon the solvency of his debtor. In case of a failure he is sure to be forced out by a creditor who is upon the ground or who stands in with the debtor. To know that in any event the assets will be divided equally among all creditors is an advantage.

In this connection another evil has grown up in many communities which ought to be eradicated. It is the practice of preferring home creditors to the exclusion of foreign creditors. I am in favor of home industries and the patronage of home institutions; but the ethics of that good principle is wrenched when it is carried to the extent of wholly depriving foreign creditors of payment of their claims in order that home or domestic creditors may be paid in full or receive large dividends.

The law of preferences gives the debtor more power in the disposition of his estate in case of insolvency than he should have. The estate or property of an insolvent, at least after insolvency reaches a point requiring liquidation, should belong to and be controlled by his creditors. They alone have an interest in it. But under the insolvent laws of most of the States they can do nothing, however involved the debtor is, unless the debt was fraudulently or criminally contracted, or they can get a judgment obligation, or there exist grounds for attachment. Under these laws a preference is not an act upon which may be predicated the remedies of attachment or receiver. An insolvent debtor may give a judgment note or a mortgage upon his property to a favorite creditor, and at the same sitting execute a deed of assignment, put the mortgage on file, or levy the execution a minute ahead of filing the deed of assignment, and the supreme court of Ohio holds the preference to be valid.

For some years the doctrine was sustained in Ohio that if the preference given to secure a preexisting debt and the execution of the deed of assignment was one transaction—that is, if the former was done in contemplation of insolvency and assignment—it was void as against creditors. But within a year or two this rule has been so modified that no presumption obtains, although the preference and the deed of assignment are given and made at the same time. At least it goes to the extent of holding that the fact of contemporaneous execution of the instruments by which the preference is given and the assignment made does not of itself afford proof sufficient to invalidate the preference. How many other States have a like rule I am unable to state. So much for the creditor; now about the debtor.

Honest debts ought to be paid in full, but there are certain situations and conditions in which that becomes impossible, and in such cases we are confronted "by a condition and not a theory." Then the question must be determined whether it is better to require the creditor to lose his debt or a portion of it, or give him a mortgage on the life of the debtor. The community has some interest in this proposition, and its interest should be consulted. An individual is an integral part of the community—his labor contributes to its prosperity, and his incapacity or inability to labor withdraws so much from its productive forces. The mainspring of industry is the desire to accumulate property, to become independent. This incentive is withdrawn if the individual is not allowed to hold property in his own name or is driven to cover up his ownership, neither of which is any advantage to the community or to his creditors.

When an individual completely fails, leaving a large indebtedness, it is a rare exception where he recuperates and pays any considerable part of such indebtedness. The wise creditor in such case puts the amount down to loss and wipes it from his memory. But there are others; and they pursue and harass an unfortunate debtor while both are upon the earth. The creditor gets nothing and the debtor dare not get anything. In most instances the indebtedness is so large that there can be no hope of payment within such time as the debtor's recuperative forces last; and at any rate it is more than human to ask a man to devote all his life to paying debts.

Again, the debtor's family is a powerful factor in the problem.

A man's first duty is to his family, his wife and children. "He that provideth not for his own household has denied the faith, and is worse than an infidel" is the divine condemnation. A roof-tree must be maintained and the mouths of dependents fed before any other rights intervene. Of course all the States provide homestead and other exemptions to debtors who are heads of families, but these alone are hardly sufficient to call forth the energies and abilities of men who have made fortunes and conducted large businesses. Extinguish hope, and we become driftwood on the stream of life.

During the last few years of financial and business disaster thousands of men of integrity and high business ability have become bankrupt. Unless the load of debt is lifted they are useless, useless to themselves, useless to their families, useless to their communities. All incentive to activity is cut off; they float, and will float to the end.

Every dollar of property belonging to a debtor, save reasonable exemptions, should be sequestered for creditors, but when that is done the bond should be canceled. We might as well imprison for debt as to allow a creditor a mortgage on the life of his debtor.

There are certain chances in business that must be taken by those engaged in it. Credit is largely extended upon property, stock, assets, and not very largely upon the life of the person to whom credit is extended. If the former fail the latter should not be put in pound.

This philosophy may be too fine for business, but to subscribe to it is creditable to our humanity. In many cases it all resolves itself into the poet's conclusion, "God made the old man poor." Honesty is the talisman which opens the door of this act to the debtor. At its hands no dishonest debtor will receive his liberty.

This measure provides for both voluntary and involuntary bankruptcy; that is, it permits the debtor to take advantage of the act and it permits creditors to compel the debtor to liquidate under it if he is shown to be insolvent and that he has committed an act of bankruptcy. The acts of bankruptcy, as defined in section 2 of this bill, fall within three general classes, namely: First, acts which are a fraud against the rights of creditors; second, giving or attempting to give favorite creditors a preference or advantage over other creditors, and third, conditions, such as defaulting in payment of matured commercial paper and suspension of business, which of themselves indicate failure or bankruptcy. In most of the States these acts are held to give the creditors of a debtor committing them certain rights which more or less interfere with his control of his property and with the prosecution of his business. Acts of fraud such as are described in clauses 1, 3, and 7 of section 2 in most of the States are grounds for attachment, and under them the debtor's property is sequestered and sold under legal process. Acts such as are described in clauses 5 and 6 of said section furnish ground, in many of the States, for setting aside the preferences as a fraud upon creditors, and if the debtor's whole property is covered by the liens or preferences it all may be administered for the benefit of all creditors. So the debtor would not be in a position differing so radically from the present situation as some would make appear, even though this bill should pass.

The strongest argument—at least the one that thunders most in the index—is that debtors would be at the mercy of rapacious creditors. Not so. On the contrary, their hand would be stayed by the certainty that no advantage over other creditors could be secured, however swift they might move. The certainty, also, that however slow they might move, however lenient they might treat the debtor, it would not result in advantage to other creditors, would act powerfully to the debtor's advantage. Indeed, under the State attachment laws, the inducement to rush in is more dangerous to debtor than anything that could menace him under the provisions of this bill. In States where legal preferences can be given the inducement to press and harass a debtor is especially strong. It is a powerful leverage, and is used as such.

But take this measure; a debtor knows exactly or can measure accurately the rights of his creditors. He knows that if he does not commit an act of bankruptcy he is in no danger from them; that is, in no danger of being thrown into bankruptcy. He may be sued and all that, but I mean he is in no new danger by reason of a bankrupt law.

It is argued that because other bankruptcy laws proved unsatisfactory this one will. I have not examined the reasons for the repeal of the acts of 1800 and 1841, but I have some knowledge of the cause which resulted in the repeal of the act of 1867. The expense of administering it broke it down. The demand for its repeal did not come from the debtors, but from creditors, who saw estate after estate swallowed up in the hungry maw of registers, assignees, marshals, and others whose services were employed. Delays were devised, because the longer the delay the larger the fees. This bill is carefully guarded against that abuse. In addition to the per cent—the commission—the fees are fixed and can not exceed a certain reasonable amount. The commissions, based upon the amount of the estate, are low, and no discretion is left under which they might be enlarged. There being no inducement for delay, there will be no unreasonable delay in administering this law.

The law of 1867 was unsatisfactory in that a debtor must pay 50 per cent of his debts or he could not be discharged without the consent of a majority, in number and amount, of his creditors. Many who honestly turned over all their property, and in fact the majority at the end, found they could not pay 50 per cent, and they went on with their burden, unrelieved and undischarged. This was wrong. A debtor who turns over everything should be discharged. There is little loss to the creditor and much gain to the debtor and community in the discharge, and it should be granted in every case where the debtor honestly complies with the act.

Under the law of 1867 there were not sufficient registers to make its administration convenient to the people. Whenever a litigant has to travel out of his county to court or hearings in which he is interested or compelled to attend it is burdensome and expensive. A creditor may do this, but a debtor whose property is sequestered can not do so without inconvenience and embarrassment. This bill requires at least one referee in each county, and that feature will prove a great improvement on the last law.

The rights of both debtor and creditor are carefully guarded in this bill. No debtor can be adjudged guilty of an act of bankruptcy until that question is passed upon by a jury, unless, by his failure to request one, the right is waived. This right is as safely guarded as life and liberty. The right of trial by jury, the great Anglo-Saxon institution, is erected between the debtor and his creditors. If that right could preserve liberty against the power of tyranny and kings for centuries, it can and will protect a debtor from being oppressed and wronged at the hands of his creditors.

With all its merits the bill should be broadened a little in its scope. It should include corporations as voluntary bankrupts. They are included as involuntary bankrupts, and if they can be thrown into bankruptcy they should have the power to go into it voluntarily. No reason has occurred to me, and I have heard none, for depriving artificial persons of this right accorded to natural persons. They were included in the act of 1867, and nothing in the operation of that act as to corporations furnishes a reason for this departure.

That they should not be discharged from debts is very clear. In the first place, there is no necessity for it and no advantage or benefit by reason of it. A corporation upon going through the process of liquidation loses its entity; it is dissolved. The same corporators or stockholders may again start in business, but it will be under a new organization and as a new artificial being. The stockholders, individually, are not the corporation, and except as they are made liable by statute or constitution for its debts, the measure of their interest is their respective interests—the company property and assets. The stockholder's liability could not be discharged or affected by an act of Congress. So, as I have said, the reasons for not discharging a corporation from its debts are obvious.

But why should it not have the right to become bankrupt on its own motion if its interests and those of its creditors render it advisable? In the form this bill now assumes the only way a corporation can secure the benefit of the law is by committing some act of bankruptcy, committing some fraud upon its creditors, or doing some uncommercial or unbusinesslike act. This is not so important to the company itself as to its creditors. Every year sees the business done through the medium of corporations increased. Let me illustrate. A corporation is failing—may be insolvent, yet no act of bankruptcy is committed. There is no ground upon which creditors can move for relief or remedy under this bill. Certain creditors have cognovit or judgment notes, and upon these judgments are taken and levies made. As in the ordinary course, judgments may be taken upon matured paper or debts, and levies made. The result of this is that a few creditors exhaust the property and others are excluded. There is no wrong about this, but there is no reason why the means of equal distribution should be provided in case of natural persons and not in case of corporations.

I propose the following amendment, which, if adopted, will put corporations in this act as they were in the act of 1867:

In section 3, line 1, after the word "person," insert "partnership or corporation," and strike out of said section the words "except a corporation"; and at the end of Paragraph B, of section 3, insert the following.

"That the provisions of this act shall apply to all moneyed business or commercial corporations and joint stock companies, and that upon the petition of any officer of such corporation or company, duly authorized by a vote of a majority of the corporators at any legal meeting called for the purpose, or upon the petition of any creditor or creditors of such corporation or company, made and presented in the manner hereinafter provided in respect to debtors, the like proceedings shall be had and taken as are hereinafter provided in the case of debtors; and all the provisions of this act which apply to the debtor, or set forth his duties in regard to furnishing schedules and inventories, executing papers, concealing, conveying, assigning, or paying away his money or property, shall in like manner and with like force, effect, and penalties apply to each and every officer of such corporation or company in relation to the matter. Concerning the corporation or company and the

money or property thereof, all payments, conveyances, and assignments declared fraudulent and void by this act when made by a debtor shall in like manner and to like extent and with like remedies be fraudulent and void when made by a corporation or company. No allowance or discharge shall be granted to any corporation or joint stock company, or to any person or officer or member thereof: *Provided*, That whenever any corporation by proceedings under this act shall be declared bankrupt, all its property and assets shall be distributed to the creditors in like manner as provided in this act in respect to natural persons."

Another most potent reason why they should be included: This law, if passed, will supersede or suspend the insolvent laws of the States. If corporations are not permitted to make voluntary assignments in bankruptcy and the State assignment laws are suspended, there is no way left by which they can secure an equal distribution of assets among creditors. They may liquidate through the hands of receivers, they may be wound up, but there will remain no means in the hands of the company itself to secure such distribution.

It may be thought that the State insolvent laws will continue in force as to corporations if they are not brought within the provisions of this act, but such is not the case. The act of Congress itself supersedes all State insolvent and bankrupt laws. The jurisdiction is concurrent, but when Congress acts by enacting a uniform system the jurisdiction of the States ceases. But if there were not constitutional obstacles it would hardly be practicable to have the assets of insolvent corporations administered under State laws and the assets of natural persons under a national bankruptcy law. The conflict would be endless between creditors seeking to secure equal distribution through bankruptcy proceedings, and the company itself or favorite creditors seeking or having secured preferences, to proceed under the insolvent laws of the States.

The act should contain some provision as to what the petition should contain in both voluntary and involuntary proceedings. This provision should seek to enforce brevity in the pleadings. If the essentials are made statutory, it will do much toward simplifying the petitions and render unnecessary court construction, and it will at least enable every pleader to know just what is necessary to set forth.

As to the form of the petition in voluntary bankruptcy, I propose the following amendment:

The petition filed by a debtor shall contain, in substance, the following allegations: The debtor's place of residence, his inability to pay all his debts in full, his willingness to surrender all his estate and effects for the benefit of his creditors, and his desire to obtain the benefits of the act.

This is substantially the requirements of the act of 1867, and it would have the advantage of judicial construction.

As to the petition of creditors I propose the following amendment, namely:

The petition filed by a creditor or creditors shall contain, in substance, the following allegations: The debtor's place of residence, the amount of claims represented by the petitioners, and the number of claims, the commission by the debtor of one or more of the acts of bankruptcy as herein defined (and it shall be sufficient to set them forth in the words of the act) and the desire of the creditors that the debtor be declared a bankrupt and his property and estate be administered under the provisions of this act.

No form was provided in the other bankruptcy laws for the petition of creditors, so far as I know, but it seems wise that the act should fix the general form and determine the essential allegations.

There should be an amendment to section 5, striking out the following words: "For six months, or the greater portion thereof, immediately preceding the filing of the petition." This section seeks and proposes to preserve intact the exemptions of debtors in the various States, but it will not do so. The words quoted are the concluding words of the section and put a condition upon the right of exemption which does not exist in many of the States. It in effect requires a domicile of six months, or the greater part thereof, before the filing of a petition to entitle a debtor to the exemptions.

In many of the States no length of residence or domicile is required to entitle a debtor to a homestead or exemptions. If he is the head of a family and has no homestead he is entitled to certain exemptions, and if he has a homestead, being the head of a family, and if its value does not exceed a certain amount, it is preserved to him, free from the claims and attacks of creditors without regard to any length of residence or domicile. Some States require a certain residence and some do not, so that if this act passes it will fix a new rule of exemption in perhaps all the States. It will require a domicile of the greater part of six months in the State. What the section should provide, and what it will provide if these words are stricken out, is that exemptions shall remain as they are now fixed by the laws of the various States.

This measure has received the most careful consideration of the Judiciary Committee and the House, and no doubt is the very best product in the way of bankruptcy legislation that could be presented. Public sentiment is for a bill of this kind and ought to be responded to. I shall vote for it with great pleasure.

Pensions.

REMARKS
OF
HON. JAMES A. CONNOLLY,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Friday, April 24, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8271) relating to pensions—

Mr. CONNOLLY said:

Mr. CHAIRMAN: The laws of the United States granting pensions to our soldiers are somewhat different from the laws of any other civilized country in the class of soldiers to which they are applicable. Civilized nations of the world, as a rule, aside from our own, have their standing armies, and their soldiers may be called regular or professional soldiers, and yet, although that is their profession, those countries provide for pensions to such of their regular professional soldiers as may have incurred disability while in the service of their respective countries. Our soldiery—the great mass of it; all those that it is necessary to mention as soldiers in this country—were men who simply recognized the duty that is incumbent upon every citizen of every country, namely, when the life of that country is in danger, that the highest duty of the citizen is to offer his services, his life, and his person on the field of battle in defense of his government. That is an obligation resting upon him, whether he is paid or not and whether he is pensioned or not. He must give it, and all countries recognize that those who live within their borders and are protected by their laws owe to the several governments under which they live, in return, their lives, if necessary, for the preservation and protection of the government itself.

The soldiers in reference to whose pensions we are now considering the pending bill were citizens of our common country, and not professional soldiers. They were men who had no love of war and its alarms; men who were engaged in civil avocations and the peaceful pursuits of life, with no ambition except to succeed in such civil pursuits. They were called to the field of battle, not by force, not by conscription, but simply by a proclamation of Abraham Lincoln, standing at the capital of the nation, and calling on all men of the North who believed the Union ought to be preserved to leave home and their ordinary pursuits and enter the field as soldiers, subjecting themselves to the risks, trials, and vicissitudes of the soldier's life. They came in myriads, inspired not by the hope of fame, inspired not by the hope of pensions, but inspired alone by love—for that is what it was—a love for the Union and a determination that it should not perish from the face of the earth. Their work is done; the few remaining among us of that great Army that saved the Union are old, crippled, diseased.

These are all that remain among us. A generous people through their Congress have provided laws whereby these men—the men who thus volunteered and rendered the highest duty of the citizen in the time of their country's danger—should be cared for in some degree and kept, in their old age, from going for support into the almshouses of the land. In the administration of the law thus enacted by a grateful people we find practically that the generous purposes of the people, the generous purposes that Congress evidently intended, that the laws should be liberally construed for the benefit of the survivors of that war, have failed to meet the purposes designed by them, and by the Congress that enacted them; and all over this land, from the North to the South, there come up wailings and complaints from these men, because while they know the generous purpose that inspired the enactment of these laws, they yet see that by hostile construction, by unfriendly construction, they are not carried out, and they find themselves turned away without receiving the pension or the bounty that the public intended they should have for their services.

They now appeal to us to remedy this hostile construction and make the rules of evidence—the rules of procedure—such that they shall secure for every man who was a volunteer and who incurred disease or wound by reason of his service, or since then by reason of age or disease not traceable to the service, and who shall be unable to maintain himself, what the Government intended he should receive; and it is for the purpose of responding to that call, for the simple purpose of crystallizing into law the generous purposes that Congress had in enacting these laws, that the pending bill is brought forward for our consideration at this time. They ask that the rules of evidence and procedure with reference to the consideration of pension claims shall henceforth obtain in the Pension Bureau just the same as the rules of evidence and law obtain in the courts of justice throughout the land. That is the reason this bill is now being considered by this House.

As was said by the gentleman from Ohio [Mr. LAYTON] it is

manifest that this bill should not provoke partisan discussion, because no man, whether a Republican or Democrat, would dare to say that he did not respect the man who went, when his country called for his services, bravely to the front, and took his place with his comrades in the battlefield. They do respect him. There is no man, Republican or Democrat, who would openly say above a whisper in this land that a man who did thus leave home at the call of his country, the man who has thus faithfully done his duty, should be permitted to end his days in the almshouse.

This Government simply consists of the people. The duty to fight at such a time was incumbent upon us all. If some remained at home and others took up the cross, those who bore the cross and sustained the wounds should now be cared for by those who lived at home in ease and comfort and by their survivors, so that no partisan feeling should be provoked by a discussion of this kind; and I agree that the gentleman from Ohio [Mr. LAYTON] was right when he made that proposition. But I noticed that before his speech closed he had a carefully prepared summary to show that the Democratic party was a better friend of the soldier than the Republican party.

Mr. LAYTON. I will say to the gentleman that I did not make any such claim. My data that you refer to simply show that the Democratic party was also a good friend.

Mr. CONNOLLY. Was also a good friend. Now, it is immaterial about that question of party; but since it has been injected here I want to suggest that the soldiers of the war of the rebellion, when considered simply as soldiers, are more indebted to the Democratic party than to the Republican party. Why? Because if it had not been for the Democratic party they never could have had an opportunity of being soldiers of the war of the rebellion. [Applause on the Republican side.] They never could have had a chance to reap their harvest of wounds, disease, death, and glory on the field of battle.

Yes, and the soldiers of the Mexican war are more indebted to the Democratic party than to the Republican or Whig party of that day; because if it had not been for that Democratic party and the necessities that were pressing upon it there could have been no glory reaped by our men on the battlefields of Mexico, for there would have been and could have been no war.

So that, getting down to the foundation of it, if that were friendship let the Democratic members on this floor who have injected partisan discussion into this matter remember that I concede to their party the origin of all the wounds and glory won by our soldiery. I concede to them the initiation of all that brought all this trouble, of death, of wounds, of disaster, and sorrow, upon this great Republic

The gentleman from New York [Mr. MCCLELLAN] opened this debate in opposition to this bill.

When I reflect upon matters that are within my memory, but not within his, I am reminded of some things that may furnish a reason why that gentleman may be presumed to be hostile to this or any other measure for the benefit of the victorious Federal soldiers who survive the war of the rebellion.

In the summer of 1864 Grant had begun his all-summer fight through the Wilderness on his way to Richmond. Sherman was fighting to win Atlanta preparatory to his march to the sea. The might and power of the Union armies were at last being marshaled and moved as Lincoln and every loyal man in the North long had prayed for. Half-hearted leaders had been deposed; martinets sent to the rear; drill and dress parade commanders dispensed with, and the Union armies, finally working in their full vigor, were in the midst of their last glorious summer's work, with the grand diapason of battle swelling out day by day from Grant's army in the Wilderness to Sherman's army before Atlanta.

At such a time a former leader of that splendid army which was then with Grant in the Wilderness, from a safe retreat, far behind Grant's struggling lines, pretending to act for Union men of the North, raised the white flag of truce and surrender, and the raising of that flag at such a time by such a man was regarded by the world as equivalent to saying to South Carolina and her sister Confederates: "Hold out for a time and we will help you in your work."

That deposed leader, under that flag of surrender, became the candidate of this party that is now claiming to be the friend of the soldier. That party proclaimed at Chicago in its national convention in 1864—

> That this convention does explicitly declare as the sense of the American people that after four years of failure to restore the Union by the experiment of war, during which under the pretense of a military necessity or war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public liberty and private right alike trodden down, and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities with a view to the ultimate convention of the States, or other peaceable means, to the end that at the earliest practicable moment peace may be restored on the basis of the Federal Union of the States.

I say, when the gentleman from New York [Mr. MCCLELLAN] stood there making his speech there came back to my memory those words that were inscribed upon the white flag which that former leader of our armies carried all through a great campaign, fighting in the rear against these men who to-day survive with their wounds and their diseases. I am, therefore, not surprised that that gentleman should insist that the Democratic party was the best friend of the soldier. Aye, under the leadership of that party in the North in 1864, when Sherman was marching through to the sea, when Grant and Lee stood in deadly struggle around the ramparts of Richmond, these things were happening. Remembering that fact, I ask, How much is the gentleman from New York [Mr. MCCLELLAN] to-day inspired by tradition and early teaching to the notion that the entire war was wrong after Grant assumed command of the Potomac Army; that there should have been a base surrender at that time instead of the glorious victory won by that Army of the Potomac, which for years, under different leadership, had been simply an army of construction? Is it strange at all that now that gentleman should come here and insist that the Democratic party is the only party that is the friend of the soldier?

I distinguish between Democrats and the Democratic party as an organization. I know there are thousands and hundreds of thousands of Democrats all over the North, aye, in the South, too, who are friends of the soldier, and who want to see the pension laws honestly and fairly carried out. But the party as an organization, I say, has never shown itself in its action to be favorable. It has rather looked upon this question of pensions as an economic question, as a question which involved vast expenditures of money, and has been desirous all the time to keep it limited within the narrowest possible range, actuated possibly by the spirit of the Democratic convention of 1864, that saw the war was continuing and costing enormous amounts of money, and that would therefore stop it because of the vast expense. Now, Mr. Chairman, if it had not been that these gentlemen did inject this sort of a thing into this discussion, I certainly should not have called back to memory any of these things that the older members of this House remember very well.

I turn my attention, sir, for a few minutes to the bill itself. The bill, I say, is in the right direction; but I conceive that in many respects it fails to carry out the real purpose that the committee intends and that other members of this House intend shall be attained. Take, for instance, the first section of this bill. It reads this way:

> That no person otherwise entitled to a pension by virtue of any law of the United States shall be disqualified from receiving the same by reason of any prior service in the Confederate army or navy during the war of the rebellion, nor shall the widow, children, or dependent relatives of such person be deprived of a right to pension by reason of such service: *Provided*, That no pension shall be granted by virtue of this section for disability contracted or incurred while aiding or abetting the late rebellion against the authority of the United States.

The section as it stands there now broadly goes to this extent: A man who assisted in the beginning in working up the fury of rebellion in the States of the South, who enlisted at the first opportunity, who served for three years or three and a half years in the armies of the Confederacy, whether as an officer or a soldier, who fought his best and bravely under the flag he had espoused as his, if that man for any reason, if it be for no other reason than that which Benedict Arnold had for deserting the American Army in the time of the Revolution, had deserted their lines and came into ours and took the oath of allegiance and enlisted in our Army, he becomes entitled to a pension for any disease thereafter contracted in our service during the ninety days of his service in it or for any wound he might have received, just the same as a boy from the North who had served four years and was disabled by a disease. The boy from the North who had left his home and had given all the hard labor that he could for years for his country's cause is placed on no better footing than the rebel soldier or officer who, when he found his cause failing or through disappointment of any kind, deserted his flag and came to us, crawling in under our flag when he saw success for the future under it. I agree with the gentleman from South Carolina [Mr. TALBERT] in some of the remarks he made yesterday in his speech, in which he said, substantially, that a man who has once intelligently espoused a cause and fought under a flag and then in a cowardly manner deserts it and goes to the other is not entitled to much consideration from either side.

Mr. PICKLER. Even if he is a Union soldier he is not entitled to any consideration?

Mr. CONNOLLY. No, sir; not when he leaves his former flag and comrades from a sense of cowardice.

Mr. PICKLER. Well, allow me to say you desert the Republican position of four years ago, which held that these men were entitled to pension, although not on so broad a proposition as this. This is not a new pledge.

Mr. CONNOLLY. The gentleman suggests to me that I must hold no idea except that which is contained in the Republican platform of four years ago. I tell him that I am not thus to be restricted by a platform.

Mr. PICKLER. But the gentleman will allow me. I mean this,

that these men were pensioned, and we have forgiven the Confederate soldier, as I said yesterday, for about everything except being a Union soldier. Now, four years ago these pensions were allowed, and the country did not think bad of it.

Mr. CONNOLLY. I understand.

Mr. PICKLER. And no Union soldier ever complained of it.

Mr. CONNOLLY. Here is one now that does complain of it.

Mr. PICKLER. He is a new convert.

Mr. CONNOLLY. No, sir; I am not a new convert. I was a Union soldier a long time, as early as the gentleman, and I stayed there about as long as any.

Mr. PICKLER. I mean to that doctrine.

Mr. CONNOLLY. No; not to that doctrine. And I say, and mark my words, that the man who intelligently and deliberately espoused a cause and fought for that flag until he found its fortunes failing and then deserted it for the cause that he found was to be successful, that man in his heart is a moral coward, and is not entitled to consideration from anybody. [Applause.] It is quite different, sir, with a man who was forced to fight under a flag that was not the flag of his heart. It is quite different from the boy who in boyish impulse was carried to fight under a flag for a time that his heart had no attachment for. In cases of that kind, when the sober second thought came to him, that man or that boy—and I have no doubt there were many such who had gone as boys into line of battle—when they saw on the other side Old Glory their hearts were swelled, and then and there they resolved that they would leave the ranks they were in and go back to the ranks of Old Glory, where they were born.

In cases of that kind they were welcome, because there never was any change of heart. It was not an act of cowardice when such men deserted the flag that for a short time they were under; but it was a case where when calm reflection came to them, when they saw the folds of Old Glory, the early affection came back to them, and the moment they could get there they got to it, sheltered themselves under its folds and fought for it. When they took the oath of allegiance once again to the flag they were born under, we welcomed them. It was so in east Tennessee, in the district of my friend Mr. GIBSON, and in North Carolina and in northern Alabama, where there were hundreds and thousands of that kind. There were thousands that were conscripted and forced to fight under a flag they detested. These men on the first opportunity, as I know, and as the gentleman from South Dakota knows, and as the gentleman from Tennessee [Mr. GIBSON] knows, and as many other members of this House know, came under our flag and into our lines and escaped from the thraldom of the Confederacy, which robbed them of their homes, and was trying to rob them of their birthright as free American citizens. We welcomed them, and honor the survivors of them to-day, quite as much as if they had been cradled in the North, for we know full well the heroism and devotion of the loyal men and women of North Carolina and east Tennessee, and the reunited nation will preserve the story of their loyalty and unselfish devotion to the Union of their fathers as an incentive to patriotism for future generations, both North and South.

I propose, Mr. Chairman, to offer an amendment to the first section, which I desire shall at least appear in my remarks. I would amend the section by inserting the word "involuntary" before the word "service," so as to provide that they shall not be disqualified by reason of any prior involuntary service in the armies of the Confederacy. That would cover all classes of cases that I have mentioned, but gentlemen to whom I have suggested this amendment say: "The trouble is, How can they prove that their service was involuntary?"

Mr. Chairman, the law now requires the Federal soldier to prove that he was an able-bodied man when he entered the service thirty and more years ago. How can he make that proof? He is living now in a distant part of the country; the friends of his youth are dead and scattered; those who knew him in his young and stalwart days when he first enlisted are separated and gone. How shall he prove the fact? Is it any more difficult for the man who was forced into the Confederate service to prove that he was so forced than it is for the Federal soldier to prove that thirty and odd years ago he was an able-bodied, strong man, not afflicted with any disease?

Mr. GIBSON. If the gentleman will allow me one minute, I will undertake to explain the difference between the two cases.

Mr. CONNOLLY. You will have time of your own after I get through.

Mr. FAIRCHILD. Will the gentleman yield for a question?

Mr. CONNOLLY. Yes; simply for a question.

Mr. FAIRCHILD. In the case of those ex-Confederate soldiers are you not raising a question of motive; and how in the world can a man prove, except by his own statement, what his motive was?

Mr. CONNOLLY. No, sir; I am not discussing a question of motive entirely. These are matters susceptible of proof. In all that Southern country, where this class of people lived, testimony can be found, because, as a rule, the survivors live in the same neighborhoods, and the circumstances and conditions existing at the time these men went into the Confederate service are generally known to those survivors, and are just as susceptible of proof now as the physical condition of a boy who was born in Maine, who entered the Army and served through the war, and who now lives, say, in Oregon.

Mr. FAIRCHILD. But how can a man's neighbors tell what his motives were when he went into the Confederate service?

Mr. CONNOLLY. They can tell whether he was driven from his home or carried off by conscription, or whether he went voluntarily.

Mr. GROSVENOR. As I understand the gentleman, he says that it is impossible for the Union soldier now to prove that he was a sound, able-bodied man when he went into the service at the beginning of the war.

Mr. CONNOLLY. No; I do not say it is impossible; but I do say that it is very difficult.

Mr. GROSVENOR. It is very difficult; and I say it is substantially impossible.

Mr. CONNOLLY. Yes; in many, perhaps most, cases.

Mr. GROSVENOR. Now, do not you think it would be a little difficult to prove by a man's neighbors what his motive or sentiment was at the time he went into the Confederate service?

Mr. CONNOLLY. Just about as difficult as it is for a Federal soldier to prove that when he went into the Army thirty years ago he was a sound, healthy man.

Mr. GROSVENOR. That is right.

Mr. CONNOLLY. I do not want to make the road any easier for these men than it is for our own boys. I do not want to make a paved road for these ex-Confederates to march up to the Treasury, while my own comrades are compelled to walk over a road filled with stumps and quagmires. [Applause.] I want to make it at least as easy for them as for anybody on earth. Now, mark you, gentlemen, this section as it stands takes in everybody who, ninety days before the surrender of Lee, escaped from the rebel lines and came into ours and joined our Army to get rations and clothing and a little pay. It takes them all in without regard to the motive with which they came.

Now, sir, why not limit the time of their joining our Army to the 1st of May, 1864? At that time there were eleven months of the war yet remaining. The men who came prior to that time could not be said to be men who were heart and soul enlisted in the cause of the Confederacy until they found its banner falling. By the 1st of May, 1864, what were the conditions existing? Sherman was at Ringgold, south of Chattanooga, his army massed and ready, with Joe Johnston at Buzzards Roost, beyond it. The last great movement was begun. Knoxville was free. Longstreet had left to join Lee. Grant was moving to surround Lee at Richmond. Indeed, the grand opening overture that ended in the great climax was already beginning on the great theater of war on the 1st day of May, 1864. From that time on until the truce at Appomattox the god of battles was all the time with our flag. Success followed every movement. Sherman marched onward day by day until he reached Atlanta. From Atlanta he swung eastward, and day by day, in his holiday march, he led his legions to the sea. The great Army of the Potomac, thundering along through the Wilderness, thundering through the timber and over the open plain, finally drove Lee and his legions to the ramparts of Richmond. There, through the fall and winter, they were held as in a grip of iron.

All the world could see when Sherman reached Savannah that the days of the Confederacy were ended. It had been pierced like an eggshell, and its existence was then but a question of days. Yet enough time remained for all the faint-hearted under the Confederate flag; for all those whose courage, like that of Bob Acres, had oozed out at the fingers' ends, to slip through their lines, come within ours, profess penitence, join our Army, and now get the benefits of this bill. Now, is it right to say of those who stood, as those gray-coated men did stand, for months and years a living wall against every advance that we sought to make, is it right to say that those of them who deserted their ranks within the last ninety days of the conflict and came to us shall, in the matter of pensions, be put on a par with our men who pushed them back and fought them on every field?

Why, sir, those generous, big-hearted men who wore the gray see themselves that such a rule as that is not a proper one. In their own States they care for the men who wore the gray, who bore the heat and burden of that long conflict, and I honor them for their manhood in doing it. It is right; it is humane; it springs from a patriotic and generous impulse. I desire that we shall do the same. But in order to have the privilege of putting the men who wore the blue on as fair footing for pensions, I do not want to be compelled to say that all the "rag tag and bobtail" who in the last days of the war escaped from the army of the Confederacy may now come in and obtain pensions. That is too big a price to pay for getting justice to my own comrades.

Mr. PICKLER. Then, on the same ground, you would not be

willing to give anything to the hundred-days men from the North who came in at the close of the conflict.

Mr. CONNOLLY. Yes, I would; and I will tell you why.

Mr. PICKLER. The gentleman speaks of Confederates who "slipped through the lines" and joined our Army. Sir, Confederates of that sort have been pensioned long ago. The men who will be covered by this bill are those who were in Northern prisons and were induced by our officers to join the Union Army. The trouble with the gentleman from Illinois is that he is not "posted" on this matter.

Mr. CONNOLLY. I admit that I may not be posted. I have not given as much attention to this matter as has the gentleman from South Dakota. But there are some things that I know; there are some things that I believe anybody may know that has a heart in him and a proper spirit as an American citizen, without sitting down in the room of the Invalid Pensions Committee and talking with the gentleman from South Dakota. [Laughter.] One of those things that every man ought to know is that the coward who sneaks away from his flag is not entitled to as much consideration as the brave man that stands up to it and goes down with it. [Applause.]

Mr. PICKLER. We all know that.

Mr. CONNOLLY. That is my notion about the matter; and it does not take very long to tell it. Sir, it should be considered too great a concession upon the part of any nation, when those who for years have been fighting against it and who in the last ninety days of the conflict come in and swear allegiance to its flag, to permit them to go on the pension roll of that nation upon the same footing as those men who fought for years under the flag.

Mr. PICKLER. The only objection you have to these men is that they were Union soldiers. You have forgiven them for being Confederates, and for everything else, but you will not forgive them for joining the Union Army.

Mr. CONNOLLY. Why, bless your soul, I forgive them with all my heart; I am glad they got in; but I do not want to go and pay them for it in addition. [Laughter.] It is enough to forgive. If this provision with reference to ex-Confederates were limited to those who came within our lines and joined our Army by the 1st day of May, 1864, when the Confederacy had still a fair fighting chance, when there was still some hope and confidence left in the hearts of the Confederates, I should be willing to presume that the men who by that time had come within our lines did so because their hearts were true to their country's flag.

Mr. PICKLER. How would you ever establish that?

Mr. CONNOLLY. How would I establish it? I would presume it; I would not ask them to prove it. I would presume that those who had come within our lines by the 1st of May, 1864, had been loyal men all the time and had simply been awaiting their opportunity to join us.

Now, Mr. Chairman, I want to call attenton to section 2 of this bill. Gentlemen have talked about this bill as a measure that will prevent the present system of suspending or discontinuing pensions which have already been granted. I do not agree with them in that construction of the bill. And, mark my words, if it should become a law it will never be carried out in that way, but the suspension or discontinuance will still take place just as it does now. They give the pensioner notice that his pension is suspended, and then they commence (taking their time, even if it be a year or two years) to get the proof that will enable a final adjudication upon the question to be made. Now, I wish to suggest an amendment to section 2. It now provides—

> That from and after the passage of this act no pension heretofore granted or which may hereafter be granted under the pension laws shall be reduced or discontinued except—

Then it enumerates the causes for which a pension may be reduced or discontinued—

> for fraud, clerical error, mistake of fact, or recovery from disability.

Now, then, suppose the Pension Bureau, by some secret process, has made up its mind that some particular pensioner should be dropped from the rolls, that the pension was obtained by "fraud, clerical error," or that the disability had been cured, what do they do? They send a notice to the pensioner, and the pension is suspended, and the reason is given why. Whatever that reason is, it stops the pension for the time being. Now, the Pension Bureau takes its time to proceed under the provisions of section 4, which provides "that hereafter in the administration of the pension laws all investigations into the merits" of any claim "shall be by question and answer" or information under oath. Now, all of that comes after the pension has been suspended and the pensioner has suffered from the suspension, just as the claims are suspended now.

Now, I suggest there where it provides that any pension shall be reduced or discontinued for fraud, clerical mistake, or mistake of facts, or recovery from the disability, that the words shall be added: "And only after the taking of evidence on notice as hereinafter provided." Then if there be a claim that the pension is fraudulent, notice is given to the pensioner that they propose to investigate and take proof in regard to that pension, and they start in with their proof, but the pension remains intact while this proceeding is going on. Then at the end of the taking of the proof, if it appears that the pension was properly allowed, the man was never disturbed, as he should not have been. If it turns out that the pension was obtained by fraud, the pension is finally cut off. But it gives him a chance of a hearing. It does not render judgment until after the evidence in his behalf is heard.

Again, sir, at the end of section 5 it is provided that no claims shall be rejected because of the claimant's inability to furnish, as to any material fact in the case, the testimony of more than one credible witness having knowledge of such facts. Now, how much does that change the present condition of the law? That is the simple holding out to the soldier of a promise to the ear to be broken to the hope. The idea that that will reform anything is about like the idea of trying to fill the belly of a hungry man with the east wind. [Laughter.] It will be just about as effective. The claimant himself now is not considered a credible witness at all. I propose that we should give to him, if you are in good faith, if you mean this to be effective, a provision in this bill that the claimant himself shall be considered prima facie as a credible witness to any material facts. Why not do that? They do not now take the claimant as a credible witness. He goes into the Pension Office discredited the very moment he files his application. Every affidavit he makes is required to be confirmed or corroborated by the affidavits of somebody else. Why should not he be a credible witness in his own behalf?

In the courts of every State in the Union, I presume, a man may go into the court in a matter in which he is interested and may be a witness for himself to maintain that cause, and on the testimony thus presented he may have a judgment of thousands, aye, millions, of dollars rendered in his favor, and collected if collectible. Why, then, when he applies for a pension should not his oath be regarded as good as that of anybody else? Why should he not be regarded as a witness in his own behalf?

I say, then, if we are trying to avoid these evils of construction and of loose legislation in the past, why not make it close by saying here, if you mean it, that the claimant himself shall be considered prima facie as a credible witness?

Mr. PICKLER. So he is.

Mr. CONNOLLY. Oh, no.

Mr. PICKLER. Well, the gentleman is a lawyer, and will he say that the Commissioner of Pensions should be compelled to allow a pension because the applicant himself swears to the matter alleged? He is now a credible witness——

Mr. CONNOLLY. No; he is considered a discredited witness at the very beginning.

Mr. PICKLER. Not at all; the gentleman is entirely mistaken.

Mr. CONNOLLY (continuing). The gentleman knows that his testimony is not regarded——

Mr. PICKLER. I beg the gentleman's pardon; it is.

Mr. CONNOLLY (continuing). And no pensioner has ever been able to recover or to obtain a pension on his own affidavit.

Mr. PICKLER. Because the law says he shall have one or more witnesses to the facts claimed.

Mr. CONNOLLY. Now, I want him to be considered as a prima facie witness, just as he is in every court of justice throughout this country.

Mr. PICKLER. He is now. The gentleman is entirely mistaken. The only question, and it may be debatable, is whether the Commissioner of Pensions shall be required to allow a pension on the simple oath of the claimant himself. That is what the gentleman is contending for, as I understand his contention.

Mr. CONNOLLY. Yes, I contend that. It has been the custom to talk about these proceedings as being ex parte. The gentleman from Illinois [Mr. WOOD] yesterday very properly considered that question. They are not ex parte proceedings. The claimant for a pension is required to do what the plaintiff is required to do in every court in this country. What is that? Go into court and file your declaration, your complaint, your application. These terms are synonymous. In some States the paper is called a complaint, and in other States it is called a declaration. In the Pension Bureau it is called an application. That is your claim. Now, so far the United States is defendant in the pension matter. The man who files the application is the plaintiff. The United States is not required to make up an issue; it is not required to plead. It takes it for granted that the United States denies everything set up in the application until the claimant has filed his proof in support of it.

Now, gentlemen say this is ex parte. No. Up to that point it has been ex parte. Then comes the United States. There are no rules of court to force a trial and a judgment this week or next week, or this year or next year. The United States has all the time for a continuance that it wants. It takes months and years, in many cases, to find evidence, raking the country high and low

to find proof that will overturn the proof that is on file in its own archives, placed there by the applicant for the pension.

Mr. GRAFF. I will ask my colleague whether it is not true that in many cases the nature of the case precludes the obtaining of any other testimony except the testimony of the claimant himself?

Mr. CONNOLLY. Very true, sir.

Mr. GRAFF. In those cases it works a great hardship under the present rules.

Mr. CONNOLLY. Certainly. Suppose there were a law in any State that a party who had a suit pending against another, and had no testimony except his own, should not be allowed to recover his claim. How would anybody like a law of that kind? How long would the people of any State stand it, with a law of that kind, which should say to any honest man who comes into court with a just claim, "You shall not be allowed to recover, because you can not get the testimony of somebody else who corroborates you as to the justice of your claim"?

Mr. PICKLER. Mr. Chairman, would the gentleman go further than section 5? I suppose he has noticed that section.

Mr. CONNOLLY. That is what I am talking about now.

Mr. PICKLER. Well, the proviso reads:

Provided, That no claim shall be rejected because of claimant's inability to furnish, as to any material fact in the case, the testimony of more than one credible witness having knowledge of such fact.

Mr. CONNOLLY. I would add to that this:

And the claimant shall be held prima facie to be a credible witness.

Mr. PICKLER. That is done already.

Mr. CONNOLLY. It is not done already.

Mr. PICKLER. Yes, it is; and when the claimant finally says he is unable to find any other evidence, the Department then takes up and considers it from that standpoint.

Mr. HARDY. And rejects the claim.

Mr. PICKLER. They do not administer it fairly.

Mr. CONNOLLY. Who is making this speech, I should like to know?

Mr. PICKLER. The gentleman is making a pretty good stagger at it.

The CHAIRMAN. The gentleman from Illinois declines to yield.

Mr. PICKLER. I want to correct the gentleman when he says that the claimant is not taken as a credible witness. That is not the fact. He is taken as a credible witness.

Mr. CONNOLLY. Now, Mr. Chairman, I pass from that section to this. I make this suggestion: Here is a rule that has always been a hardship under these pension laws. The man who was received into the service of the United States thirty-odd years ago was examined by the surgeons of the United States and proclaimed fit for the duties of a soldier, sworn into the service and placed under orders, fought for three or four years, and was wounded or disabled by some disease incurred in the service. Years afterwards he applies for a pension. He is compelled at the outset to prove: "When I was mustered into the service of the United States I was a sound man." Why, did not the United States admit that when she accepted him into her service? Did she not say to him, "You can not come in until my surgeon examines you, until he certifies that you are a sound man and fit for a soldier's duty"?

Mr. HARDY. They stripped him and examined him.

Mr. CONNOLLY Yes; stripped and examined and sounded him. Now, thirty years afterwards, when he comes to apply for a pension, even under this dependent pension act of 1890, he is required to go back thirty years and prove that he was a sound man at the time he enlisted. Now, why should that be? Why should not this rule obtain—does not common sense say that it ought to—that when the United States received a man and mustered him into the service that fact should be prima facie proof and always available to that man to show that he was sound when he was so received?

Mr. DINGLEY. If the gentleman will pardon me, is not that to-day the statute law in the Pension Office, that it is prima facie evidence?

Mr. CONNOLLY. No, sir.

Mr. PICKLER. I will say to the gentleman that that is the statute.

Mr. DINGLEY. That is the statute, that it is prima facie.

Mr. PICKLER. Yes.

Mr. DINGLEY. I agree with the gentleman that it ought to be prima facie. But ought it to be more than prima facie?

Mr. CONNOLLY. Would the gentleman make it conclusive?

Mr. DINGLEY. No, I would not, for my part.

Mr. CONNOLLY. I think it would not be safe to make it conclusive.

Mr. DINGLEY. I think it would not be safe to make it conclusive.

Mr. CONNOLLY. But it ought to be prima facie.

Mr. DINGLEY. It ought to be prima facie.

Mr. CONNOLLY. And further, that any disease or ailment the man had at the time he was mustered out of the service should be held prima facie to have been incurred in the line of duty. Now, for all his term of service he was subject to the orders of the United States. He could not get out of that duty voluntarily; but when he comes home now with a disease, he is required to prove that he acquired it in the line of duty. It is not sufficient to say that he acquired it while in the Army. I would suggest, if we are going to do anything of service, that we make that provision in this bill that the disease that he had at the time of his muster out shall be considered as having been contracted in the line of duty, prima facie, subject, of course, to be overthrown by proof to the contrary.

Now as to section 13, which has been discussed by many, concerning the granting of pension to deserters. That section provides that anyone who had been in the military and naval service thirty days and honorably discharged therefrom shall, notwithstanding a prior service from which he was not honorably discharged, be entitled to a pension under the act of 1890, provided the disabilities for which the pension is claimed were not incurred while in the service from which the claimant was not honorably discharged.

Under this section as it stands in the bill, the professional "bounty jumper," who enlisted and deserted, and enlisted and deserted again and again for the sake of the public and private bounty which he might thereby obtain, would be made eligible for a pension under the act of 1890.

Surely there is no public call to open the door for these notorious "bounty jumpers" to be allowed to prey upon the pension fund, as they did upon the bounty funds during the war.

I therefore suggest an amendment to this section so that the pension shall be allowed only to those who neither claimed nor received public or private bounty for the enlistment or service for which the pension is claimed. This would prevent the "bounty jumper" from claiming a pension under this bill.

But it is said there are many cases in which a soldier became separated from his command by sickness or otherwise without his fault after having faithfully served a year or two with it, and then instead of rejoining his own proper command enlisted in some other regiment and faithfully completed this second enlistment, and was honorably discharged from it.

Under such circumstances this soldier must appear on the rolls of his original regiment as a deserter, and yet it seems very harsh now to hold and treat him as a deserter, and deprive him of any opportunity to obtain a pension for wounds or other disability incurred by him in the line of duty either in his first or second term of service.

But to provide for the case of such really meritorious soldiers who are recorded as deserters, when in fact they were meritorious soldiers, and only technical deserters, I would suggest that we revive the act of March 2, 1889, which expired by limitation in 1892, whereby the Secretary of War can be authorized to correct the record of such men by removing the charge of desertion which stands against them, thereby making them eligible to pensions when they are entitled to them otherwise.

By so doing each record of desertion can be disposed of on its own merits; the worthy cases can not be used to assist the unworthy cases, and in our desire to relieve in meritorious cases we will not be taking the chance of opening a door for unmeritorious cases to escape from the just stigma of desertion.

Mr. Chairman, I know it was intended by the committee that this bill should only deal with the administrative features of existing pension laws without adding any new class of pensioners to the roll.

But, sir, while we are considering the subject of pensions, when we reach the proper place in the bill, I hope no one will object to an amendment I shall propose with reference to a class of soldiers, some of whom are still surviving, who suffered far more than the ordinary hardships of the soldier and who endured them long and heroically.

I refer to those who were confined at Belle Isle, Libby, Florence, Salisbury, Charleston, and Andersonville.

The soldier who faces death on the battlefield does so with full beating pulses, cheered and lifted out of himself by the inspiration of his comrades, by the hope of victory, by the sight of his waving flag, and all the mad, wild pageantry and music of battle.

Death seems wreathed in smiles and is robbed of its terrors at such moments; reason and reflection are stilled, self is forgotten, and the past and future lost sight of in the wild exhilaration and inspiration of the supreme present.

But the soldiers who for long weary months in the suppressed quiet of those fearful prisons had death for their daily and nightly companion—not the glorious death of the battlefield, but the solemn, slow-moving, hollow-eyed death of the gloomy charnal house—the death that touched each of them with its clammy fingers from day to day, but dallied with them in their torment and

refused them the relief that taking them at once would bring—the death that kept them from day to day for further torture, like the savage with his captive—the death that robbed them of all that makes life hopeful and, filling them with seeds of lingering, incurable disease, led them to the very brink of the grave and then, refusing them its welcome shelter and surcease from pain, flung them back to us shattered, dismantled human wrecks, doomed to an unequal struggle for existence—these soldiers, some of whom are yet maintaining that unequal struggle, with both death and poverty dogging their halting footsteps, should certainly not be forgotteen by the nation for which they endured all this.

I therefore propose to add to this bill a section pensioning all soldiers who served one hundred days in any of these prisons, or in more than one, and to count the time they may have been away from them in attempting to escape as part of the one hundred days, also the time spent in being transported from one to another of these prisons as part of the one hundred days, and to give them a pension of $30 a month. That is the pension allowed by law for total disability of all officers above the rank of major. This is a moderate, conservative provision for these men, and it will make no great addition to the amount of the pension roll, but, whether it makes much or little addition, it should be done if we are willing to give pensions to ex-Confederates who deserted their falling cause only ninety days before Lee surrendered the whole bunch of them.

I suggest the one hundred days' imprisonment, because for a shorter term a man could not be regarded as having suffered anything more than the ordinary casualty of war; but those who were kept in these prisons a longer period than that were generally so detained because the Government was refusing to relieve them by the ordinary mode of exchange.

In the great majority of cases their capture was while they were in the line of duty, generally on the battlefield and without their fault. They endured their sufferings rather than accept freedom on condition of swearing allegiance to the Confederacy. They exhibited the heroism of martyrs at the stake, and accepted the dreadful alternative of death by starvation rather than falter in their allegiance to the Union.

Their example of loyalty and devotion is worth more as an heroic example to the generations who must maintain our Union in the future than a score of battles won, and the few of them now living should go on the pension roll, which I trust may ever be maintained as a roll of honor.

Bankruptcy.

SPEECH

OF

HON. GEO. B. McCLELLAN.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 30, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States.

Mr. McCLELLAN said:

Mr. SPEAKER: The two questions to be considered in discussing this bill are, first, is it constitutional, and, second, is it expedient? The thirteen original colonies failed to adopt, as a part of their common law, the English laws of bankruptcy and insolvency. Many of them, however, enacted insolvency laws of their own. The framers of the Constitution, realizing the importance of uniform bankruptcy laws, provided that Congress "shall have the power to establish an uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States." This would appear to settle the question of constitutionality. As, however, that section of the Constitution does not expressly declare that Congress may "pass" a bankruptcy law, some doubt appears to have existed in the early history of the country as to whether Congress could enact a national bankruptcy law, or could only establish "uniformity" among the bankruptcy laws of the several States.

As early as 1800 the question of constitutionality seems to have been definitely settled, as in that year the first bankruptcy law was enacted. None to-day question the constitutional right of Congress to legislate on the subject of bankruptcy. The bill under consideration is constitutional under the strictest possible construction.

It is one of the cardinal principles of the Democratic party that those functions of government which the individual States can perform as well as the United States should be left to them, and not taken over by the National Government. It is the principle of decentralization, of home rule. Some of the States have upon their statute books insolvency laws that are far stricter and much more harsh toward the debtor than is this bill. These State laws differ so much from each other and are so lacking in uniformity that it is surprising that the original bankruptcy law should ever have been repealed. The business of the country is so enormous, communication between the States is so easy, that for commercial purposes State boundaries have practically disappeared. The question of bankruptcy is one that can be better handled by the National Government than by the individual States.

The first bankruptcy law was repealed in 1803. The second bankruptcy law was enacted in 1841 and repealed in 1843. The third and last bankruptcy law was enacted in 1867, amended in 1868, 1870, 1871, and 1872, and was repealed in 1878.

Since 1878, when the last bankruptcy law was repealed, to and including 1895, the failures in the United States have numbered 171,389 (representing liabilities of $2,611,521,704), a percentage of 1.02 of the total number engaged in business. It would appear that, in view of the enormous liabilities of insolvent debtors during the past seventeen years, justice to them would require that an opportunity be given them of commencing life anew free from the fearful burden of debt which at present in many cases they are unable to remove, and that justice to the creditors would require that they be given the opportunity of sharing equally any assets of their insolvent debtors.

Under existing conditions when a debtor becomes insolvent the first creditor who obtains knowledge of that fact can secure himself at the expense of the other creditors. Debtors may prefer certain creditors at the expense of the rest, in consequence of which it may almost be said that a premium is placed upon fraudulent failures, and each creditor is virtually the enemy of the other creditors in general and of the debtor in particular.

It has been said during this debate that this bill is harsh to the debtor. Gentlemen of my own party have acknowledged the desirability of the voluntary features of this bill, but insisted that the involuntary features are oppressive and unjust to the debtor, so much so that these gentlemen oppose the bill as a whole. The bill is not harsh to the honest debtor. It enables him to go into voluntary bankruptcy and distribute his assets pro rata among his creditors, and then, having done all that he can to liquidate his debt, to be discharged and begin his business life anew. As the insolvent debtor class is but little more than 1 per cent of all those engaged in business, it would be manifestly unjust to legislate in favor of that 1 per cent to the detriment of the 99 per cent of solvent business men.

This bill permits creditors to force an insolvent debtor into involuntary bankruptcy. This may be harsh to the dishonest debtor who desires to escape from the payment of his obligation, reserving the right to become a bankrupt when it may please him to do so; but it must be acknowledged that it is only fair to give the business community power to protect itself. It prevents one creditor from taking advantage of the rest; all share pro rata in the distribution of the assets of the bankrupt.

It has been urged against this bill that creditors will use a bankruptcy law as a means of oppressing the helpless debtor. The interests of the creditor and the debtor are in many ways identical. While to-day a creditor may consider it to his interest to drive a debtor into insolvency so that he may be the first to profit thereby, under this bill it will be for the interest of the creditor to maintain the solvency of the debtor for as long a time as possible.

My friend, the gentleman from Massachusetts [Mr. GILLETT], has very eloquently called our attention to the importance of credit in the complicated relations of modern business life. This bill, if enacted, will enlarge credit, for it will increase that essential element of credit—confidence. Every business man to-day who becomes a creditor assumes the risk, in case of the insolvency of the debtor, of being absolutely debarred from receiving any share of the assets through the preference of some other creditor. Under this bill, should it become a law, every business man will know when he becomes a creditor that, should his debtor become insolvent, he will receive his share of the assets, and that no other creditor can exclude him from what should be his both by law and equity. Certainly this should increase confidence and therefore enlarge credit.

This bill has been carefully drawn. It is the so-called Torrey bill amended and improved, and judging from the comments upon it contained in the newspapers and in the many letters which I have received from business men, it seems to meet with the general approval of the business community, especially in that great commercial center, New York City, a part of which I have the honor to represent. It protects the interests of the creditor; it protects the interests of the debtor; it will make fraudulent failures more difficult; it will increase confidence; it will enlarge credit. It is, in short, in the interest of the business men of the country, which is merely another way of saying that it is in the interest of the whole country.

Legislative, Executive, and Judicial Appropriation Bill.

SPEECH

OF

HON. CLAUDE A. SWANSON,

OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 3, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 6248) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes—

Mr. SWANSON said:

Mr. CHAIRMAN: I am indeed grateful to my friend from Texas [Mr. CULBERSON] for yielding me this time, as for many other courtesies.

This measure now before us embodies a reform which is well needed in the administration of justice in this country. Some time ago I addressed this House upon this question and pointed out the great necessity for this reform. I introduced a bill to abolish absolutely the fee system. I am glad to see my efforts have borne fruit. I want to congratulate the committee upon the nonpartisan spirit in which it has approached so great a measure of reform. I will try not to travel over the ground I went over in my former speech. But there must necessarily be much repetition.

The first question for this House to determine will be, Is it better for the administration of justice in this country to abandon the fee system for the salary system? Upon the determination of that question depends whether this bill should or should not meet the approval of the House. First, we must inquire, Are there any abuses connected with the administration of the present system? If we look at the testimony of people who have administered this system, there can be no doubt about the unanimity of such testimony. Every President of the United States from the time of Grant to the present moment has recommended the abolition of the fee system and the substitution therefor of the salary system. Every Attorney-General, commencing with the Administration of President Grant and coming down to the present one, has recommended this reform and pointed out the glaring abuses in the existing system. The present President of the United States has thought the abuses of such magnitude that in two messages to Congress he has dignified this subject by making it a matter of special reference, and asked Congress to enact a reform in this direction. If we go to the leading officers themselves connected with the administration of this system, they all bear testimony to the glaring abuses that exist.

The testimony of every official connected with this system bears evidence to the great scandals connected with the present fee system of the United States Government. If we go further and look at the records of our courts, they also bear testimony to the necessity for great reforms in this direction. Listen. Last year United States marshals were paid upon their accounts for that year and prior years $1,339,690.31; commissioners, $452,000; clerks, $298,000; attorneys, $427,000. Now, mark this item: Jurors, $932,170.27. And mark also this item: Witnesses, $1,713,162.17. Summing up these items, we find that the expenditures of the courts for the last year amounted to $5,300,000, and over half of this expenditure was incurred in the payment of fees to jurors and witnesses.

Now, let us see what was the outcome of these expenditures. Of suits terminated last year in the United States courts there were 2,751 civil suits, and of these 1,060 were decided against the United States. What does that prove? It proves that over 40 per cent of the civil suits instituted by the district attorneys were suits that should not have been brought.

Mr. TAWNEY. Will the gentleman state what fee under the present system the district attorney received for prosecuting and trying each of those cases?

Mr. SWANSON. The fees of the United States attorneys in these cases are taxed, and he receives a fee in each case until it amounts to $6,000 annually, which he can not exceed.

Mr. TAWNEY. Is not the fee limited to $20 in each case?

Mr. SWANSON. I think it is; and on that basis 1,000 cases would make $20,000 of improper charges.

Now, of criminal suits there were terminated last year 25,949, of which 10,521 were nolle prosequied, dismissed, or discontinued. In other words, of the indictments found by the grand jury, and in which it may be assumed the district attorneys did all they could to bring criminals to conviction, forty-odd per cent were dismissed, the parties being found not guilty, or the cases being nolle prosequied. These figures do not include suits that the commissioner refused to send to the grand jury, nor suits in which the grand jury refused to prefer indictments. The records of the courts will show that over one-half of the suits for which expense is incurred in the Federal courts are suits in which there was no merit and which should not have been brought.

Now, Mr. Chairman, take that view of it and what does it mean? It means that last year $2,600,000 was paid out improperly for the prosecution of frivolous suits in the United States courts, simply instituted for the purpose of gathering fees for these officers.

But let us see how much money the Government received in return for the immense expenditure made on this account. Last year there was received in the compromise of criminal suits $37,647.61; there was received in collections from fees turned in $132,055.53, and there was collected in civil suits in compromise cases $131,696.67, or, in other words, on an expenditure of $5,300,000 last year there was only received, in the shape of fees in civil and criminal compromises by the courts, less than $255,000.

Now, go a step further and you will see the more we look into this matter that this very method of making appropriations by Congress for these courts is in itself a glaring abuse. You may make an appropriation this year, we will say, to cover all the supposed expenses, based on the estimates of the Department of Justice. But next year, and before the expiration of the current fiscal year, you are compelled to come in with a deficiency bill and make up by appropriation as much as the original sum appropriated. Why? Because you can not have any possible idea as to what the expenses of the judiciary will be next year. There is no possible way of calculating what it will be, because it is measured solely and alone by the greed and rapacity of the officers who administer the law in their scramble to get fees.

Consequently, Mr. Chairman, the question is presented to us as to whether we can safely abandon the system so full of abuse, so saturated with glaring wrongs, and so redolent of outrages against the liberty and property of the citizens of the United States and adopt a system which will be in harmony with our principles of government and ideas of right. But let us go even further. I regret to say that these are not the greatest abuses. Last year 10,541 of our citizens were arrested and put into the prisoners' dock, subject to all of the expenses and all of the annoyances and disgrace which such a situation entails, when on trial of the cases it was found that they should not have been brought into court at all. They were brought into court to make fees for officers and rewards for infamous spies. Consider the vast amount that 10,541 innocent citizens had to pay for their defense in court, who had to get witnesses to come and testify in their behalf, and with all of the other petty annoyances which this number of arrests would necessarily involve, and I say that no more glaring abuse could be found in the history of this country. It is an abuse that Congress ought to strike down now and forever. Just imagine the vast amount of money lost by these people on account of these prosecutions; imagine the loss of time of these people from their ordinary employments; conceive of the vast amounts expended in payment of witnesses and their traveling expenses, juries, and then think of the disgrace and worry of innocent people under such a system.

I am glad, therefore, to see that the Committee on the Judiciary of the House of Representatives, in a fearless, brave, and nonpartisan spirit, have had the courage to go forward and endeavor to meet these abuses and effectuate a reform.

My only objection to the bill, although I shall vote for it even though the amendment which I shall offer later on does not carry, is that they have not gone far enough in the abolition of the fee system. There are two defects that ought to be remedied. One in reference to the special or field deputy marshals and the other as to the commissioners. This bill ought to provide that the deputy marshals and the commissioners also should receive salaries instead of fees. This bill fails to put them on the salaried list. It goes on the idea that if you make the marshal a salaried officer he can exercise over the field marshal his power of removal when he institutes frivolous suits. I admit that it is a great reform and in the proper direction and will do great good; but it ought to be carried a step further by putting the deputy marshal also on a salary. At the proper time, and I hope the chairman of the committee will make a note of it, I want to offer an amendment to provide that the deputy marshals shall be put upon the salary system.

Mr. BAKER of New Hampshire. If the gentleman will draw a distinction between deputy marshals and field deputies he will be entirely correct. The field deputies are the only ones now left on the old system.

Mr. SWANSON. The deputy marshals confined to the office are put on salary; but the field deputies are the ones that do the most work in connection with the commissioners in bringing suits.

Mr. BAKER of New Hampshire. One word more, if the gentleman will permit me. The field deputies do not bring the suits.

Mr. SWANSON. The field deputies can only execute the writs after the commissioner has issued them, but a deputy can get an informer to go to the commissioner, and he can inspire and incite suits. It is true that he can only execute writs after they have been issued.

Mr. BAKER of New Hampshire. One word more——

Mr. BURTON of Missouri. The bill, by an amendment which the committee will offer at the proper time, takes away from the commissioner any power to institute these proceedings upon the affidavit of a private citizen.

Mr. SWANSON. That is right. It will destroy to a large extent the detestable vocation of the infamous spies and informers. Now, that is a great reform, but the committee should go one step further and add a provision like that existing in many State courts, that whenever a prosecution is inspired by malice in instituting frivolous suits, the complainant shall be liable for the costs. You will find that a great many will be debarred by that. Now, as to the deputy marshals, I can see no reason why the entire deputy marshal force should not be put upon salary.

Mr. BURTON of Missouri. Will the gentleman yield for another suggestion?

Mr. SWANSON. Yes.

Mr. BURTON of Missouri. That system was recently adopted in the Indian Territory, and the Department of Justice informs the committee that it does not work satisfactorily. What are called field marshals in this bill simply sit quietly by and take their salaries and do not perform their duties.

Mr. SWANSON. That may be true in the Indian Territory, because in the Indian Territory the United States courts try all local matters and have the combined jurisdiction of State and Federal courts; but if you take away in this bill the power of deputy marshals to bring suits and incite suits and give them simply writs to execute, then they are compelled to execute those specific writs and there can be no dereliction of duty.

Now, it is said there will be too many deputy marshals. It seems to me that we should draw a bill with this amendment, that deputy marshals shall be appointed by the Attorney-General on the recommendation of the marshal, and that no more deputies shall be appointed in any district than the district judge and the marshal shall certify to be necessary for the efficient performance of the public business in that district. It seems to me there can be no abuse then. Why? Because the Attorney-General can not appoint any more deputy marshals than the district judge will certify to be necessary for the efficient discharge of the duties in that district. He is not compelled, under a law like that, to appoint as many as are required. Then, when that is done, if too many are appointed——

Mr. BROWN. United States commissioners are now appointed by the United States circuit judges.

Mr. SWANSON. That is true, sir.

Mr. BROWN. Now, I will ask if it is not true that one great complaint in districts in the South has been that the United States circuit judges appoint too many United States circuit court commissioners?

Mr. SWANSON. That is true.

Mr. BROWN. Now, if you leave to the district judge the appointment of United States deputy marshals, will you not find the same complaint? Why not leave the appointment of the field deputies to the marshals, to be approved by the Department of Justice?

Mr. SWANSON. My amendment provides for that.

Mr. BROWN. The bill already provides for that. It already provides that the United States deputy marshals shall be appointed by the marshal, subject to the approval of the Attorney-General.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. CULBERSON. I promised to yield to the gentleman from Tennessee [Mr. BROWN] after my friend from Virginia had concluded his remarks. I hope the gentleman from Tennessee [Mr. BROWN] will take the floor and yield five minutes more to the gentleman from Virginia.

Mr. BROWN. I will be recognized in my own time later on.

Mr. CULBERSON. Then I yield to the gentleman from Virginia such time as he desires.

Mr. SWANSON. The suggestion of the gentleman from Tennessee [Mr. BROWN] was a very good one. He did not catch the amendment that I intended to offer to this bill. I will read it, and I hope the Chair will note it, when the proper time comes, so that I can offer it.

The amendment which I desire to offer is this:

That the Attorney-General may appoint, on recommendation of each United States marshal, one clerk and one chief deputy, whose salaries shall not exceed $1,500 per annum each. No clerk or chief deputy shall be appointed in any district unless the United States district judge shall certify and the Attorney-General be satisfied that such appointment is necessary for the efficient performance of the public business. The Attorney-General shall also appoint, on recommendation of the marshal, such number of deputy marshals for each district as he shall deem necessary for the efficient performance of the public business, whose salaries shall not exceed $1,000 per annum and their reasonable and necessary expenses of travel and subsistence actually incurred while on duty, such expense to be approved by the United States district judge of each district. But the Attorney-General shall in no case appoint for a district more deputy marshals than the United States district judge of each district shall certify to him as necessary for an efficient performance of the public business.

Mr. BROWN. There is the trouble that I spoke about. The complaint against the circuit judges heretofore has been that they have appointed everybody United States commissioners who wanted to be appointed.

Mr. SWANSON. That is true.

Mr. BROWN. Then we have the same complaint in regard to the deputy marshals. The Attorney-General will be compelled and will be bound to appoint everybody the district judges recommend.

Mr. SWANSON. No.

Mr. BROWN. This bill already provides for appointment of field deputies. It prescribes how they shall be appointed and then their appointments submitted to the Attorney-General.

Mr. SWANSON. No. The gentleman did not catch the force of this amendment. This amendment says that the Attorney-General shall not appoint any number exceeding the number that the district judge shall certify; and it is also provided that he shall not certify any more than necessary for the efficient and economical administration of the law in that district. He is not compelled to appoint as many as the judge shall certify, but it is provided that he shall not exceed that number. Then this goes further. It provides that he shall not pay a salary exceeding $1,200. In some counties the deputy marshals might have very little to do, and he could pay him from a very small sum up to not exceeding $1,200 a year.

Now, that provision is guarded this way; First, it leaves it to the Attorney-General; he is to be the judge of the salary. I think that is wise. Why? Because each Department endeavors to be economical in submitting its estimates for approval.

Mr. BROWN. This bill does not limit the amount of compensation in the matter of field marshals, because the Department of Justice would find that in some districts the compensation to be earned by the field marshals would amount to more than $2,500; and in some places they ought to have that much if they earn that much.

Mr. SWANSON. Now, the view I take of it is this: If you put the amount at $1,000—and you could make it $1,200 if that was necessary, but you should work him all the time when this was paid—and pay him his necessary expenses—and that is sufficient compensation for the office—you can get good, efficient men to execute the law. Now, under this provision of mine, as I was proceeding to say, you first leave it to the Attorney-General as to how many there shall be. Then you guard it around by the fact that he can not appoint any more than the district judge will certify as necessary for the economical administration of law in that district. So you guard the Attorney-General, you guard the district judge, by not allowing him to certify more than a certain number, and you have the marshal to make the recommendation of the man. With these three safeguards, I do not see how any legislation can be better guarded. When we come to the commissioners, I want to offer an amendment that I hope the Chair will note.

The gentleman who interrupted me a few minutes ago said there was a grievance in connection with the number of United States commissioners who are appointed. When you appoint these officers, whether United States commissioners or deputy marshals, they are going to make a living out of the office. They are going to do it. They are going to make enough to support themselves, and you may as well recognize that fact in dealing with this question. For United States commissioners, this bill provides for their removal and appointment for four years. I have the same idea about them that I have about deputy marshals. I provide in section 7 of the bill I introduced:

That the judges of the circuit and district courts of the United States and the judges of the Territorial courts shall divide each district into commissioners' districts, consisting of one or more counties or parishes, and they shall appoint one or more United States commissioners in each commissioner's district as may be required for the efficient and economical execution of the laws. Such commissioners, in lieu of all fees and salary now provided by law, shall receive a salary not exceeding $1,200 per annum, to be paid quarterly. The judges of the circuit and district courts of the United States and the judges of the Territorial courts shall, before the 1st of July of each year, certify to the Attorney-General the names of the commissioners in their respective districts and the Attorney-General shall fix the salary each is to receive, not to exceed $1,200 per annum. The Attorney-General shall have power to increase or decrease the salaries of the commissioners, provided the salary does not exceed the aforesaid sum. The courts aforesaid can remove any of the commissioners for cause, and the Attorney-General may remove any of them whenever he is satisfied that the number exceeds those required for an efficient and economical administration of the law. The fees

earned by the United States commissioners in all civil and criminal cases in taking or authenticating depositions, or as special commissioner by order of court, or as master in chancery, and in all matters of any name incident to their office, when taxed against parties other than the United States, shall be taxed, collected, and paid to the Treasurer of the United States. The commissioners shall make, under oath and to be approved by their respective courts, a statement of all such fees quarterly to the Attorney-General.

Under this provision the district judges and the circuit judges appoint the commissioners, and they send the names to the Attorney-General. The Attorney-General then fixes the salaries of these commissioners, not to exceed $1,200 a year. The Attorney-General, first, has power to remove any commissioner when he thinks there are more than an economical administration of the law requires. He has the right to fix their salaries each year, at a sum not exceeding $1,200. Now, in some counties the commissioner would not be required to do enough to pay $200, and the Attorney-General can designate that the commissioner of that county shall receive for the ensuing year $200. In some counties the work would not exceed $500, and he could fix it in the same way; and in some counties not exceeding $800, and he could also fix it in the same way. This will give power to the Attorney-General to fix the rate of the salaries, to remove anyone where there are too many, and give him power where they do not do any work to say that they shall receive no salary. That removes the objection urged by the gentleman in connection with commissioners.

Now, as to the number of these deputies, if you take the number as reported by the Department of Justice and eliminate those who are unnecessary and put those you retain upon a stated salary you will effect a great saving to the Government. The deputy marshals in this country number now about 1,900, I think. Every one of those men makes a living, makes from $1,000 to $2,000 or $3,000 a year. In my opinion the number of deputy marshals ought not to be greater than the number of deputy collectors for the collection of the internal revenue. A bill passed here a few days ago providing for about 992 deputies for the collection of the internal revenue. Every district in the United States has a deputy collector to attend to the collection of vast sums of money in the form of internal revenue, and I think that an equal number of deputy marshals certainly ought to be able to execute the processes of the courts.

It seems to me, Mr. Chairman, that with these two provisions this bill reported by the Committee on the Judiciary would be perfect. If you are going to abolish the fee system, if you think that evils accrue from it, the best way is to destroy the system entirely. I am willing to leave it to the Attorney-General, to the district judge, to the marshal, and to the district attorney of every district, each one being a check upon the other, to take charge of this matter and fix the salaries of all the other officials.

I want to say in conclusion, Mr. Chairman, that this bill is a step in the right direction. It carries relief and reform far in the direction where they are needed, but I think it ought to be amended in relation to commissioners and deputy marshals. With those amendments the entire vicious fee system would be destroyed and every official engaged in the administration of justice would be paid a specific salary. When you make that change you do better, not only for the public but for the officer himself. Why? Because the officer would then be removed from the temptation to use the power with which he is clothed to make money for himself instead of using it for the benefit of the Government and the vindication of violated law. Again, each of these officials would then receive a specific salary regularly, while now some of them have to wait from six to twelve months before they receive any compensation for their labors.

If there is any place where the fee system ought not to exist it is in the judiciary department. Why? Because the judiciary department is one that should have the complete confidence of every citizen. A citizen, when he is arrested and brought before a commissioner and incarcerated in jail, should feel that the officers of the law have no interest in inciting the prosecution against him or conducting it to a successful termination, except the desire to perform their sworn duties as officers of justice. With the fee system you make every man who is arrested think that he is a victim of the greed of some official who is trying to enrich himself at the expense of the man he has arrested and prosecuted.

Now, if this fee system is as glaring in abuses, as outrageous in practice, as vicious in its administration, as it has been portrayed by the gentleman who has explained this bill, the committee certainly ought to have the courage to go far enough to eliminate the last vestige of that system, and that will be done by putting the commissioners and the deputy marshals upon salaries. I hope, therefore, that the committee will consent to make those amendments and that this House will be courageous enough to wipe out every vestige of a system which has shown itself to be so vicious, as acknowledged by the Department of Justice, by the Committee on the Judiciary, and by everybody who has investigated the subject. I reserve the remainder of my time.

Pensions.

REMARKS
OF
HON. GEORGE W. WILSON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 27, 1896,

On the bill (H. R. 8271) relating to pensions.

Mr. WILSON of Ohio said:

Mr. SPEAKER: The first section of the bill authorizes pensions to Union soldiers who had previously served in the Confederate army, and to their widows, children, and dependent relatives, provided that pensions shall not be granted for disability contracted or incurred in aiding or abetting the late rebellion. This section may not be without objectionable features. It is possible Confederate soldiers enlisted in the Union Army near the close of the war for mercenary purposes only and without expectation of doing valuable services in the Union Army. In such cases, after serving ninety days, the ex-Confederate soldier would be entitled to the benefits of our pension laws; and this would be wrong.

But there is another class of ex-Confederate soldiers, who afterwards enlisted in the Union Army because they were Union men and always had been loyal, but were forced to join the Confederate army. There were doubtless many Union men conscripted and compelled to enlist in the Confederate army or suffer imprisonment or death at the hands of the rebel forces and organizations in the communities in which they lived. I can see nothing wrong in granting pensions to those truly loyal men, who availed themselves of the first opportunities to abandon the Confederate army and join the Union forces because they desired to be loyal.

I have not heard anybody state what number of ex-Confederate soldiers enlisted in the Union Army, nor when they enlisted, and how long they served in the respective armies. I am not sure it is wise to enact the first section, but I am not disposed to vote against the bill on account of that section.

The second, third, and fourth sections provide against the reduction and discontinuance of pensions except for fraud, clerical error, mistake of fact, or recovery from disease; and pensions reduced and discontinued since January 7, 1893, shall be reconsidered and adjudicated upon proper application; and the pension, if restored or allowed, shall date back to time of reduction or discontinuance. If the proof shows the disability occurred subsequent to the filing of the claim the pension shall date from the time the disability occurred. If the claimant dies before his pension is restored or allowed the accrued pension shall be paid as allowed by existing law.

Hereafter investigations into the merits of pensions previously allowed shall be by questions and answers, under oath, in open session, after due notice to the pensioner, who shall have a fair hearing. If fraud is alleged the charges must be written and sworn to, and the pensioner shall have a certified copy, together with the names of persons making the charges, at least thirty days prior to the investigation, and shall be furnished with the names of witnesses by whom it is expected to prove the charges at least five days before the examination. The hearing shall be at the county seat of the county where the pensioner resides, and depositions shall be taken, as near as may be, according to the laws of the States where the witnesses reside.

It seems to me that after a pension has been granted a presumption arises in favor of the pensioner, and all attempts to deprive pensioners of their pensions should be so conducted as to afford the fullest and fairest opportunities for an impartial and thorough investigation into the merits of the pension. I am therefore quite prepared to yield my support to these provisions of the bill.

Section 5 provides that the oaths of enlisted men shall not have less weight than if they had been commissioned officers, and that no claim shall be rejected because the claimant can only produce one credible witness to a material fact. I think, if there ever was any just ground for holding the evidence of a commissioned officer entitled to greater weight than the evidence of enlisted men, the reasons therefor no longer exist. After an officer has left the service there are no longer any circumstances requiring him to be more careful of his conduct than is required of any other ex-soldier. The ex-officer may or may not be more truthful than the discharged soldier, the fact depending not upon rank but upon the character of the man giving the evidence.

The latter clause of the section dispenses with the necessity of two witnesses to a material fact, and I think this provision is well enough, because it is very difficult to find witnesses in many claims. The lapse of time and removals and deaths of the comrades of claimants are great obstacles in the way of procuring evidence in pension claims. I can give this section my vote

without fear of violating any principle which should obtain in a court of justice when the rights of individuals or the Government are involved.

Section 6 simply provides that affiants shall know that the contents of affidavits are in his own language.

Section 7 requires the Bureau of Pensions to furnish a statement of all that is required to complete the claim.

Section 8 gives pensioners and claimant and their attorneys the right to examine all evidence and papers filed in pension claims.

Section 9 makes the records of the War and Navy Department, showing disabilities to have been incurred or contracted in line of duty, conclusive of the facts.

Section 10 creates a presumption of death from seven years' absence without news or tidings of the missing person; but if the absent person is proved to be alive, a pension granted on account of his death shall cease.

Section 11 recognizes marriages upon proof of living and cohabiting together as such, and makes their children lawful for pension purposes.

Section 12 fixes the end of the war of the rebellion on July 1, 1865, for the purposes of administering the pension laws.

Section 13 extends the provisions of the act approved June 27, 1890, to all persons who served ninety days or more in the military or naval service of the United States during the rebellion and were honorably discharged, although such person may not have received an honorable discharge from a prior service. This provision is one of some doubt in my mind. If a soldier was not entitled to an honorable discharge, but subsequently served only ninety days in another organization, he does not present himself in the best possible aspect as a soldier. But there are doubtless many instances in which the rule here provided will accomplish good results. The section restricts pensions to injuries subsequent to the dishonorable discharge, and makes the final discharge conclusive of dates of enlistment and discharge.

The section also makes death of a soldier, sailor, or marine while in the service in line of duty equivalent to an honorable discharge. I think this provision just in all respects.

Section 14 provides that under the act of June 27, 1890, applications for pensions shall be sufficient as to allegation of disability not the result of his own vicious habits, which renders him unable to earn a support, and every disability found to exist at the time of filing a claim, which is recognized as pensionable under the general pension laws, or act of June 27, 1890, shall be taken into consideration in determining the degree of disability, and to all disabilities pensionable under the general laws the same rate of pensions shall be allowed as under the general laws, not exceeding $12. And pensions under act of June 27, 1890, shall not be granted unless disabilities amount to at least $6.

This section embraces important regulations, and so far as I am prepared to express an opinion it is just and will tend to facilitate a better administration of the pension laws. I think it well to give pensioners under the act of June 27, 1890, the benefit of disabilities traceable to their service. A pensioner prefers his claim should be based upon injuries sustained in the Army.

Section 15 relates to rejected claims under act of June 27, 1890, and dispenses with new applications when other evidence is furnished. When the sworn statement of a reputable physician is filed, showing that a pensionable degree does exist, an order for the applicant's examination before another board of surgeons, if desired, shall issue. If the report of such surgeons and the evidence show the existence of as pensionable disability at the time of filing, the pension, when allowed, shall commence from the date of filing of the rejected application, and if otherwise, from the date when the disability began to exist, as shown by the evidence.

This section affords opportunities for claimants to present additional evidence and protects them from much inconvenience.

Section 16 fixes the amount of net income which will prevent the granting of a pension under the act of June 27, 1890, at $300. This section will settle a question of much doubt and will tend to establish a rule which will be uniform.

Section 17 extends the act of June 27, 1890, to persons who served on gunboats, acting assistant and contract surgeons, provost marshals, deputy provost marshals, and enrolling officers who bring themselves within the provisions of the pension laws.

Mr. Speaker, I have reviewed the pending bill quite carefully, and I think it a measure deserving of the support of the friends of the ex-Union soldiers.

I am not one of those who believe the pension roll is honeycombed with fraud. There are doubtless some cases—possibly many cases—into which fraud has crept and persons have been pensioned who are not entitled to pensions. But, sir, these are exceptional cases, and I protest against every effort, from whatever source it comes, to cast odium upon those who constitute the honorable pension roll of the Union armies.

We should guard against abuses, but in doing so we should not be guilty of unjust treatment of those who are entitled to the benefits of the pension laws.

Pensions.

SPEECH

OF

HON. SNYDER S. KIRKPATRICK.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 23, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8271) relating to pensions—

Mr. KIRKPATRICK said:

Mr. CHAIRMAN: The presence of this bill and its solemn consideration in the Congress of the United States is by no means complimentary to the patriotism of the people of this nation. It demonstrates a want of gratitude toward the men who for four long years imperiled their lives on a thousand battlefields that the nation might live, that patriotism is at a low ebb, or that a patriotic people have been deceived in the selection of those whose duty it is to administer the liberal pension laws of this country. That the American people are wanting in gratitude to the nation's defenders I will not concede; it is not true. The mere suggestion that patriotism is on the wane is an insult to a liberty-loving people. No, Mr. Chairman, the nation is not ungrateful to its defenders, and patriotism is unbounded. There is no disguising the fact; the people have been deceived, and are impatiently waiting an opportunity to right the great wrong, and that opportunity will soon come. When it does come, woe unto the party responsible for the wrongs, indignities, and insults heaped upon the gray-haired veterans of the land.

The discussion of this bill has assumed a wide range, and brings back to us memories, scenes, incidents, and trials of bygone days. Our minds involuntarily run back over that period of our country's history, so full of sorrow, desolation, and death. For four long years, from 1861 to 1865, the most stupendous struggle the world ever knew was waged with a zeal and determination unparalleled in ancient or modern times. The issues involved were the greatest ever submitted to the arbitrament of war, not only involving the very existence of our Government, but that of every other Republic as well. The crowned heads of the Old World looked on with amazement while the struggle progressed, realizing that the fate of self-government hung in the balance. That we may comprehend the magnitude of this struggle, and have a proper appreciation of the heroic services of those who stood between us and treason, I want to invite your attention to a few historic facts.

The total number of men enrolled in the Union Army during the four years of the war of the rebellion was 2,778,304. Of these (including regulars) there were killed in battle 110,170; died of disease (not including those who died in prison), 199,720. The total deaths from all causes, 359,528. The number of deaths from disease was remarkable, being more than double the number from battle. Part, at least, of this extraordinary loss of life by disease was due to the severity of the campaigns. The extent of the territory marched over was immense. Some of the campaigns were made under a tropical sun and some of the battles fought amid the snows of winter. The Ninth Army Corps fought on the Carolina coast and then marched 1,000 miles westward to the fever-smitten camps of Vicksburg. The Twelfth Corps, after fighting two years in Virginia, moved to Tennessee, from which it fought its way through Georgia to Atlanta, marched from Atlanta to the sea, and thence northward to its old battle grounds, having encircled half a continent. Men from the woods of Maine camped 2,000 miles distant, along the bayous of Louisiana. Men from the prairies of the Northwest toiled and battled among the everglades of Florida and along the Gulf. Human endurance was often taxed to its utmost, and the restless, moving armies left in their wake a line of countless graves.

History will never record, language can not express, and the human mind can not comprehend the hardships. the suffering, the trials, the sorrow, and the heartaches endured by those participating in that great conflict, and their loved ones at home. I thank God that peace finally came, with the Union restored, the nation's supremacy established, slavery abolished, and Old Glory supreme in the skies. [Applause.] Allow me in connection with this to call your attention to another event which occurred thirty-one years ago. It was the triumphant march of that victorious army in grand review down Pennsylvania avenue past this Capitol after the surrender of Lee at Appomattox. It was an imposing scene, ever to be remembered by those who witnessed it. I fancy I can see that heroic army, careworn and dusty, with their sunburnt faces, as they moved down this historic thoroughfare with their tattered battle flags kissing the breeze of that April morning, and hear their shouts and huzzas as they passed the grand reviewing stand. In that triumphal march as they approached this building their eyes fell upon a great banner; it was placed there by the

direction of the immortal Lincoln himself, and upon it was inscribed these words: "This nation owes but one debt it can never pay, the debt to the soldiers who saved the Union." Ah, Mr. Chairman, if the spirit of Abraham Lincoln could touch the hearts of those in control of the Pension Bureau this bill would not be here.

Thus closed a struggle unparalleled in the history of the world; a struggle in which, on the Union side alone, 110,070 men were killed in battle, while 249,458 died from disease, accident, in military prisons, or from other causes. Including both sides, more than 500,000 lives were lost. There have been wars which lasted longer—wars with intermittent, desultory campaigns—but in this struggle the two contending armies for four years never let go their clutch upon each other's throat. For four years the echo of the pickets' rifle never ceased. As a consequence of this prolonged and deadly conflict our land was filled with grief and sorrow—mothers weeping for sons, wives for husbands, and children for fathers that never returned. Every neighborhood had its mourning widows and orphan children. The maimed and wounded could be seen upon every hand. Added to this distressed condition, our country was involved in a debt of $2,800,000,000. Notwithstanding the overburdened condition of our Treasury, Congress, in obedience to the patriotic demands of the people, made suitable provision for pensioning our deserving heroes, their widows and orphans.

These pension laws have from time to time and from year to year been expanded and broadened until to-day we have the most liberal pension laws on the face of the globe. Ours is the only country in the universe where it is possible for the private soldier who served in the ranks to receive a pension of $1,200 per year under general law. Under the liberal and patriotic provisions of our pension laws thousands, yea hundreds of thousands, of our nation's defenders have received the generous bounty of this great country; and it has been administered with a liberal hand. There was paid to these old veterans, their widows and orphans, during the fiscal year ending June 30, 1893, $156,740,467.14. The number of persons on the pension roll June 30, 1892, was 876,068. Subsequent thereto, and during that year, there was added to the pension roll 121,000 names. And I may be permitted to suggest to the Democratic side of this House that this was before Hoke Smith and Lochren's day. [Laughter.]

During the year ending June 30, 1894, there were added to the pension roll 41,483 additional names. And I again repeat, our pension laws are liberal and acceptable to the defenders of the nation. I now propose to state a proposition that can not be gainsaid on this floor, a proposition in which every Republican in this nation should take pride—that each and every one of these liberal pension laws was written upon the statutes of this country by the party of which I have the honor to be an humble member, and over the objection and protest of the Democratic party. [Applause.]

I do not mean to say, nor will I say, that no Democrat voted for these measures, but the fact remains that the Democratic party as a party, while talking in favor of liberal pensions, have always voted the other way. And I again repeat that the Republican party has always been, and now is, the friend of the old veteran. This claim is verified by every pension law upon the statute books from July 14, 1862, to the present time. The Democratic party makes the same claim, forgetting (if it ever knew) the test prescribed over nineteen hundred years ago: "By their fruit shall ye know them." [Applause.] I invoke this test, and call upon the gentlemen on the other side of this Chamber to point to one single act pensioning the veterans of the late war that their party, as a party, ever advocated or supported.

In 1892 a political cyclone swept over the nation, as the result of which the Democratic party was placed in full control of the executive and legislative branches of this Government. It differed from the ordinary cyclone in this, that the wreck and ruin attending it did not manifest itself until the next year. That it was more destructive and broader in its scope than the ordinary cyclone is conceded by all, and that it is not likely to be visited upon us again while this generation lasts is, to say the least, quite consoling. Strange as it may seem, hundreds and thousands of our old veterans contributed by their votes directly and indirectly to this result, unconscious apparently of the fate in store for them. They were like the young lady of Niger who went riding on the back of a tiger; her face it wore a smile; when they returned from the ride the lady was inside, and the smile was on the face of the tiger. When I realized the determination of these old veterans to place themselves in this predicament I felt like repeating the prayer of the Saviour of mankind at the crucifixion: "Father, forgive them; they know not what they do." It is unnecessary for me to take up your time by stating that they fully realize now what they did, and my word for it, they will never do it again.

With the incoming Administration came Hoke Smith. These old veterans never heard of him before, but they all know him now. Before his day they used to sing, "While we were marching through Georgia," but during the past three years Georgia has been marching through them, as the records fully show. During the year ended June 30, 1893, there were dropped from the pension rolls in this country 2,296 pensioners. This does not include the names of those dropped by reason of death, remarriage, or minors reaching the age of 16 years. These persons were dropped simply and solely because the Pension Bureau in overhauling these cases reached a different conclusion than that announced at the time the claim was passed upon. It should be remembered in this connection also that the Democratic party assumed control of this Bureau March 4, 1893.

In the year ending June 30, 1894, there were dropped from the pension roll 5,233. There were also dropped from the roll during the year ended June 30, 1895, for the same reason, 9,680, making a total dropped to June 30, 1895, of 17,209. What the present year will disclose, in the absence of the report, I am unable to state, but I have no doubt it will not fall behind the record of the preceding year. These figures do not include pensioners reduced, but represent the number entirely stricken from the roll. These are some of the fruits by which we may know them. If this is the party that is the friend of the old soldiers, I fancy I can hear them exclaim, "Lord, protect us from our friends!"

Mr. Chairman, this is not all of the fruits of this Administration in pension matters. During the year ended June 30, 1895, 103,355 claims were rejected, while on the 1st day of July, 1895, there were pending, undisposed of, 552,210 pension claims in this Bureau. Of these 210,765 are original claims of parties who have never been placed upon the pension rolls and who have never received a dollar. This ought not to be so, and if the Pension Bureau would manifest more zeal in putting some of these upon the roll and less in striking others off its action would meet the hearty commendation of these old veterans. [Applause.] The action of this Bureau is extraordinary and unprecedented, and has called down upon itself the condemnation of every old soldier in the land. It has sent consternation into many thousands of humble homes. A letter bearing its frank fills the pensioner's heart with sorrow and anguish, and he opens it with fear and trembling lest the little pittance that stands between him and hunger is to be arbitrarily taken away. The condition to-day of hundreds and thousands of our soldiers has been well expressed by Joseph G. Waters, of Topeka, in a letter to my colleague, Hon. DICK BLUE of Kansas, calling his attention to a special bill pending before the Committee on Invalid Pensions in behalf of one Wallace McGrath. I desire to quote from that letter.

Speaking of Wallace McGrath, Captain Waters says:

Full six foot two, with head in air,
And straight as shaft or column,
Without a blemish, hurt, or care,
And never glum or solemn.

Behind the drums he marched away,
A thousand others going,
To fields where waiting foemen lay
And blood would soon be flowing.

The very devils in his soul,
Leashed to the fife's slow meter,
Impatient heard the muskets' roll
And vomit their saltpeter.

Through all the long and hard campaigns,
Up hills and down the valleys,
Where smoking guns drove narrow lanes
Through ranks that made the sallies.

I once, long years ago, was told—
It's Gov'nor Martin's story—
This man, so true, so brave and bold,
Did once a thing of glory.

Of all the men who climbed the crest
Where Bragg had his headquarters,
He was the one who led the rest
Above the crimson slaughters.

The war is past, and Peace, secure,
Points upward with its moral.
And long as centuries endure
The soldier wins his laurel.

Not so, DICK BLUE! That man, they say—
This is not strange or novel—
Is at the Soldiers' Home to-day,
His loved ones in a hovel.

Lame, paralyzed, and desolate,
His sunset glow of glory,
Infirm and old, left to his fate,
And, BLUE, this ends his story.

Mr. Chairman, I want to enter my solemn protest here and now against these outrages, and to warn the Democratic party that a cyclone is gathering from the Atlantic to the Pacific, from the Lakes to the Gulf, that will sweep it from place and power. These old veterans are eagerly watching and impatiently waiting for the opportunity to set the seal of their condemnation upon the party that has so grossly deceived and outraged them; and that time will soon appear. What is the purpose of the bill under consideration? Is it a bill to extend and broaden the pension laws? By no means; it is simply administrative in its character.

It is intended to correct some of the evils and abuses of the Pension Bureau. Its design is to simplify the practice, to abolish technicalities, and make it possible for the claimant to obtain that which is so justly due and from which they have so long been deprived. In other words, it is an effort to compel by law a Democratic Administration to allow pensions, and its necessity was occasioned by the mistake of 1892. I must confess that the bill is open to criticism in some respects, and that many of its provisions do not fully coincide with my views; nevertheless it is a step in the right direction, and I will support it by my vote. I introduced a bill in this House early in this session that I would like to see enacted into law, as I feel confident it would meet the hearty approval of the old veterans themselves. The first section of this bill is as follows:

That no person otherwise entitled to a pension by virtue of any law of the United States shall be disqualified from receiving the same by reason of any prior service in the Confederate army or navy during the war of the rebellion, nor shall the widow, children, or dependent relatives of such person be deprived of a right to pension by reason of such service: *Provided*, That no pension shall be granted by virtue of this section for disability contracted or incurred while aiding or abetting the late rebellion against the authority of the United States.

I may say with reference to this section that I have no desire to exclude from the pension rolls a man solely on the ground of his previous service in the Confederate army. We all know that many by reason of their environment enlisted in that service either through compulsion or for the purpose of escaping to the Union side, and did so escape and join our Army the very first opportunity. I do not, however, believe that the Confederate soldier who abandoned his cause when all hope of success had vanished and entered the Union Army when the struggle was practically over is entitled to receive the bounty of this Government, and for that reason this section of the bill should be modified in this respect. Section 2 of the bill reads as follows:

SEC. 2. That from and after the passage of this act no pension heretofore granted or which may hereafter be granted under the pension laws shall be reduced or discontinued except for fraud, clerical error, mistake of fact, or recovery from disability: *Provided, however*, That nothing herein contained shall be construed to entitle any person to more than one pension, or as allowing more than one pension for the same service, nor to affect or enlarge the pension rights of widows and others under sections 4702, 4706, and 4708 of the Revised Statutes of the United States and acts supplemental to and amendatory thereof.

This section, in my judgment, will not meet the expectation of its author, and is open to serious criticism. I am one of those who believe that the pension certificate in the hands of the old veteran should be as sacred as the bond in the hands of the bondholder and should be clothed with all of the privileges of a vested right. The old soldier should be as secure in his pension when the certificate is once granted as he is to the land to which he holds the patent of the Government. The allowance of the pension should have the force and effect of a judgment rendered by a competent court, and should only be set aside for actual fraud, in a proceeding based upon an accusation under oath judicial in its character, and with reasonable opportunity to defend. This section permits the Pension Bureau to set aside the pension for a mistake of fact in its allowance, or for the reason that the pensioner has recovered from his disabilities.

These are dangerous provisions, and more especially when intrusted to an unfriendly Bureau. It will be observed that the Bureau is the sole judge, and the pensioner is at the mercy and subject to the whim and caprice of the Commissioner of Pensions. Under these provisions the present Bureau will undoubtedly hold that every person stricken from the pension rolls during the past three years falls within one or the other of these provisions. I want to warn my Republican friends of the danger of permitting these provisions to remain in this bill. We should prohibit in the most positive terms the Pension Bureau from striking from the roll a single pensioner except for fraud, clearly established in a judicial proceeding, in which the fullest opportunity to defend is offered. Nothing short of this will protect the pensioner from the outrages of which he now so justly complains and bring to him that peace of mind so desirable in his declining years. I will now invite your attention to section 3 of this bill, which reads:

SEC. 3. That all pensions reduced or discontinued since January 7, 1893, shall, upon application, be reconsidered and adjudicated in accordance with the provisions of this act, and the pension, if restored or allowed, shall commence from the date of such reduction or discontinuance, or from the date subsequent thereto at which the disability is shown by the evidence to have existed: *Provided*, That in the event of the death of the pensioner after such reduction or discontinuance, any accrued pension that may be found due under this section shall be paid as provided by existing law in cases of death.

This section, if administered in a patriotic spirit, will restore to the pension roll thousands heretofore dropped, and will enable them to recover their pensions from the time they were stricken therefrom. This is a simple act of justice to those who have felt the blighting hand of this unfriendly Administration. But if administered by an unpatriotic and unfriendly Commissioner we can not hope for such results. I will next take up section 4, which is as follows:

SEC. 4. That hereafter, in the administration of the pension laws, all investigations into the merits of any pension previously allowed shall be by question and answer, under oath, in open session, after due notice to the person or persons who may be affected thereby to be present personally or by attorney; and such person or persons shall have the right to cross-examine and a fair and full opportunity to rebut or substantiate any facts alleged or disputed: *Provided*, That when fraud is alleged the allegations shall be reduced to writing and under oath and the person or persons affected thereby shall be furnished with a certified copy of the charges made, together with the names of the persons making the same, at least thirty days prior to such investigation, and shall be furnished with the names of the witnesses by whom said charges are to be proved at least five days prior to their examination, such investigation to be conducted at the county seat of the county in which the person affected resides, and the depositions of witnesses residing outside of said county shall be taken as near as may be in accordance with the practice of the State or Territory in which said witness resides.

With reference to this section I will only say its phraseology is peculiar, and the procedure not as well defined as it should be, still with a fair interpretation it will doubtless prevent many pensioners being dropped from the rolls. I will now invite attention to section 5, which reads:

SEC. 5. That in the administration of the pension laws the oath of a person who has served as a noncommissioned officer or private shall not have any less weight than if such person had served as a commissioned officer: *Provided*, That no claim shall be rejected because of claimant's inability to furnish, as to any material fact in the case, the testimony of more than one credible witness having knowledge of such fact.

This section, barring its peculiar phraseology, is free from criticism and will meet the approval of the old soldier. Under this section no distinction can be made in the testimony of a private soldier and that of an officer solely on account of rank, but the most important provision of this section is that which requires the Bureau to accept the testimony of one credible witness where two or more heretofore have been required. Many claims have come under my observation since I have been here where the claimant is unable to furnish the affidavit of more than one credible witness to the time, place, and circumstances under which his disability was contracted or incurred, and thousands of claims are now held in the Pension Office for this reason. This provision has my unqualified indorsement, and I fully commend it to this House.

Section 6 meets my approval, and is as follows:

SEC. 6. That in the administration of the pension laws an affiant shall be required only to make oath that said affiant has read or heard read the subscribed affidavit, that the same was prepared in his or her presence at his or her dictation, is in affiant's own language, and that the matters and things therein stated are true.

This section prescribes the form of affidavits to be used in pension cases, and is intended to annul, abrogate, and abolish that intricate, complicated, unpatriotic, and wicked Order 229, devised, designed, and intended to vex, annoy, and harass those applying for pensions, and to hinder and delay them in procuring the same. The name of the author of this remarkable order will doubtless never be known, but it is the legitimate child of a Democratic Bureau, and in order that future generations may be able to properly interpret the political history of 1896, when they come to read it, I will incorporate this order in my remarks:

[Order No. 229.]

DEPARTMENT OF THE INTERIOR, BUREAU OF PENSIONS,
Washington, D. C., June 19, 1893.

In the preparation of testimony in support of claims in pension cases all statements affecting the particular case and not merely formal must be written, or prepared to be typewritten, in the presence of the witness, and from his oral declarations then made to the person who then reduces the testimony to writing, or then prepares the same to be typewritten. And such testimony must embody a statement by the witness that such testimony was all written, or prepared for typewriting (as the case may be), in his presence, and only from his oral statements then made; stating also the time, place, and person, when, where, and to whom he made such oral statements, and that in making the same he did not use and was not aided or prompted by any written or printed statement or recital prepared or dictated by any other person and not attached as an exhibit to his testimony.

Any needless delay in the preparation of such testimony after such oral statement by the witness or in forwarding the same to this Bureau and any material alteration or erasure will be cause for rejecting such testimony.

WM. LOCHREN, *Commissioner.*

Approved:
HOKE SMITH, *Secretary.*

Section 7 is important, and corrects an evil that should never have existed. The section reads:

SEC. 7. That all notifications from the Bureau of Pensions as to the status of any case shall set forth each and every fact upon which further evidence is required to complete the same.

Section 8 is both wise and timely. It will protect the pensioner against that class of cowardly assassins whose morbid natures induce them to make false and malicious charges against the unsuspecting old veteran with the hope of having his name dropped from the pension roll with the assurance that their false, wicked, and cowardly communications will be held sacred by the Pension Bureau, thus shielding them from public censure and condemnation. The section is as follows:

SEC. 8. That all papers, memoranda, writings, letters, or exhibits received by the Bureau of Pensions relating to any pension or claim shall be preserved and filed with the papers in said case, and every pensioner or pension claimant shall have the right, in person or by attorney, to examine and inspect each and every such paper, memorandum, writing, letter, or exhibit which has any reference to or bearing upon his or her pension or claim.

This section should not stop here, but should embrace all such communications heretofore received. I make this suggestion, for I am informed and believe the fact to be that on the convening of this Congress all of these pension files passed through what is

know as the shucking process, whereby communications of this character were abstracted therefrom. Justice demands that these unpatriotic and cowardly methods be exposed to the light of day, and that these cowardly spies be exposed to the gaze of an outraged people.

Section 9 simply provides that the records of the War and Navy Departments showing disabilities to have been received and contracted in the line of duty shall be conclusive of that fact. Section 10 simply declares that the common-law presumption of death after the lapse of seven years shall apply in pension cases. Section 11 relates to proof of marriage, making continuous cohabitation prima facie evidence thereof. Section 12 fixes July 1, 1865, as the date on which the civil war ended. Section 13 extends the act of June 27, 1890, to persons who served ninety days or more and received an honorable discharge, notwithstanding a prior service in which the soldier was not discharged, and that the death of the soldier while in the line of duty shall be equivalent to a discharge. Section 14 requires the rating under the act of June 27, 1890, to conform to the act of July 14, 1862, up to the maximum of $12 per month, and that all disabilities found to exist shall be combined in fixing the rate of the pension, and further provides that the pension shall not be denied if the disabilities so combined entitle the pensioner to $6 per month.

This section will be appreciated by the pensioners; it restores the ruling of Commissioner Raum, and is manifestly just. Under the ruling of the present Bureau the pension is denied unless some one of the disabilities in and of itself justifies a rating of $6 per month.

Section 15 provides for the reopening of any claim rejected under the act of June 27, 1890, without filing a new or supplemental declaration, and fixes the time when the pension shall commence if allowed.

Section 16 construes the term "without other means of support than her daily labor," used in the act of June 27, 1890, to mean without a net income of $300 per annum. This section will be hailed with joy by thousands of widows now deprived of their pensions under the rule established by the present Bureau, which denies the pension where the income exceeded $8 per month.

Now, Mr. Chairman, I have discussed in my humble way every feature of this bill, and while I have criticised some of its provisions I look upon it as a measure of much importance to the old soldiers of this country and shall gladly record my vote in its favor. I would like to see section 1 of the bill introduced by myself substituted for the first section of this bill. It provides in substance that every soldier, sailor, or marine received or accepted into the service of the United States in the war of the rebellion shall be conclusively presumed to have been sound, able-bodied, and free from disease at the time of such acceptance.

Mr. SULLOWAY. That is right.

Mr. KIRKPATRICK. Of course it is right. I can conceive of nothing more unjust than to deny one of these old veterans a pension on the theory that he was unsound when he entered the service. I do not care whether he was sound or not when he entered the service; he offered his life in the defense of his country; the Government inspected and accepted him, and it is manifestly unjust now to say, and the Government ought not to be permitted to say, that he was unfit to be a soldier. That long march and the battlefield are his witnesses, and their testimony is conclusive.

Mr. Chairman, I might offer many other suggestions along this line, but I have already occupied too much time. No man regrets more than myself the necessity for this bill; but the Republican party never turned a deaf ear to the appeals of the nation's defenders and never will. [Applause.] There never was a time in the history of this country when there was so much uneasiness, distrust, and alarm among our pensioners as to-day. There never was a time when they felt so much insecurity as now, for they know not what a day may bring forth. We realize that this bill will not afford that security and peace of mind so earnestly desired. We confess our inability to enact a law that will secure a liberal and patriotic administration of the pension laws when controlled by a party that does not believe in pensions. In order to do this we must be able by law to change the hearts of those in control of the Pension Bureau, as well as to inject into the veins of the Democratic party a generous supply of patriotic blood. This being impossible, there is but one remedy left to the old soldier, and that is to drive from place and power the party that has dealt so unpatriotically and unjustly with him.

The gentlemen on the other side of this Chamber are following the same hypocritical course with reference to this bill that has characterized their actions since 1865. They pretend that they are in favor of liberal pension legislation, and yet no bill has ever been offered proposing either special or general legislation in the interests and behalf of the old soldiers of this country that has met their approval. It matters not how wise or patriotic and just the measure may be, it meets their combined opposition. When a private or special bill is offered for the relief of some old veteran whose pitiable condition appeals to the sympathy of all, they refuse to support it, under the shallow pretense that it is unjust to others similarly situated.

I affirm in the presence and hearing of every Democratic member on this floor, and with the records at their command, without fear of contradiction, that the Democratic party has upon this floor opposed every measure to pension the soldiers of the late war from 1861 to the present time; and that each and every one of our pension laws have been placed upon the statute books of this country by the Republican party and over the opposition of the Democratic party; and I challenge any gentleman here to put his finger upon a single pension law that contradicts my statement. I will venture the further assertion that this bill will not receive three Democratic votes, with all of their talk about justice to the old soldier. Do gentlemen suppose that they can deceive the people further by their sham pretenses and utterances in the face of a record of opposition for thirty years? Why not vote for this bill, it is the only measure before the House at this time, and then if any other measure can be devised more equitable in its terms we assure you that it shall have our hearty support?

Now, I want to make another prediction, notwithstanding the remarks of the gentlemen and their clamor for a service pension, that when such a bill is presented it will not receive 5 votes on that side of the House. Like all measures, it will not be the kind of a service pension they desire. You flippantly ask why we do not report a service-pension bill. In answer to that I want to say that we now have under consideration in the committee a bill of that character which will be reported to this body in a few days. But I have no doubt, when it comes up for consideration, your side will insist that it is unjust to some other class of soldiers and will refuse to support it. And, again, I might suggest to you some very cogent reasons for deferring a service-pension bill for the present. If you remember, in 1892 the people of this country listened to the siren voice of Democracy, and unwisely placed the destinies of this nation under Democratic control. Our protective system, under which the country had prospered as it never prospered before, was supplanted by the heresy of free trade, the pet and idol of the Democratic party. This blighting, un-American system paralyzed every industry, obstructed trade, and forced 2,000,000 people into idleness. Our imports exceeded our exports, and our Treasury was soon at the mercy of a foreign syndicate that could only be appeased by the issuance of two hundred and sixty-two millions in bonds.

We have scarcely seen a day since this ruinous policy was enacted that our expenditures did not exceed our receipts. Our deficit has been growing from day to day, and is now into the millions. Our interest-bearing public debt has increased during this time $285,000,000. Confronted as we are to-day with a deficit of millions, and increasing with each day in the year, with ten months of this Administration yet to be endured, would seem to be very cogent reasons for delaying a bill that would increase the expenditures at the lowest estimate fifty millions per annum, however meritorious and deserving the measure may be. Give yourselves no concern, my Democratic brethren, the friends of the old soldier will soon be in control, your free-trade heresy will be overthrown, and protection and reciprocity restored. Our crippled and paralyzed industries will resume their former activity, business will revive, and the wage earner will find abundant employment at a remunerative price, unfettered by the competition of the Old World. When that time comes, and it will soon come, there will be no dickering with syndicates to sustain the nation's credit, no borrowing of money to meet the current expenses; our Treasury will be filled with tribute levied on the commodities of other climes. When that time comes, if not before, we will speedily pass a service-pension law, the most liberal and generous in its terms found upon the statutes of any country on earth. Will our Democratic brethren then join us in bringing about this patriotic measure? Judging from the past, I should say no. I will therefore suggest to them to stand still and they will see the salvation of the Lord. [Applause.]

Filled Cheese.

REMARKS
OF
HON. WINFIELD S. KERR,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, April 15, 1896,

On the bill (H. R. 8008) defining cheese, and also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of "filled cheese."

Mr. KERR said:

Mr. SPEAKER: I should not delay final action upon this bill even for the brief time which I shall occupy were it not for the fact that a large number of my constituents are engaged in the manufacture and sale of genuine cheese, and that they need and are

entitled to the protection of a law which will strip the disguise from spurious competitors and compel every product to enter the market upon its own merits and for what it is. All laws are, to a greater or less degree, an abridgment of liberty—so all trade regulations encroach more or less upon the freedom of business—but they are nevertheless necessary to secure its honest or orderly transaction. I concede that on a cursory reading of this bill, and at first blush, it would seem especially onerous and burdensome upon those coming within its provisions, but a careful consideration and enumeration of the things required, aside from the tax, will remove that impression and demonstrate that no especial hardship is entailed. In determining whether a law should pass or not we should keep steadily in mind the evil at which it is directed, the vice which it is to cure. It must be borne in mind that the business at which this bill is directed has projected itself upon the people under false pretenses; it has worn the cloak of deceit; it has declined to meet an honorable competitor in an honorable way in the markets. I do not mean to do any man or combination of men injustice; therefore I say that I presume not all the manufacturers of "filled cheese" should be thus characterized, but the evil is sufficiently prevalent to not only justify but to demand relief.

It is no sufficient answer to this legislation to say that "filled cheese" is not deleterious to health. But if it is not it seems inexplicable that with such charge being made and the burdens of this law impending that only one person should have appeared before the committee against the measure. But, however that may be, and the committee seems to have left it unanswered, the law has secure foundation in other reasons. The power of Congress under the Constitution to legislate on this subject is clear, it seems to me. The internal-revenue taxes, and their method of collection, upon liquors, tobacco, cigars, and as they were formerly levied upon a hundred articles, are in all substantial respects as they are levied here. That these articles are luxuries or vices does not at all affect the power. Formerly taxes by stamps were levied or collected upon friction matches, bank checks, and other things, all very important, altogether legitimate, and absolutely essential under this same constitutional authority. This year, under an unquestioned law of Congress, 66,000,000 pounds of oleomargarine paid an internal-revenue tax of $1,328,000.

It is urged that this is a legitimate business and ought not to be discriminated against and burdened. So is the distilling of liquor, so far as the National Government regards it, a legitimate business, and so the brewing of beer, the making of tobacco and cigars, the drawing of bank checks, yet all fell within this power and do or did bear the burdens of taxation.

Every State in the Union, I presume, has laws to protect its people against deception from adulterated food products. Ohio has an elaborate and successful system of pure-food laws. These laws do not rest upon the sale nor essentially upon the ground that adulterated articles are deleterious to health. That is one of the reasons for their existence; but they rest upon the broader foundation that the people are entitled to protection against fraud and deceit. Oleomargarine may taste as well and be as healthful as dairy butter; but an individual who supposes he is buying butter and gets oleomargarine is defrauded. So the individual who supposes he is buying "full cream cheese" and is given "filled cheese" is defrauded and deceived. That kind of practice is legal and moral deceit and ought to be prevented if a remedy can be devised. It has brought our cheese into disrepute in foreign markets.

State legislatures, limited in their powers by the Federal Constitution, can afford no adequate relief. This product, while it is the subject of interstate commerce, is beyond the reach of State regulation or control. I venture the opinion that nine-tenths of the trade in this article by the manufacturer and wholesaler is interstate and within the exclusive jurisdiction of Congress.

I do not believe the exactions of this bill are any more burdensome than those imposed upon several other businesses by Federal laws, but if they are the report of the committee shows that the producers and dealers in "filled cheese" have made them necessary. A man who manufactures a good article of any kind advances his own interests by preserving by suitable marks the identity of his product. Fees are paid for trade-marks and suits are prosecuted to redress and prevent their infringement. But in this business, one of large proportions, no such business precautions are taken, or seemingly advisable. As the committee report shows, a large proportion of the product is sold by the manufacturers to jobbers without any mark whatever, without name or habitation, thus leaving to the jobber the privilege of locating the place of manufacture and naming the article.

Only one reasonable inference is open from such a situation, namely, the manufacturer has no pride in his product and is in conspiracy with the dealer to deceive the consumer. When this cheese, unmarked and bastardized by its producer, reaches the dealer, the report shows that it is marked "New York State full cream cheese," "Fine cream cheese," "Badger State full cream cheese"; and this defrauds and deceives the purchaser and consumer, and as well infringes the rights of the honest manufacturers of these brands of cheese and brings their product into disrepute through the deception. It appears that these dealers have stencil plates, and with them mark the cheese anything, give it any name and quality the cupidity of the purchaser may suggest. It is certainly time that such practices should be put under the ban of the law, and here and now is a splendid opportunity to do it.

The minority of the committee, among the grounds upon which they oppose the measure, deprecate the present increase of revenue in view of the plethoric condition of the Treasury. As supporting this argument they say there is now in the Treasury over and above the gold reserve $160,000,000. So there is of borrowed money, but how long will it last with the present revenues and expenditures? Yesterday's statement of the receipts and expenditures show the expenditures to be $1,041,000 over the receipts. At this rate the $160,000,000 would last about one hundred and fifty-nine days, or about five months. How such an argument overwhelms one! In a month or two Congress will adjourn for six months at least; before we again convene this fund will be exhausted at the present rate of diminution, and each day thereafter the Government will be running behind. It is also asserted in some quarters that the President will reconvene Congress unless some revenue legislation is enacted. All of which is very interesting in connection with this revenue argument. The manufacturers of and dealers in this article may find some substantial benefit to their business in this measure. I have no information as to whether this kind of cheese is imported, but if not now I have no doubt that soon the enterprise of other countries will follow the Yankee lead and will be making filled cheese and seeking a market for it abroad, and most likely in this direction. This bill, in addition to the import duty, the tariff, levies 8 cents a pound internal-revenue tax upon the foreign product. This will give the American producer of filled cheese the American market; so that, after all, this advantage may lift the burdens of the measure.

At any rate, it is a reasonable proposition. It enforces fair dealing, honest business. It prevents fraud and deceit and puts this article into the market upon its merits, with its own flag flying.

We have stopped pirating on the high seas. We have attempted to stop it against copyrighted literature and works of art. Let us now stop it in the cheese business.

River and Harbor Appropriations.

SPEECH
OF
HON. DAVID G. COLSON,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Monday, April 6, 1896.

The House having under consideration the bill (H. R. 7977) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. COLSON said:

Mr. SPEAKER: If I were to criticise the bill now before the House for consideration I would say that the appropriations made for some of the rivers of the country are too small. There is no economy in making public improvements by piecemeal. Such a policy results in increased cost in the completion of any improvement to which it is applied. This bill in some of its parts does not meet my approval. It is in some of its items too illiberal. I will refer to only one item, which is the one of $20,000 for continuing the improvement of the Cumberland River between the Tennessee and Kentucky State line and the town of Burnside, in Kentucky, to be expended in purchasing sites and masonry for locks and dams 21 and 22 on said river. I asked the committee to put these locks and dams under the continuous contract system or to appropriate $100,000 for expenditure in the work. The bill does neither, but carries only $20,000 for the purpose named. This amount, though small, is the only appropriation ever made especially for that part of the Cumberland between the State line and the town of Burnside, and bearing in mind this fact, I am pleased to get the $20,000. But it is illiberal.

Were it allowable under the rule under which we are operating to offer amendments, I would offer an amendment putting these locks and dams (21 and 22) under continuous contract, and failing to secure its adoption would move to increase the appropriation for said locks and dams to $100,000.

By the Cumberland River the distance from Nashville, Tenn., to Burnside, on the Cincinnati Southern Railroad, in Kentucky, is 327 miles, and nowhere between these two points is this river crossed by any railroad. This may strike you as remarkable, but it is true.

The Cumberland River, in the plan for its improvement, is divided into two sections, the Cumberland below Nashville and the Cumberland above Nashville.

Nearly all the appropriations made for the improvement of the

Cumberland above Nashville has been expended on that part of the river in Tennessee.

This is not just to the people along that part of the division above Nashville which is in Kentucky. Of the 327 miles of the Cumberland between Nashville (in Tennessee) and Burnside (in Kentucky) 203 miles is in Kentucky, and the people of the districts lying along this part of this 203 miles of the Cumberland between the State line and Burnside seek the markets of the country not by going down the river to Nashville, but by going up it to the railroad at Burnside. Burnside is the railroad shipping point for all the upper Cumberland River country between Burnside and the State line. Hence the importance of pushing the improvement of the Cumberland River from Burnside down. The river is navigable up to Burnside for boats of 3-foot draft about five months in the year.

The plan of improvement favorably reported by the engineers is entirely possible, and when completed will make the river navigable to Burnside all the year for boats of 4-foot draft. The completion of locks and dams 22 and 21, which are about 5 and 30 miles, respectively, below Burnside, would give transportation all the year to a large territory, rich in oil, coal, timber, and a variety of resources. The people of this section are honest, industrious, and progressive, and I here and now enter my earnest protest against the failure to make an adequate appropriation for the pushing forward of the improvement of the Cumberland River from Burnside down. The Republican party can not afford to neglect any improvement that ought to be made. The Republican party believes in the policy of internal improvement, as it does in the doctrine of protection. These are the two great policies for which Henry Clay stood, and Kentucky stands to-day advocating them, Kentuckians never having departed from the faith of that great man.

Pensions.

The Loyalists of East Tennessee—Their Services as Soldiers—The National Guards and Home Guards—Never Paid as Promised—Their Appeal for Justice.

SPEECH
OF
HON. HENRY R. GIBSON,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1896.

The House having under consideration the bill (H. R. 8271) relating to pensions—

Mr. GIBSON said:

Mr. SPEAKER: The remarks that I propose to submit to-night in connection with the pending measure will not perhaps appear at first to bear directly upon the bill now under consideration, but later on their pertinency will become more manifest.

I desire to speak to-night in reference to what might be termed the irregular Union soldiers of the South. Those soldiers may be divided into three distinct classes: First, the men who joined regular military organizations without ever having been mustered; second, the "East Tennessee National Guards," and third, the "Home Guards" of East Tennessee.

A great many of the regular East Tennessee regiments frequently passed through their end of the State, and as they passed through numbers of loyal men joined their ranks. These men had no thought of bounties. They did not wait to be examined by surgeons; they did not wait to be mustered into the service; they did not even stop to put on uniforms, but dressed in our mountain homespun took their places in the ranks of the Army and ran all the risks of a soldier, proud of the chance to serve under the flag of their country and battle in her cause, with the consent, of course, of the officers commanding the companies and the officers commanding the regiments. These men went into battle with the regiments they had thus joined. Many of them were killed, many were wounded, and many captured. Many served six, eight, ten, twelve, or more months in the service, and when these regiments at last reached some point where a mustering officer could be found, those who were killed of course were not there and could not be mustered; those who were wounded and were in the hospitals, and the sick who had been left elsewhere, could not be mustered; and very frequently those who were present were rejected because of wounds, injuries, or other disability incurred while in the service; and thus but a small percentage of them were ever actually mustered into the armies of the Union and became entitled to a soldier's rights.

BRAVE SOLDIERS NEVER MUSTERED.

I have introduced a number of bills covering cases of this character. One case is that of a man who served about three years, Capt. George A. Tillett, who was three times wounded in battle and twice made a prisoner of war. Captain Tillett's record is one of thrilling interest. Another case is that of William B. Caldwell, who joined the Ninth Tennessee Cavalry. I have in my hand the statement of his case as it appears of record in the Record and Pension Office of the War Department. He enlisted in Company D, Ninth Tennessee Cavalry, and served with the regiment in several engagements, the last one at Bulls Gap, Tenn., on November 14, 1864, in which engagement he received a bullet wound in his right hip. He was sent to the army hospital at Knoxville, where he remained until March, 1865, when he rejoined his regiment, but was rejected because his wound had disabled him for further military service—was never mustered.

I could also call attention to the cases of William C. Chandler and Jason R. Gossett, pending before this House, both of whom were captured by the rebels after enlistment and before muster and confined in rebel prisons—in Chandler's case for about two years and in Gossett's case eight months. I could cite many other cases, but refer to these to show that there ought to be some law passed by the Congress of the United States giving these men who thus rendered faithful services some recognition as soldiers and some adequate compensation for their patriotism, their heroism, and their unselfish services in the cause of their country. [Applause.]

I have introduced a general bill covering this class of cases; but for fear I may not get an opportunity to discuss that bill, I state the matter here, as pertinent to some extent to the bill now under consideration.

NATIONAL GUARDS OF EAST TENNESSEE.

The second class of cases I wish to refer to are National Guards of East Tennessee. When General Burnside came into East Tennessee the people went forth to meet him in crowds and to welcome him as a deliverer. They embraced the very horse he was riding. The women crowded around to take his hand and touch his garments. His march from Cumberland Gap to Knoxville was one continuous ovation. The mountains rejoiced and the very hills broke forth into songs, for the day of their deliverance had come. Union flags blossomed out everywhere, all over East Tennessee, from the places where they had been hidden during the winter of those terrible times when the Confederates were in control of that mountain land, and a jubilee was held in every loyal home. [Applause.] Later on I will read a letter that General Burnside addressed to Mr. Lincoln in reference to the extraordinary loyalty and patriotic devotion of the people of East Tennessee. As soon as he struck that country he issued an order a part of which I will read, and the whole I will append to my remarks.

General Field Orders, No. 10. HEADQUARTERS, ARMY OF THE OHIO, *September 15, 1863.*

For the better defense of East Tennessee the loyal citizens are hereby invited and authorized to form themselves into companies, which will be known as the "National Guard" of East Tennessee.

* * * * * * *

The companies will elect their own officers, and as soon as the organization is completed either the captain or some other responsible officer will report at these headquarters, when arms, ammunition, and necessary equipments will be issued.

The companies will be mustered into the service of the United States—

Note that language, Mr. Speaker—"will be mustered into the service of the United States"; not into the service of the State of Tennessee, nor into the service of General Burnside, but into "the service of the United States." I call special attention to these words, for the reason that the War Department, as I will hereafter show, claims that they were mere State militia or "home guards."

The companies will be mustered into the service of United States, and when called out by competent authority will receive the pay and allowances given other troops of the same arm in the volunteer service.

* * * * * * *

The loyal citizens of East Tennessee are called upon to be active in forming themselves into companies, in order that they may be armed with the least possible delay. The Government places arms at their disposal to be used in defense of their homes, and it is hoped they will come forward with promptness and do their part toward securing their several counties from invasion.

By command of Major-General Burnside.

LEWIS RICHMOND,
Assistant Adjutant-General.

COMPANIES OF NATIONAL GUARDS.

You will notice that this order calls them "the National Guard of East Tennessee," not home guards, not State militia, not county guards, but "the National Guard of East Tennessee." They were called out by the United States directly and not by the State; they were organized and officered, armed and equipped, by the United States, and were in every sense soldiers of the United States.

In pursuance of that order numerous companies of National Guards were organized in East Tennessee, notably the following:

Five companies in the county of Sevier, commanded respectively by Capts. Benjamin F. Tipton, Daniel Kelley, Samuel W. Randles, Nathaniel M. Baker, and Jacob Tyson.

Four companies in Blount County, commanded, respectively, by Capts. Newton McConnell, Elijah Walker, Hamilton Tipton, and William Bingham.

One company in Knox County, commanded by Capt. Gideon S. White.

One company in Union County, commanded by Capt. William Shelby.

One company in Jefferson County, commanded by Capt. Daniel Carter.

Two companies in Cocke County, commanded by Capts. Russell Jenkins and Jefferson Denton, respectively.

Three companies in Scott, Morgan, and Campbell counties, commanded, respectively, by Capts. Dennis Trammell, Wimer Croley, and Joseph Newport. These three companies have been recognized as soldiers, and what I may hereafter say about the nonpayment and non-recognition of the National Guards of East Tennessee does not refer to these three companies.

These companies were sworn into the service of the United States under Burnside's order, as I will presently show.

I have in my hand an original draft of the oath furnished by General Burnside to be administered to these men. It is as follows:

OATH TAKEN BY THE NATIONAL GUARD.

HEADQUARTERS, ARMY OF THE OHIO,
Knoxville, Tenn., October 3, 1863.

Oath to be administered to the National Guard of East Tennessee:

"All and each of you do solemnly swear (or affirm, as the case may be) that you will bear true allegiance to the United States of America, and that you will serve them honestly and faithfully against all their enemies or opposers whatsoever, and observe and obey the orders of the President of the United States and the orders of the officers appointed over you according to the Rules and Articles for the Government of the Armies of the United States. So help you God."

That is the oath that these men took. They remained subject to the orders of United States officers from their enlistment to their disbandment. They fought battle after battle, sometimes victorious and sometimes going down in defeat. Many of them were killed, many of them were captured, many suffered all the horrors of Andersonville prison; and in revenge for their espousal of the cause of the Union, when the Confederate forces under Longstreet came in, the rebel guerrillas and Cherokee Indians from the mountains of North Carolina were turned loose upon their families, and their property burned or swept away, and their wives and children maltreated.

SERVICES RENDERED BY THE NATIONAL GUARDS.

And yet, Mr. Speaker, with the exception stated, none of these men has ever been paid one cent by the Government of the United States. Not a dollar has ever gone into their pockets. They were armed by the Government, it is true; they drew ammunition from the Government, it is true; but they furnished their own clothing, they furnished their own horses, and they furnished their own commissaries. I have here the muster rolls of several of those companies, with the affidavits of the officers as to the services that they rendered. Two of these affidavits I will, for the information of the House, append to my remarks as samples of the services rendered by these companies of National Guards.

These affidavits all show that these companies of National Guards were all organized and duly sworn into the service of the United States under General Field Order No. 10 just read, that they were armed by General Burnside, that they were under military order, that they rendered many and valuable services, that many of these guards were killed, wounded, and captured, that some died in rebel prisons, and that, in short, they had all the varying fortunes and vicissitudes of soldiers in time of war, without, however, ever receiving any of the compensations and allowances promised them.

Now, Mr. Speaker, what is the excuse that the War Department has given why these companies were not paid? General Burnside himself, while he was in the Senate of the United States, I am told, went to the then Secretary of War and entreated him to recognize the National Guards of East Tennessee, telling the Secretary that he had solemnly pledged these men that they should be recognized as United States soldiers, and receive, in the language of his general order—

The pay and allowances given other troops of the same arm in the volunteer service.

I hold in my hand the letter of the Adjutant-General, dated Washington, D. C., February 4, 1880, and he gives as a reason why these troops should not be paid the following:

The returns of the Army of the Ohio, in which it is claimed the companies served, make no mention of the force. The companies were simply home guards, and as such furnished with arms and ammunition to defend themselves whenever the occasion required.

THE NATIONAL GUARDS DULY AUTHORIZED.

Now, Mr. Speaker, in this very report he gives the general field order that I have just referred to, issued by General Burnside, calling them "National Guards," recognizing them as soldiers in "the service of the United States," promising them "the pay and allowances given other troops in the same arm of the volunteer service"; and his report also sets forth the orders that were given to these men to go to different places and do various duties. This general field order that I have just read is dated September 15, 1863, and the document which I will now read is dated September 25, ten days afterwards. General Burnside called on the loyal men of East Tennessee to be active. Well, they were active. In less than a week over 2,000 men had rallied to his call. On the 25th of September, 1863, ten days after he had issued his field order, he issued this special field order:

HEADQUARTERS, ARMY OF THE OHIO,
Knoxville, Tenn., September 25, 1863.

He had just come to Knoxville. It was the first time it had been taken possession of by the Union armies during the rebellion.

Special Field Orders, No. 29.

HEADQUARTERS, ARMY OF THE OHIO,
Knoxville, Tenn., September 25, 1863.

* * * * * * *

6. Capt. R. C. Crawford will proceed without delay to Sevier, Cocke, Greene, Hawkins, and Hancock, East Tennessee, and such other places as he may deem necessary for the purpose of mustering into the service of the United States the National Guard of East Tennessee in those counties, and of distributing 1,000 stand rifled arms, with accouterments and ammunition. Captain Crawford has authority to muster in one mustering officer for each county.

* * * * * * *

By command of Major-General Burnside:

R. H. I. GODDARD,
Captain & A. D. C. & A. A. A. G.

These officers, whose muster rolls I hold in my hand, swear and prove by overwhelming testimony that Capt. R. Clay Crawford appeared, had the companies drawn up, swore every man, entered their names upon the muster rolls, and put them under military orders; and from that time on for months these men were as much in the service of the United States of America as any men who fought under our flag during the war of the rebellion.

These muster rolls show the names of the men killed in battle, wounded, and captured, the marches they made, and the battles they fought.

The War Department has said, in a letter dated June 5, 1890, addressed to Hon. H. F. Finley, then a member of this House, from Kentucky:

It is proper to remark that the records fail to show any authorization to raise these companies was ever given by the War Department; and in the absence of any record of their muster into the United States service, the members thereof are not entitled to discharges therefrom.

He says there is no record of any authorization, but I have already shown that General Burnside had authorized the formation of these companies. It is said, however, that General Burnside had no authority from the War Department. That would be a miserable defense for a great Government to set up as an excuse for refusing to pay the soldiers who rallied to her defense at her call in her hour of danger. But let us see what the record is upon that point. Here is a copy of a letter addressed by President Lincoln to Andrew Johnson, which is contained in the War Records, Series I, Volume XXX, Part III:

PRESIDENT LINCOLN TO GOVERNOR JOHNSON.

EXECUTIVE MANSION,
Washington, September 8, 1863—9.30 a. m.

It must be remembered that Andrew Johnson was appointed by President Lincoln brigadier-general, and military governor of the State of Tennessee. And I wish to stop right here to say that the soldiers of East Tennessee had none of the advantages of the soldiers of Ohio or Indiana or New York or Pennsylvania or the other loyal States. Tennessee had no State organization; we had no governor; we had no adjutant-general. Our regiments were "orphans," so to speak. They were left to take care of themselves. In your States your governor and adjutant-general vigilantly guarded the welfare of your soldiers. In Tennessee, men not only served as soldiers and were killed, wounded, captured, or disabled without ever being mustered, but privates served as lieutenants and captains for months and months before they were commissioned, and sometimes without ever being commissioned at all. Our Tennessee soldiers were not only "orphans," but orphans without a guardian. [Laughter.]

Now listen to this letter:

EXECUTIVE MANSION,
Washington, September 3, 1863—9.30 a. m.

Hon. ANDREW JOHNSON,
Nashville, Tenn.:

Dispatch of yesterday received. I shall try to find the paper you mention and carefully consider it. In the meantime let me urge that you do your utmost to get every man you can, black and white, under arms at the very earliest moment to guard roads, bridges, and trains, allowing all the better-trained soldiers to go forward to Rosecrans. Of course I mean for you to act in cooperation with, and not independently of, the military authorities.

A. LINCOLN.

Mr. PICKLER. I suppose they would not have refused men then even if they had been in the Confederate service?

Mr. GIBSON. Not in those days. The Government was glad to get all the men they could. This letter is dated September 8. Now I will read a letter dated September 11. It will be found also in the War Records, Series I, Volume XXX, Part III. At that time Mr. Lincoln had his eye right on East Tennessee. East Tennessee was dear to his heart. The letter read yesterday by my colleague [Mr. BROWN], of the Chattanooga district of East Tennessee, addressed by President Lincoln to General Buell, shows

how Mr. Lincoln's heart was yearning for the Union men in East Tennessee, who were anxious for the time to come when they could show their devotion to their country by battling under its flag. [Applause.] I will append that letter to my remarks. The letter of Mr. Lincoln to Governor Johnson was dated September 8. On September 11, three days afterwards, General Halleck, then the General-in-Chief of all our armies, wrote the following letter:

WAR DEPARTMENT,
Washington, D. C., September 11, 1863.

Major-General BURNSIDE,
Cumberland Gap:

Cumberland Gap is the northern gateway to East Tennessee.

HALLECK TO BURNSIDE.

WAR DEPARTMENT,
Washington, D. C., September 11, 1863.

Major-General BURNSIDE,
Cumberland Gap:

* * * * * * * *

The Secretary of War directs that you raise all the volunteers you can in East Tennessee. Select the officers, and if not commissioned by Governor Johnson, they will be by the President. If you have not arms and equipments at your disposal, telegraph for them.

* * * * * * * *

H. W. HALLECK, *General-in-Chief.*

The general field order of General Burnside read a moment ago is dated September 15, four days after this order. It is presumed, at least it is my presumption, that as soon as General Burnside received this dispatch from General Halleck to raise all the volunteers he could in East Tennessee he issued his general field order calling upon the loyal men of East Tennessee to form themselves in military companies to be known as the National Guard of East Tennessee.

And on September 17, two days after the date of his general field order No. 10, General Burnside sends this dispatch to General Halleck:

BURNSIDE TO HALLECK.

KNOXVILLE, TENN.,
September 17, 1863.

Maj. Gen. H. W. HALLECK,
General-in-Chief:

I arrived here on the night of the 12th. * * * I brought with me 5,000 stand of rifled muskets, with equipments and ammunition, which are now being issued to troops that are organizing here. I think we will have no difficulty in organizing from 5,000 to 10,000 troops, and therefore beg that 5,000 stand of Springfield rifles be placed at my disposal in Cincinnati, with equipment and plenty of ammunition. The men in this country are all good marksmen, and are devotedly loyal.

Respectfully,
A. E. BURNSIDE,
Major-General, Commanding.

Right here a comparison of dates is important and suggestive. On September 8, 1863, President Lincoln writes to Military Governor Johnson of Tennessee:

Do your utmost to get every man you can, black and white, under arms at the very earliest moment.

On September 11, three days afterwards, Gen. H. W. Halleck writes to General Burnside, then just entering East Tennessee:

The Secretary of War directs that you raise all the volunteers you can in East Tennessee.

On September 15, four days after this order, and as soon as he could, under the circumstances, no doubt, General Burnside issued General Field Order No. 10, saying:

For the better defense of East Tennessee the loyal citizens are hereby invited and authorized to form themselves into companies, which will be known as the "National Guard" of East Tennessee.

And on September 17, two days thereafter, General Burnside tells General Halleck that he is issuing arms to the troops organizing at Knoxville.

So anxious was President Lincoln to know how General Burnside was prospering in East Tennessee in raising men that on October 17, 1863, he sent this dispatch:

WAR DEPARTMENT,
Washington, D. C., October 17, 1863.

Major-General BURNSIDE, *Knoxville, Tenn.*

I am greatly interested to know how many new troops of all sorts you have raised in Tennessee. Please inform me.

A. LINCOLN.

And on the day of its receipt General Burnside sent this answer:

KNOXVILLE, *October 20, 1863.*

His Excellency ABRAHAM LINCOLN, *President:*

Your dispatch of this date received. We have armed some 2,500 guards, and have recruited nearly 3,000 men for three years' service.

* * * * * * * *

A. E. BURNSIDE, *Major-General.*

Now, Mr. Speaker, who can doubt, after reading and comparing these letters, that General Burnside had authority from the War Department, and from President Lincoln himself, to raise these companies of National Guards and make them the promises he did?

THE BRAVERY AND PATRIOTISM OF THE NATIONAL GUARDS.

In those days all that the men of East Tennessee wanted was an opportunity to fight under the flag of their country. Remember, that everything in the shape of a weapon of war had been strained out of East Tennessee by the Confederate authorities, and it was a crime for any man there to have a weapon in his possession. Once fully armed it would have taken 50,000 Confederate troops to have held secure possession of that loyal mountain land. And after getting arms many were the deeds of heroism performed by them; and the published volumes of the War Records show that the National Guards of East Tennessee were often in evidence when the services of loyal and brave soldiers were in demand, and the record they made is one of which we all are justly proud. [Applause.]

It was these men who saved General Burnside's army from starvation in the city of Knoxville when besieged by Longstreet. They provided him with forage; they supplied him with provisions; they kept the roads into Knoxville open; they floated down the Tennessee River rafts loaded with provisions and forage: they swarmed on the flanks of Longstreet's army, capturing stragglers, aiding deserters, and fighting foragers. Indeed, it is safe to say that had it not been for the National Guard of East Tennessee, Burnside would have been starved into surrendering, and no one can confidently tell what the results of that surrender would have been on the issues of the war. And yet to this good day these heroic National Guards have never been recognized as soldiers and have never received one cent of pay for their services and no pensions for their sufferings.

A MEMBER. It is a shame.

Mr. GIBSON. I hope, Mr. Speaker, that before this Congress adjourns it will do justice to these men and will see to it that the faith which the Government pledged to them is made good, and that the promises of General Burnside are in all things ratified and fulfilled. Remember, Mr. Speaker, that these men who served from two to five months never received a dime of pay. The wives and children of those that were killed in battle never received either a pension or any other benefits from the Government. Those that died in prison at Andersonville have received no encomium, no reward, no recognition as soldiers of a Government they died to save; they died, by their country "unwept, unhonored, and unsung." [Applause.] I have here the affidavit of Maj. Charles Inman, the officer to whom four of these companies were directed to report for duty, giving a full account of their services. I will print it as a part of my remarks.

THE HOME GUARDS.

Mr. Speaker, there is another class of men in East Tennessee about whom I wish to say something. Before General Burnside came the mountain men of East Tennessee organized themselves into companies called "Home Guards." The principal companies that were organized in my district were those commanded by Capt. Joshua J. Duncan, Capt. William A. Hembree, Capt. Wayne W. Cotton, and Capt. William Robbins, of Scott County, all gallant and patriotic men. These "Home Guards" were the exact counterparts of those liberty-loving heroes who fought under Marion and Sumter in the war of the Revolution. They were the exact counterparts of the men who fought under John Sevier and Isaac Shelby at the battle of Kings Mountain. They were the same sort of men as those who hung upon the flanks of Lord Cornwallis and Lord Rawdon in the Carolinas in the dark days of the Revolutionary war, and finally drove Cornwallis to the sea, and enabled Washington and Lafayette to coop him up and capture him and his whole army at Yorktown. [Applause.]

You all know what was said by Washington himself when he read the glorious tidings from the Carolinas, that Major Ferguson had been killed and the royal troops under him had been captured at Kings Mountain by John Sevier and Isaac Shelby, both from what is now East Tennessee. They were North Carolinians at that time, because that victory was won before our State was organized. It may not be known to all the gentlemen present that the men who fought at Kings Mountain were the ancestors of my constituents. Col. John Sevier, who commanded one of the East Tennessee regiments at Kings Mountain, was the first governor of Tennessee; and Col. Isaac Shelby, who commanded another East Tennessee regiment in that battle, afterwards removed to Kentucky and became its first governor. He is the same Shelby who commanded a part of the American forces under General Harrison at the battle of the River Thames, where the British army was overthrown and that great Indian chieftain Tecumseh stricken with the blow that made him bite the dust. [Applause.]

These "Home Guards" were of incalculable benefit to the country they protected. They not only kept out the Confederate invaders, but they did more. And at this point I am tempted to cite an incident illustrating their achievements. A Confederate brigade commanded by Col. Crawford Vaughan, composed of infantry and cavalry, was sent by the Confederate general commanding in East Tennessee—and I may say, by way of parenthesis, that it took at least 20,000 Confederate troops for the first two years of the war to garrison East Tennessee and keep down the loyalists in that section of the country. Col. Crawford Vaughan, commanding a brigade of infantry and cavalry, was sent up into the mountains of Anderson and Scott counties to destroy the

home guards and punish the mountaineers for their loyalty; but those home guards bushwhacked him. They filled every mountain top, they filled every rocky crag, they filled every cove, they swarmed in every forest, they were upon every ridge, and they sent their bullets down into Vaughan's brigade from the right and from the left, so thickly and with such unerring aim that at last his men turned and fled panic-stricken and in dismay, declaring that the mountains were filled with Yankee bushwhackers and to stay there was certain death. [Applause.]

SERVICES OF THE HOME GUARDS.

These "Home Guards" piloted the Union refugees northward from the whole Southern country, from northern Georgia, from western North Carolina, from eastern Tennessee, up through the mountains into Kentucky, where they organized into regiments under the flag of the Union. Congress voted a pension a few nights ago to Maj. Gen. Joseph A. Cooper. He was from the county of Campbell, a county which I now represent and in which I formerly lived. He was the best specimen of the ideal American soldier that the war of the rebellion gave a chance to come to the front. He left the plow when a boy and joined our Army in the war with Mexico. He marched as a gallant American soldier from Vera Cruz to the halls of the Montezumas. Coming back home, he went upon his little farm and resumed the avocations of an humble farmer. He was elected to the office of constable of his civil district and served faithfully as became a good citizen.

When the war of the rebellion broke out he again left his plow, gathered together a few of his neighbors, bade his family goodby, and went to Kentucky, walking all the way, until they reached a place where there was a Union flag flying and a Federal officer in command; and there he got authority to go back to Tennessee and organize a regiment. He stole through the mountains in the night, gathered together about 100 men and carried them to Kentucky. He opened the way, and the Union men of East Tennessee poured out, marching in the night-time and hiding in the daytime, in order to reach the rendezvous in the State of Kentucky. And in this way was raised the first regiment of Union soldiers from East Tennessee. This same man, Joseph A. Cooper, without the aid of education, without the aid of wealth, without any influential friends or family connections, without any assistance but the will of a hero, the heart of a patriot, and the soul of a Christian, rose step by step in the Army until as a crowning reward for bravery and skill he was finally mustered out as a brevet major-general in the Army of the United States. [Applause.]

The "Home Guards" kept the roads leading from the South into the Union lines in Kentucky open, and thousands were the Union refugees they enabled to reach those points in Kentucky where they could organize themselves into companies and regiments under the Union flag. Mr. Speaker, there is one thing that I will discuss right here. It is the right of a man to a pension who left the Confederate army and joined the Union Army. I had intended to have spoken of it later on, but will refer to it now. The Confederates had their infantry and cavalry stationed in all of the mountain passes, up and down all of the valleys of East Tennessee, their forces numbering at times about 20,000 men. Gen. Albert Sidney Johnston has been excused for his failure to hold Bowling Green and other points in Kentucky, and for allowing the Federals to flank him, by reason of the fact that it took so many thousand Confederate soldiers to keep the Unionists of East Tennessee overawed, and prevent them from destroying the rebel railroad communications through their country.

THE PERSECUTION OF EAST TENNESSEANS.

Mr. Speaker, these companies of Union refugees that were fleeing through the mountains of East Tennessee to the Union lines in Kentucky to escape conscription into the rebel army were being constantly captured, and were being hung or shot on the spot by their Confederate captors; and if any of you gentlemen ever pass through that country you will see the graves of these patriots by the roadside, a great many of them, many of which are in neat inclosures, painted white, because the people revere the memory of those murdered patriots, men who suffered in their country's cause. [Applause.] And you will inquire what is the meaning of those little inclosures, and will be told that there sleep men who were murdered by the rebels during the war because they loved their country. Plenty of them were hung, hundreds were shot, thousands died in prison pens. In those days every man was enrolled for conscription; if he did not put in his appearance at the county seat on a given day he was considered a deserter; and if captured was hung or shot, or thrown into prison. All the prominent Union men that were over the military age were arrested. You remember that Governor Brownlow was put in the prison at Knoxville. Hundreds of prominent Unionists were imprisoned, and many sent to Tuscaloosa, where they died. When Horace Maynard was elected to Congress the last time, before the war became flagrant, he barely escaped capture; and Col. Thomas A. R. Nelson, who was elected to Congress from upper East Tennessee at the same time, while trying to get out of the country, was captured by the Confederate forces, put into prison, and actually compelled to take the oath of allegiance to the Southern Confederacy in order to save his life. In those days the bullet, the halter, or the prison pen was the fate of every man in East Tennessee who was suspected of being hostile to the Southern Confederacy.

But no amount of persecution, not the hangman's rope, nor the deadly bullet, nor the prison pen, not exposure to the rigors of the weather, not starvation nor disease, not the depressing influences of false reports of Union disasters, not the longing for home, not distressing tidings of wives or dear kinsmen in sickness or want, not all these influences, singly or combined, could shake the fidelity of the Union men of East Tennessee to the flag of their fathers and the Constitution of their country. And I here and now challenge history to produce a sublimer spectacle of unselfish and unfailing patriotism than was exhibited by the Union men of East Tennessee during the dark days of the war of the rebellion. They truly were—

The noblest of that noble race
That since the days of old
Have kept the lamps of loyalty
Alight in hearts of gold.

UNION MEN FORCED INTO THE REBEL ARMY.

It was this class of men, thus forced into the Confederate army by fear of death or the prison pen, who, at the first favorable opportunity, deserted from that army and joined the army that fought under the flag that they loved so dearly and for the cause for which they had struggled so bravely and so long. [Applause.] This is the class of men that the gentleman from South Dakota, the chairman of the Committee on Invalid Pensions, who represents this bill, is anxious to relieve from the odium of having served in the Confederate army by placing them upon the same footing as other Union soldiers, a footing to which they are clearly entitled by every principle of patriotism and every impulse of sympathy and gratitude. [Applause.]

I have no special anxiety to help any class of men who, while voluntarily serving in the Confederate army or while prisoners of war to the United States, when they saw the Confederacy tumbling to pieces, then joined the Union armies. I want to help the men who were forced into the Confederate army—men who had Union hearts, and who left the Confederate army the first chance they had. I have introduced a bill for the benefit of these men, because scores of my constituents in the last twelve months have been dropped from the rolls of the Pension Office because their names appear on the Confederate muster rolls, they having been conscripts. I received two letters this morning about pensioners dropped because the Confederate war records showed that they had been in the Confederate service.

It may not be known, perhaps, to all of you that these Confederate army rolls have been very carefully examined and compared with our pension rolls, and whenever the same name is found on both rolls a special pension examiner makes an inquiry into the matter, and if it turns out that the pensioner was in the Confederate army he is at once dropped from the pension roll. In order to cure that defect I have introduced a bill which, as amended, reads as follows:

That section 4716 of the Revised Statutes of the United States shall not be so construed as to apply to any person or to the widow, children, or heirs of any deceased person, who, having participated in the rebellion, afterwards enlisted in either the Army or Navy of the United States and served therein for four or more months prior to April 9, 1865;—

That was the date of the surrender at Appomattox. The bill then goes on:

And that all pensioners who have been dropped from the rolls because of such participation, and who come within the purview of this act, shall, upon their application, be restored as of the date to which they were last paid.

Now, Mr. Speaker, to get back to the irregular soldiers and to the National and Home Guards, what I want is a provision that those men who joined regiments and were never mustered, those men who were National Guards, and who were Home Guards, shall be entitled to pensions. If they are not to get any pay for their services, at least let us give them the right to a pension. There are very few of them left; most of them are in their graves, and all will soon be. I have drawn and will at the proper time introduce this amendment to the pending bill:

Insert in line 6 of section 17, after the words "United States," the following: "And also to include all persons, and their widows, children, and dependent parents, not regularly enlisted, who, while serving with any military organization in the service of the United States, or with any military organization authorized by a general in the United States Army, or with any military company organized to repel rebel invaders, during the war of the rebellion, received wounds or injuries, or incurred disabilities in the line of duty, or who served three or more months in any of such organizations, or was captured by the rebels while so serving and confined as prisoners of war for three or more months."

PENSIONS FOR THESE SOLDIERS.

I have several constituents who come within this last class, two of whom—Chandler and Gossett—I have already mentioned. A third is William Stephenson Smith, for whose benefit I have

introduced a bill. He joined a Union regiment, and before he was mustered was engaged in battle, was wounded and left on the battlefield by reason of his wounds, and was taken prisoner by the Confederates, and kept in Confederate prisons until the close of the war, a period of nearly two years.

He was confined in nearly all the rebel prisons, from Libby to Andersonville, and yet for all these untold miseries that man to this good day has never received one cent, either as pay or pension, and absolutely no recognition from the Government of his country.

Now, it so happens that when the war ended there was a provision made for some of these men I have been describing, the provision made by the act of March 3, 1873, which is as follows:

Third. Any person not an enlisted soldier in the Army, serving for the time being as a member of the militia of any State under orders of an officer of the United States, or who volunteered for the time being to serve with any regularly organized military or naval force of the United States, or who otherwise volunteered and rendered service in any engagement with rebels or Indians, disabled in consequence of wounds or injury received in the line of duty in such temporary service. But no claim of a State militiaman or nonenlisted person, on account of disability from wounds or injury received in battle with rebels or Indians, while temporarily rendering service, shall be valid unless prosecuted to a successful issue prior to the 4th day of July, 1874.

It will be seen that this act only allowed sixteen months not only to file the claim but to prosecute it to a successful issue. The fact is the passage of that act never was known, until a comparatively recent date, to thousands of men interested in its provisions. Now, I want to ask the House to pass this amendment of mine, which is only that old law slightly broadened, and give these men of the classes I have been describing, who rendered as good service for the time they did serve as any enlisted men in the Army of the United States, that recognition that their services, their patriotism, their fidelity, and their bravery justify at the hands of a great and powerful Government, for whose defense they gave their best energies and their heartiest prayers.

Mr. PICKLER. Will the gentleman allow me to suggest that this is about the sentiment of a bill that the Committee on Invalid Pensions have recommended favorably?

Mr. GIBSON. Pretty nearly.

The SPEAKER pro tempore. The time of the gentleman from Tennessee has expired.

Several MEMBERS. Let his time be extended.

The SPEAKER pro tempore. If there be no objection, the gentleman from Tennessee will be given five more minutes.

There was no objection.

Mr. GIBSON. Now, Mr. Speaker, I have various documents, which I have not read in full, which I will print as a part of my remarks. They all bear on the subjects I have been discussing.

Mr. PEARSON. Before the gentleman from Tennessee takes his seat I should like to have him correct one observation which he made. I do not mean to disturb him now. I think the gentleman is not yet finished.

Mr. GIBSON. No; I have not yet quite finished.

PENSIONERS IN EAST TENNESSEE.

Mr. Chairman, in order to show the character of the people that I represent I have prepared a table showing the number of pensioners in the loyal States in 1890, by Congressional districts. I take the year 1890 for the reason that the last report of pensioners by counties made by the Commissioner of Pensions is for that year. I give in one column the number of pensioners in the loyal States, in another column the number of Congressional districts, and in the third column the average number of pensioners per district. I give the number in the First and Second districts of Tennessee. The number of pensioners in my district, which is the Second, is 2,648. The number in the First district, the one above mine, is 2,534; and, Mr. Speaker, the table shows that there are more pensioners in the Second Congressional district of Tennessee than the average in any of the so-called loyal States, except Maine, New Hampshire, Vermont, Ohio, Indiana, and Kansas. The average in the six States I have mentioned is greater than that in my district; but in the other 18 States the average is less than in my district, and generally much less. My county of Knox, with less than 60,000 population by the census of 1890, had more pensioners in it that year than many of the Congressional districts in the so-called loyal States, with about 200,000 inhabitants each.

Mr. PICKLER. Mr. Speaker, do I understand the gentleman to say that there are quite a considerable number in his district who are cut off under the present ruling of the Pension Bureau because they were in the Confederate service, and who will be reinstated under section 1 of this bill? Have you quite a considerable number in your district?

Mr. GIBSON. Oh, yes.

Mr. PEARSON. There are more than 200 in my district, which adjoins that of the gentleman from Tennessee, in the State of North Carolina.

Mr. PICKLER. I hope some of these gentlemen who are so conscientious about this section will take notice of these figures. I understand the gentleman to state that these people are now cut off, under the rulings of the Pension Department.

Mr. GIBSON. They are being dropped or threatened almost every day, because of service in the Confederate army, a service forced on them at the point of the bayonet, or with the threat of a halter, or the prison pen.

Mr. PEARSON. They have been dropped, under this Administration.

The SPEAKER pro tempore. The time of the gentleman from Tennessee has expired.

Mr. PEARSON. Before the gentleman takes his seat——

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. CROWTHER. I ask unanimous consent that the gentleman be allowed to continue until he has completed his remarks.

Mr. PEARSON. I hope there will be no objection, because there is one statement of history that I want the gentleman to correct.

The SPEAKER pro tempore. Unanimous consent is asked that the gentleman be allowed to proceed until he completes his remarks. Is there objection?

There was no objection.

Mr. PEARSON. I simply desire to ask the gentleman from Tennessee if he is not in error in saying that the battle at King's Mountain was fought on the American side entirely by men from other States than from North Carolina?

Mr. GIBSON. There was a regiment from Virginia and a company from South Carolina and several companies from North Carolina, from your side of the mountains.

Mr. PEARSON. And some from your side, or the Tennessee side of the mountains?

Mr. GIBSON. Yes; a majority of the men who fought that battle were from my side of the mountains; and the sword that De Peyster surrendered when he lowered his flag after Ferguson's death is now among the trophies of the State of Tennessee, and on deposit in her capitol.

Mr. PEARSON. As a North Carolinian I could not permit that statement to go unchallenged, because I will say, as a matter of fact, that my own great-grandfather was there, Joseph Williams, of Surry, and if the gentleman will stop on his way home at my house, where I shall be glad to see him, I will show him a piece of porcelain that was captured by North Carolinians from Ferguson, and it is the most valuable property in our family. I hope that in the gentleman's very valuable historical remarks he will not undertake to include an error of that sort, because the Williamses, and the McDowells, and the Gwyns, and the Lenoirs, and the Carsons all took part in that battle, and their descendants are proud and jealous of the fame of those heroes.

UNION SOLDIERS FROM EAST TENNESSEE.

Mr. GIBSON. There were many North Carolinians from your side of the mountains in the battle of Kings Mountain, and all of them patriots and heroes, and the fame they won there will live while the history of our country is remembered. We were all North Carolinians then, and the glory of one is the glory of all.

Now, Mr. Chairman, I want to say there were thousands of Union soldiers from East Tennessee who are credited to Kentucky. They went over and joined Kentucky regiments. Some went farther and joined Ohio regiments, some joined Indiana regiments, and some joined regiments of other States. They refugeed from East Tennessee, but returned after the war was over. That is the reason why the number of pensioners now in East Tennessee seems to be excessive in proportion to the number of troops that East Tennessee furnished according to the records found in the Adjutant-General's Office. It is safe to say that East Tennessee, first and last, put over 40,000 men into the Union Army, and all of them heroes and patriots, men who would rather have died in battle under the flag of the Union than lived in peace under the Confederate banner.

I wish to call the attention of the House to another fact. Union soldiers from the Sonth, and especially those from East Tennessee, when made prisoners of war were treated with far more cruelty by their rebel captors than were the soldiers of the North. Not only were the Union soldiers from East Tennessee while in rebel prisons fed on food no honest man would give a dog, but they were not given half enough of even that sort to keep a dog alive. And what is worse still, if there can be anything worse than starvation and insult combined, many East Tennessee Union soldiers were hung in prison by their rebel captors on the pretense that they were spies, or deserters, or fugitives from conscription, or bridge burners. The sword of Damocles hung over the head of every man from East Tennessee as long as he was in a rebel prison, and so well was this known that every effort was made by an East Tennessee Unionist when captured to conceal the fact that he was an East Tennessean.

Among the 60 Union regiments mentioned in Fox's book on Regimental Losses in the Civil War as sustaining the heaviest

losses by deaths in Confederate prisons, 9, or over one-seventh, were from the South, 4 of the 9 being from Tennessee. I will give Fox's data as to Tennessee:

Regiment.	Died in prison.
Third Tennessee Cavalry	70
Sixth Tennessee Cavalry	78
Seventh Tennessee Cavalry	193
Second Tennessee Infantry	382

LOSSES OF EAST TENNESSEE SOLDIERS.

The Second Tennessee Infantry lost by death in rebel prisons 160 more men than any regiment from any other State, North or South. More than twice as many Tennesseans died in Confederate prisons out of every hundred prisoners than did the soldiers of any Northern State; and an examination of the prison records shows that the percentage of prison deaths was far greater among the Southern Union soldiers than among those from the North.

These statistics only corroborate the well-known fact that the Union soldiers from the South were subjected to special persecution and were made the victims of a malignant vengeance whenever they were so unfortunate as to fall into the hands of the Confederate authorities. Loyalty to the Union was deemed disloyalty to the Confederacy, and what the Southern Union men considered to be patriotism the Confederates branded as treason. Devotion to the Stars and Stripes was punished as desertion of the South; and the patriotic Southern heroes who joined the armies of the United States were stigmatized as "Lincolnites" and "renegades," and hounded with a hate that pursued them to their graves.

Mr. Fox, in his book, also shows that more Tennessee troops died in the Army in proportion to numbers than did the troops from any other State of the Union, more than 25 out of every 100 having given up their lives for the cause of their country.

The fact is beyond successful dispute that no portion of the United States was more loyal to the Union during the war of the rebellion than East Tennessee, and no section of the country suffered so much for its loyalty; and never in the history of wars and revolutions did any people come out of the fiery furnace of trial with brighter garments and more glory than did the loyal men of East Tennessee out of the fierce furnace of persecution that flamed and roared about them from the moment the first gun was fired on Fort Sumter to the moment the last gun was surrendered at Appomattox. Not truer is the needle to the north, not truer the bridegroom to the bride, not truer the Christian to the cross, than were the mountain men of East Tennessee to the flag of their fathers and the cause of their country, and that, too, while the black clouds of a fratricidal war were rolling their thunders and darting their lightnings upon their defenseless heads.

East Tennessee! East Tennessee!
Land of the mountain, rock, and glen,
Of lovely maids and loyal men;
Earth's fairest and most favored spot,
Oh, who that knows thee loves thee not,
Thou Paradise of Liberty?

And right here I want to say a word about many of the men who are marked "deserters" on the rolls of the East Tennessee regiments. Very few of these men were deserters in the popular meaning of that hateful word. Very few of them ever fled from the face of the enemy. Very few of them ever turned their backs upon their flag in the hour of danger or in the day of battle. Very few of them ever lost faith in the cause of the Union or doubted the final triumph of our flag. Very few, if any of them, ever turned traitor and fled to the camps of the Confederacy. Nearly all of these men who are marked "deserters" were allowed by their officers to go home because of disease or wounds incurred in the service, or because their wives were sick or their families in distress, and were unable to return because of their own disability or because they had not the heart to leave a dying wife or a starving family. The dreadful alternative was often presented them of returning to their regiments and deserting their suffering wives and children or staying away from their regiments and taking care of their distressed families; and whatever their crime in the sight of the God of War, I feel sure they will never be condemned by the God of Peace.

POLITICS OF THE SECOND DISTRICT OF TENNESSEE.

Now, not for the purpose of introducing politics in this discussion, but for the purpose of showing the loyalty of the section of country from which I come, I have in my hand the Republican vote and the Democratic vote of the Second district of Tennessee in the race for governor in 1894, by counties (which I will append to my remarks), showing that in the last election the vote in my district for H. Clay Evans, the Republican candidate for governor, was 22,744, while the vote for Peter Turney, the Democratic candidate, was only 7,788 [applause], making a Republican majority of 14,956, and that on a light vote. Really our Republican majority there is about 17,000. But I want to say this about the 7,000 Democrats that are there: A very large proportion of them were good Union men, and a great many of them were in the Union Army; and if it were not for the presence of the 22,000 Republicans most of those 7,000 Democrats would make very good Republicans themselves. [Laughter.] They are only Democrats because they want to be in opposition to somebody, and there are so few real Bourbon Democrats there that we Republicans loan them a few thousand so we may have somebody to fight when an election comes round. [Laughter.] Most of the Democrats in my district would make good Republicans in almost any other State.

Now, in conclusion, Mr. Speaker, I have made these remarks for the purpose of acquainting this House and acquainting the country with the character of the people among whom I live, to the end that when their claims are presented and their merits are considered, something like an adequate measure of justice may be done them, and that their appeals may be heeded, whether it be for pensions or for recognition as soldiers or for pay for the thousands of dollars' worth of their property which was used in feeding and caring for the Union troops during the war; that these claimants and their claims may receive at the hands of a Republican House that consideration which they have so long demanded and which they so justly deserve, but which down to this good day has never yet been fully bestowed. [Applause.]

The papers I have alluded to are the following, which I make a part of my remarks:

LINCOLN AND EAST TENNESSEE.

EXECUTIVE MANSION, *Washington, January 6, 1863.*

MY DEAR SIR: Your dispatch of yesterday has been received, and it disappoints and distresses me. * * * My distress is that our friends in East Tennessee are being hanged and driven to despair, and even now I fear are thinking of taking rebel arms for the sake of personal protection. In this we lose the most valuable stake we have in the South. My dispatch to which yours is an answer was sent with the knowledge of Senator Johnson and Representative Maynard, of East Tennessee, and they will be upon me to know the answer, which I can not safely show them. They would despair; possibly resign to go and save their families somehow or die with them.

I do not intend this to be an order in any sense, but merely, as intimated before, to show you the grounds of my anxiety.

Yours, very truly,

A. LINCOLN.

Brigadier-General BUELL.

BURNSIDE'S FIELD ORDER CALLING OUT THE NATIONAL GUARD OF EAST TENNESSEE.

General Field Orders No. 10. HEADQUARTERS, ARMY OF THE OHIO, *September 15, 1863.*

For the better defense of East Tennessee, the loyal citizens are hereby invited and authorized to form themselves into companies which will be known as the "National Guard" of East Tennessee.

The company organization will be as follows:

One captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 4 sergeants, 8 corporals, 2 musicians, 1 wagoner, and 64 privates minimum, 82 privates maximum.

The companies will select their own officers, and as soon as the organization is complete, either the captain or some other responsible officer will report at these headquarters with a roll of the company, when arms, ammunition, and necessary equipments will be issued.

The companies will be mustered into the service of the United States when called out by competent authority and will receive pay and allowances given other troops of the same arm in the volunteer service.

So soon as the term for which their services are actually required expires, they will be ordered to their homes, retaining, however, their arms and equipments.

The organization of the companies of the "National Guard" of East Tennessee into regiments, and the appointment of field officers will be made at the proper time from these headquarters.

The loyal citizens of East Tennessee are called upon to be active in forming themselves into companies in order that they may be armed with the least possible delay.

The Government places arms at their disposal to be used in defense of their homes, and it is to be hoped that they will come forward with promptness and do their part toward securing their several counties from invasion.

By command of Major-General Burnside.

LEWIS RICHMOND,
Assistant Adjutant-General.

ARMS ISSUED TO THE NATIONAL GUARDS.

Following also are copies of record entries of letters relating to the force sent from the headquarters of the Army of the Ohio and district of East Tennessee:

HEADQUARTERS, ARMY OF THE OHIO,
Knoxville, Tenn., September 17, 1863.

COLONEL: The commanding general authorizes you to issue all arms that you may deem proper to "Home Guards" on your being satisfied of their loyalty.

You can issue them from the arms issued at the Gap.

Inclosed is the general order creating a National Guard. You will please report when any companies are organized under its provisions.

You will probably remain in permanent command at the Gap.

I am, Colonel, very respectfully,

LEWIS RICHMOND,
Assistant Adjutant-General.

Col. W. C. LEMERT,
Commanding at Cumberland Gap.

CAPTAIN WALKER'S BLOUNT COUNTY COMPANY ARMED.

Special Field Orders No. 24. HEADQUARTERS, ARMY OF THE OHIO, *September 17, 1863.*

* * * * * * *

12. The following issues of ordnance stores by Mr. C. E. Mallam, in charge of ordnance train, upon the verbal instructions of the commanding general are hereby approved.

* * * * * * *

September 16.—To Capt. E. Walker [National Guards, Blount County], 100 rifled muskets with accouterments and 100 rounds of ammunition per gun.

By command of Major-General Burnside:

R. H. I. GODDARD,
Capt. and A. D. C. and A. A. A. G.

This Blount County company of National Guards was armed the day after Field Order No. 10 was issued, and this by the verbal orders of General Burnside.

CAPTAIN TIPTON'S SEVIER COUNTY COMPANY CALLED OUT.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 27. } *Knoxville, Tenn., September 22, 1863.*

6. Capt. B. F. Tipton's Company of the National Guard of East Tennessee, Sevier County, Tenn., is hereby called into the service of the United States for ten days from this date for the purpose of guarding the ordnance stores at Sevierville. They will provide their own subsistence, which will be commuted for at the Government valuation of rations.

By command of Major-General Burnside.

R. H. I. GODDARD,
Captain and A. D. C. and A. A. A. G.

This order shows that their subsistence was to be commuted for, which has never been done.

CAPTAIN M'CONNELL'S BLOUNT COUNTY COMPANY ARMED.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 28. } *September 23, 1863.*

* * * * * * *

3. Lieutenant Williams, post ordnance officer, Knoxville, Tenn., will issue to Capt. Newton McConnell, of Blount County, for the use of the National Guard of East Tennessee, 100 stand rifled arms and accouterments complete, with 100 rounds ammunition per musket.

* * * * * * *

By command of Major-General Burnside.

R. H. I. GODDARD,
Captain and A. D. C. and A. A. A. G.

—

CAPT. DANIEL CARTER'S JEFFERSON COUNTY COMPANY RECOGNIZED.

The "Letters Received" book kept at the headquarters of the Army of the Ohio contains the following entry of a letter received, the original of which has not been found on file:

OCTOBER 15, 1863.

CARTER, DANIEL, *Captain.*

JEFFERSON, TENN., *October 10, 1863.*

Transmits issue of election of officers in company of "Home Guards." Gives names of officers elected and names of members of the company.

This official entry shows a literal compliance with Field Order No. 10 on the part of Captain Carter in transmitting the muster roll of his company to headquarters.

Special Field Order } HEADQUARTERS, ARMY OF THE OHIO,
No. 49. } *October 15, 1863.*

3. Capt. Daniel Carter, commanding Company A, National Guard of East Tennessee, Jefferson County, is hereby authorized to swear into the service of the United States such men as may be recruited for his company.

* * * * * * *

By command of Major-General Burnside.

EDWARD M. NEILL,
Major and Assistant Adjutant-General.

The Special Field Order No. 29, dated September 25, 1863, directing Capt. R. C. Crawford to muster into the service of the United States the National Guards, and the oath administered, will be found in the body of the speech.

CAPTAIN TIPTON'S SEVIER COUNTY COMPANY AGAIN RECOGNIZED.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 50. } *October 16, 1863.*

* * * * * * *

9. Capt. W. H. Harris, chief of ordnance, Department of Ohio, will issue to Captain Tipton, of the National Guard of East Tennessee, in Blount County, one hundred and thirty (130) rounds of ammunition each.

* * * * * * *

By command of Major-General Burnside.

EDWARD M. NEILL,
Major and Assistant Adjutant-General.

On September 22, 1863, this company was called out for ten days. See order above.

THE NATIONAL GUARDS OF COCKE AND SEVIER COUNTIES CALLED OUT.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 88. } *November 25, 1863.*

* * * * * * *

4. The National Guard of Cocke County are hereby called into active service for thirty days.

They will report to Major Randolph.

5. The National Guard of Sevier County are hereby called into active service for thirty days.

They will report to Major Inman, at Sevierville.

* * * * * * *

By command of Major-General Burnside.

EDWARD M. NEILL,
Assistant Adjutant-General.

—

CAPTAIN CARTER'S JEFFERSON COUNTY COMPANY FURTHER ARMED.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 74. } *November 9, 1863.*

11. Lieutenant Williams, post ordnance officer, will issue to Capt. Daniel Carter, for the further equipment of Company A, of the National Guard of East Tennessee, Jefferson County, thirty (30) muskets and accouterments, with fifty (50) rounds of ammunition per musket. The Quartermaster's Department will furnish transportation for the above by railroad to Newmarket.

* * * * * * *

By command of Major-General Burnside,

EDWARD M. NEILL,
Assistant Adjutant-General.

THE SCOTT, MORGAN, AND CAMPBELL COUNTY COMPANIES CALLED OUT.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 90. } *November 27, 1863.*

1. The National Guard of Scott, Morgan, and campbell Counties are hereby called into active service for thirty (30) days, and will report to Captain Reynolds, at Kingston, Tenn.

* * * * * * *

By command of Major-General Burnside.

EDWARD M. NEILL,
Assistant Adjutant-General.

Three of the companies of National Guards of Scott, Morgan, and Campbell counties are alleged to have been paid for three months. The companies admit payment for two months. These three companies are also under the pension laws and are the three companies excepted in the body of the speech.

CAPTAIN KELLEY'S SEVIER COUNTY COMPANY RECOGNIZED.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 96. } *December 4, 1863.*

* * * * * * *

5. Lieut. R. Williams, post ordnance officer, will turn over to Capt. Daniel Kelley, National Guard, 75 stand arms and accouterments, with 40 rounds of ammunition per gun.

* * * * * * *

This order to cover issues of October 16, 1863, and 31, respectively.

* * * * * * *

By command of Major-General Burnside.

EDWARD M. NEILL,
Assistant Adjutant-General.

—

FOUR COMPANIES OF NATIONAL GUARDS ORDERED TO BE PAID.

Special Field Orders } HEADQUARTERS, ARMY OF THE OHIO,
No. 102. } *December 10, 1863.*

* * * * * * *

8. Major McDowell, chief paymaster, will designate a paymaster to proceed to Clinton, East Tennessee, to pay off the four companies, National Guard who were called into service for sixty days by orders from these headquarters. The officer to be in Clinton on the 14th inst.

* * * * * * *

By command Major-General Burnside.

EDWARD M. NEILL,
Assistant Adjutant-General.

The three companies from Scott, Morgan, and Campbell, commanded, respectively, by Capts. Dennis Trammell, Wimer Croley, and Joseph Newport, were paid under this order. Which was the fourth company ordered to be paid does not appear; and the order calling out these four companies seems to be missing.

CAPTAIN RANDAL'S SEVIER COUNTY COMPANY ORDERED OUT FOR SIXTY DAYS.

Special Field Orders } HEADQUARTERS, DEPARTMENT OF OHIO,
No. 114. Extract. } *December 22, 1863.*

* * * * * * *

12. Capt. S. W. Randal commanding company of "Home Guards" stationed about Sevierville, being ordered out by General Burnside for thirty days, is hereby ordered to remain in the service for service for thirty days from the expiration of that time.

* * * * * * *

By command of Major-General Foster.

_____,
Major and A. D. C.

—

CAPT. GIDEON S. WHITE'S KNOX COUNTY COMPANY RECOGNIZED.

HEADQUARTERS, DISTRICT OF EAST TENNESSEE AND
FOURTH DIVISION TWENTY-THIRD ARMY CORPS,
Knoxville, Tenn., January 30, 1865.

LIEUTENANT: In accordance with Special Orders No. 202, series of 1864, from Department of the Ohio, you will please issue to Gideon S. White, captain of Home Guards in Knox County, third civil district, the following ammunition for the use of his company: 320 rounds Spencer rifle ammunition, 400 rounds Burnside carbine ammunition, 240 rounds Gallagher carbine ammunition, 240 rounds Colt's revolving rifle ammunition, 320 rounds Austrian rifle ammunition, 800 rounds Enfield rifle ammunition.

Very respectfully, your obedient servant,

DAVIS TILLSON,
Brig. Gen., U. S. Vols., Commanding District and Division.

Lieut. ED. G. FECHET,
Depot Ordnance Officer.

—

HEADQUARTERS, DISTRICT OF EAST TENNESSEE AND
FOURTH DIVISION, TWENTY-THIRD ARMY CORPS,
Knoxville, Tenn., February 10, 1865.

COLONEL: The general commanding directs that you order two commissioned officers and 50 enlisted men from detachment of Second Ohio Volunteer Heavy Artillery, now at Strawberry Plains, provided with 60 rounds of ammunition and three days' rations per man, to proceed to Blain's Cross-Roads, so as to be at that place by 3 o'clock p. m. on Saturday, February 16, to cooperate with Capt. G. S. White, of the Home Guards, in an expedition after bushwhackers.

Most respectfully, your obedient servant,

W. W. DEANE, *Capt. and A. A. G.*

Col. C. G. GIBSON,
Commanding Second Brigade, Fourth Division, Twenty-third Army Corps.

—

HEADQUARTERS, DISTRICT OF EAST TENNESSEE,
Knoxville, Tenn., April 11, 1865.

LIEUTENANT: In compliance with Special Orders No. 202, Department of the Ohio, series of 1864, you are directed to issue to Capt. G. S. White, commanding Home Guards, Knox County, Tenn., the following ammunition: 280 Spencer rifle cartridges; 600 Burnside carbine cartridges; 240 Colt's

revolving rifle cartridges; 1,500 Enfield rifle cartridges, caliber .56; 1,500 cartridges, caliber 54; 160 Ballard carbine cartridges.

By command of Major-General Stoneman:

N. A. REED, JR.,
Lieut., A. D. C., and A. A. A. G.

Lieut. E. G. FECHET,
Commanding Ordnance Depot, Knoxville, Tenn.

THE GUARDS RECOGNIZED IN JULY, 1864.

Special Orders No. 202. HEADQUARTERS, DEPARTMENT OF THE OHIO, *Knoxville, Tenn., July 23, 1864.*

2. The ordnance department, Knoxville, Tenn., will issue ammunition to Home Guards in the district of East Tennessee upon the approval or request of Brig. Gen. J. Ammen, commanding Fourth Division, Twenty-third Army Corps.

* * * * * * *

By command of Major-General Schofield:

R. MORROW,
Assistant Adjutant-General.

This order says "Home" Guards; but on comparison of the various orders above given it will be seen that the National Guards are sometimes designated "Home Guards." It will be noted that this order recognizes the guards as still subject to orders ten months after they were first called out.

ARMY REGULATIONS APPLICABLE TO THE NATIONAL GUARDS.

Revised United States Army Regulations, 1863, page 482, section 1672, read as follows:

If, as has sometimes happened, militia, at the end of a term of service, shall, from the want of a mustering officer, disperse or return home without being regularly mustered out, and if, with a view to payment, a muster shall afterwards be ordered by competent authority, the officer sent for the purpose shall carefully verify all the facts affecting pay, by the oath of one or more of the officers belonging to such militia, in order that full justice may be done.

This was the military law when the National Guards were mustered and when disbanded, and it admirably provides for just such emergencies as exist in the case of these guards. The Guards were never formally disbanded, but remained subject to orders until the war ended.

THE NATIONAL GUARDS IN THE WAR RECORDS.

There are many references to the National Guards in the published volumes of the War Records, sometimes miscalling them home guards. These records show that whenever the Confederates appeared in the neighborhood of Knoxville they were sure to be confronted by companies of the National Guards. Whenever forage was to be had, roads to be guarded, trains to be escorted, scouting to be done, bushwhackers and guerrillas to be dispersed, spies to be intercepted, stragglers to be picked up, and reconnoitering to be done, the National Guards of East Tennessee were always called on and always ready, and always did the work to the satisfaction of their superiors and with credit to themselves.

The following affidavits from the muster-out rolls of two companies of the National Guards, forwarded to the War Department by their respective captains, are given as samples of the services rendered by these Guards:

CAPTAIN RANDLES'S COMPANY.

STATE OF TENNESSEE, *County of Sevier, ss:*

On this the 27th day of March, 1878, came Samuel W. Randles, who, being duly sworn according to law, in relation to the military organization, service, and history of this company of East Tennessee National Home Guards, United States Volunteers, deposes and says, that he is a citizen of Sevier County, Tenn., address Trundles Crossroads, Tenn., and the identical Samuel W. Randles who organized, raised, and commanded a company of East Tennessee National Home Guards, United States Volunteers, during the late war; that he raised said company under General Order No. 10, dated "headquarters Army of the Ohio, Knoxville, Tenn., September 15, 1863," as issued by Maj. Gen. A. E. Burnside, commanding, and in obedience to orders from the honorable Secretary of War, Washington, D. C.; that affiant, as captain, together with the officers, noncommissioned officers, and privates whose names appear on this roll, were organized at Trundles Crossroads, Sevier County, Tenn., on the 1st day of October, 1863, and regularly mustered into the United States service at Trundles Crossroads, Sevier County, Tenn., on the 25th day of November, 1863, by R. Clay Crawford, then lieutenant-colonel of the First Tennessee Regiment of Light Artillery, at which time a rough or memorandum roll was furnished said mustering officer, who then instructed affiant to make out a complete muster roll of said company, in regular official form, and bring the same to him at Knoxville, Tenn., in order that he might file it with the War Department, and which orders or instructions affiant carried out by making a complete and formal muster roll of said company and taking and delivering the same to said Crawford at Knoxville, Tenn., within a period of two or three days from date of muster of said troops at Trundles Crossroads, Tenn., November 25, 1863.

Affiant further states that after he and this company of which he was captain was mustered into the United States service at Trundles Crossroads, as above stated, on the 28th of November, 1863, affiant was ordered by Charles Inman, deputy provost-marshal, office at Sevierville, Tenn., to take his company and act as guard in taking a lot of United States Government hogs to Knoxville, Tenn., and which orders were duly respected and obeyed, and a portion of his company acted as guard in taking another lot at another time to Knoxville, Tenn. Affiant further states that during the term of their service his company acted as guard to United States foraging wagons and parties sent out into the country for forage for use of the main army stationed at Knoxville, Tenn.; that his company protected the forage in the counties of Sevier and Blount from destruction by the rebels until the Federal forces of Burnside's army at Knoxville, Tenn., could gather up the same, etc.; that they were sent on the scout in order to protect the various forage wagon trains, etc., from danger, and they were ordered to report regularly by General Burnside and said Inman, which they did; that their service was of the most important character to the protection of the country lying on the east and southeast of Knoxville, Tenn., where the main army was stationed, for they protected the forage thereof, which was the richest portion of country around Knoxville and the main dependence of the army at that place during that time; that during the time of the service of said company they captured about 200 rebel prisoners and turned them over to General Burnside at Knoxville, Tenn.; that at one time they captured 22 or 23 rebels in one company, near Waylands Mill, Sevier County, Tenn., and turned the same over at Knoxville. This was about the latter part of December, 1863. Affiant states that it was his company while on said service and duty that captured one E. A. Dodd, the Texas ranger and rebel spy, who was tried by military court-martial, found guilty, and hung at Knoxville, Tenn., and in regard to this roll he states that John Cunningham was found unable to do service and was sent home; * * * that John Jones was captured about 4 miles east of Knoxville, Tenn., by the rebels, and died in Andersonville prison, Georgia, 1864; that James W. Shelly left and went to Third Tennessee Cavalry; that George Wade was old, and went home and did no service; that George Stoner was sent home about 1st of December, 1863, on account that he could not hear well. * * * Affiant states that he received 75 United States muskets from General Burnside, together with ammunition which they drew at the date of enrollment of this company for use of same; that affiant came up from Knoxville to Trundles Crossroads with said arms or muskets and ammunition, and which was hauled by Captain Pike, accompanied by about 80 or 90 United States soldiers sent by General Burnside, who superintended the loading of the wagons with same at Knoxville, Tenn. Regular monthly pay as allowed to United States soldiers at that time was promised them, as also commutation for clothing and subsistence, they having furnished their own clothing and rations while in said service; that their muster was such as will authorize this company to receive their monthly pay, commutation for clothing and rations due for period of service rendered, to wit, from 1st day of October, 1863, date of enrollment, to 10th day of February, 1864, date of last service rendered; that the men's names appearing on this roll are stated correctly; that all dates and remarks relative to this company's history and service performed by said company are stated as accurately as is possible to do at this time, all of which is personally well known to General Burnside and staff, who were perfectly familiar with all the facts relating to the calling out, organizing, mustering, and equipping said troops for the reason they were called into the service of the United States by the honorable Secretary of War by orders given to General Burnside direct and by him to affiant; that no pay or other allowance has ever been received for the service in question or any part thereof, but pay is still due to each of the officers, noncommissioned officers, and privates borne on this roll.

SAMUEL W. RANDLES,
Late Captain East Tennessee National Home Guards, United States Volunteers.

Sworn to and subscribed before me this 27th day of March, 1878, by Capt. Samuel W. Randles, late captain East Tennessee National Guards, and he fully understood the above. I am not interested.

[SEAL.] WILLIAM FOWLER,
County Court Clerk.

INDORSEMENTS ON CAPTAIN RANDLES'S MUSTER-OUT ROLL.

STATE OF TENNESSEE, *County of Sevier, ss:*

On this the 2d day of April, 1878, came Adam Creswell, and states on oath that he is the identical Adam Creswell who served as first lieutenant in Capt. Samuel W. Randle's company of East Tennessee National Guard, war of rebellion, and that this roll contains a correct and true list of said company, and that the history, service, and facts set forth in Capt. Samuel W. Randle's affidavit on the other side of this roll is correct in its statements, or as near so as can be made at this time.

ADAM CRESWELL,
First Lieutenant.

Sworn to and subscribed before me this the 2d day of April, 1878, by Adam Creswell, who understands the contents of this roll. I am not interested.

WILLIAM FOWLER,
County Court Clerk.

General Field Orders No. 25. HEADQUARTERS, ARMY OF THE OHIO, *Knoxville, Tenn., November 4, 1863.*

The members of the National Guard of East Tennessee are authorized to arrest any soldiers they may find straggling about the country without proper papers, and also such citizens as are known to have been guilty of acts of oppression and cruelty to Union men, and generally any suspicious characters who may not be able to give a satisfactory account of themselves.

Such prisoners will be handed over without delay to the nearest provost-marshal or military commander, together with a full statement of the circumstances under which they were arrested. Charges, substantiated by full affidavits, must in all cases accompany the delivery of prisoners.

By command of Major-General Burnside.

LEWIS RICHMOND, *A. A. G.*

Official.

Assistant Adjutant-General.

BOWMANS FERRY, KNOX COUNTY, TENN., *November 20, 1863.*

Capt. S. W. RANDLES, OR WHOEVER IS IN COMMAND OF NATIONAL GUARDS:

You are hereby commanded to bring all your effective men and report at once to me at this place, together with all their arms and equipments. Mount your men as much as possible.

G. W. DOUGHTY,
Captain Commanding Seventeenth Tennessee Cavalry.

P. S.—I am ordered by the post commander to take command of all this section of country, and of course you are all under my command.

KNOXVILLE, *November 26, 1863.*

SIR: I want you to meet me with your company this side of this place. I will have a wagon of arms on the road. I want you to send one of your men to Captain Kelley and tell him to come with his men to Sevierville as quick as he can.

Yours, in haste, CHARLES INMAN,
Deputy Provost-Marshal.

Capt. S. RANDLES.

CAPTAIN TIPTON'S COMPANY.

STATE OF TENNESSEE, *County of Sevier, ss:*

On this the 3d day of April, 1878, came Capt. Benjamin F. Tipton, who being duly sworn according to law in relation to the military organization, service, and history of this company of East Tennessee National Guards, United States Volunteers, deposes and says that he is a citizen of Sevierville, Sevier County, Tenn., address, Sevierville, Tenn., and the identical B. F. Tipton who organized, raised, and commanded a company of East Tennessee National Home Guards, United States Volunteers, during the late war of rebellion; that he raised said company under order No. 10, dated "Headquarters Army

of the Ohio, Knoxville, Tenn., September 15, 1863," as issued by Maj. Gen. A. E. Burnside, commanding, and in obedience to orders from the honorable Secretary of War, Washington, D. C.; that affiant, as captain, together with the officers, noncommissioned officers, and privates whose names appear in this roll were organized at Sevierville, Sevier County, Tenn., on the 20th day of September, 1863, and regularly mustered into the service of the United States at Sevierville, Sevier County, Tenn., on the 20th day of October, 1863, by Col. R. C. Crawford, lieutenant-colonel commanding the First Tennessee Light Artillery. Affiant states that he with this his company were ordered to protect the country east of Knoxville, Tenn., from the invasions of the rebels, mostly the county of Sevier, upon which the main Army, stationed at Knoxville, Tenn., was to a great extent dependent for forage and supplies. Affiant states that by virtue of special field orders No. 27, dated "Headquarters Army of the Ohio, in the field, September 22, 1863," this affiant and his company were ordered on active duty in Sevier County, Tenn., to aid in protecting the country from the invasions of the rebel forces, to guard the forage in the county of Sevier, and aid in getting the same to the main Army at Knoxville, Tenn., and in the performance of which the company was exposed to great danger of falling into the hands of the rebel army that moved around Knoxville, Tenn. Again on the 4th day of November, 1863, General Field Orders No. 25, issued ordering the East Tennessee National Guards to arrest any soldiers found straggling about the country without proper papers, and also rebel citizens known to have been guilty of oppression and cruelty toward Union men, or any suspicious characters who were unable to give a satisfactory account of themselves and turn the same over to the nearest provost-marshal. These orders were signed by Lewis Richmond, assistant adjutant-general, and by command of Major-General Burnside. During the term of service of this company about 200 prisoners were turned over to custody of General Burnside at Knoxville, Tenn. Again, on the 27th of November, 1863, affiant and his said company were ordered to remain on duty, which they did until about the 21st day of February, 1864. Said company was sent on a trip into Greenbrier Cave, in the Smoky Mountains, near North Carolina line, on a scouting expedition. Was then sent with Fifteenth Pennsylvania and Second Tennessee Mounted Infantry on a scout up French Broad River into Jefferson County, Tenn., and returned to Flat Creek, in Sevier County, Tenn., and reported headquarters, Knoxville, Tenn.; then was sent back to Shady Grove, near Dandridge, Tenn., to guard roads until two of Burnside's regiments came up. Here Colonel Palmer, colonel Fifteenth Pennsylvania Regiment, relieved affiant and his said company and sent us back to Sevierville, Tenn., to aid in guarding provost-marshal, etc., where affiant and this company remained until 8th December, 1863, when they were attacked by Thomas's North Carolina Rebel Legion and repulsed with the loss of Jonathan Mize and John Parrott killed, and James D. Serratt and Andrew Ward captured and who died in rebel prison; and on or about 28th January, 1864, they fell back to Maryville, Tenn., as Longstreet advanced, and at which place they drew one or two days' rations from General Willick. They were then sent to Louisville and Kingston, Tenn., on a scout, and returned to Sevierville about the 21st of February, 1864. * * * Regular pay as allowed United States soldiers at that time was promised them, as also was commutation for rations and clothing, they having furnished their own rations and clothing. That such muster should be recognized as will authorize this company to receive their monthly pay, commutation for clothing, and rations due for period of service rendered, to wit: From the 20th day of September, 1863, date of enrollment, to 21st of February, 1864, date of expiration of service. This company was furnished with United States muskets and ammunition by Gen. A. E. Burnside about the 20th of September, 1863, and the same was sent to Sevierville, Tenn., by General Burnside's wagons, accompanied by a guard of about 80 men, with which to equip themselves. Affiant states that the men's names on this roll are stated correctly and all dates and remarks relative to the service and history of this company are stated as correctly and accurately as is possible to do at this time. All of which General Burnside and staff were perfectly familiar with, being known to the organizing, equipping, and muster of said troops—Burnside having received orders from Secretary of War direct, and by him to affiant. Pay is still due each man borne on this roll except those charged with absence and desertion. They never received any pay.

B. F. TIPTON, *Captain of this Company.*

Sworn to and subscribed before me this April 3, 1878, by Capt. B. F. Tipton.
[SEAL.] WILLIAM FOWLER, *Clerk.*

STATE OF TENNESSEE, *County of Sevier, ss:*

I, John S. Roberts, do state on oath that this roll containing the names of the members of Capt. B. F. Tipton's company of East Tennessee National Guards is correct and true and the affidavit of Capt. B. F. Tipton, on the opposite side of this roll, sets forth the facts and history of this said company as accurately as can be made at this time. I also state that I was first lieutenant in this said company of East Tennessee National Guards, and am acquainted with the contents of this roll and the statements thereon and know them to be true.

JOHN S. ROBERTS.

Sworn to and subscribed before me this the 3d day of April, 1878, by John S. Roberts, who understood the entire contents of this roll before signing the above.
[SEAL.] WILLIAM FOWLER, *Clerk.*

The companies of National Guards commanded by Capts. Daniel Kelley, Nathaniel M. Baker, and Jacob Tyson, of Sevier County; Newton McConnell, Elijah Walker, Hamilton Tipton, and William Bingham, of Blount County; Gideon S. White, of Knox County; William Shelby, of Union County; Daniel Carter, of Jefferson County, and Russell Jenkins and Jefferson Denton, of Cocke County, rendered like valuable, brave, and patriotic services.

AFFIDAVIT OF MAJ. CHARLES INMAN.

STATE OF TENNESSEE, *County of Sevier:*

On this 24th day of January, 1896, personally appeared before me, a clerk of the county court in and for the county aforesaid, Charles Inman, aged 86 years, whose post-office address is Fair Garden, Sevier County, Tenn., deposeth and says as follows: I was major of the Second Regiment of Tennessee Volunteer Cavalry, and was appointed provost-marshal by Gen. A. E. Burnside on or about the 15th day of September, 1863, and was ordered to Sevierville, county of Sevier, and State of Tennessee, by Gen. A. E. Burnside, to do duty there, and served five months there as provost-marshal, and the National Guards of Sevier County, Tenn., reported to me for duty. The companies that reported to me were commanded by Capt. B. F. Tipton, Capt. Daniel Kelley, Capt. Samuel W. Randles, Capt. Nathaniel M. Baker, all of Sevier County, Tenn., and did service in guarding Government arms and ammunition at Sevierville, and did duty as scouts, and had many skirmishes and battles with the rebels, and captured many prisoners, but I do not remember the exact number of skirmishes or battles or number of prisoners the National Guards captured. The prisoners captured were sent to Knoxville, Tenn., and turned over to General Carter. In a battle they had with the rebels at Gatlinburg, Sevier County, Tenn., they killed and wounded several rebels in that engagement, I do not remember the exact number, and in an engagement the guards had with the rebels near Fair Garden, Sevier County, Tenn., they killed some rebels in that engagement; do not remember the exact number, and there was six of the National Guards killed by the rebels, and there was a part of B. F. Tipton's company and a majority of Capt. Daniel Kelley's company captured at Sevierville, Tenn., and paroled by Colonel Thomas, of North Carolina, who commanded a rebel regiment of Indians, on or about January, 1864. I do not remember the exact number captured of the National Guard. These National Guards were recognized by the following United States officers, to wit: Gen. A. E. Burnside, General Carter, Colonel Palmer, of the Fifteenth Regiment Pennsylvania Cavalry, and Colonel Crawford. By A. E. Burnside in issuing orders to me to be executed by these guards, and General Carter issuing orders to me to have the guards to execute, and by Colonel Palmer by having the guards to assist him in scouting the country. It was always my understanding that these guards were sworn into the United States service by Col. R. Clay Crawford. I was not present when they were sworn into service. It was done at Sevierville, except Samuel W. Randles's company was sworn in at Trundles Cross Roads, Sevier County, Tenn., and I recognized and treated the National Guards as United States soldiers. I do not remember the whole number of prisoners captured by the guards. They captured several prisoners. They were recognized by the United States officers by ordering them on duty. I, with these National Guards, went with Colonel Palmer and his reziment to Cosby Creek, Cocke County, Tenn., and captured General Vance and 106 men and 30 horses, and recaptured 18 United States wagons and 1 ambulance. This was in the winter of 1864, as well as I recollect. I will here give as many of the officers' names as I remember: Capt. B. F. Tipton; First Lieut. J. S. Roberts; Second Lieut. John Lewelling; Levis C. Roberts, first sergeant, and Capt. Nathaniel M. Baker; Carrol Shrader, first lieutenant, and Joseph McAndrews, first sergeant; Capt. Samuel W. Randles; John Rose, lieutenant; Capt. Daniel Kelly. These are all of the officers I now remember. The lapse of time and my feeble condition and old age has greatly impaired my recollection.

his
CHARLES x INMAN.
mark

Attest:
P. P. SEATON.
ELI H. ROBERTS.

Personally appeared before me, John Chandler, clerk of the county court of aforesaid county and State, Charles Inman, who, being duly sworn, says the foregoing is true and correct, and he has no interest in said claim. This January 24, 1896.

JOHN CHANDLER, *County Clerk.*

—

CAPT. JOSHUA J. DUNCAN'S COMPANY OF HOME GUARDS.

THE STATE OF TENNESSEE, *Campbell County, ss:*

Personally came before me, the undersigned authority, a notary public within and for said county, Joshua J. Duncan, who is personally known to me, and, who, after being duly sworn, deposed and says as follows, viz:

At the beginning of the late civil war I was a citizen of East Tennessee; resided in Scott County, on the border between Tennessee and Kentucky, it being a mountainous section of country and principally composed of citizens who were loyal to the Government of the United States.

At the outbreak of the war, or early in 1861, a number of the men made their way over into Kentucky and volunteered in the Federal Army with the hope and understanding that the soldiers would soon return to the South and their families and property receive protection.

But very soon the country was being invaded and overrun with squads and companies of Confederates and guerrillas, taking from the citizens all the firearms, ammunition, etc., they could find, and arresting loyal men and requiring them to take the oath of allegiance to the Southern Confederacy or remain prisoners.

And it being the section of country through which the Union men in Tennessee from south of the Cumberland Mountains had to pass when forced by the Confederates to leave their homes and families and make their way over the mountains to the Federal Army, it was becoming very perilous for them.

In consequence of all which, on or about the 10th day of October, 1861, I, as captain, recruited or raised a company of Federal or Union Home Guards. Said company at one time consisted of over 100 men. In said number several were over and some under military age, and each and all acting under oath, in substance, to support the Constitution of United States of America and protect and defend the Union, and also the persons and property of loyal citizens. The company furnished its own arms and ammunition, except occasionally when the opportunity afforded it, we would get small amounts of ammunition from the Federal Army in Kentucky. We also furnished our own rations, etc., so far as possible, but very often, and not infrequently, being dependent upon the hospitalities of the loyal people among whom our lot was cast.

At the time I organized said home guard company the country was, as well as by Confederate soldiers, being also invaded by a company of Confederate guerrillas, then known as the Gibson Company, most of whom were East Tennesseans and well acquainted with the entire country along the border. This company, together with squads of Confederates, was invading the country very often by night, as well as by day, taking loyal men prisoners, shooting some of them, and carrying away their property, and hunting down and capturing all the men they could who were making their way over the mountains to the Federal Army.

A short time after the organization of my said company, these invaders came over the mountains and hurriedly and as secretly as possible went to Thomas Chambers's, a very old but wealthy citizen, having a large family of negroes and other property, and were preparing to take and carry away all his property. Being surprised and attacked by the home guard, after a heated and sharp skirmish fight they were repulsed and compelled to retreat, leaving all of their spoils and some of their arms, etc., which were captured by the home guards, the home guard also recapturing and releasing six or eight prisoners they had taken, and the invaders forced to retreat from the community, their forces then outnumbering ours perhaps 5 to 1.

I continued in active service with my small force, guarding the approaches, very often being divided into small squads or detachments, and giving aid and protection to loyal citizens, and giving aid and assistance to loyal men making their way over the mountains from the Confederacy to the Federal Army, and blockading roads at the different approaches to prevent the advance of Confederate cavalry or speedy advance of the Confederate forces, and also to prevent stock from being driven out and supplies taken from the country by the rebels and their guerrillas.

In the early spring of 1862, as now remembered, Colonel Vaughan (Confederate), with as many as one regiment of infantry and perhaps from 300 to 500 cavalry, advanced over the mountains, taking every loyal man prisoner they could catch; shooting and wounding some; taking all the property they could find; taking and destroying their supplies, etc., and after advancing to Captain Robbins's residence, on Brimstone Creek, about 6 miles southwest from

Huntsville, Tenn, the infantry encamping on Captain Robbins's premises, the cavalry raiding the country as far as Huntsville, cutting down the flag (the Stars and Stripes) reared over the court-house by the home guard, and then hurriedly fell back to camps. In the meantime the infantry was burning and destroying the fencing, barns, and other effects of Captain Robbins and others in the immediate vicinity, and taking all the available property, including household goods, etc.

On receiving a dispatch I at once marched with as many of my company as were then available and not absent on other duty, and after marching a distance of about 15 miles and in the meantime being reenforced by Captain Cotton, with perhaps about 40 men, our entire force not exceeding 100 men, at the dawn of day the next morning we attacked and surprised the rebel pickets and skirmishers, and after a very heated engagement and skirmish fight forced them to retreat and drove them in, capturing one gun and some of their blankets and other camp equipage. Then taking advantage of the grounds, so as to evade the enemy's cavalry, we advanced within shooting range of the main force, and while engaged in a very heated, perilous, and dangerous battle the enemy, by a flank movement, unobserved by me or any of our force, surrounded us, or nearly so, by a large force, and I was compelled to order a retreat; and we fought and fell back out of their lines with a loss of two killed, two severely wounded, and two taken prisoners. As soon as the engagement ceased the rebels started on a retreat back south of the mountains.

In the early part of the summer of 1862, as now remembered, Col. William Clift established headquarters at Huntsville, Tenn., for the purpose of recruiting and organizing the Seventh Regiment East Tennessee Volunteers, and was furnished arms, ammunition, rations, etc., by the Government. This being inside the Confederacy, placed Colonel Clift, his recruits, and Government property in great peril. I, with the home guards, gave every assistance possible, and kept out guards when deemed necessary on the enemy's approaches, and, when deemed necessary, by request of Colonel Clift, would go into camp with my men who were not on other duty, and remain subject to his instructions in case of an attack by the enemy, and in the meantime assisted in erecting some defenses known as "Fort Clift." In the latter part of summer or early part of the fall of 1862, Colonel Clift was surprised by a large force of rebels and forced to retreat back inside the Federal lines, and about this time the Federal armies in Kentucky, having fell back nearer the Ohio River, and Kentucky being invaded by the Confederates, placed me, with my home guards, in a dangerous and perilous condition.

In the latter part of 1862 and winter of 1863 the country along the border of Tennessee and Kentucky was invaded and overrun with rebel soldiers and rebel guerrillas, taking and carrying away the property of the home guards and other loyal citizens, taking, using, or destroying all of their available supplies, and not unfrequently burning their dwellings and barns, etc. During said time the home guards did all in their power to protect themselves, and the loyal citizens, having become so overrun by large forces, had become almost powerless, but frequently having engagements and skirmishes with the enemy, where the odds would be more than 10 to 1, and in some instances perhaps 50 to 1, and in which some of my men were killed. In the early part of 1863 Maj. James S. Duncan, Lieut. Col. R. A. Davis, Capt. B. T. Staples, and a small squad of Union men, while coming from the Federal Army in Kentucky over into Tennessee on business, met a large force of Confederate cavalry near Pine Knot, Ky., and in a fight with them Major Duncan was killed, Colonel Davis severely and painfully wounded and losing his horse and arms, Captain Staples taken prisoner and afterwards, while a prisoner, killed. Some of the detachment escaped. I was coming on a short distance in the rear, and found Colonel Davis wounded. I dismounted, placed him on my horse, and on foot myself and acquainted with the country, I assisted and conveyed him through a wilderness portion of country, a distance of about 30 miles, to a place of safety and where he could be treated and cared for. On our way, crossing the road near the point where he had been wounded and Major Duncan killed, and at times during our travel, would approach near enough to the rebels to hear the report of their small firearms.

The country having become so invaded by large forces of rebels, and the home guard so powerless, and having no assistance, and some having been killed, some wounded, and some discouraged and tired of the exposure, fatigue, and dangers, etc., had enlisted in the Federal Army on or about the 1st day of April, 1863. I thought best to temporarily disband the company and cease to do active service; which I did until General Burnside advanced with his army into East Tennessee, in August, 1863; but we retained our arms and gave every distance possible in any emergency. * * *

In 1862, about December 25, about 2,500 or 3,000 Confederates, composed of both infantry and cavalry, and commanded by Colonel Palmer, McKenzie, and others, encamped on my premises and around my residence; remained two days and nights, and took, consumed, and destroyed almost all my property and effects, burned the fencing around my premises, drove off my milch cows, young stock, cattle, a pair of young oxen; consumed and destroyed a large amount of hay and other forage, several hundred bushels of corn; destroyed my entire stock of honey bees, fowls, farming tools, and implements, all provisions and family supplies of every kind and description, and including household goods, or most of them, and also kitchen utensils and implements, etc., leaving my wife and three small children without subsistence, and to seek support and protection as best they could, in consequence of which my wife and children had to abandon their home. They telling my wife (who is now dead), so she stated to me, that they had come expressly to take and destroy my property and effects, because I was a Union man and was captain of a company of Union or Federal home guards. Soon after this they taken and carried off the only horse I owned.

I further state that I now have no incomes from any source whatever, and am dependent upon my own labor and exertions for a living; that I am 62 years of age and physically disable, from a complication of bodily disabilities, to do and perform hard or fatiguing manual labor; said disabilities believed to be in whole or in part the results of fatigue, hardships, and exposure during said service and the late civil war.

JOSHUA J. DUNCAN.

Subscribed and sworn to before me at office in Elk Valley, Tenn., this the 2d day of December, A. D. 1895.

[SEAL.] LEWIS BAIRD, *Notary Public.*

THE STATE OF TENNESSEE, *Campbell County, ss:*

Personally appeared before me, the undersigned authority, a notary public within and for said county, Drewry Smith, aged 80 years; William Cooper, aged 66; A. J. Cross, aged 59 years; Andrew Thompson, aged 57 years; N. P. Cross, aged 57 years; J. G. Robinson, aged 66 years; W. H. Cross, aged 57 years; F. H. Standley, aged 58 years; Ewell Phillips, aged 56 years, whose post-office address is Bowl, Tenn., all who are personally known to me to be credible persons, and who, after being duly sworn, deposed and say as follows, viz:

We was personally acquainted with Joshua J. Duncan before and at the commencement of the late civil war, and have been ever since. We further say, each for ourselves, that we were members of said Duncan's Home Guard Company and served under him as captain during said entire service.

We further say that we carefully read and heard read the foregoing affidavit and statements of said Joshua J. Duncan, and each say for ourselves, respectively, that to the best of our knowledge, recollections, and belief all of the material facts set forth and statements made in said foregoing affidavit of said Joshua J. Duncan is substantially true and correct, and any statements made therein to which we may not have severally been eyewitnesses to, we have every reason to believe to be correct.

We further say that we each make this our affidavit Exhibit A to said foregoing affidavit and statements of said Joshua J. Duncan.

—

CAPT. WILLIAM A. HEMBREE'S COMPANY OF HOME GUARDS.

About the 1st of August, 1861, a company or band of rebel guerrillas was organized in Scott County, Tenn., near the head of New River, by a man named Gibson. This company was composed of men from Scott, Anderson, and Campbell counties and numbered about 100 men.

A very large majority of the people of Scott County were Union men, and many of them had at the date above mentioned joined the Union Army. When Gibson's band of marauders was organized, not only were the citizens of the mountains along the waters of New River exposed to dangers which they were powerless to resist, but the direct route taken by soldiers going from Anderson, Campbell, Knox, and other counties south of Scott led through these mountain passes, and the prime object of this band seemed to be to guard these passes and thus prevent Union men from passing through to join the Union Army in Kentucky. This section of the State was so sparsely settled and so remote from the centers of population that aid from other counties was not to be thought of, wherefore it became imperative that loyal citizens do something for the protection of themselves and the families of those who had joined the Union Army.

In accordance with the above state of affairs Capt. William A. Hembree, on or about the 1st day of October, 1861, organized a company which was known as the "Scott County Home Guards." Captain Hembree's company was composed of about 60 men. * * *

Some of the skirmishes and battles in which Captain Hembree's company were engaged are as follows:

1. A skirmish on Beech Fork of New River, about December 25, 1861.
2. A battle on Smoky Creek, on the 12th day of February, 1862. In this engagement Capt. William A. Hembree and Thomas Duncan, jr., were severely wounded, and 4 of our number were captured.
3. A raid in Anderson County, about July 15, 1862, in which we captured 7 men.
4. A battle on the head of New River, about August, 1862. In this engagement the enemy lost several in killed, wounded, and captured.
5. A battle on Poplar Creek, about October 1, 1862. At this place we rescued one of our men who had been previously captured by the rebels. Nine of the enemy were killed and several wounded.
6. A battle on the head of New River. In this battle we had 1 man killed and 2 wounded. This was about December, 1862.
7. A battle on Bowling Mountain, about March 1, 1863. Our side had 2 men killed in this engagement.
8. About March 15, 1863, we had a skirmish near the mouth of Smoky Creek, in which the enemy were repulsed and driven back.
9. About July 12, 1863, we had an engagement in which we suffered as follows: Riley Overton killed, Wiley S. Rich wounded, and 1 man captured.
10. A battle near Lees Ferry, in Anderson County, in which we were repulsed. In this battle John Brown was wounded.
11. About October 10, 1863, we made a raid in Anderson County.

In addition to the above raids, skirmishes, and battles, some of our number were continually escorting Union men through the mountains to Kentucky, where they could join Union regiments. Our knowledge of all the mountain passes made us capable of rendering valuable service in this way, and indeed there was much of the time when it would have been next to impossible for a Union man to cross the mountains without a guide who was thoroughly familiar with all the country.

W. A. HEMBREE, *Captain.*
D. JEFFERS, *First Lieutenant.*
WM. (his x mark) LOW.

STATE OF TENNESSEE. *Scott County:*

Personally appeared before me, the undersigned authority, William A. Hembree, D. Jeffers, Wm. Low, sr., and being duly sworn make oath and say that the foregoing statements in regard to Capt. William A. Hembree's Scott County Home Guards are true to the best of their recollection, information, and belief.

W. A. HEMBREE, *Captain.*
D. JEFFERS. *First Lieutenant.*

Pensions.

REMARKS
OF
HON. ROBERT J. GAMBLE,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, April 25, 1896,

On the bill (H. R. 8271) relating to pensions.

Mr. GAMBLE said:

Mr. SPEAKER: It is not my purpose to detain the House at any length in the discussion of the pending bill. My sense of justice, however, compels me to add a few words in justification of the measure, and especially of the fourth section of the bill. I have the honor in part to represent a large constituency of the veterans of the late war. As far as in me lies their sacrifices during that trying crisis of our history shall have just and honorable recognition. It is this motive that impels me, and a resolution early made after my election to this House to aid in whatever way I could in the enactment of a law to prevent what has appeared to me a wanton and violent assault upon the pension rolls of the Government by the present Administration.

Very early in the present session, in order to resist this general onslaught upon the deserving pensioners, I introduced the following bill, which I will insert as a part of my remarks:

A bill to prevent the reduction or discontinuance of pensions without first giving notice to the pensioner of such intended reduction or discontinuance, and allowing testimony to be submitted in defense thereof, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act no pension heretofore granted or which may hereafter be granted under the pension laws of the United States shall be reduced or discontinued except upon the ground of fraud; and no pension shall be discontinued upon said ground or for any other reason until the person receiving said pension shall have been first duly notified in writing by the Commissioner of Pensions of the grounds upon which such reduction or discontinuance is proposed to be made, giving the substance of the testimony or of the records upon which such proposed action is based, and the said notice shall also contain the names and post-office address of any and all witnesses whose testimony has been submitted, or is proposed to be considered, looking to the impeachment of such pension claim, and the said pensioner shall have the right to submit testimony to rebut the same or in defense of such proposed reduction or discontinuance for ninety days after the service upon him of the notice hereinbefore provided for, and no final action shall be taken by the Commissioner of Pensions or adjudication had upon such proposed reduction or discontinuance until after the expiration of the time aforesaid.

As its provisions have been substantially incorporated as the fourth section in the pending measure, I will limit my observations largely to that part of the bill. I regret that partisanship should manifest itself so strongly in this discussion. To me the provisions referred to seem wise and just, and acrimonious debate is foreign to its fair consideration. Partisanship in popular government is essential in leading forward the best ideals in citizenship. The primal motive of the partisan, however, should be that of the patriot, and the best interests of the whole country, rather than the narrow prejudices of political ascendency. Although we may differ in methods, we should all be imbued with the same patriotic endeavor.

To my mind, in the just and equitable consideration of pension legislation partisanship should have no place. The sacrifices these men made, the perils and hardships they endured, were for no party or section, but in the largest and fullest sense were for the country in its entirety. A grateful people should thus recognize their sense of gratitude by a common and united expression without division or partisan bias. Our nation has always recognized its high appreciation of the services of its soldiers who risked their lives to preserve the integrity of the Union. I believe a grateful people desire to manifest their gratitude by extending to the maimed and stricken, as a result of the perils and hardships of war, just and adequate pensions.

It is idle for the Democratic party to claim credit for the enactment of any of the wise and beneficent provisions of the pension laws now in force. They were all placed upon our statute books by the Republican party, and as a rule opposed by a large percentage of the Democratic organization. A careful history of that legislation was recited on this floor during this discussion by the gentleman from Pennsylvania [Mr. MAHON]. It shows that all the pension laws passed since 1878 met the opposition of the Democratic party. In the record of fourteen different votes in Congress upon these different measures there was a total of 417 Democrats in favor of the bills and 648 against. The record of the Republican party, however, stands in strange contrast to that presented by the opposition. The total votes cast by them were 1,066, all in favor of the legislation and none against it. Had the veterans of the war depended upon the Democratic party for relief in the way of pension legislation they would, I fear, have remained in anxious and hopeless waiting.

A like record, only more intensified, comes from the executive department in its hostility to pensioners. From Lincoln to Harrison only five pension vetoes were sent to Congress by Republican Presidents. On the other hand, the present occupant of the White House has made the unenviable record during his incumbency of 542. His petty malevolence has not alone been manifested toward the veterans of the war in vetoing bills for their relief which had passed the scrutiny of Congress, but in one of his messages he made the slanderous charge against the "fraudulent pensioners in thousands of neighborhoods." Has such an assertion been justified by the facts? The report of the Attorney-General for 1895 shows the total criminal prosecutions in the United States courts for that year were 12,495. Of that great number, the total convictions under the pension laws were 229. It must be remembered, however, that of those convicted only 39 were from the list of the veterans of the war.

It seems to me it is a remarkable showing as a result from the terrific onslaught that has been so persistently made by the Pension Bureau for the past three years upon the pensioners of the Government. It demonstrates what Republicans have uniformly asserted, that the pension list was an honorable one, and in very few cases has the Government been imposed upon. The pensioners themselves do not object to fair and just investigation. If fraud exists, let it be detected and exposed. But an unwarranted slander should not be cast against the entire list of the honorable and deserving, aggregating now over 970,000. Let those who are on the rolls be treated with consideration and justice.

During the past year the Board of Review of that office has reexamined over 100,000 pension claims already adjudicated and arbitrarily dropped therefrom 4,149 pensioners as not entitled to recognition by the Government. In the same time over 20,000 cases were reduced from the amount already allowed. After such a wholesale and indefensible raid upon the pension list, it seems to me the number of convictions in the courts is a just and sufficient answer to the general charge of fraud that without any reason has been so often repeated by those who oppose this class of legislation.

To my mind, the conduct of the Pension Bureau under the present Administration demands the severest condemnation. Where a pension has been granted, after a full and fair hearing, it should have the force and solemnity of the judgment of a court. It should not rest upon the caprice of an individual or a set of individuals to change, revoke, or alter the findings after it has once been adjudicated. The pensioner has a right to rest in security after the Bureau has concluded its judgment, the same as in a court of law. If the finding is to be vacated and set aside let the like procedure apply as in a court of justice. Section 4 of the bill seeks to correct the practice now in vogue.

Its purpose is to abolish any star-chamber investigation that shuns all known rules of enlightened jurisprudence and is fit only to be ranked with the mediæval past. It is a well-recognized principle of law that a judgment is not vacated except upon the ground of fraud, and that within a reasonable time after its rendition. I know of no reason why the same rule should not pertain upon the subject of an adjudicated pension. Testimony is submitted by the claimant in compliance with the rules adopted by the Bureau. An investigation is made and a finding entered that should have all the force and effect of a judgment of a court. If this is to be set aside let the same rules of procedure apply as near as may be upon a like hearing in a court. If the rights of the pensioner are to be invaded, and his claim to the bounty of the Government assailed, let the charges be openly made and the names of the persons thus making them be given.

If a judgment is attacked, the particular fraud must be alleged with clearness and certainty, and the court limits its inquiry alone to the charges thus made. The burden of proof rests upon the party assailing the judgment. All legal presumptions favor its validity. But with the practice now in vogue in the Pension Bureau it would seem this rule of law is reversed, and all presumptions are indulged in adverse to sustaining the original finding. Recognized principles of pleading in all courts are discarded and charges of fraud are made without any specification, and their authorship is withheld from the pensioner. He is called upon to sustain his claim against a general charge, ignorant of the specifications or the promoter of the attack. The pensioner is practically powerless to protect himself under such procedure. About 20,000 pensions under this practice have been canceled during the present Administration. Is it not time that just rules of procedure should be applied and the pensioner protected in his rights?

The pension should not be considered a gratuity. It should be and is a vested right. The soldiers largely entered the service with the law of 1862 in force, and he had a right to rely that its provisions would be faithfully administered by the Government toward himself as well as to those dependent upon him. When he faced the dangers in defense of his country, he had a right to assume, if, perchance, he fell in battle, that the Government would care for his loved and helpless ones at home. If a pensioner is receiving a pension to which he is not justly entitled, it is eminently proper that the same should be investigated. No one insists that such a person be retained upon the rolls. The objection, however, is as to the manner in which such investigation is conducted and the presumptions indulged in as to the rights of the pensioner. Let recognized rules of pleading as well as evidence prevail, and no complaint will be made.

It is not my purpose to inveigh against the present Commissioner of Pensions, or to indulge in harsh criticisms of him. Personally he has treated me with consideration, and I believe him to be a man of the highest integrity. But it is the system of injustice and unfair treatment of the pensioners that has been developed and systematically carried out by the present Administration against which I protest. After a pension has been granted upon a fair hearing, the beneficiary should have the assurance that the matter is at rest, and that it is not open to attack without due notice and upon a fair and open hearing.

Section 4 provides a new and wholesome rule. The anonymous person who seeks to attack the claimant must come out into the light. He no longer can do an injustice under cover and have his name withheld. The examination shall no longer be secretly conducted without an opportunity of a fair and open hearing, and upon due notice and the right to appear by counsel. The right to be confronted by the witnesses by whose testimony the pension is to be impeached is also conferred. The charge must be made specific and duly served upon the party in interest thirty days before the hearing and the names of the witnesses given. It occurs to me such a regulation is eminently fair and just, not only to the individual but to the Government. The nation does not want an injustice done to any of its citizens, and especially to the veterans of the late war. Individual officials may be anxious to make a record for their own promotion, and many too often exhibit too great zeal for their personal advancement rather than to do exact justice between the Government and the individual.

The Republican party has always sought fair treatment for the soldiers of the war. It has never been its boast that it has been niggardly and parsimonious in meeting the engagements of the Government in their behalf. They have left that claim and what credit it can secure from it to the present Administration. The genius from Georgia who presides over that Department may assert, if he chooses, that it has saved $25,000,000 by the suspension and reduction of pensions during his imperial reign. The country will judge of its justness and patriotism.

Under our policy, aside from the mere fact of good faith and exact justice, it occurs to me there is a necessity for fair and honorable treatment of the veterans of the war. Considering our population, geographical extent, and physical resources, our standing Army as well as our Navy, in comparison with other Governments, are limited indeed. If necessity required we must, as we always have, depend upon the volunteer soldier. Our loyal citizenship has never failed us in the past and its patriotism can be relied upon in our greatest needs. Our pension laws should not be so administered that our people would lose faith in the integrity and justness of the Government or its appreciation of the sacrifices of its citizen soldiery.

When the black cloud of secession gathered upon the Southern horizon in 1861, a soldiery most brave and heroic sprang to the nation's defense. Liberty and Union had grown priceless by their possession, and were not to be sacrificed, even though life itself must be offered upon the altar of country. When to sustain our institutions and a nation in its entirety meant grim-visaged war, and that it would require millions of human lives and billions of treasure to be chanced in the struggle, the sacrifice was unhesitatingly made. The true citizenship of the North knew nothing but country and the whole country, and their patriotism was as exhaustless as the necessities of the nation. No braver, truer, or more loyal and capable soldiers ever fought for higher principles or sacrificed themselves for a government devoted to nobler aims than the armies of the Union. Their valor and heroism were worthy the ancestry of the patriots of the Revolution. For a nation saved, a Union restored, a Constitution broadened and strengthened, a flag true to its inscription, we owe to the common soldier our unspeakable gratitude. We vie with each other in our admiration of the great leaders and chieftains of that memorable struggle, and it is well that we should. They filled their exalted stations with conspicuous ability and added new luster to their country's glory, but the splendid soldiery developed from the volunteer made their success possible and the ultimate triumph of the Northern army.

The judgment of this generation surely is a justification of the great leaders who took up the cause of the Union and the splendid citizenship that enlisted under them in defense of the Government.

The integrity of free institutions the world over was at stake. The security of the best government devised by man was assailed. The war, though localized, was a struggle for humanity, for an ideal freedom that was to be a beacon light to the governments of mankind. It was a struggle for the larger and the ideal citizenship and that under the law all men were equal. It was to preserve and make secure liberty's greatest stronghold, so that the blessings of a free government might be enjoyed not only by its own children but be an incentive to higher endeavors to struggling humanity in whatever land freedom had hope. That the North was right in the controversy is demonstrated by the results as well as by reason.

Patriotism in the North meant love of country in its broadest sense, and was not restricted to the narrow limits of geographical subdivisions. It encompassed the nation instead of a particular State. It developed a larger citizenship, overlapped State boundaries, and dignified our nationality. It gave liberty to all and broke the shackles of human slavery. Our flag thereafter truly symbolized what we had before proclaimed, universal freedom.

Great as was our Government then and wonderful as has been our development and expansion since, it is difficult to fully realize what a calamity to the whole country would have been the defeat of the North and the triumph of the Confederacy. It would have meant two governments, jealous of each other, in constant apprehension of active hostilities, standing armies of great number, with all the added weight of taxation for their support; the great natural waterways of commerce cut off and practical intercommunication denied us; a great family and race divided, our energies stifled, our manifest destiny eclipsed, and the hope of a great people buried.

The war has taught a higher degree of patriotism and devotion to country. The great characters developed by it have been, and always will be, wonderful forces in impressing themselves upon the character of the young and upon our national life. The influence for good and to higher patriotism and patriotic endeavor of a Lincoln and the great military chieftains can never be told. The great army that returned and again mingled in the peaceful avenues of life and told and are telling the story by the quiet firesides of the land have surely developed a greater love of country than ever before.

Self-sacrifice to one's country in itself begets patriotism not only in the individual, but in the community where it is made manifest. The stricken and maimed veterans to-day are living evidences of that struggle, and each should be, and is, a teacher of high patriotic endeavor. Material power gives greater pride in country, as well as larger influence amongst the nations of the world. A united country, with all its forces energized to their fullest capacity, develops stronger national spirit and will make more forceful our influence as a nation and as a people in impressing ourselves as a force in the world's civilization. With a divided country these great possibilities would have been stifled and great problems of government have been left unsolved.

Every power of the Government since the war closed has been strengthened and quickened. In national strength, since 1860, even excluding the cost of the war, it has increased in wealth exceeding 300 per cent, and in population exceeding 100 per cent. The conscience of the people has been more enlightened. At no time in our history has religion been so free or its influence so extended. Philanthropy has sought the most extensive fields for its generosity and munificence. Civic virtue is on a higher plane to-day than ever before. Education is more generally diffused and nowhere has its progress been so apparent in the last decade than in certain localities of the South. Although devastated by war, the South has been the highest gainer, as the result of the struggle, in all that goes to make a strong, free, and intelligent people.

There is no class of citizens to which the Government owes so great a debt of gratitude as to the soldiers of the late war. The veterans of that great Army that still remain are entitled to and deserve the consideration and regard of every citizen of the Republic. It was their valor and sacrifice that preserved and made permanent the nation. No true citizen can review those eventful years of our history without having his patriotism revived and his love of country strengthened.

We must and should do justice to the soldier and to those dependent upon him. Generous pension laws are already upon our statute books in their behalf. It is as to the interpretation and construction of these laws that complaint is made. A grateful people, as well as the Congress that enacted them, intended they should be liberally and fairly construed in the interest of the veteran. The purpose of the pending measure is to emphasize and make clear that intention. It is to clear the path for the honest and deserving, so they may be able to secure what the Government originally intended. It is to protect the pensioner under just rules of construction as well as procedure in their rights, after the claim has once been fairly and honestly adjudicated. It is to set at rest the apprehension, justly developed under the recent administration of this Bureau, that practically without warning the pensioner is stricken from the rolls without the right of adequate protection or defense.

I believe the sentiment of the country justifies, as well as demands, the legislation, and especially the provisions embodied in the fourth section of the bill, and I heartily give it my support.

Bankruptcy.

SPEECH

OF

HON. JOHN K. HENDRICK,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 1, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States.

Mr. HENDRICK said:

Mr. SPEAKER: I regret exceedingly that I am compelled, from a sense of duty, to vote against a bill which has been reported by a committee, the Judiciary, of such high standing in this House; but the duty which I owe to my constituents and the people at large impels me not only to withhold my support, but to oppose it strenuously and do all I can, in an humble way, to prevent its passage.

We may, I think, rely implicitly on the judgment of the people touching any public question when they have had a reasonable and fair opportunity to thoroughly try and test that question. I am a great believer in the wisdom of the people whenever they have time to investigate and consider dispassionately any question pertaining to the welfare of the country. If we test the bill now being considered by this rule, we certainly can not grow enthusiastic in its support unless we have forgotten our democracy and ceased to believe in or care for the right of the people to rule.

When it comes to governmental affairs, there are no higher or diviner rights than the rights of the people, and the man who accepts position at their hands and then ceases for one moment to be vigilant in their behalf is unworthy to represent them. Remembering these wholesome democratic truths, let us see what the people have said of bankrupt laws after having tried them time and again. It will not be denied that Congress has power, under the Constitution, to establish a uniform system of bankruptcy throughout the United States. This power has been exercised several times. On the 4th day of April, 1800, a bankrupt law was passed by Congress, which was repealed in December, 1803, having remained in force only three years and eight months. Thirty-seven years later, and after the people had forgotten the deleterious effects of the first act, another was passed August 19, 1841, but in 1843, within two years after its passage, its pernicious tendencies having been demonstrated, it was promptly repealed. The people having again, as we may justly suppose, forgotten their sad experience with the former laws, the third and last act was passed in 1867, and remained in force longer than either of its predecessors; but in 1878, eleven years after its passage and after the people had had ample time to ascertain its virtues, if it had any, it was also repealed. Are we to ignore all of this experience? If so, by what light shall our legislative steps be guided? Experience is a great school.

What would be thought of a farmer in the North who had attempted time and again to raise tropical fruits and plants, failing each time because of uncongeniality of soil and clime, if he should, despite his experience, continue annually to plant his hopeless crop? He would be regarded as a crank; and yet we are ignoring experience equally as patent, and claiming that we are engaged in wise legislation.

If the Republican party should propose the passage of another force bill civilized Christendom would laugh the attempt to scorn. The leaders of such a move would be looked upon as madmen. Why? Because the people, after much experience with such nefarious legislation, have condemned it in most positive and unqualified terms. Their condemnation of force bills, however, has not been more pronounced than their triple condemnation, if I may so designate it, of the bankrupt laws. If the people can not rely on their oft-expressed wishes to protect them from oppressive laws, what can secure or protect them from the whims and caprices of their Representatives?

There has been a great deal said during the progress of this debate about "the debtor class" and "the creditor class." That is all right. I have no desire, if I know myself, to wrong any class of my fellow-citizens. I am anxious to do my whole duty toward every class and every condition which may be affected by my acts; but if I am placed in a condition where I am compelled to select between two classes, I am dead certain to cast my influence on the side that needs my help. If it is true that we have two distinct classes in our land, known as the debtor and creditor classes, and I am compelled to choose between them, I do not hesitate to say that I am on the side of the debtor, because the very term shows that he is more likely to need my aid than the other. Strike out the involuntary features of this bill and I will support it as a measure to relieve debtors, provided corporations are excluded; but I can not vote for a law that permits a harsh, relentless, and sometimes cruel creditor to force his unfortunate debtor, against his will—involuntarily is the word—into bankruptcy. The Shylocks are not all dead; neither are the Antonios.

I desire to ask gentlemen who contemplate voting for this measure to consider the different causes under this bill which permit the creditor to pursue this relentless and pitiless course toward those who owe him. These acts of bankruptcy by a person shall consist of his having (1) concealed himself, departed or remained away from his place of business, residence, or domicile with intent to avoid the service of civil process and to defeat his creditors, and shall not have returned at least forty-eight hours before the filing of a petition in bankruptcy, and before the rights of creditors shall have been impaired, altered, or interfered with; (2) failed for thirty days and until a petition is filed while insolvent to secure the release of any property levied upon under process of law for $500 or over, or if such property is to be sold within such time under such process then until three days before the time fixed for such sale; (3) made a transfer of any of his property with intent to defeat his creditors and has not regained the ownership and possession of such property before the rights of creditors have been altered, impaired, or changed by reason of such transfer and at least ten days before the commencement of a proceeding in bankruptcy; (4) made an assignment for the benefit of his creditors or filed in court a written statement admitting his inability to pay his debts; (5) made, while insolvent, a transfer of any of his property or suffered any of it to be taken or levied upon by process of law or otherwise for the purpose of giving a preference, and has not regained the ownership of such property or released same from such levy before the rights of creditors shall have been altered, changed, or impaired by reason of such transfer, taking, or levy and at least ten days before the commencement of a proceeding in bankruptcy; (6) procured or suffered a judgment to be entered against himself with intent to defeat his creditors, and suffered same to remain unpaid until ten days before the filing of a petition in bankruptcy, provided that a payment or satisfaction of such a judgment by a sale of any of the debtor's property or from the proceeds of such a sale shall not be deemed a payment of such judgment under the provisions of this section; (7) secreted any of his property to avoid its being levied upon under legal process against himself and to defeat his creditors, and has not surrendered such property to such legal process at least ten days before the filing of a petition in bankruptcy; (8) suffered while insolvent an execution for $500

or over, or a number of executions aggregating such amount, against himself to be returned no property found, unless the amount shown to be due by such executions shall be paid before a petition is filed; or (9) suspended and not resumed for thirty days and until a petition is filed, while insolvent, the payment of his commercial paper for or aggregating $500 or over.

We have but recently passed through one of the most universal panics that ever blighted a country and paralyzed its business industries, and many of our people are now suffering from the accumulation of debts which they can not pay. If anybody is to be relieved by legislation, the debt-ridden classes certainly appeal to us most strongly and demand our first consideration, but, instead of pursuing a course which will relieve the unfortunate, we are absolutely devising new methods of oppression in favor of the creditor by attempting to put upon the statute books laws which will enable him to take his victim by force into the Federal courts and have him declared a bankrupt. I think the experience of my own State (Kentucky) is worth something on this point. In 1821, when the people were passing through a panic, the legislature of that State passed what is commonly known there as a stay law. Under this law no judgment could be rendered or execution issued against a debtor for the space of three years. This legislation proved to be an inestimable blessing to the poor, oppressed, and unfortunate debtors who were unable to meet the demands against them.

In 1837, when the people were suffering from another great panic, a similar law was passed, and likewise another in 1857. It will be noticed that these laws were only temporary; enacted for the purpose of bringing immediate relief to unfortunate people who could not meet their obligations. There is something admirable in these humane statutes, intended solely to give relief to overburdened, struggling humanity.

Contrast the pending bill with these relief statutes. The contrast is so great that it shocks our finer feelings. The Kentucky statutes indicate moderation, sympathy, humanity—this act indicates intemperance, avarice, relentlessness. Certainly this country has never suffered under a greater panic or one of longer duration than the one from which we are just emerging. If there ever was a time which would justify the passage of laws protecting the debtor, this is certainly preeminently the time, but instead we are placing bludgeons in the hands of those whom fortune has favored with which they may brain, so to speak, their less fortunate countrymen. Why should we pass laws to assist the rich? They do not need our help. They can help themselves. The man who is struggling for meat and bread for himself and family is the one who demands our careful, earnest, I might say prayerful, consideration. He is sinking and is calling to us. Let us in the name of humanity heed his cry.

You ask me if I would wrong the creditor. Of course I would not; but I had rather not be called on to help him when he does not need my help, if that call forces me to turn a deaf ear to the debtor by his side, who does need my aid.

The law as it now stands works no injustice to creditors. It permits them to contract as freemen, with their eyes wide open. If they have made bad contracts ought we to come as lawmakers to their assistance and enact laws which will enable them to harass debtors for the payment of debts made when there was no such law in existence? For one, I will not do it; and more than that, it is not right from a moral standpoint, I care not who indorses it.

I would oppose the bill, if for no other reason, because it enlarges the jurisdiction of the Federal courts to an almost incalculable extent. It converts them into debt-collecting tribunals in addition to the vast jurisdiction heretofore conferred on them by the Republican party. No man can believe in the principles of Democracy and give this bill his approval. One of the fundamental principles of Democracy is that the people are entitled to be tried before their local judicial tribunals. This bill virtually deprives them of that right. How can a Democrat vote for a measure which deprives a large class of the people—the unfortunate class at that—who are burdened with debt, from the right to be tried by the courts of their own State, where the people select their own officials, and where the juries are composed of their neighbors and acquaintances? If you desire to rob the State courts of their jurisdiction, why do you not proceed in a bold, manly way and not by covert and insidious measures like this? So far as I am concerned, I had rather take from than to confer additional jurisdiction on the Federal courts. I believe strictly in the doctrine of the Democratic party, which recognizes the sovereignty of the States and keeps the power in the people by permitting them to select their own officials.

The bill under consideration permits the creditor to force his unfortunate debtor into bankruptcy, and the more effectually to accomplish that purpose permits him to go into a Federal court, removed by the very mode of its creation from all interest in or sympathy for the people. We are told, however, that the bill not only forces individuals into involuntary bankruptcy but that corporations can likewise be forced into insolvency. How does that improve matters? If a robber takes my property, of what benefit is it to me to know that he has also taken the property of other people? Instead of that provision of the bill being a recommendation it is a further reason for my opposition to it. It is also insisted that another great virtue in the bill will be found in the clauses which make bankruptcy both voluntary and involuntary; that is, one may voluntarily become a bankrupt or be forced into it involuntarily, according to the fleetness of the contestants for the dubious honor. Of course, if the creditor is alert and gets the first start on his debtor in the Federal court and succeeds in obtaining a judgment declaring his victim a bankrupt, it is involuntary bankruptcy; on the other hand, if the debtor makes the first move, surrenders his property, and obtains a decree exempting him from his debts, it is voluntary bankruptcy.

Now, then, let us go back, as it were, resurrect some of our past experiences with corporations, and see whether or not this law will be a benefit or an injury to the people so far as it applies to corporations. I say without the least fear of contradiction that its passage will be a perfect boon to rascally corporations which wish to avoid or repudiate their debts. For example, let us review very briefly the history of the Union Pacific system of railroads. The Government, through the Republican party, donated to these roads the enormous amount of 89,000,000 acres of land and gave pecuniary aid by issuing bonds to the extent of $61,000,000, with the understanding and agreement that the interest on the bonds should be paid to the Government annually and at the end of thirty years the principal.

What has been the result? The interest has not been paid, the principal is now due and unpaid, and none of it, in my opinion, will ever be collected, while the people of the West and Northwest have been robbed in the way of freights and transportation to a degree that is wonderful, and at the same time the individual directors and incorporators have become enormously, if not alarmingly and dangerously, rich, because it is a menace to society and to the welfare of the people and republican institutions to have men rolling in untold millions which they acquired by dishonesty. Let it be borne in mind, too, that some of these incorporators have been proven beyond a reasonable doubt to be perjurers and criminals.

Here are the principal incorporators, with a recent estimate of their wealth, all of them being comparatively poor when the Republican party concluded to put the Government in partnership with them in the railroad business:

C. P. Huntington	$70,000,000
Mark Hopkins	30,000,000
Leland Stanford's estate	25,000,000
Charles Crocker	30,000,000
Total	155,000,000

Does any sane man believe that these men could have made that sum of money honestly, while the Government in the same enterprise could not collect even its interest?

Let it be borne in mind that the great Credit Mobilier scandal, swindle, and bribery grew out of some of these same corporations.

I am asked what connection these matters can have with the bill under consideration. It has just this much to do with it: I am not willing to give a corporation which is managed by such unspeakable wretches and scoundrels as these the privilege of taking the benefit of the bankrupt law. What if it is involuntary? How long would it take perjurers and thieves to concoct a scheme to put a corporation through the process of bankruptcy and swindle stockholders and creditors out of every dollar of their interest?

No, Mr. Speaker, none of it for me. Let others so vote if they will; but in my opinion the political party or the individual who does it will be repudiated by the people, and the repudiation will be right and proper.

We have been tauntingly told by the other side of the House that we are so divided that we amount to nothing but roving bands of political guerrillas, decimating our own ranks by our relentless factional fights.

I regret to say, Mr. Speaker, that we are divided, and that in our present condition we are not able to even check the Republican party in the enactment of vicious legislation. But let me say to our friends that notwithstanding the little family quarrel that is now on, all breaches will yet be healed, and the matchless party of the people, with "Equal rights to all and exclusive privileges to none" as its motto, will plant the banner of the people upon the breastworks of class legislation, trusts, and nurtured monopolies.

Bear with me for a moment while I review some of the past breaches and divisions in the Democratic party, for I think that our friends, the enemy, will fail to find a great deal of consolation in that review, if we may judge of the future by the past.

In 1835 the first breach or factional fight, so far as I now recall, occurred in the ranks of the Democratic party. One of these factions was called the Locofoco and the other faction was known as the Equal Rights Democrats. The bitterness between them was intense and widespread, and threatened to disrupt the party, but

the breach was finally healed, and the party was wiser and more vigilant of the interests of the people than ever.

In 1848 a second breach occurred, one faction being derisively called the Barnburners, the other the Hunkers. The fight between these two factions was extremely vindictive, and resulted in the defeat of the party and the election of General Taylor, a Whig, to the Presidency. This chastisement proved beneficial to the party for a number of years.

In 1860 the third great division in the party occurred, and we all know the sad result of that disagreement.

Now, let me remind the authors of this bill that notwithstanding the lamentable internal strifes, that we are here to-day alive and kicking, a little disfigured, but still in the ring, battling for the rights of the people, for constitutional government, for equality before the law against the party of high taxes, monopolies, trusts, force bills, bankrupt laws, and extravagant expenditures of the public money.

Let me say in conclusion to the gentlemen who are now chuckling over our dissensions, that they may take warning from the past history of our party, because a recitation of the past may prove to be but a prophesy for the future, and while they are pondering over the result of our past divisions, it would be well enough to remember that the Federalist party, which originated the first bankrupt law, has long since departed this life, and the Whig party, who were responsible for the second, have long since gone to that bourne from whence no political party returns, and the Republican party may profit by their example; remembering always that the principles of Democracy are immortal, and if you defeat us this year the party will not die, but will come smiling to the scratch on the next battlefield, rejuvenated and invigorated by the very chastisement it may receive.

The Financial Policy.

SPEECH
OF
HON. WILLIAM V. ALLEN,
OF NEBRASKA.

IN THE SENATE OF THE UNITED STATES,

Thursday, April 30, 1896.

The Senate having under consideration the bill (H. R. 7542) making appropriations for the naval service for the fiscal year ending June 30, 1897, and for other purposes—

Mr. ALLEN said:

Mr. PRESIDENT: Yesterday the Senator from Maine [Mr. HALE], who has this bill in charge, admonished the Senate that the discussion had drifted from the pending amendment and had gone into the field of party politics. It is my purpose to discuss the amendment as thoroughly as I can in view of the fact that I am not a member of the Committee on Appropriations or a committee having charge of an appropriation bill, and I shall embrace the opportunity to discuss it in all its features and consider all the facts that may properly enter into the discussion.

I have been greatly interested in the discussion that has extended over the last two days, especially that part which was precipitated by the senior Senator from Ohio [Mr. SHERMAN], and participated in by the senior Senator from Colorado [Mr. TELLER], and the senior Senator from Maryland [Mr. GORMAN], because it disclosed to the country a thing that has been obscured as far as political action can be obscured, that the issue the people are to be confronted with in the approaching campaign is the old issue of tariff rather than that of financial reform, if the two old parties can frame the issue on that line. The Senator from Maryland has stated in substance, not perhaps in words, that it is the purpose, as he believes, of the Republican party, as represented here, to make large present appropriations and authorize large contracts to meet which appropriations will be required at the second session of this Congress or by another Congress, as an excuse for the enactment of a tariff law based on the principles of the McKinley Act. If the statements of the proposed appropriations which are being presented to us are correct, that would naturally and necessarily result.

One feature of the bill is the proposition to make an appropriation of something like $28,000,000 for the construction of four battle ships in addition to the ordinary naval appropriations amounting to $29,000,000 annually. The Senator from Maryland [Mr. GORMAN] has moved to amend the bill as reported by the Committee on Appropriations by striking out two battle ships, so that we will be required to construct only two, while the junior Senator from Pennsylvania [Mr. QUAY] has moved to amend by requiring the construction of six instead of two. If the amendment offered by the Senator from Pennsylvania shall carry, we will be put in the attitude, so far as this item for battle ships is concerned and so far as this branch of the naval appropriations is concerned, of appropriating $29,000,000 for ordinary naval purposes and making $2,000,000 more immediately available for beginning the construction of battle ships, which, when completed, will cost the Government all told $40,000,000. So we will have $69,000,000 appropriated and contracted for under this bill.

The question which presents itself to me most forcibly in considering this question is whether there is any urgent necessity for this appropriation. Certainly the financial condition of the country will not warrant it, and it should not be made unless there is an immediate demand to prepare ourselves for contemplated or actual war or for the protection of our coasts and commerce.

Mr. President, when I first came into this Chamber I looked on all discussion that took place here as serious, but I have gotten over that to a very great extent. I have long since learned that many, very many, discussions are precipitated solely for the entertainment of the people who are supposed to read the proceedings of Congress, in the press or the RECORD; that the debates amount to no more than a play between the two dominant parties, or the two great political parties, as they are pleased to call themselves; that they consist largely in sparring for political points, in maneuvering for party advantage, and there are no benefits resulting from them. That seems to be the purpose of the discussion that has sprung up here over this amendment.

When Congress convened in December last, the Democratic and Republican parties were in need of campaign material. The Republican party had been defeated in 1892 by an overwhelming majority. It was and is resting under a cloud cast over it by that defeat. It was struggling to reinstate itself to public favor and, of course, was bent on making all the campaign material possible in Congress to enable it to advance its interests in the coming national campaign. The Democratic party, which, in 1893, for the first time in thirty years, had come into power in the legislative and executive branches of the Government concurrently, and which had brighter prospects than any political party has had in many years, had shown itself—I will not say incompetent, but inadequate to meet the expectations of the people and fulfill its promises.

When this Congress convened, therefore, it was necessary for these two parties to have something more than the tariff to discuss. It was necessary for them to have something more than the issue of financial reform, for that issue belongs to the Populist party, and if the attention of the people should be seriously directed to it there would be a sloughing of Democrats and Republicans, who would naturally land in the Populist party. Therefore, during the first few days of the present Congress, various resolutions were introduced in the Senate and discussed by Democrats and Republicans as respects the policy that should be pursued by the Government as to the Monroe doctrine, and especially the policy that should be pursued in respect to the Island of Cuba. Ringing speeches, jingo speeches, if you see proper to call them such, and I myself see no objection to proper jingoism, were made on these subjects. The country was given to understand that we were liable to be precipitated into serious difficulty with Great Britain as to the true boundary line between Venezuela and British Guiana.

The President, as the head of his party, was not to be outdone in this game of party politics. The attitude of the President and the Republican Senators remind me very forcibly of the story Artemus Ward used to tell of one of his creditors. He said he had loaned a friend $100 when he was in distress, and that, after a time, being sorely pressed for money, he ventured in a gentle way to remind him that he would like payment. The friend told him a pitiful story of poverty, and said he did not have the money, and could not pay him. "So," said Artemus, "I thought I would relieve him of his distress, and in a spirit of generosity I told him I would throw off one-half if he would pay me the other half." Moved to tears of joy, his friend brightened, and, taking him by the hand, said: "Old horse, I will not be outdone in generosity by you. I will throw off the other half." [Laughter.]

Mr. President, when the Republicans began the introduction of resolutions on the subject of a strong foreign policy, for the purpose of diverting public attention from the financial and industrial conditions of the country, the President, as the head of a great political party, was not to be outdone by them "in generosity," and therefore he gave us his Venezuelan message of the 17th of December. I do not believe there is a citizen of the United States who believes, or who has ever believed there was the slightest likelihood of a conflict between Great Britain and this country over the boundary between Venezuela and British Guiana, or, for that matter, over any other question. It was simply one of those party plays for party advantage that are frequently indulged in here.

Mr. President, my position, as I assert it here, is capable of proof beyond a reasonable doubt, and that is the quantum of proof required to convict a man of crime in this country. On the 17th of December last the President sent to Congress his Venezuelan message, which called attention to the established doctrine of preservation of American soil for American Governments, known as the Monroe doctrine. On the 20th of that month, three days later, there was a financial panic in London, precipitated, so it was

said in British papers and in our own, by the Venezuelan message. American securities were thrown on the market at a discount by hundreds of millions. On the 21st of December, four days after the Venezuelan message, we experienced a panic in New York, a sympathetic panic, as a result of the one in London. Here were relations so intimate between the lords of finance in London and the lords of finance in Wall street, who are in partnership in all financial transactions in this and other countries, that the simple statement of the President that we would maintain the Monroe doctrine by force of arms, if necessary, precipitated a panic in both countries. I have stated repeatedly in this Chamber, and especially three years ago, that there was a money power in Lombard street, London, and Wall street, New York, that controlled the affairs of this and other nations, and here is evidence conclusive of the fact.

I used to be sneered at for making this assertion, and yet it has been quite a common thing during this Congress for Republican and Democratic Senators to refer to a great money power that controls the affairs of the British Empire and the United States. What more conclusive evidence could be demanded that British gold controls the legislation and the administration of this nation than that which is to be found in those panics occurring in London and New York almost simultaneously and sustaining a sympathetic relation with each other?

Mr. President, I have preserved the evidence of the panics, and, at the risk of being somewhat tedious, I think it proper for me to call public attention to it. I will read from the New York World of December 21, 1895:

A dismal Friday in Wall street—Real fright among security holders at the unreal specter of war over little Venezuela—Stocks and bonds fell $350,000,000—The scare was caused by European selling of American securities and by alarm over our loss of gold—Five firms fail—Executive message came after market closed—

This refers to the message of the President which we received but a few days after the first message, and which was intended to allay suspicion of war—

In five hours of business all active stocks had fallen from 2 to 20 points—A memorable day.

And the article proceeds to give a detailed account of the scene in Wall street and on 'Change at the time of the panic.

I desire to embrace in my remarks a clipping from the New York World, giving details of the loss that was sustained in New York on the 21st of December as a consequence of the panic, amounting to about $357,000,000 in round numbers:

WALL STREET'S SHOCK COST $357,795,245—DETAILED STATEMENT OF THE DECLINE IN MARKET VALUES OF AMERICAN SECURITIES IN FOUR DAYS SINCE PRESIDENT CLEVELAND'S MESSAGE WAS ISSUED.

Total apparent decline in four days in stocks and bonds alone				357,795,246

Mr. President, this establishes, if proof were lacking, that there is a strong bond of sympathy between the money power of London and New York, a thing which has been denied in the press and in Congress and in other quarters until very recently. Here is proof as strong as Holy Writ not only of the existence of this power but of an alliance between its European and American branches. In my judgment, the evidence is sufficient to prove to the mind of any fair-minded man the existence of a money power that controls the conduct of this nation.

But, Mr. President, this is not all the evidence. Look for a moment, if you will, at the insincerity of the claim that this nation was liable at the time to be precipitated into war with Great Britain or with Spain. Within twenty days from the time the President told the world that we were ready to muster our Army and Navy to fight Great Britain for the Monroe doctrine as applied to the dispute over the boundary between Venezuela and British Guiana the Secretary of the Treasury issued a call to borrow $100,000,000 of British gold. We were, in fact, placed in the humiliating attitude of borrowing $100,000,000 of British gold to fight our prospective battles with that country. Mr. Carlisle, without a shadow of authority, as has been repeatedly shown in this Chamber, and as has been announced by Republicans and Democrats as well as Populists, issued a call for a one-hundred-million-dollar loan in gold, basing it upon the provisions of the resumption act of 1875, which was repealed by fulfillment, and expressly and directly repealed by the act of 1878.

Mr. President, Mr. Carlisle was negotiating with the agents of the Rothschilds, who dominate the financial affairs of Great Britain, for this loan at the precise moment the President was writing his Venezuelan message. At one and the same time the agents of this country were negotiating with this English money power for a loan of $100,000,000 of gold, and the President was launching his Venezuelan message upon the country. Can any man doubt, under such circumstances, that an intimate relation exists between the money power of Great Britain and the money power of this country? Can any man who is sane and at the same time honest doubt that this combined power controls the actions of the Chief Executive, as it does the decisions of the Supreme Court and the legislative branch of the Government?

Sir, in a little over one month and a half from the time we received the Venezuelan message of the President, the Secretary of the Treasury sold bonds to the amount of $100,000,000, and more than one-half of that amount went to the representatives of the English money power. We recall with vivid recollection the charges that were made of speculation in the bonds. The same contract in substance was entered into with J. Pierpont Morgan, as a representative of the English money power, for the sale of these bonds that had been entered into before, and it would have been carried out had not two great newspapers called attention to the fact to an extent and in such a manner that the President and

the Secretary of the Treasury were compelled by force of public opinion to make it a quasi public loan—a public loan that put the bonds on sale at a few places in the United States; and when, under the charges made by these great newspapers and under the searching light of criticism of the action of the Treasury Department, the bonds brought more than they were to be contracted to the English syndicate, the President and the Secretary felicitated themselves—not the country—on the success of the "popular loan." We have been told, and the country will be told this fall, that it was a popular loan. It was in no sense a popular loan. It simply compelled the representatives of the British money power to go, not to one point in New York or in Washington, but to a few points in the country to accomplish the same result. They got the bonds, or the greater portion of them.

Here, Mr. President, was the singular spectacle of Great Britain purchasing the bonds of the United States and paying out gold for them within a very few days of the time the President was menacing a declaration of war against her for the invasion of American rights.

Sir, does any man suppose, is there a sane human being upon the face of the earth who supposes, with these facts before him, that there was the slightest likelihood of war with Great Britain, or that there is now the slightest likelihood of war? Mr. President, our financial and commercial relations are so closely allied with those of that nation that there is scarcely any conceivable circumstance under which the one could be provoked to declare war against the other; and yet, for the purpose of putting a burden on the people, and for the purpose of further mortgaging the future and increasing the burden of taxation that rests so heavily on the backs of our laboring and producing classes, we are to have six great battle ships to defend ourselves against Great Britain!

Mr. President, I am not insensible of the defenseless condition of our coasts. I am not insensible of the necessity of having a respectable navy and adequate coast defenses; but when we are about to engage in a lavish expenditure of public revenue we should have the money within our call, or be able to secure it by a reasonable effort, and not by onerous and unjust taxation.

By the recent unwarranted action of public officials we have been placed in a position where we are necessarily compelled under our form of government to increase our taxation. I am not, so far as I am concerned, and so far as the party is concerned which I have the honor to represent in part in this Chamber, opposed to necessary and proper taxation. I am not opposed to a standing army sufficient for the preservation of a great nation like this. I am not opposed to proper coast defenses and an adequate navy; but I am opposed to those things that are unnecessary, and especially until the Government comes back to the principles recognized by the fathers and embodied in the Constitution, and the people are afforded, by an increased volume of money, an opportunity to pay taxes adequate to the just demands of the Government.

We have repeatedly heard our Republican and Democratic friends affirming on the one side and denying on the other, the one alleging that the other is responsible, and the other denying its responsibility, for the present condition of the country; the one affirming that the prosperity of the country will be found only in increasing the burden of taxation, and the other asserting that it will be found in lightening the burden of taxation and opening up the great avenues of commerce, whatever that may mean. It is quite a common thing in the Senate for our Democratic friends to charge the Republican party with the responsibility for the present condition of the Treasury, and it is an equally common thing for our Republican friends to say to the Democrats, "You are responsible for it."

The senior Senator from Ohio [Mr. SHERMAN] said yesterday, and he has made the assertion very frequently, that if the Wilson bill had carried a higher rate of taxation, a rate sufficient to supply the Treasury with the necessary revenue to meet the current expenses of the Government, the Democratic party would not have been compelled to issue bonds in time of peace.

Mr. President, the issuance of Government bonds in times of peace is a policy that has been encouraged by both parties, and I have not the slightest doubt that, with some noble exceptions on both sides, there is a perfect understanding between the leaders of the Republican and Democratic parties (not confined to this Chamber, but existing throughout the country) that a policy shall be pursued that will result in a perpetual interest-bearing national debt.

What was the condition of the Treasury as respects the issuance of bonds when the Harrison Administration went out of office on the 4th of March, 1893? It is a very common thing to read in the press and hear statements here and elsewhere that the Treasury was solvent, and that, under the beneficent influences of the McKinley Act, there would have been no necessity for the issuance of Government bonds. The initial step in the issuance of Government bonds was taken by the Republican party just prior to Harrison's retirement from the Presidency. I took occasion recently to address a letter to the Secretary of the Treasury to ascertain the fact, and in reply I received from him this letter:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., December 13, 1895.

SIR: Your favor of the 11th instant, in which you state that the assertion has been frequently made in the public press and elsewhere that just prior to the time when President Harrison retired from office my predecessor, the Hon. Charles Foster, was negotiating with a financial syndicate for the sale of Government bonds, and that the bonds had actually been engraved, and asking me for information upon the subject, is received, and in response I have the honor to say that I have no official information concerning any negotiations that may have been pending between Secretary Foster and others, but the records of this Department show that on the 20th of February, 1893, he issued an order to the Chief of the Bureau of Engraving and Printing, directing that officer to prepare designs for 3 per cent bonds, which had been provided for in a Senate amendment to the sundry civil bill then pending in Congress.

An amendment, by the way, that had been offered by the senior Senator from Ohio [Mr. SHERMAN].

A copy of the order is herewith inclosed, together with a copy of the recital which was to be inserted in the bonds.

Very respectfully, yours, J. G. CARLISLE, *Secretary.*

Hon. WILLIAM V. ALLEN,
Senate Chamber.

And here is the direction of Secretary Foster to the Chief of the Bureau of Engraving and Printing:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., February 20, 1893.

SIR: You are hereby authorized and directed to prepare designs for the 3 per cent bonds provided in a Senate amendment to the sundry civil bill now pending. The denominations which should first receive attention are $100s and $1,000s of the coupon bonds and $100s, $1,000s, and $10,000s of the registered bonds.

This authority is given in advance of the enactment, in view of pressing contingencies, and you are directed to hasten the preparation of the designs and plates in every possible manner.

I inclose a memorandum for your guidance in preparing the script for the body of the bond.

Respectfully, yours, CHARLES FOSTER, *Secretary.*

To the CHIEF OF THE BUREAU OF ENGRAVING AND PRINTING.

WASHINGTON, *April 1, 1893*—

Just a little over a month before Harrison's retirement from the Presidency——

Mr. ALLISON. Give the date again, please.

Mr. ALLEN. It is evidently a misquotation. It is "April, 1893." This is the direction of Secretary Foster respecting the recital in the bonds:

This bond is issued in accordance with the provisions of section — of an act entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1894, and for other purposes," approved March 3, 1893, and is redeemable at the pleasure of the United States after the 1st day of April, A. D. 1898, in coin of the standard value of the United States on said March 3, 1893, with interest in such coin from the day of the date thereof, at the rate of 3 per cent per annum, payable semiannually on the 1st day of October and April in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

I think this conclusive evidence that the statement we hear so frequently that the Republican party was not in a condition, during the late Administration, to compel it to issue bonds, while true in form, is in fact and substance false. I call the attention of the Senate again to the significant language of Mr. Foster, in his letter to the Chief of the Bureau of Engraving and Printing:

This authority is given in advance of the enactment, in view of pressing contingencies, and you are directed to hasten the preparation of the designs and plates in every possible manner.

Why the necessity of directing the Chief of the Bureau of Engraving and Printing to engrave the bonds in advance of the passage of a law authorizing their issuance? What urgent contingency was pressing upon the Treasury Department? There had been deficits in the revenues under the McKinley Act, the limit of the gold reserve had almost been reached, and unless the bonds should be authorized or the Secretary of the Treasury should pursue the course of his successor in issuing bonds under an act that had been repealed, the Treasury would be practically bankrupt. In fact, it would have been under President Harrison if his Administration had not ended just at the time it did.

And you are directed to hasten the preparation of the designs and plates in every possible manner—

Says Mr. Foster. Mr. President, it was urgent. The circumstances were such as to require great haste on the part of the Bureau of Engraving and Printing. Our Republican friends do not want the country to know this truth. They want to keep the people in ignorance of the fact that the McKinley Act was a complete failure as a revenue producer. It was not enacted in the interest of the masses. It was the compilation of the manufacturers in their own interest and not the handiwork of Mr. McKinley.

So much, then, for the attitude of the Republican party as respects the Treasury at the close of the Harrison Administration. The people will not be deceived respecting the truth of this matter. There had been no extraordinary expenses thrown on the Government. It is true that Mr. Harrison had taken something

over $200,000,000, found in the Treasury at the close of Cleveland's former Administration, and bought bonds at a premium of about $26,000,000. But that will hardly be claimed to be creditable financiering. It may have hastened the condition of affairs I have described, but aside from that there had been no extraordinary drain on the Treasury, nothing more than the usual expenses of the Government. And yet the McKinley Act failed utterly to produce the necessary revenues to pay the expenses, and Mr. Foster, as the chief financial officer of the Government, was put to the necessity, just a few days before the inauguration of Mr. Cleveland in 1893, of giving directions to the Chief of the Bureau of Engraving and Printing, in anticipation of the passage of a law authorizing the issuance of 3 per cent bonds, to speedily engrave bonds. These bonds were to be issued for the purpose of obtaining money to conduct the ordinary expenses of the Government. Although the McKinley Act is declared by its supporters to be the most perfect act of protective legislation the country has ever seen, it is a notorious fact that it failed to produce the necessary revenue, and therefore the Republican Administration was on the verge of bankruptcy and a great and pressing necessity existed for the issuance of bonds.

It will not do for our Republican friends to say, because Mr. Harrison passed out of office without in fact issuing bonds, that therefore their party is guiltless. If Mr. Harrison had remained in the Presidential chair until the 1st of May, 1893, he would have issued bonds. It was an open secret that Mr. Foster had been in New York but a month or two before the inauguration, had called together Mr. Williams and other financiers of that city, and had formed a syndicate to purchase the bonds that were to be issued; and there was an evil rumor attached to the transaction that Mr. Foster was to be the recipient of profit from the syndicate. Of that, however, I know nothing and I care nothing.

Mr. PLATT. Mr. President——

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Nebraska yield to the Senator from Connecticut?

Mr. ALLEN. Certainly.

Mr. PLATT. Does the Senator from Nebraska state that there was any such rumor or statement as that made anywhere?

Mr. ALLEN. I do say that such a statement appeared in the press.

Mr. PLATT. If so the Senator ought to give his authority. I never heard of such a statement.

Mr. ALLEN. We read a great many things that we can not give authority for. I can not give authority further than to say that I read it in the press dispatches. There was a rumor at the time; I remember it distinctly. I want the Senator to understand, however, that I am not making this as a charge. I said that I did not make it as a charge, but I remember distinctly at the time reading in the press dispatches that it was said that Mr. Foster was to share in the profit of the syndicate, and that the profit to the syndicate would amount to two and one-half million dollars.

Mr. ALLISON. I think in a charge of that sort the Senator ought to be able at least to produce the newspaper at some time—I do not mean just at this moment. I confess I never heard such a statement before, and I am a reader of newspapers.

Mr. ALLEN. I speak of what I read in the press dispatches. I said to the Senate that I did not make a charge of that kind, and I do not make the charge. I read a great many things, as other Senators do, in the newspapers every morning, and I can not tell the next day in what paper I read them. But I did not suppose there was any doubt of the fact that the statement was made in the press. Whether it is true or not I do not know, and I do not care for it one way or the other.

Mr. President, that was the condition of the Republican party in respect to this bond question when Mr. Harrison went out of office and Mr. Cleveland came in. I am not speaking as the political friend of either, and therefore I think I can do as much justice to one as the other.

Now, what was the condition thereafter? Shortly after Mr. Cleveland came into office it became apparent that, under the operations of the McKinley Act—which continued in force until the 28th of August, 1894, a year and a half—the gold reserve would be trenched on to meet the ordinary expenses of the Government, unless some method could be devised to raise revenue.

Mr. HILL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from New York?

Mr. ALLEN. Certainly.

Mr. HILL. As the Senator from Nebraska is speaking upon the bond question, and as it is now 2 o'clock, I suggest that the unfinished business ought to be laid before the Senate in order that he may speak upon that resolution.

Mr. ALLEN. I am not speaking on the bond question, except incidentally.

Mr. HILL. What has become of the bond resolution?

Mr. ALLEN. I have not seen the bond resolution since the exploitation of the Senator from New York for several days talked it out of sight.

The PRESIDING OFFICER. The Chair understands that, by unanimous consent, the bond resolution was temporarily laid aside until after the passage of the pending appropriation bill. Hence the Chair did not lay the unfinished business before the Senate at 2 o'clock, as is usually done under the rule.

Mr. ALLEN. Mr. President, all these subjects enter into the question whether or no we are to appropriate $40.000,000 extra at this time. I heard the Senator from California [Mr. WHITE] a few moments ago speak of $300,000,000 as necessary for our coast defenses as though that were a mere bagatelle. We are required to determine whether the country is in a condition, or can be put in a condition, to make such an appropriation under the legislation enacted by either of the two great political parties, as they repeatedly and with seeming delight call themselves, or under any legislation that they are likely to enact.

Now, then, returning to the question of issuing bonds. The McKinley Act of 1890 had proved to be an absolute failure. It was Republican legislation. It was the child of Republicanism. Its parentage can not be denied. It was held up to the country, and will be held up this fall, as the greatest act of tariff legislation in the history of our country.

The Government had run a few months under Cleveland's Administration, until February, 1894, when the Secretary of the Treasury (whether or not he was directed to do so by the President, I do not know, but his act certainly received Executive sanction in some way) issued $50,000,000 of bonds to borrow money. The money was borrowed and placed in the Treasury. Possibly I will be corrected here again and be told that I ought not to make the statement, but I have been told by reliable authority that of the first $50,000,000 of bonds that were issued and sold for gold, as the country supposed, but a little over $13,000,000 of gold reached the Treasury. I do not know whether this is true or not. I give it as I got it, for what it is worth.

Where was to be found the authority of the Secretary of the Treasury to issue bonds? It might be supposed from what we hear in this city—at the Departments and in Congress—that all we need is a President and a Secretary of the Treasury, and the bonds and money will come as speedily as they can issue bonds. I have supposed until this time, and I am yet inclined to believe, that, when an agent, great or small, undertakes to bind the principal for whom he acts, he must have some authority in the form of a statute, if he acts for a sovereign power, or in the form of a power of attorney in the case of a corporation or private individual. Yet we are told by Democrats and by Republicans, too, that there is no limit to the power of Mr. Carlisle to issue the bonds of the Government and engulf this nation in a debt that can not be paid in a hundred years, if he shall see fit at his caprice to do so.

Another $50,000,000 of bonds were issued under the same pretended authority, that of the resumption act of 1875. There was still another issue of $62,000,000. All the money that came into the Treasury as a result of these issues was wiped out almost by a single touch of the wand of the gold power. Then we have had an issue of bonds since the beginning of the present year of $100,000,000. And now we are told, as though it were something to gloat over, as though it were something to be proud of, that there is $170,000,000 surplus money in the Treasury, that we must get rid of this surplus by appropriating it for the construction of battle ships, and that we must devise other schemes and methods of reducing it. Yet it was confessed, if I remember rightly, by the distinguished Senator from Maryland [Mr. GORMAN] but a day or two ago that we are in default over $100,000,000 for current expenses, which we must pay.

Sir, the money is not to be applied to the payment of our bonded or unbonded debts. Our debts are to be permitted to accumulate, and we are to take this surplus money, borrowed by the issuance of bonds without authority and that must ultimately be paid by the sweat, if not the blood, of our people, and invest it in great battle ships that will give the Carnegie Works and the Bethlehem Works an opportunity to make more money out of the Government, when there is not the slightest possibility, as I have already shown, of a war between this country and Great Britain or any other power.

Mr. President, the bonded debt of this country has been increased within the last two years, under the Cleveland Administration, to the extent of $263,000,000 in round numbers. Two hundred and sixty-three million dollars have been placed on the farms and homes of the industrial classes as a great mortgage that we might obtain gold to satisfy the appetites of the shylocks.

We have been told, and we will be told, that it is necessary for us to do this because we are on a gold basis. Mr. President, we are not on a gold basis, except by the mere arbitrary construction of the Treasury Department. We have in round numbers $500,000,000 of Treasury notes—greenbacks and notes issued under the Sherman Act—that are legal tenders, every dollar of which by ex-

press law is redeemable in silver as well as in gold. There is a positive command on the part of Congress in the form of a statute that these notes shall be redeemed in coin, and yet, because the money power of Lombard street and Wall street says to our officers, "You must redeem these notes in gold," they openly, flagrantly, dogmatically, persistently, and without reason violate the statute and comply with the request of the shylocks, and, by that means, and that alone, we are placed on a gold basis.

Sir, suppose Mr. Carlisle had obeyed the provisions of the Sherman Act and the acts preceding it, and had redeemed the greenbacks and the Treasury notes in coin, in silver coin and gold coin, according to the condition of the Treasury, how frequently would these shylocks, who are engaged in looting the Treasury from month to month, have presented the notes for redemption at the Treasury Department? They would have tried the experiment once only, and then they would have ceased.

No, Mr. President, this Government is bound hand and foot by the gold power of this country and Europe, and any man who stands in this Chamber and asserts the doctrine which I do must understand well that he does so at the peril of certain political death, for Shylock will spend his money lavishly to defeat such a man.

Mr. President, you can find the gold shylocks and their agents in this Capitol building from the opening to the closing of every session of Congress. Their faces are as familiar as are the forms of birds of passage. They are here to buttonhole Senators and Representatives, to cajole, to threaten, to do worse if they can, in upholding their peculiar views of the financial policy the Administration and Congress should pursue. It makes no difference to them that the Constitution recognizes silver as money. It makes no difference to them that our highest officers have stood in the presence of thousands of their fellow-citizens and with raised hands and bowed heads have taken an oath before heaven to observe and uphold the principles of the Constitution of the United States. It makes no difference to them that the Constitution puts gold and silver on terms of equality and recognizes them both as money. They would destroy all these for their own advantage, and require the highest officers of our nation to bow in meek submission to their demands.

Now, sir, who established this bond and gold policy, if it rises to the dignity of a policy? Here appear the two old political parties on the scene. Who established the exclusive redemption of legal-tender notes in gold? During Harrison's administration this question was mooted in New York. A construction of the act of 1890 had not been given, however, and Mr. Harrison, seeking to succeed himself to the Presidency, gave a hint to Wall street and to Lombard street that he purposed seeing that "every dollar was as good as every other dollar"—meaning that the Government would go to a gold basis. He is the author of that expression. What did he mean? He meant that he had accepted the Wall street theory of financiering; and that silver was to be treated as a mere commodity, to be estimated and measured by gold, and therefore be depreciated.

More than this, Mr. Foster, at the time to which I am referring, when the syndicate was formed to take the bonds which he was preparing to issue, gave the bankers to understand that he would redeem the notes exclusively in gold and would accept their interpretation of the statute. And he did so. Mr. Carlisle, when he gave to the act of 1890 the construction which he is following to-day in violation of every principle for the construing of statutes—there is not a court of any intelligence or integrity in the United States that would construe the act as he has construed it—was but following the example set by his Republican predecessor. This proves, if the country needed proof, that there is no distinction between Republicanism and Democracy. It is proper, Mr. President, that I should make some exceptions, and I want it distinctly understood, if I do not mention it at length, that I do except the silver Democrats and silver Republicans, who have proved themselves to be patriotic citizens. But there is no difference between the power that moves the Republican party and the power that controls that part of the Democratic party that occupies the White House and the official positions. Both hold to the doctrine that gold shall be what they call the "standard of value."

It would take too long, and it would be tiresome to the Senate, to the country, and to myself, to consider the various subterfuges that are offered from time to time on the question of silver; therefore, I shall merely refer to the matter at this time. I heard the senior Senator from Ohio [Mr. SHERMAN] yesterday use one of these subterfuges in speaking of a 50-cent dollar. Mr. President, I do not believe that any really sane man, who speaks his convictions, ever thought there was such a thing as a 50-cent dollar. I do not believe that any intelligent man will assert that a dollar in this country is composed of anything less than 100 cents. It makes no difference what the material, it takes 100 cents under our system to make a dollar, whether of gold, silver, or paper. The senior Senator from Ohio, and others thinking as he does, who use the expression "a 50-cent dollar," might say with as much consistency that there is a white blackbird, or that 90 degrees form a complete circle, or that perpetual motion has been established.

I shall not go into that feature of the question, however, but I desire to demonstrate that there is no distinction between the moving power of the Republican party, and the moving power of that part of the Democratic party now in control of the Government, in the interpretation of our statutes so as to make all forms of our paper money redeemable in gold.

What effect has this? Why, it forces the Government to issue bonds; that is its purpose. That is the purpose that receives support from both the old political parties. You can see this purpose manifest in the gold press, in the daily press, the weekly press, and in magazine articles. The time has come, they say, when the United States, like England, must have a perpetual national debt; and, with a perpetual national debt in the form of bonds, we will hold the country together when all other things fail. The capitalistic classes must have something in which to invest their surplus money. Therefore the scheme has been started, prompted and promoted by both old parties, to engulf this nation in a perpetual national debt, resting as a mortgage upon the property and industry of our producing classes.

Mr. President, can it mean anything else? Why, sir, it means even more. It means another conspiracy to transfer for all time the sovereign power to issue money from the Government, where the Constitution placed it, to the hands of the national banks. Mr. Cleveland said in his annual message to Congress, and it was repeated by Mr. Carlisle in his report as Secretary of the Treasury, that what we must do is to divorce the Government from the issuance of any form of paper money and turn over that power wholly to the national banks. Has any man ever been able to tell why the Government's sovereign power to issue money should be abandoned and a few private corporations be permitted to usurp it? No, sir; it was conferred on the Government by the Constitution for the benefit of the people for all generations of our national existence, and there never was the slightest thought of transferring it to private corporations until the exigencies of our recent civil strife seemed to make it temporarily necessary. The author of the scheme declared that it was a temporary expedient; that it was a war measure, and that, when the war was over, it would pass away and the right to issue money would revert to the Government, where it belongs.

Has there ever been any attempt on the part of the Government to retire the national-bank currency? Not the slightest. The Republican party has not dared to incur the enmity of the national banks. The Democratic party has not dared to incur their enmity. The representatives of these parties standing in this Chamber and in the other branch of Congress, do not lift their voices against the usurpation of power on the part of national banks, and the abandonment of the Government's right to issue money, simply because they fear the national banks and their influences in the politics of the country. An illustrious President of the United States, the head of the Democratic party, declared not many years ago that the national bank was unconstitutional. What has become of that declaration? We never hear it quoted by Democratic statesmen nowadays. We never see it commended in the Democratic press, for the power that influences the action of the modern statesman also controls the press.

What does a gold standard mean? It means the issuance of more bonds and the extension and enlargement of the power of the national banks. What did the senior Senator from Ohio [Mr. SHERMAN] mean two years ago when he stood at his desk in this Chamber and, referring to our different forms of paper money, say that we had practically $900,000,000 of unsecured indebtedness, which we would have to secure by bonds or in some other way before a great while? What did he mean but to inform the country that he, as the leader of his party, was committed to the doctrine of putting an interest-bearing gold bond behind every dollar of our paper money, and that no form of paper money should be redeemed in silver, the coin of the Constitution?

Mr. President, is anything further needed in support of the assertion that the two old parties are united in a conspiracy to bring this country to a single gold standard? Why, sir, not over five weeks ago the national bankers held a meeting in New York, I think, composed of Democrats and Republicans alike. I remember having talked with one of them on his return from the meeting. He said to me, and he did not seem to think that he was conveying any news, that they fully indorsed the policy of the President and the Secretary of the Treasury in their efforts to retire all forms of paper money and to issue bonds for that purpose. Not only that, but he said further that the National Bankers' Association had declared that they would use every influence within their power to control the delegations to the Republican and Democratic national conventions this year; that they had declared it openly and in writing.

It seems to make no difference whether the national banker is a

Republican or Democrat, according to the resolutions of the association. The bankers propose to control the action of both the Democratic and Republican national conventions on the financial question in the interest of the single gold standard. They propose to use for political effect the power which they possess over the patrons of their banks. What does this radical action mean? It means, among other things, that the delegates who are chosen to the national convention of the Democratic party are, if possible, to be debauched in the interest of the single gold standard by the organized national banks of the country. It means the same thing as respects the delegates to the Republican national convention. It means that public sentiment is to be stifled by the purchase of delegates with gold, if necessary, and that this great selfish interest is to spread like an octopus over every section of the country. The farmers, the laborers, and the masses are to have nothing to say. The Populist party has no money to conduct a campaign; and therefore, it is harmless, according to the ideas of these gentlemen. Some of our friends, the enemy, say occasionally that Populism is destined to an early frost, and that it will soon disappear. But, sir, I have faith in the patriotism and loyalty of the people of our country. I believe they will eventually see that they can find no relief in the ranks of either the Republican or Democratic party, and that, when that day comes, the country will be saved.

According to the scheme of the money power, as fast as Government bonds are issued the legal-tender notes of the Government are to be retired and the national banks are to issue notes to circulate in their stead. Their issue has increased from $170,000,000 a year or two ago to about $222,000,000 now. Here is an extraordinary power which has been taken from the Government, where the Constitution placed it, and auctioned off to private corporations. Now, as a new lease of power, they are to be authorized to issue their notes in lieu of the Treasury notes of the United States, and to loan them out to the people at rates of interest running all the way from 6 per cent per annum to 2 per cent per minute, according to the necessity of the man who may be compelled to borrow of them; and this great favor they are to receive in exchange for their political influence. This influence will be a more important factor in the politics of our country in the future than it has been in the past, though it has been very powerful in the past. Our country is coming to the point where the Government is to be made a Government of the banks, by the banks, and for the banks, and the people are to disappear except as the mere producers of wealth at a very low standard of civilization.

Mr. President, I do not want any man to say that I am an enemy of legitimate banks and banking. They are necessary in our commerce, necessary in our civilization, and necessary for the successful transaction of our business. I wish to see the banks and bankers thrive, the same as I desire to see any other legitimate industry develop, but I want the banks to keep their hands off the politics and legislation of the country. Why, sir, in practicing law you are compelled to rely on yourself. You have the protection of the Government to pursue your occupation as best you can, but that is all. Do you know any reason why the man who is doing business across the street from you should be invested with the special power to issue his note and call it money, to usurp a sovereign power that was placed in the hands of the Government for your interest and the interest of every other citizen? Mr. President, this is a dangerous power when conferred on private corporations. I do not want to see the banks destroyed—by no means. I want to see the Government take the money-issuing power from them, and then let them stand or fall like any other private corporation, like State banks for instance, and succeed or fail according to the merits of their business and the skill and honesty they employ in conducting it.

By a false construction of the statute for the redemption of Treasury notes and by the enlargement of the issue power of national banks we are to have fastened on us the single gold standard; we are to have notes issued by the banks in lieu of notes issued by the Government, a perpetual national debt, and domination by national banks.

Mr. President, there is other and indisputable proof that this conspiracy of the money power has not contented itself with tampering with Congress, the President, and the different subordinate branches of the Government. It has reached the highest judicial tribunal of the Government. Is it supposed that any man can be placed upon the Supreme Bench to-day—let us talk plainly about this matter—whose opinions on great political and financial questions are not known before he is appointed?

I remember, Mr. President, and so do you, the struggles which occurred in this Chamber within the last three years. I am violating no secret of the Senate and I am saying nothing that I ought not to say when I state that the sole recommendation of two nominees of the President for judge of the Supreme Court of the United States was the fact that they were corporation lawyers. They had not a single qualification except they had been raised under the influences of corporations; they had studied the law of corporations; they were committed to the side of the corporation as against the individual. Whether or no that made them eligible, they were selected and nominated, and their names were sent to us for confirmation. The people who believe that a man can be placed on that bench whose opinion is not known in advance on great questions are simply hoodwinked; they are mistaken. They believe that the Government is more honest and more honorable than it is.

What has happened recently? We passed, as one of the important features of the Wilson bill, now known as the Wilson-Gorman Act, an income-tax law. It was in strict accordance with the established usage of the Government. In 1796 the Supreme Court of the United States in the Hylton case, in Third Dallas, decided the constitutionality of an income tax without a dissenting opinion. There were opinions delivered in that case by Mr. Justice Chase, Mr. Justice Iredell, Mr. Justice Patterson, and by one other justice whose name I do not now recall. There was no dissent from the proposition that by the Constitution the power was conferred on Congress to impose an income tax. We imposed an income tax as one of the features of the Wilson bill of 1894 directly in accordance with precedent. There were at least one-half dozen income-tax laws passed between 1790 and 1880. They had passed in favorable review before every judge who had occupied a place on the Supreme Bench of the United States as Chief Justice or associate justice up to the last date. And following these precedents, in 1894 we put an amendment on the Wilson bill which would have brought to the Government $30,000,000 of revenue annually if it had not been annulled by the action of the Supreme Court.

Mr. President, it was necessary to get rid of this provision in order that the plan of the money power might be carried out. The highly protected industries could never have the people completely by the throat until they were able to get rid of the Government's power to tax incomes. I remember as distinctly as though it were yesterday how the honorable senior Senator from New York [Mr. HILL] inveighed against taxing the prosperity of the country, as he was pleased to call it, as though the poverty ought to be taxed, as it is being taxed now, and idle income gatherers be permitted to escape taxation. I remember how he met the decisions in the Hylton case, the Veazie Bank case, and other cases, including the Springer case, by the assertion—it sounds now like prophecy—that the law would be declared unconstitutional. I have never before given the Senator from New York credit for being a prophet. But I now give him credit for being a successful prophet in that case.

Mr. HILL. Will the Senator from Nebraska permit me?

Mr. ALLEN. Certainly.

Mr. HILL. The Senator speaks of the decision of the Supreme Court on the income-tax question as though it were a surprise. Does not the Senator know that on several constitutional questions which were discussed in the Senate, a Senate composed of very many able lawyers, the vote was very close? Did the Senator himself argue in favor of the right of the National Government to tax State and municipal bonds, and was he surprised that the Supreme Court of the United States unanimously decided that that provision was unconstitutional?

Mr. ALLEN. I am not surprised at anything that happens here—absolutely nothing. If I were to be told to-morrow that every citizen of the 70,000,000 was to be a bond slave I would not be surprised. They are, as a matter of fact, industrial slaves now. I was speaking, however, of the Supreme Court of the United States, and the peculiar effect of their opinions on the income tax.

Mr. President, do you not see the purpose? It is just as plain as the thimble-rigging game with which we were all more or less familiar as boys. If the money power could induce the Supreme Court to declare the income tax invalid, the millions of the rich would escape taxation. Then they could put the final nail in the political coffin of the industrial slave and make him bear the full burden for all time. How was that to be done? How could it be done? There was only one place to go to accomplish it. I will not say it was accomplished by design, but I call attention to the fact that the first decision of the court in May last—I think it was in May—upheld some of the main features of the income-tax law. It would have been unblushing and inexcusable to have overruled at one time five decisions extending over a period of almost one hundred years, so the court was reconvened and a reargument was ordered. These reargurments are always dangerous, no matter where they occur, and are always open to suspicion. Mr. Justice Jackson was brought to Washington more dead than alive—for he died shortly after the second hearing—and by some mysterious process, which the world does not know and never will, one of the judges, who had joined in deciding the act constitutional in part, changed his mind and pronounced it wholly unconstitutional. His change of mind possesses great significance to me from the fact that he is a citizen of a State that is peculiarly benefited by tariff taxation.

In 1796 the Supreme Court unanimously declared the constitutionality of the income tax in the Hylton case. They declared its constitutionality as late as October, 1880, in the Springer case in

102 United States Supreme Court Reports; they declared its constitutionality in the Phœnix Insurance Company case, in the Veazie Bank case, and in still another case, the name of which I do not at this time recall. And yet in 1895 all the great judges who had passed on the laws authorizing an income tax were overruled by the Supreme Court as now constituted by a bare majority.

It may not be unimportant in the history of this question to glance over the list of gentlemen who have composed the Supreme Court of the United States in the past. When the Hylton case was determined in 1796, Oliver Ellsworth was the Chief Justice and William Cushing, James Wilson, John Blair, James Iredell, Thomas Johnson, William Patterson, and Samuel Chase were the associate justices. That law passed in successful review before those gentlemen. It is true that Chief Justice Ellsworth took his seat on the bench on the day the opinion was rendered and did not participate in it, but never during his term of service did he dissent from it, or the principle recognized by it, and it passed successfully in review before that court without a dissenting voice. Chief Justice John Jay was nominated and confirmed as Chief Justice of the Supreme Court of the United States before Oliver Ellsworth, but he declined the appointment, and John Marshall was made Chief Justice and so remained from June 30, 1801, to July 6, 1835.

Four income-tax laws were enacted by Congress between the time the Hylton case was decided and the time John Marshall retired from the Supreme Bench, yet the decision in the Hylton case was never questioned. These income-tax laws were executed during his incumbency. Then came Roger B. Taney, Chief Justice, from November 15, 1836, to October 12, 1864, and those acts passed successfully in review before him.

Mr. HILL. The Senator seems to think highly of Chief Justice Taney.

Mr. ALLEN. Yes; with the exception of his opinion in the Dred Scott case.

Mr. HILL. The Senator thinks well, with one exception, of all the decisions of that judge, who was upon the bench for twenty or twenty-three years?

Mr. ALLEN. I admire his great ability.

Mr. HILL. And his legal knowledge?

Mr. ALLEN. And his great legal knowledge and his purity of character.

Mr. HILL. When the income-tax provisions of the tariff bill were pending here, I read during that discussion a letter from Chief Justice Taney, of the Supreme Court, in which he wrote to the Secretary of the Treasury that an attempt to tax the incomes or salaries of the justices of the Supreme Court under the income law of 1862 was, in his judgment, unconstitutional. That same provision was incorporated in the recent income law, and notwithstanding that opinion of Chief Justice Taney, which I read here, the Senator from Nebraska voted to overrule it and put a tax on the salaries of the justices of the Supreme Court.

Mr. ALLEN. Yes, that is true, Mr. President, and I would do it again.

Mr. HILL. How can the Senator reconcile his confidence in Chief Justice Taney with the vote the Senator gave?

Mr. ALLEN. Mr. President, perhaps I can illustrate my position better by referring to the Senator from New York than I can by referring to Chief Justice Taney, because I know the Senator better. I have the utmost confidence in the ability of my friend from New York, and certainly I have now the utmost confidence in his gift of prophecy. Yet I have heard the Senator from New York advocate things which I thought were absolutely unsound and which I still think are unsound. It is not necessary for me to abandon my own convictions in every instance. A great man who is right ninety-nine times out of a hundred may differ from me, but it might be that in a few instances I would be right and he wrong. I am here to discharge my duties as I understand them, not as some other man understands them. My position in this respect must be distinctly understood. If it brings me in conflict with the opinions of other gentlemen, I am very sorry; but unless I can, after due investigation, understand a question as he understands it, I shall vote my own convictions and follow my own judgment.

Now, Mr. President, here was Roger B. Taney, a great jurist, who was Chief Justice from November 15, 1836, to October 12, 1864, and no question was ever raised before him as to the constitutionality of any of the income-tax laws, although many of them were in existence and being enforced while he was a member of the court.

These acts passed successfully in review before Salmon P. Chase, and their constitutionality was affirmed by him and the court over which he presided. They passed successfully in review before Morrison R. Waite, and their constitutionality was affirmed by him and the court over which he presided. We come at last to the present Chief Justice, Melville W. Fuller, who became Chief Justice July 20, 1888. It was reserved for him alone, of all the distinguished and illustrious Chief Justices, to discover that his predecessors had been wrong as to the constitutionality of the income-tax law.

The Hylton case, and the income-tax laws which were enacted after that decision, passed successfully in review before this long list of associate justices of the Supreme Court:

ASSOCIATE JUSTICES.

		Years.	Months.	Days.
William Cushing	Sept. 27, 1789, to Sept. 13, 1810	20	11	16
James Wilson	Sept. 29, 1789, to Aug. 28, 1798	8	10	29
John Blair	Sept. 30, 1789, to Jan. 27, 1796	6	3	27
James Iredell	Feb. 10, 1790, to Oct. 20, 1799	9	8	10
Thomas Johnson	Aug. 5, 1791, to Mar. 3, 1793	1	6	28
William Patterson	Mar. 4, 1793, to Sept. 19, 1806	13	6	15
Samuel Chase	Jan. 27, 1796, to June 19, 1811	15	4	22
Bushrod Washington	Sept. 29, 1798, to Mar. 26, 1829	31	1	27
Alfred Moore	Dec. 10, 1799, to Mar. —, 1804	4	2	20
William Johnson	Mar. 26, 1804, to Aug. 11, 1834	30	4	15
Brockholst Livingston	Nov. 10, 1806, to Mar. 18, 1823	16	4	8
Thomas Todd	Mar. 3, 1807, to Feb. 7, 1826	18	11	4
Joseph Story	Nov. 18, 1811, to Sept. 10, 1845	33	9	22
Gabriel Duval	Nov. 18, 1811, to Jan. —, 1835	23	1	12
Smith Thompson	Sept. 1, 1823, to Dec. 18, 1843	20	3	17
Robert Trimble	May 9, 1826, to Aug. 25, 1828	2	3	16
John McLean	Mar. 7, 1829, to Apr. 4, 1861	32	0	27
Henry Baldwin	Jan. 6, 1830, to Apr. 21, 1844	14	3	15
James M. Wayne	Jan. 9, 1835, to July 5, 1867	32	5	26
Philip P. Barbour	Mar. 15, 1836, to Feb. 24, 1841	4	11	9
John Catron	Mar. 8, 1837, to May 30, 1865	28	2	22
John McKinley	Apr. 22, 1837, to July 14, 1852	14	2	27
Peter V. Daniel	Mar. 3, 1841, to May 31, 1860	19	2	28
Samuel Nelson	Feb. 13, 1845, to Dec. 1, 1872	27	9	18
Levi Woodbury	Sept. 20, 1845, to Sept. 4, 1851	5	11	14
Robert C. Grier	Aug. 4, 1846, to Jan. 31, 1870	23	5	27
Benjamin R. Curtis	Sept. 22, 1851, to Sept. 30, 1857	6	0	8
John A. Campbell	Mar. 22, 1853, to May 21, 1861	8	1	29
Nathan Clifford	Jan. 12, 1858, to July 25, 1881	23	6	13
Noah H. Swayne	Jan. 24, 1862, to Jan. 24, 1881	19	0	0
Samuel F. Miller	July 16, 1862, to Oct. 13, 1890	28	2	27
David Davis	Oct. 17, 1862, to Nov. 4, 1877	14	4	17
Stephen J. Field	Mar. 10, 1863			

Stephen J. Field is the first man on the list which I have read, aside from the present Chief Justice, who discovered that nearly one hundred years ago the Hylton case had been wrongly decided, and that all the cases since determined were bottomed on wrong principles. Yet, Mr. President, Mr. Justice Field had, by not dissenting, given his assent to two of the cases in which the Supreme Court declared the constitutionality of an income-tax law.

An income-tax law also received the approval of the court when it was composed of the following associate justices:

		Years.	Months.	Days.
William Strong	Feb. 18, 1870, to Dec. 14, 1880	10	9	26
Joseph P. Bradley	Mar. 21, 1870, to Jan. 22, 1892	21	10	1
Ward Hunt	Dec. 11, 1872, to Jan. 7, 1882	9	0	26
John M. Harlan	Nov. 29, 1877			
William B. Woods	Dec. 21, 1880, to May 14, 1887	6	4	23
Stanley Matthews	May 12, 1881, to Mar. 22, 1889	7	10	10
Horace Gray	Dec. 20, 1881			
Samuel Blatchford	Nov. 22, 1882, to July 7, 1893	11	5	15
Lucius Q. C. Lamar	Jan. 16, 1888, to Jan. 23, 1893	5	0	7
David J. Brewer	Dec. 18, 1889			
Henry B. Brown	Dec. 29, 1890			
George Shiras	July 26, 1892			
Howell E. Jackson	Feb. 18, 1893			
Edward D White	Feb. 19, 1894			

From the organization of the Supreme Court, from the day of John Jay to the day of Melville W. Fuller, no member of the court had supposed that the Government did not possess the constitutional power to levy an income tax. The question had been thoroughly and exhaustively investigated by Congress in the passage of some half dozen or more income-tax laws; it had been patiently investigated by a majority of the Chief Justices whose names I have mentioned, and yet, in 1895, it remained for a bare majority of the present court to discover that the Hylton case, that the Veazie case, that the Phœnix Insurance Company case, that the Springer case, and all other cases on the subject, and all the laws that had been passed by Congress throughout the history of the country, were wrong, and that the Government does not possess the constitutional power to impose an income tax.

Mr. President, I am not a member of the Supreme Court, and no man entertaining the opinions I do ever will be, at least not until there is a change in our system of doing business. I do not say that the last decision, which was made by a bare majority of the court, is not the honest opinion of that high tribunal. On that subject I say nothing. But I do say that it is a most singular circumstance, and it will stand out prominently in the judicial history of the country, more prominently than the electoral decision of 1877, which was one of the most vicious decisions of the age, as an exceptional case in the constitutional history of the country that great men like Oliver Ellsworth, John Marshall, Roger B. Taney, Salmon P. Chase, and Morrison R. Waite, and their associates, were wrong in determining that Congress, under the Constitution, had power to impose an income tax, and that it was reserved for Melville W. Fuller and a bare majority of his associates to discover that their predecessors had been in error for nearly one hundred years. It will stand out prominently that over thirty associate justices who have occupied the Supreme Bench during our national existence, and before whom this question had passed

in review successively, and who had given to the doctrine their full assent—it will be a marvelous thing in our judicial history—that five gentlemen out of nine, in the year of our Lord 1895, discovered that all their illustrious predecessors for a hundred years had been wrong.

Passing this late decision—which I have noticed more for the purpose of showing somewhat in detail the history of constitutional power—passing from that, and admitting that the Supreme Court had a right to decide as it did—and we must obey its decision whether right or wrong—letting it remain a profound secret how the decision was brought about—let me observe that the direct result was to call loudly for the enactment of a tariff that will impose additional and heavier burdens on an already tax-ridden people.

Mr. President, can there be any doubt that the people have lost confidence in the Supreme Court? I declare it as my solemn conviction that the thinking people lost confidence in the Supreme Court when it rendered the decision in the case of Tilden against Hayes, when some of the judges of that high tribunal suffered themselves to be dragged from the court room, where they belonged and where the Constitution had placed them, to be put upon a political tribunal to decide a merely party question between contending political parties. The last income-tax decision will be as exceptional, anomalous, and suspicious in our judicial history as is the decision of the Electoral Commission in our political history.

Mr. HILL. Will the Senator allow me to interrupt him?

Mr. ALLEN. Certainly.

Mr. HILL. Did not some of the justices who decided in favor of Hayes concur in the opinion that the income tax was constitutional; and was the Senator's lost confidence in them restored by that decision?

Mr. ALLEN. It has not restored lost confidence. I do not know if it has to the Senator from New York.

Mr. GEORGE. If the Senator from Nebraska will allow me, I will state that it is a little remarkable that every justice of the Supreme Court who served on the Electoral Commission came to the conclusion that his party candidate was elected.

Mr. ALLEN. Mr. President, that is not particularly surprising to me, in view of the fact that throughout the entire history of our country no judge has ever yet been known to decide a political question against the party of which he was a member. There has never been an instance of the kind, and it is a sad commentary on the character and stability of our judicial system.

What is the truth as respects the assertions frequently made here that the question which we must discuss this fall, and which the people must determine, is the tariff? Sir, this country has seen good times and bad times, under both a high and a low tariff. The tariff is a false issue. There is practically nothing in it as compared with the great issue of monetary reform, and if the country can be put on a sound financial basis, where it is able to meet taxation successfully, the tariff question will disappear.

Mr. President, when in the history of the country was it more prosperous than under the operation of the Walker tariff act of 1846, a low-tariff act? When was it more prosperous after that than in 1866 and 1867, after the close of the war and before the iniquitous system of contraction had begun? In 1866 this country had the war tariff, that bears the name of the senior Senator from Vermont [Mr. MORRILL], the highest tariff that had ever been passed by Congress, and which was made necessary, as its author declared, by reason of the war. He told the country at the time of its passage that as soon as the war was closed, and the demands created by it should be met and satisfied, the act would be repealed. But it was not repealed. Instead of retracing our steps we went on from bad to worse until we reached the McKinley tariff, an act that was almost prohibitive of importations. Sir, there was prosperity under the Walker tariff and under the Morrill Act of 1861. Was that prosperity due to the tariff in each instance? Was it due to a low tariff in 1846 and 1847 and to a high tariff in 1866 and 1867, before we entered on the perilous policy of specie resumption, of which the senior Senator from Ohio [Mr. SHERMAN] is the author?

Sir, the prosperity of the country was due to neither. It was due to the volume of money in circulation in each instance.

It is quite a common thing to be told that all the farmers and laborers need is a high tariff, a tariff that will maintain the wages of the laboring man in this country above those of the laboring man in Europe.

Mr. GALLINGER. Would it interfere with the Senator's argument if I should call his attention to some history regarding the operation of the tariff act of 1846?

Mr. ALLEN. Not at all.

Mr. GALLINGER. If the Senator will go to the Springfield Republican, of which the elder Bowles was editor, he will find an editorial in the year 1850, about three years after that tariff went into operation, which read as follows:

Previous to the passage of that law the manufacturing and mechanical interests in this community were in a flourishing condition. Since that time the condition of things has entirely changed, and it is fully believed that much of the stagnation of business may be traced to the operation of that law. Manufacturing languishes, mechanics are thrown out of employment, business of all kinds is dull, and unless protection can be afforded to our laboring classes poverty will overtake them. The subscribers therefore pray that Congress will so alter the tariff of 1846 that it will protect the labor and capital of the country from foreign competition.

In Hunt's Merchants' Magazine, in 1854, the Senator will find the following:

Confidence is shaken everywhere and all classes are made to realize the insecurity of worldly possessions. The causes which led to this have been a long time at work. Goods which had accumulated abroad when the demand had almost ceased were crowded upon our shores at whatever advance could be obtained, thus aggravating the evil.

A little later, January 6, 1855, the Senator will find that the New York Herald said editorially:

Elsewhere will be found some mention of large failures at Boston and New Orleans. The epidemic is traveling over the whole country. No city of any note can hope to escape.

If the Senator will go to the New York Herald of the same date he will find an address of the unemployed workingmen's committee to the mayor of that city, in which those workingmen said:

We do not come as beggars, but we ask what we deem right. We ask not alms, but work. We don't want a little soup now, and cast-off clothing tomorrow. But we do want work and the means of making an honest livelihood. The condition of the working classes is most piteous. They want bread. Is there not enough in the city? They want clothes. Is there none made nowadays?

Mr. President, those are historic facts concerning the operations of the Walker tariff law of 1846, which may have escaped the attention of the Senator from Nebraska.

Mr. ALLEN. Mr. President, there is a great deal of that kind of history which has escaped my attention, and I am very glad that it has. There is a great deal of so-called history that does no man any good to know. I do not refer to the "quotations" of the Senator, however, when I say there is a great deal of history manufactured to support arguments in favor of an abnormally high tariff.

James G. Blaine, who ought to be authority in Republican circles, in his work, Twenty Years in Congress, took occasion to say—I will not use his exact language nor can I refer at this moment to the page—that the Walker tariff was so satisfactory that no man in public life thought of trying to modify or change it for ten years after its passage.

Mr. President, I was discussing the question of good and bad times under both systems of tariff when the Senator from New Hampshire interrupted me. I do hope, sir, that the people will not be deceived again to their injury by being led to believe that the leading issue is the tariff. They have been fed on that kind of intellectual trash for twenty-five years, and it has been false at all times when asserted.

What has been the condition of the country during that time? I will turn briefly to the Statistical Abstract, which I suppose is correct, as it is issued by the Treasury Department, by Republican Administrations and by Democratic Administrations alike, and I will call attention to some facts that may be well worthy of investigation. I refer now to page 298, No. 67, "Cereal crops," the estimated production of corn from 1872 to 1895. These are the reports of the Department of Agriculture on the subject of corn.

In 1872 the average value of the yield per acre, according to this book, was $12.24. In 1877 it had fallen to $9.54, and in 1879 it had fallen again to $8.55, and so on. I will insert this page in my remarks:

No. 67.—*Cereal crops: Estimated production and value of the United States from 1872 to 1895.*

[From reports of the Department of Agriculture.]

CORN.

Calendar year.	Total.			Average.		
	Production.	Area of crop.	Value of crop.	Value per bushel.	Yield per acre.	Value of yield per acre.
	Bushels.	*Acres.*	*Dollars.*	*Cents.*	*Bushels.*	*Dollars.*
1872	1,092,719,000	35,526,836	435,149,290	39.8	30.8	12.24
1873	932,274,000	39,197,148	447,183,020	48	23.8	11.41
1874	850,148,500	41,036,918	550,043,080	64.7	20.7	13.40
1875	1,321,069,000	44,841,371	555,445,930	42	29.5	12.39
1876	1,283,827,500	49,033,364	475,491,210	37	26.2	9.70
1877	1,342,558,000	50,369,113	480,643,400	35.8	26.6	9.54
1878	1,388,218,750	51,585,000	441,153,495	31.9	26.9	8.55
1879	1,547,901,790	53,085,450	580,486,217	37.5	29.2	10.93
1880	1,717,434,543	62,317,842	679,714,499	39.6	27.6	10.91

a No estimates prepared by Agricultural Department for 1889 to 1892.

Mr. President, we had a high tariff from 1872 to 1894, but notwithstanding this fact there was a constant fall in the price of corn from $12.24 in 1872 to $6.91 per acre in 1895. If there had been any virtue in a protective tariff for the agricultural classes, why did it not manifest itself in maintaining the price of this great staple product?

Take the next great staple, wheat. It dropped from $15.27 per acre in 1880, a time when the Republican party was in power and a high tariff was in force, to $6.48 per acre, less than one-half, in 1894, at the time the McKinley Act was in force, and reached $6.99 per acre for the year 1895.

Mr. President, we were told during the discussion of the tariff bill in the last Congress that a high tariff was the salvation of the farmer; that it was necessary for us to build a home market for the consumption of his products, and that he would get better prices in that way than he could through shipments of his products to larger markets. But during the period of which I speak, wheat lost 60 per cent of its value, and went from a fraction over $15 an acre in 1880 to six dollars and a few cents in 1894. If there is any virtue in a high tariff, it did not manifest itself and beneficially affect the price of wheat.

Take rye, another staple. The value of the yield per acre in 1872 was $10.83; in 1894 it was $6.89, and in 1895, $6.33. There was, as in the cases of corn and wheat, a drop of almost 50 per cent.

Take the case of oats. It was worth $10.14 per acre in 1872. I do not know why these reports do not go back to 1865, unless to shut out some valuable information; but oats dropped from $10.14 per acre in 1872 to $7.95 per acre in 1894. The crop was all produced and much of it on the market before the repeal of the McKinley Act in 1894.

Take the case of barley, worth $14.20 an acre in 1872 and $8.88 per acre in 1895. Buckwheat, $15.04 per acre in 1872, dropped gradually to $8.92 in 1894 and rose slightly to $9.09 in 1895.

Under a system of high protection there has been a fall on an average of fully 50 per cent in the prices of the great staple articles of the farm.

Mr. President, does anyone suppose this fall in prices was due to tariff? Our Republican friends will go to the country this fall—they are preparing their arguments at this moment—and declare to the farmers, aiming by that means to deceive them once more, if possible, that prosperity for the farmer and increased value per acre of his products can be brought about only by voting for the party that will enact a law similar to the McKinley Act of 1890. The Republican party will do this in face of the fact that farm products have fallen in price during the period I have stated under the highest protective tariff act we have ever had.

But this is not all they will do. We have had disclosed here a peculiar condition of affairs recently. The official statistics, although they seem to have been gotten up to support a particular cause, will once in a while disclose a really valuable fact. Look for a moment at the failures that have taken place in the United States. I read from page 336 of this abstract:

The total failures in 1893 were 15,242; and total liabilities, $346,749,889.

In 1894 there were failures amounting to 13,185; with total liabilities, $172,992,856.

In 1895 there were 13,197 failures, with total liabilities of $173,196,060.

If this book is to be believed, in 1893, under the operations of the McKinley Act, we had 15,242 failures as against 13,197 in 1895 under the Wilson Act. I suppose it would be a natural inference, then, that the Wilson Act was a better law than the McKinley

Act. From 1893, when the failures reached $346,749,889, their maximum, they decreased to $173,196,060 in 1895. According to this statement, in 1893, although we had the highest tariff we have ever known, the failures were almost 200 per cent greater in liabilities than they had ever been before or have been since.

Mr. President, I must say in all candor that I have touched these official statistics with the suspicion that they might not be absolutely correct, and that they may have been doctored, but they have been doctored no more under the present than under previous Administrations.

What is the difficulty with the country, then? That brings me to the old question of the policy of the Republican and Democratic parties on the money question. If we take the history of our country as it has existed during your life and mine, we will observe that when the volume of money was greatest there was the greatest prosperity among the people, and when it was smallest there was the greatest amount of misery. Why, Mr. President, misery exists all over the land at this moment. We are told by our Republican friends that many of the mills are closed now, and yet I observe by reading the statistics that we have more spindles in motion to-day than we have had in twenty years. And what, after all, is the trouble? It is scarcity of money. I do not propose, so far as I am concerned, and so far as my limited capacity goes, to see the people hoodwinked and deceived by this combination between the leaders of the two old parties on the tariff issue for the purpose of obscuring the real issue, the money question.

Oh, but we are told, "You want to put the country on a silver basis. You want the people to pay their indebtedness in 50-cent dollars." That kind of argument has been used here for the last three years to my knowledge, and has been refuted successfully every time, so that no one scarcely dare to assert it again. The holders of public and private securities, prompted by selfishness, want a small volume of money. Mr. President, they want low prices; they want poverty among the people, so that they themselves, with their money and bonds, can command the greatest amount of property and service at the lowest price.

We are told very frequently to look at the condition of Mexico, and she is held up as a horrible example of poverty and depravity. We read frequently in our press that we can buy two Mexican dollars for one American dollar. This argument is used as though it were unanswerable. Mr. President, there is absolutely nothing in it. It is the statement used for the purpose of deception. But, sir, what is the truth? Why, Mr. President, never since its conquest by Cortez, never since the bloody contest which resulted in the downfall of Montezuma, in 1520, never, in all the years of her existence, has Mexico enjoyed the prosperity that she enjoys at this time and has enjoyed for the last ten years. Mexico has more railroads, more factories, more people at work, higher wages, more prosperity, a greater and higher civilization than in all of the years of her preceding history. It may not be uninteresting to read a Mexican view of their situation, but I will not weary the Senate with reading all I have on that subject. I read from the Mexican Herald of April 23, 1896, published at the City of Mexico, the capital of the Mexican Republic:

Mexico as an awful example—

Is the heading of the article.

Mr. Carlisle, the gentleman who has been giving the world an object lesson in how not to manage the finances of the great Republic, has had the effrontery to hold Mexico up to an audience in Chicago as an awful example, simply because Mexico is on a silver basis. He has endeavored to show that the laboring population here, paid on a silver basis, is not prosperous, and, while receiving payment in 50-cent dollars, finds the prices of commodities and all luxuries generally much higher than they are in the United States. He declares that the prices of "imported articles especially are exorbitantly high in Mexico because they have to be paid for abroad in gold, and the depreciation of their money is so great that it requires nearly $2 in silver to pay $1 in gold."

* * * * * * *

All we ask here—

Says the editor—

is to be let alone to work out our own problems, educating our working masses, and creating new industries affording diversified and remunerative employment for all. The problem here is to modernize Mexico, and the United States on a silver basis would put us back half a century at least. The American workingman is now being asked to listen to the seductive pleas of two old parties which, every four years, promise much and do little. While they talk to him of tariff and currency, the steady growth of unfavorable conditions is making it every year harder for him to advance himself in life. Huge monopolies created by law, voted for by legislators of both parties, are supreme. Their managers laugh at parties and their platforms. Their game is all right however the election goes. This fact the American workingman does not appear to perceive, and men like Mr. Carlisle are not likely to inform him.

Then again:

The representatives of the American manufacturers now here are pleased to find silver-basis Mexico prosperous and likely long to remain so. They also have learned that we are not a bit jealous of our dear old Uncle Samuel, but wish him joy and lots of fun out of his gold standard.

There never was a time in our history or in the history of Mexico when so much American capital has been transferred to that country as now. American capital that could not be invested in our own country to advantage has gone to Mexico by the millions, and is constructing their railways, their ships, opening wonderful highways of commerce, establishing successful manufactories, developing mines of all kinds, and opening agriculture to an extent that had never been dreamed of before. Mexico, with her peculiar civilization, was never more prosperous than she is at this time, notwithstanding she is on a silver basis.

I do not want to see this country go to a silver basis, and I am satisfied it never will. I have no confidence in the judgment of the man who asserts that it will go to a silver basis under free coinage.

In 1878, when the Bland-Allison Act was passed, the same argument was used. It was then said that if we should have free coinage the country would go to a silver basis, and yet, sir, we accumulated from that time until 1893, when the purchase clause of the Sherman Act was repealed, something like $236,000,000 of gold, more than we had before. By history it has been irrefutably established that we can successfully sustain the double standard.

Mr. President, it has been quite a common thing for Republicans and Democrats in speeches, letters, and interviews to speak disparagingly of the Populist party, and to assert that Populists are not silver men, although they believe in its use, but that they are in favor of a limitless volume of irredeemable paper money. That assertion has been frequently made.

Mr. HILL. Where has that been charged?

Mr. ALLEN. It was charged by the senior Senator from Idaho [Mr. DUBOIS] and the junior Senator from Kansas [Mr. BAKER] a short time ago in speeches in this Chamber. I have seen it stated in letters and interviews recently by Republican and Democratic Senators. The Populist party, so say these gentlemen, is in favor of a limitless volume of irredeemable paper money. It is very strange that Populists are compelled to go away from home to get the news. Mr. President, there is not a Populist in Congress or out of it, between the two oceans, or to be found between Canada and the Gulf, who advocates that doctrine, and there never has been a man who advocated it. I want to say to the senior Senator from Idaho and the junior Senator from Kansas that when they told the Senate and the country that the Populist party was in favor of a limitless volume of irredeemable paper money they did not know what they were talking about. Such a declaration is not in the Populist platform; it can not be found in any authoritative declaration of the party, State or national. It can be found nowhere outside of speeches and utterances of Democratic and Republican statesmen.

But what is this assertion made for? The Populist party numbers 2,000,000 voters to-day. In the first six years of its national existence, it has, in some sections of the country, threatened the complete destruction of the two old parties. I think my honorable friend from Texas [Mr. MILLS] is experiencing a strong touch of Populism in his State at this time. It is necessary to ring the alarm; something must be said that will stamp the Populists as vagarists and men claiming and desiring the accomplishment of impossible things to prevent the people from leaving the two old parties and joining its ranks.

Mr. President, every form of paper money we have is redeemable under the law. There is no man living, with sense enough to be called a man, and deserving recognition as such, who does not know that a limitless volume of irredeemable paper money would mean the absolute destruction of the Government that indulged in it. Then why do these gentlemen make such statements? They are afraid to meet the real issue. They dread the advancement of the Populist party. They make these statements to keep their party friends in line, and they hold up before them the tariff question to deceive them again. While gold bonds and gold bands are being riveted on the limbs of the unfortunate toilers, while a perpetual national debt is being piled up mountain high to plague and vex generations to come for all time, our Republican and Democratic friends, for mere party success, utter this false assertion against the Populist party.

Mr. President, the people will not longer be deceived. They realize that when either a Republican or a Democrat occupies the White House, falling prices, want, misery, and poverty exist among the masses. The man who seems to know the least of the Populist party and its beliefs usually asserts the most and makes the most radical misstatements regarding it. Does any really intelligent man expect that the Republican party will bring prosperity to the country? I have believed since 1893 that it would come back to power this year, that it would elect its candidate to the Presidency, no matter who he might be. I have at no time since the election of 1892, and I am by no means a prophet, doubted that the Democratic party would wreck itself utterly in the four years of Cleveland's Administration. I so declared in a public speech long before Mr. Cleveland was inaugurated at the east side of this Capitol in March, 1893.

The Democratic party as constituted to-day goes out of power for a third of a century, if not forever, in consequence of incurable dissensions in its own ranks, and because the managers of the party

are absolutely owned and controlled by the gold power. I said in the same speech, and I repeat it here at the risk of being called a false prophet, that the Republican party will come back to power in March next with a greater majority than it has had for years, because it will be able once more to deceive and mislead the people on the false issue of tariff, but in 1900 it will pass out of power, never again to appear upon or vex the political waters It will utterly destroy itself. The burden of taxation will increase under its administration; the bonded indebtedness will increase; poverty, misery, want, and distress will increase. The Republican party is now and will remain the bond servant of the gold aristocracy of the money power of America and Europe. It will not dare, nor will it have the ability, to shake off that power.

Mr. President, I have never flattered myself that the Populist party would come into power in 1896. I have never said so nor assented to the assertion. I have never thought so, nor do I think so now. I expect to see the people hoodwinked again for another four years. They have tried the Democratic party and found its promises misleading and untrue. They tried the Republican party from 1889 to 1893 and found its promises false and misleading. Like rats in a trap, they are jumping to escape. The people will again be deceived into believing that there is a ray of hope in the Republican party; a majority of them will give it their support and it will come back into power.

But in 1900 the Republican party, dejected and broken as a result of promises unfulfilled and expectations unrealized, will disappear, never, in my judgment, to reappear on the horizon of national politics again. The eyes of the common people will be opened to the fact that the claims of the old parties are mere shams and pretenses, that the money power owns and controls them, and that that power is in favor of the establishment of an oligarchy, as it has established an aristocracy now, and that their salvation can only be secured by uniting under the name of Populism, or under some other name, I care not what, for—

A rose by any other name would smell as sweet—

and taking for their motto a "Government of the people, for the people, and by the people," they will march triumphantly to victory and overturn the Democratic and Republican parties forever.

Mr. President, do you suppose that it is possible to deceive the people all the time? Look for a moment, if you will, at the condition of our country. We have, according to the census, $65,000,000,000 of property in round numbers. Mr. Blaine, in 1890, or in 1891, in a discussion with Mr. Gladstone on the tariff in the North American Review, made the statement, which has never been contradicted so far as I know, that one-half our total wealth was owned by 50,000 people.

In a number of The Forum about the same time Mr. Thomas G. Shearman, of New York, said that of the sixty-odd billions of property in this country, less than 50,000 people owned one-half; the other portion, of course, falling to the remainder of the 70,000,000. Do you not know that that amount bears a mortgage of $26,000,000,000? The total indebtedness of the country is about that in round numbers. On one-half the total national wealth retained by the people there is a mighty blanket mortgage of $26,000,000,000. In 1893 the Hon. John J. Ingalls, of Kansas, recently a member of this body, declared that more than one-half of the $65,000,000,000 of wealth of this country was owned by less than 50,000 people.

How are the people to escape from this tremendous indebtedness? How are they to secure relief from this condition of affairs? Mr. President, the people will never escape until we retrace our steps; never until we arise to a greater and keener sense of responsibility to them; never until the Government is made better and purer and brought back to the original principles on which Jefferson and the founders of the Republic placed it.

Through the manipulation of financial legislation and political jugglery on the tariff, this condition of affairs has been brought about. The people will know this; many of them know it now. They know the deplorable condition of our country.

All over the land there is a pitiful cry for relief. Has the Democratic party the power, the courage, the manhood, under the leadership of Mr. Cleveland, or Mr. Carlisle, if he is to be the heir to the White House, to shake off the money power that inflates its lungs and gives the party life? Will the party dare shake off the money power and return the Government to the people and administer it in their interests?

Mr. President, it will never do this, never in this world. Less than three months from this time there will be a bolt and a disorganized party in this country. One portion of Democracy will go to Populism or go to pieces. The other portion will go to the Republican party, where it belongs and where its influence is given to-day. It has not the courage nor the power to shake off the money power. It can not do so. The gold power has it helplessly and hopelessly in its grasp.

Does any man suppose there is real hope of relief through the instrumentality of the Republican party? No, sir; there is no hope. The only thing the Republican party has to offer is the tariff. It is to be made the panacea for all evils, and yet I have shown, and the history of the country proves conclusively, that under the highest tariff that has ever been imposed, or that will ever be imposed, there has been a constant fall of prices and continued enforced idleness.

Does any man suppose that the national banks, the gold gamblers, the money grabbers of New York and London, will consent to do anything more than increase the tariff and by that means aggravate the burdens of the people? No, Mr. President, and the national banks have declared that they will influence the national conventions of both old parties. Why, sir, the protected industries pay the election expenses of the Republican party. Out of whom do our Republican friends fry the fat to conduct their campaigns, costing millions of dollars, but out of the protected industries and the money gamblers? The party dare not shake them off. The result will be that they will come back to power in March, 1897. But, Mr. President, in 1900, as sure as the sun shines, as sure as there is a God in Israel and loyalty in the hearts of the American people, the Republican party will go out of power and it will be deader politically than Julius Cæsar has been declared to be in this Chamber, for all time.

Yes, gentlemen, of the Republican party, you may shake your fingers in scorn at Populists and Populism; you may tell unsuspecting people false stories of Populistic beliefs, stories calculated to deceive; but the people who see the 12,000,000 mortgaged homes of our country, without the slightest prospect of relief, will be compelled by force of circumstances to examine the great financial question for themselves; and when they do they will discover that the Republican and Democratic parties are the helpless bond servants of the corporations and the money power. Then, under their own banner, the people will achieve their freedom from corporate and plutocratic domination and resume the reins of their own Government.

The Appropriation for the Payment of Information and Detection of Violations of the Internal-Revenue Laws.

SPEECH

OF

HON CLAUDE A. SWANSON,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7664) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1897, and for other purposes—

Mr. SWANSON said:

Mr. CHAIRMAN: I have listened to the address of the gentleman from Texas [Mr. SAYERS] and I rise to reply to him. I regret that my time is limited and that I can not make as full and complete a discussion of this matter as I desire and as its importance requires.

I feel sure that if the House fully understood this appropriation, the purposes for which it is used, the evils which accrue from it, and the injury which it brings to the people and to the Government, the proposition to strike it out would prevail.

This bill proposes to appropriate $50,000 to pay for information and the detection of violations of internal-revenue laws. We ask this to be stricken out and the House to make no appropriation for this purpose. We claim that there is no necessity for it. There are 963 deputy collectors in the United States, who are paid salaries and especially commissioned to protect and prevent violations of the law. These are supplemented in every district and county, when needed, by commissioners and marshals. The present law, without this appropriation, provides ample officers and means for preventing its violations. The law also furnishes the Commissioner of Internal Revenue with 20 special agents who are paid salaries to see that the law is not infringed. Now, this is sufficient.

We have already said, in passing through this House the bill abolishing the fee system, that too many frivolous and unjust prosecutions are inaugurated; that the people are too much harassed by the present officials. The abolition of this system was a great reform and will produce great good. I am proud of my work and my efforts in its behalf. Now, let us carry the reform further and destroy that infamous system of secret spies, informers, and detectives who have done so much to bring the administration of justice into disrepute. It is an outrage that Congress should appropriate $50,000 for the creation of such a despicable class. The detections and prosecutions which result from this fund are so frivolous and so unjust that they are such as deputy collectors, commissioners, and marshals will take no notice of.

The State courts have charge of the punishment of far more important crimes than the violations of internal-revenue laws; yet not a State in the Union has adopted this despicable system of paying money to witnesses for information. There is not a State in the Union that would tolerate it for a moment. If a private individual should agree to furnish money for evidence as to a crime he would be scorned by every person and convicted of bribery of witnesses in court. Yet here is the United States Government proposing to furnish next year $50,000 to pay for information in the prosecution of its own citizens. It is a standing offer of reward to every person in the country. It is a standing encouragement to every sneaking, vile, miserable wretch to prowl around and try to get his neighbors in trouble on false and frivolous charges. It creates the class of professional spies and witnesses who have become a stench in the nostrils of the people. Language is not strong enough for me to express my execration of a person who will visit a neighbor's house, partake of his hospitality, ingratiate himself into his confidence, all for the purpose of discovering some petty violation of the law, that he may report him and obtain the reward paid the informers. This Government should scorn to lend aid to such a wretch. He is not worthy of belief.

Many an innocent man has been convicted upon such suborned and perjured testimony. Such a policy will never have my support. They simply report such cases as reputable officers will not take notice of.

A large part of the frivolous suits and great expenses of the Federal courts come from the existence of this detestable class, whose creation arises from the fee system and this fund. We should destroy both. They have only brought disrepute and expense upon the Government.

Only those who live in communities where the informer and the spy carry on their nefarious business can form a conception of how untrustworthy and vile they are. Only these can know the state of unrest and apprehension which they excite; how for malice and greed they direct the strong arm of the Government against innocent citizens.

This denunciation of spies and informers does not emanate solely from me or other gentlemen who represent districts in which they operate, but they are denounced by all the judges whose courts they load down with frivolous and unjust suits. The Attorney-General points to the abuses and evils which come from them.

The gentleman from Texas endeavored to prove that the appropriation was necessary and that the Government received benefit from it, by reading a communication from the Commissioner of Internal Revenue, showing the number of seizures made last year. That report, like his annual report, is misleading. It endeavors to credit this fund and his revenue agents with all the work done by the collectors and deputy collectors. He fails to show, as he should do, what seizures and what violations were made through the agencies furnished by this fund. If he will do this I feel sure it will present that the seizures which were unjust and were released mostly came from those employed under this fund. It will, no doubt, present that the unjust prosecutions, which were not sustained in court, came from those who operated under this fund. Take the report of the Commissioner upon this fund and it exhibits a state of facts which should not be permitted. He says that last year, from those operating under this fund, $340,905.26 worth of property was seized, yet the Department only received last year from all sources, in compromise settlements and judgments, $71,359.83. Last year the revenue agents using this fund were paid and cost the Government $80,019.01, which, added to the $50,000, made a cost of $130,019.01 to the Government. Over half of the amount received in the Treasury must have come from the work of deputy collectors and other officers. So, by the most favorable view that can be taken of it, those who used the fund cost the Government over $100,000 more last year than the Government received from their work. This can not be disputed. But this does not include the great cost paid by the Government for the petty prosecutions in the Federal courts, inspired by the rewards and by those employed under this fund. If these were included I believe the appropriation of this sum results in costing the Government a half a million of dollars a year. If this appropriation is defeated it will save, I believe, that amount of money to the taxpayers of this country. In this time of poverty and distress we can only justify ourselves by saving this amount of money.

But what else do these figures indicate? They show that last year, upon the evidence of informers and spies paid out of this fund, property of the value of over $300,000 was improperly seized, and which the Government had to release.

Now, this indicates a condition of affairs which should not be tolerated for a moment. The owners of this property were unjustly harassed, had their business suspended and themselves subjected to all manner of annoyance and expense. It shows that over $115,000 of unjust assessments were made against distillers which they had the trouble and the expense of relieving themselves from. Much of the money that was paid to the Department was paid by persons who knew that it was unjust and not due, but they only paid it in order to have peace and be released from the worry and annoyance of attending to the matter. Much of it was money that the Government ought not to have received and ought now to return to the parties. I am aware in my district of amounts paid by parties who knew that it was unjust, and only made offers of compromise to purchase peace and to be rid of the expense and worry of defense in court.

The report just read by the gentleman from Texas shows that last year 167 registered distilleries were seized by those operating under this fund. In other words, 167 men who were complying with the law, conducting a business for which they had paid a license, were seized, their work suspended and themselves subjected to great expense and loss upon some charges preferred by spies and informers unworthy of credence and animated by greed and malice. Now, these conditions should cease. They are unworthy of a great Government. They bespeak a system of oppression and of injustice which should be obliterated.

The tyranny of a revenue officer, supplemented by a horde of spies and informers, is more intolerable than that of despots.

The gentleman from Texas has seen proper to allude to my district as one in which there are many infractions of the law. I deny this. The facts and the records will not sustain the charge. There is not a people more peaceful, law abiding, patriotic, and intelligent than those which I have the honor to represent upon this floor. It is a constituency of which anyone should be proud. A truer, braver, more loyal, and peaceful people can not be found. No people have suffered with greater forbearance the hardships and harassments to which they have been subjected under the internal-revenue system. I myself have at times been amazed at the patience and forbearance exhibited by them. They have been the victims of the pernicious fee system and have tasted, in all of its bitterness, the evil fruits born of this appropriation. The good people there of all political parties will support me and sustain me in my efforts to destroy the pernicious fee system and to defeat this appropriation which has been to them a source of oppression and of injustice.

The gentleman can realize the extent to which this fund has oppressed and outraged my people, when the very statement he has read shows that last year 45 registered distilleries were seized in my district. That number of lawful distilleries, operating according to law, were for some time suspended and their owners subjected to great losses and expense. I am unable to recall one where the seizure was sustained and the party convicted.

The persons operating under this appropriation have not only oppressed and harassed my people, but have sought to remove all officers in the service who administered the law with justice and fairness and refused to make themselves odious to the people or to use their positions otherwise than for the good of the Government and of the people.

I abominate this fund and the agencies it employs for the oppression of the people. It is equally odious or objectionable whether administered by Republicans or Democrats.

I feel safe in leaving the administration of the law to those deputy collectors and officers who are paid salaries and selected for the purpose.

As long as I have a seat upon this floor I shall fight this appropriation and seek to destroy the vicious system of spies, informers, and detectives which it nourishes to the disgrace of the Government and to the oppression of the people.

Uniform Law on the Subject of Bankruptcy.

REMARKS
OF
HON FRANK W MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 12, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States.

Mr. MONDELL said:

Mr. SPEAKER: It seems to me that the gentlemen who have opposed this measure have misconceived its purposes and wrongfully judged the consequences which will follow from its enactment.

NECESSARY TO STRENGTHEN CREDIT.

If all the laws for the collection of debts were to be repealed, the result would be that debtors would experience the greatest difficulty in securing credit. It follows that the passage of any law which will tend to give additional security to the creditor for moneys loaned or goods sold will strengthen credit and enable those who wish to obtain it to do so upon more favorable terms and at less expense than under present conditions.

Men, firms, and corporations who have sufficient capital to pay cash for money borrowed, goods received, or labor employed are very rare indeed: it is, therefore, of the utmost importance that we increase credit for the benefit of these people if we can.

Those who are doing business, promoting enterprises, and employing labor in my State are honest and expect to pay their debts. They need in their various avocations to obtain credit, and they want to do so, I am sure, upon the most favorable terms possible. They do not want in the event of misfortune to favor some of their creditors and swindle the balance of them of equal rights. In all cases in which they obtain credit upon equal terms they are willing, I know, to treat such creditors exactly alike in the event of misfortune. They have a right under the Constitution and as provided by this bill to secure a discharge if financial misfortune shall come to them, and they want that right to be available.

This measure does not give any new remedies to creditors. If creditors avail themselves of the right to proceed against their debtors, as under the provisions of this bill, they must do so upon obligations theretofore incurred, and which exist without any reference whatever to this measure. The debtor will be more favorably situated when proceeded against by his creditors collectively, as provided by this measure, than if proceeded against individually, as under existing laws. It is therefore apparent that both debtors and creditors will be benefited by the passage of this bill.

THE EXEMPTION LAWS.

The objections urged by the opponents of this bill are untenable, and many of them are frivolous in the extreme.

One gentleman objects to the bill because it does not interfere with the State exemption laws. No doubt if it provided a uniform exemption, he would object because it interfered with the exemption laws of the several States.

The various State legislatures in their wisdom have provided different exemptions; it was but natural that they should do so. The needs for liberal exemption are greater in the newly settled States than in those which have been settled for a long time. If we were to provide a law for a uniform exemption it would not really be uniform, because the same amount of money will purchase a larger amount of supplies or furniture or any other article which is usually exempted in the East or Northeast than it will in the Western or Southwestern States.

If the bill were to provide a uniform property exemption it would still be imperfect, because different varieties of articles are needed as exemptions in the Northern from those in the Southern States; for example, fur clothes are needed in some of the cold climates, while palm-leaf fans are the greatest necessity in the warmer climates.

The bill has therefore wisely left the subject of exemptions to be passed upon from time to time and to be adjusted by the legislatures of the various States.

MEETING PLACES OF UNITED STATES COURTS.

Objection has been made to the passage of the bill because many people live at a considerable distance from the meeting places of the United States courts. This is a pertinent objection, but not so great a one as the opponents would have it appear.

The Constitution provides that Congress, and Congress alone, can pass a bankruptcy law. It follows that the Federal courts, and they alone, can enforce such a law. We therefore must suffer the inconveniences incident to many people living at distances from the meeting places of Federal courts.

In order to overcome these inconveniences it has been provided by the bill that creditors of the bankruptcy estates shall hold their meetings at the county seat of the county in which the bankrupt resides, unless that place would be manifestly inconvenient as a meeting place.

Assistant judicial officers, called referees, may be appointed in every county. They have a large jurisdiction in the administration of bankrupt estates.

As the result of these provisions most of the business of the bankrupt estates will be conducted at the places where the bankrupts reside irrespective of the meeting places of the courts.

As only about 1 in 100 of all the people engaged in conducting business and promoting enterprises fails per annum for the whole country, the inconvenience felt by the people at large who live away from the meeting places of the courts will be infinitesimally small.

OLD BANKRUPTCY LAWS.

There has been a great deal of time consumed by our opponents in the abuse of the old bankruptcy laws. Such time, it seems to me, has been wholly lost, as we are not seeking in any sense to reenact any one of them. They were defective not only in the many respects referred to by our opponents, but in others as well, and if the question before the House were one of reenacting them, we would all be opposed to doing so.

The greatest objection to the last bankruptcy law was that the fees were excessive. Under the present bill fees are very reasonable.

A very pertinent objection to the last law was the delay in its administration. Very careful provision has been made in the present law to secure prompt administrations. Doubtless these delays under the old law grew out of the fact that bankruptcy officers were interested in securing them. Under the present proposed law all of the bankruptcy officers are directly interested in a financial way in securing the prompt administration of the estate.

The inference to be drawn from all of this needless and irrelevant talk about the old bankruptcy law is that because it was an imperfect measure it is impossible for the present Congress to formulate an approximately perfect law. In other words, the reasoning is that a fire-proof building can not be erected on the site of a former frame shanty because the latter was burned down.

MISTAKEN IMPRESSION AS TO COERCING DEBTORS.

A mistaken impression prevails among some of the opponents to the effect that the real purpose of this bill is to enable the wholesale dealers in large cities to visit their customers in country places and, by shaking this bankruptcy law over their heads, coerce them into the payment or securing of the claims of such wholesalers. This impression is not justified. This bill would not in any sense answer that purpose. The creditor who wishes to coerce his debtor can do so very much more effectively under the present laws than he would be able to do under the proposed law. The position of the debtor would be very much less precarious under the proposed law than it is under the present State laws.

Our opponents have a misconception of the conditions existing between the wholesale dealers and their customers, the retailers. The wholesale dealer does not want his customer to fail. It costs him money to get his customer, and he is therefore desirous that his customer should continue in business, and to buy goods. Under present laws debtors and creditors can not confer together for their mutual benefit, because the one might take advantage of the other. But if this bill should be passed, the conditions will be different, and they may confer fully upon all matters relating to the giving and receiving of credit, and the result must be the enlargement of trade and commerce, the reduction of profits, and the accruing of great benefits not only to parties to transactions on credit but to the consumers of articles of merchandise of all kinds.

BILL OPPOSED BY FEW LARGE WHOLESALERS.

A very few large wholesale houses are now able by the aid of their vast legal and collecting machinery to coerce their debtors and collect their claims in full, while other creditors of equal rights get little or nothing. These few large houses are the most earnest and persistent opponents of the passage of this bill.

THIS BILL A COMPREHENSIVE MEASURE.

The members who oppose the passage of this measure either do not know or prefer to forget that it contains a perfectly clear and comprehensive system of voluntary bankruptcy as well as a perfectly clear and comprehensive system of involuntary bankruptcy. They allege that the passage of the bill will be detrimental to the rights of debtors. This allegation is made without any justification or reason, and directly in the face of facts showing the contrary.

This bill is not intended to and does not contain any provisions by which business will be begun or conducted, or pursuant to which enterprises will be conceived or inaugurated. It will not, therefore, in any way interfere with or be a factor in the affairs of honest solvent people in their dealings with each other.

This bill will neither pay nor increase the liabilities of debtors; but in the event they act dishonestly, or in the event they become insolvent and are unable to protect their property from an unequal distribution or to meet matured obligations after protracted defaults, their estates may, by due process of law, be distributed to the creditors who have claims against them according to the rules of equity.

THREE CLASSES OF DEBTORS INTERESTED IN THIS BILL.

In general terms there are three classes of debtors who will be affected in a material way by a bankruptcy bill:

First. The dishonest debtors. The members of that class ought to fight against the passage of this bill with all of their strength, because it will well-nigh put a stop to their nefarious practices.

Second. The class of debtors who are not now enjoying any credit, but who have large obligations and are greatly interested in the passage of a bankruptcy law under which they may secure a discharge. It is but reasonable that they should be indifferent as to whether the law shall be complete and perfect in character, or whether it shall be an incomplete voluntary bill enacted only for a limited period.

The third class of debtors is composed of those who are now enjoying credit, which is a part of their capital and is necessary to them in order to enable them to proceed with their present undertakings. The passage of our bill will aid this class of debtors by strengthening credit. The passage of a voluntary bill only would ruin them by driving them into liquidation.

With a voluntary law upon the statute books any debtor who saw fit to do so could deliberately prepare for and go into bankruptcy and swindle his creditors. In the face of such a law creditors certainly would not be foolish enough to sell goods and loan money to persons without ample security. They would extend credit generally and upon easy terms under this complete bill if passed, because it is comprehensive of the rights of both debtors and creditors.

The trouble, therefore, about a purely voluntary law would be that while it would benefit the dishonest debtor and the insolvent who is not now enjoying credit, it would ruin the class of debtors who must of necessity rely, in part at least, upon credit in order to enable them to avoid disaster. Why should we destroy one class to benefit another when it is not necessary to do so?

The bill we advocate would not only obstruct the affairs of the dishonest debtor, but would redound to the best interests of the other two classes of debtors as well as to honest creditors.

EFFECT OF THE PASSAGE OF A BANKRUPT LAW.

Some of our opponents in the House appear to and no doubt do believe that debtors who are struggling with a load of debt will be driven to the wall remorselessly by the passage of this bill. Such can not be the result. It will lighten the burden of every man who is debt ridden. It will relieve the pressure upon every debtor who has become a subject of suspicion on the part of his creditors, because they, in the event trouble comes, will receive their pro rata share of the estate and not be compelled to commence proceedings or get nothing.

The fear that the passage of this bill will strike down confidence and paralyze business enterprises is not justified in reason or by precedence. Such was not the result of the passage of any one of our prior bankruptcy laws, and has not been the result in any one of the great countries which have bankruptcy laws upon their statute books.

Our opponents should not forget that England and other important countries have all had bankruptcy laws for hundreds of years upon their statute books, and that instead of being repealed they have been from time to time amended. It appears from the report of our Judiciary Committee that China and this country and possibly Japan are the only nations of any considerable importance which do not have bankruptcy laws.

DEMAND FOR PASSAGE OF A GOOD LAW.

It has been alleged by those of our opponents who have not been informed upon this subject that this bill is being pushed as an additional means for the creditor to collect his debts. Such is not the case. It is being, and has been for many years, advocated by men of all classes and from all sections of the country who believe that the rights guaranteed by the Constitution should be available to the people in a perfectly practicable and straightforward way.

There is a very general demand for a fair and uniform law that will enable honest insolvent debtors to secure a discharge, protect creditors from incapacity and fraud on the part of their debtors, and from imposition and unfair dealing on the part of their co-debtors.

The few creditors who are now able to get the lion's share of the assets of the unfortunates do not want any legislation on this subject. They say, "Let well enough alone." The debtors of these big houses can not secure a discharge except upon such selfish terms as they may impose, and their co-creditors can not secure any consideration until the claims of the large creditors have been settled in full. No wonder they do not want a law which secures to honest insolvent debtors a discharge, not as a matter of charity, but as a matter of right, and secures to all creditors of the same class the enforcement of their equitable rights.

Mr. Speaker, I am glad to state from my knowledge of and acquaintance with creditors—that is, those who sell goods and loan money—that they do not want any hold on their debtors other than such as is offered by a fair law. They want to feel that it is just as safe to give credit to a man in my State as in New York, Texas, or California; they want the assurance that if their customer does fail the assets will not be consumed by a contest between creditors in their individual capacities, but that his estate will be economically administered and ratably divided among all of his creditors.

THE PASSAGE OF THIS BILL WOULD DECREASE FAILURES.

The dangers incident to commercial crises which occasionally take place in the country would be very much lessened by the passage of this bill, because debtors would not be permitted to commit frauds as against creditors by secreting or running away with property, and creditors would not be permitted to begin compulsory process against mutual debtors. In other words, under this law a financial storm may come up without any very serious damage, whereas without it the damage may be very great.

The financial calamities of our people within the last few years have been very great, and as a result commercial and industrial failures are on the increase. The number was very much larger for the first three months of this year than for the corresponding period for past years. If you will pass this bill the distrust which has caused these failures will disappear, since the securing of undue advantages as under present State laws will be removed, and as a result thousands of good men will be able to tide over for a short time, when we hope better times will be ours.

The deserving debtor who has the confidence of his creditors has no reason to fear them if they can be prevented from proceeding individually against him as under present laws.

One would think, to hear some of the reckless random talk of some of our opponents on this floor, that under present conditions men do not fail; that it is not now a common occurrence for stocks of goods to be sold at sacrifice sales, or that under present laws creditors do not sometimes press their debtors to a settlement upon matured obligations. The facts are that all of these misfortunes are suffered now, and will always be suffered so long as humanity continues as it is. The only question is whether the suffering shall be of the maximum or the minimum degree. Other countries have found that the minimum degree is experienced by the enactment of honest bankruptcy laws, and I respectfully submit that their example is worthy of our emulation.

The bill we advocate is not in the interests of shyster lawyers; not in aid of fee fiends; not a source of prospective joy to business bastards of any kind; but an eminently straightforward measure, which will benefit everyone and not harm any honest man who comes within the sphere of its operations, whether he be a poor or rich debtor or a poor or rich creditor.

A SUMMARY OF RESULTS ANTICIPATED.

For my own part I know that fair play is better than sharp practice, and I know, too, that I represent a constituency who have an abiding faith in the same principle.

It is confidently anticipated that the passage of this bill, as contemplated by the Constitution, will redound to the best interests of the honest people of the whole country in many ways, and among them the following:

1. Make it easier for honest men and harder for dishonest men than under present laws to conduct business and promote enterprises.
2. Enable honest insolvent debtors to secure discharges and begin financial life anew.
3. Insure to every creditor of a dishonest or insolvent debtor who has committed an act of bankruptcy the collection of his equitable part in such debtor's estate.
4. Prevent debtors and creditors from swindling or taking advantage of each other.
5. Save millions of dollars now annually spent in useless selfish struggles between creditors by enforcing the rules of equity between them.
6. Increase the dividends received by creditors from insolvent debtors who have failed.
7. Reduce the number of business and industrial failures.
8. Enable honest men to enjoy their constitutional rights.
9. Subject dishonest men to a merited punishment for their rascality.
10. Draw a line between the honest and dishonest men engaged in commercial pursuits by helping the former and obstructing the latter.
11. Reduce the expenses and trouble of creditors in obtaining amounts due from their unfortunate debtors who have become bankrupt.
12. Prevent embarrassed debtors from being coerced into needless assignments or wrongful acts by creditors.
13. Make it possible for unfortunate honest debtors to secure a just settlement quickly and economically.
14. Enable debtors and their creditors to confer together for their joint advantage without the fear that one will take advantage of the other.
15. Make it to the greatest possible advantage for debtors to be honest and creditors to be just.
16. Reduce the price of commodities and interest on money.
17. Prevent the giving and receiving of preferences.
18. Stop the giving of fraudulent mortgages and judgments by confession.
19. Permit creditors of equal rights to enjoy equal remedies.
20. Secure a return of prosperous times to the country.

For the above and many other reasons I am glad not only to support the pending bill, but to bespeak for it the support of the other members of the House.

A SUMMARY OF THE TORREY BANKRUPTCY BILL (H. R. 8110).

A summary in five words is as follows: "A square deal all around."

A summary in a paragraph is as follows:

A measure for the discharge of honest insolvents, the diminution of fraud, the prompt and economical administration of bankruptcy estates, the maintenance of integrity in transactions on credit, and the promotion of the industries and commerce.

A summary in brief is as follows:

A voluntary bankrupt is one who petitions to be and is adjudged such; an involuntary bankrupt is one who has been adjudged such in a suit brought by his creditors. The rights and duties of voluntary and involuntary bankrupts and their creditors are identical.

Farmers and wage earners may go voluntarily into bankruptcy, but their creditors can not bring suits in bankruptcy against them.

Anyone except corporations, irrespective of whether they owe more or less than $1,000, may become a voluntary bankrupt.

Persons, firms, and corporations (except farmers and wage earners) who owe $1,000 or more, and have committed an act of bankruptcy according to the evidence in a fair and impartial trial, before a jury if desired, may be adjudged bankrupts upon the petition of creditors.

An act of bankruptcy by a debtor consists of conduct or acts calculated to defraud the creditors or insolvency followed by a protracted default of payments due or a failure to prevent an inequitable distribution of the estate.

Creditors need not proceed against a debtor who has committed an act of bankruptcy any more than they need sue every debtor who is in default in payment.

A petition can be filed against a debtor who has committed an act of bankruptcy by three creditors who, together, have unsecured claims for or over $500. After the suit is begun the defendant will be served as in ordinary suits, and will have "his day in court" and a trial by jury if he desires.

If a judgment in a bankruptcy suit is for the plaintiffs, the defendant will be adjudged a bankrupt. In that event he will retain the exemptions allowed by the laws of the State in which he lives, and, if an honest man, will be released from his debts, and thereby given an opportunity to begin life anew, and be relieved from the demands of his creditors to make good his former misfortunes. If the judgment is for the defendant, the petition will be dismissed at the costs of plaintiffs, as in other suits.

The property of the debtor will remain in his possession and under his control until after adjudication that he is a bankrupt, or the dismissal of the petition, unless the creditors shall give bond and secure its attachment; in that event the debtor may retain possession of his property upon giving a forthcoming bond.

The United States district courts will have jurisdiction of the administration of bankruptcy estates. They can not be administered in the State courts, because Congress has no power to compel State courts to administer national laws.

State courts will retain their jurisdiction to hear and determine controversies between the trustee and adverse claimants concerning property rights.

Controversies may be arbitrated or compromised under the direction of the court.

The offices of referee and trustee are the only ones created by the act.

The referee is an assistant judge, and will be appointed in such numbers and in such localities as will be best calculated to secure a prompt administration of the act and serve the convenience of all parties having bankruptcy business.

The trustee will receive the title of the bankrupt to his property and administer the estate. He will be elected by the creditors in each case. He may recover all property which has been hidden away or fraudulently conveyed.

The clerk will receive a $10 filing fee in each case and no further compensation.

The referee will receive 1 per cent upon the net amount paid in dividends to creditors from each estate administered before him, or one-half of 1 per cent from estates in which there is a composition, and a filing fee in each case of $10.

The trustee will receive 5 per cent on the first $5,000 paid in dividends to creditors, 2 per cent on the second like amount, and 1 per cent on additional amounts, and in each case a filing fee of $5.

The compensation of the referees and trustees will not be paid until the estates have been administered and the records returned to court.

Making the amount of the fees received and the time of payment depend upon the prompt and economical performance of their duties by the referee and trustee will result in the quick and economical administration of bankrupt estates.

The fees of the clerk, referee, and trustee need not be paid by a proposed voluntary bankrupt who files with his petition an affidavit that he is without and can not obtain the money with which to pay such fees.

The expenses of administering the estate will not be paid until reported in detail under oath and allowed by the court.
